2. MUSIC AND MUSICAL INSTRUMENTS. Traditional Micronesian musics are predominantly vocal and are heterogeneous in voice production and musical traits. Singing was both solo and group, the latter in both unison and parts (the presumption that part-singing did not exist before the introduction of Western music is false). Much traditional music was and still is intrinsically associated with dance: in many societies, the same participants simultaneously perform the vocal component (chant or song), rhythmic accompaniment (body percussion or stick beating) and dance movements. Even where the early Protestant missionaries strictly forbade dancing by their converts, dance or dance-like movements are performed in church, for example in Kosrae in the Christmas *mas* processional and in the Marshalls in the *biit*.

Indigenous Micronesian musical and other sound-producing instruments were mostly aerophones and idiophones. The conch-shell trumpet was widely used for signalling and is still used for that purpose in some small remote islands. It is also used in some programmes prepared for local and international audiences. The several kinds of indigenous flutes are no longer played, but the rolled-leaf oboe that most Micronesians now consider a toy is still made and blown by children, especially in the outlying coral islands. Sticks (some bamboo, some wood) for certain dance forms were the principal idiophone and continue in widespread use; the bamboo jew's harp may still be played for self-entertainment by a few islanders. The indigenous drum, found only in eastern Micronesia and banned by missionaries, is no longer played: however, in the Marshalls, a modified drum has been made to replace it in performance of the *jobwa*. Among the foreign instruments introduced in the 19th and early 20th centuries, including guitar, ukulele, mandolin, harmonica, accordion and a few reed organs, the guitar remains in widespread use to accompany songs of the late 19th and early 20th centuries as well as contemporary songs in popular idioms. Western drums are used by some groups playing popular music. Of recently introduced instruments, the electronic keyboard is widely used, especially in urban areas, in both the Mormon churches and among young performers of popular secular musics such as rock and roll, country and western, reggae and later styles.

In post-colonial Micronesia, young islanders use imported cassette tape recordings to learn the latest foreign popular 'hit' songs and cassette tape recorders to record and disseminate their own new songs in contemporary idioms, whether informally to friends and family (including between those living at home and abroad) or commercially. Many of these newly created songs take as their subject love – of a person, a group or an island – or concern for the land or the future. There is also a renewed interest in indigenous dances and in creating new dances in traditional styles to perform in modern contexts, especially at official local and national events and abroad

at international events such as the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF).

The entries below are organized geographically. Two additional entries present information on the music and dance of the Chamorro people and of Ifalik, a representative Carolinian atoll.

3. DANCE. Systematic study of even satisfactory description of dance in Micronesia has been woefully neglected, despite its significance in the social relations of Micronesian people. With the exception of a few studies, such as those conducted in Pohnpei, Kiribati and the Marshalls, research on dance and its functions in many areas of Micronesia remains to be carried out. Nevertheless, a number of recent articles by anthropologists have focussed on the importance of dance in politics and for ethnic/cultural identity.

Micronesian dance is often a visual enhancement of sung poetry. Although based on poetic phrases, the movements do not necessarily interpret or allude to the texts. Instead, movements enhance the texts with a performance in which the dancers are well dressed, well rehearsed and synchronized. In the Yap 'empire', where dances were given as tribute by Ulithi, Woleai and other islands to acknowledge the overlordship of Yap, the texts were in languages unintelligible to the Yapese dancers, and the movements served as visual decoration. Even in such islands as Ifalik, where texts were in the indigenous language, movements were not illustrative but abstractly decorative. Traditionally dance was associated with tattooing, seafaring and fertility; many movement motifs were and still are linked mimetically with frigate birds. Often the importance of the sea is reflected in the use of dance paddles, head ornaments inspired by canoe parts, performances on platforms of canoes, and in the imagery of the texts; and some dances are said to concern the fertility of the land and sea.

Dances are the property of the composer, and the right to perform them can be bought and sold. Hand and arm movements are the most important, but some significance is given to movements of the head and legs. Choreography often consists of a series of poses in which rehearsed execution of group movement is emphasized, and dancers are arranged according to rank. Dances using sticks as sound and visual design components are common. In sitting or standing positions, group singing is associated with rhythmic striking of the body, ground, concussion sticks, or boards held on the lap and tapped with small sticks. Traditionally, long songs with dance accompaniment recounted origin stories, rituals for the gods and histories of encounters with Europeans, such as the Pohnpei rebellion against the Germans in 1910. Although still known and performed in the traditional manner, these songs are also rechoreographed in contemporary forms. Traditionally, dances took place on raised platforms in front of feast houses, on canoe flotillas or in other traditional performing spaces such as roads on Yap lined with shell money for ritual and yearly events or for competitions. Today, dances are performed at events emphasizing ethnic and cultural identity for important outside visitors such as UNESCO officials and during local, regional and international festivals.

Kiribati (Gilbert Islands) dance was praised by Robert Louis Stevenson as being the best of the South Seas: it 'leads on the mind; it thrills, rouses, subjugates; it has the essence of all art, an unexplored imminent significance'. Traditional Kiribati performances consist of one or more principal dancers of the same sex and similar age, located at the front of a chorus that sings and claps. Precisely choreographed movement sequences are performed by the principal dancers, while the chorus's singing, clapping, foot-stamping and body percussion are also choreographed. Movement and sound must be exactly coordinated. The most traditional dance is *ruoia*, a series of sung texts performed standing or sitting by men or women. The principal dancers enhance the texts with a series of poses with slow movements or abrupt arm, head and hand movements. Besides singing, the chorus executes clapped percussion patterns and for some sections performs dance movements in parallel with the principal dancers. Newer traditional dance forms are based on Polynesian prototypes: for example, the *batere* combines old and new movements with more 'Polynesian' sounds and the percussion box drum struck with the palm imported from Tuvalu.

On Ifalik everyone is expected to sing and dance to please Tilitr and other kindly gods. *Ur*, a dance to entertain the gods, is usually performed standing; *gapengapeng*, an invocation to Tilitr, is performed by two lines of seated dancers facing his altar. Gestures are said to have no specific meaning. A solo *bwarux* is composed, sung and danced by a woman for her lover in private; a dance of this kind can be performed in public for visiting chiefs from another island, but no man from Ifalik would attend. The arms are held high to make three circling beckoning gestures, then brought forward and dropped, while the hips make four side-to-side movements. On the fifth beat the knees are bent and the loins thrust forward.

Stick dances are common in much of Micronesia, where they have spread from island to island (fig.1). The Ifalik stick dance *laũra*, performed by all the men of a district as entertainment for the gods, is said to have come from Aurupik but is no longer performed there. The Marshallese stick dance (*jobwa*) is considered a national treasure. In fact, stick dances have become 'Micronesian' dances and are invariably performed when Micronesians from different islands combine in United Nations Day programmes or International Night Concerts. Other

1. *Micronesian stick dance performed in Hawaii*

acculturated dances, such as those based on German and Japanese military marches, have replaced many of the indigenous dances that were objectionable to Christian missionaries. Introduced forms of music and dance have long been part of Micronesian performing traditions, transforming marching into dance, incorporating waltzing and rock and roll, constructing old forms out of introductions from colonial regimes and Polynesian counterparts. Having their roots in the past, these dances are performed in a variety of contexts that reveal cultural and ethnic identity as Micronesians, as one group among many within a political jurisdiction, or as specific villagers. Through these dances people tell their stories of the past while situating themselves within the modern world. These new dances capture traditional vigour and creativity to serve new economic and political ends, providing entertainment and opportunities for interaction between islands and satisfying national aspirations.

II. Caroline Islands

The Republic of Palau (in the west) and the four states of the Federated States of Micronesia (proceeding eastwards: Yap, Chuuk, Pohnpei and Kosrae) are part of the 963 Caroline Islands. The indigenous people and culture of the individual high islands (or high-island clusters) in each of these, where the national and state government centres are located, are distinctively different from one another and from the populations of the widely scattered low coral islands and atolls that lie around and between them. In contrast, the people and culture of the low islands, especially those lying between Chuuk and Yap that traditionally were part of the Yap 'empire', have much in common and, collectively, are referred to as 'Carolinian'. The Carolinians are famous for their traditional navigational knowledge and skill, sailing extensively throughout and beyond the Carolines. Navigation is related to both the content of songs and the performing style. In Ulithi atoll, for example, the same text can be sung in different locations and circumstances (e.g. while sitting on a beach, paddling a canoe or under sail) but must be performed with the specifically designated tempo, rhythmic pulse, melodic contour and vocal production appropriate to the situation.

1. Ifalik. 2. Chuuk. 3. Kosrae. 4. Palau. 5. Pohnpei. 6. Yap.

1. IFALIK. Ifalik (formerly Ifaluk), a Carolinian atoll, lies east of Yap island in Yap State. It is a typical small atoll of three small islets with a total land area of 1·5 km² rising from a coral reef that forms a lagoon of 2·5 km². As a member of the Yap 'empire', Ifalik traditionally recognized the overlordship of Yap, and people from Ifalik voyaged there and gave chants and dances to a Yapese chief as 'tribute' in the customary periodic ceremonial exchange. An important ethnomusicological study by Burrows was made on Ifalik in the early 1950s, when the population totalled 260: only one family had adopted Christianity, and the people had little exposure to non-Micronesian musics. Since then, the population has grown to over 600, everyone belongs to the Catholic Church, and radio and cassette recordings have brought other musics, especially American musics, to the atoll. Nevertheless, much of the traditional heritage retains its vitality.

The chants, songs and dances of Ifalik are similar to those of neighbouring atolls and are important both in ceremonies and as entertainment during the day or evening. Typically, young men gather in the canoe house in the evening and among other activities sing *bwarux* (a traditional type of love song with text composed by a woman in praise of the man she loves), with or without stylized body movements, and modern love songs (including popular American love songs with texts translated into the vernacular) with guitar and/or electronic keyboard accompaniment. Women also sing and dance *bwarux*, but men and women do not perform them together – in fact, traditionally, neither should even use the word *bwarux* in the presence of the other. *Arūerū* are laments sung to a dying person, after the death, and still later in remembrance. *Arūerū* may also be sung in praise of a good chief or fisherman, for a construction project, and for other purposes. In the 1950s, the dance type *gapengapeng*, in which singers swing trimmed half-leaves of the coconut tree, was performed as an invocation to the god Tilitr, and the formal ceremonial dance *ur* ('play') aimed to entertain the gods; since conversion to Christianity they are performed in secular contexts. The *laūra*, a stick dance performed to a song, is easily recognizable as a characteristically Carolinian dance.

Traditional Ifalik song, and songs of the Carolinian style in general, are characterized by a very small number of pitches (often only two or three), a narrow range (a 2nd, at most a 3rd), many phrases ending in a terminal glide that spans about an octave, and strict, marked rhythm. Several types of song and chant have certain melodic contours specifically associated with them. Multipart singing is mostly in parallel movement, with the voices at any of several intervals but most characteristically at 4ths. On Ifalik, as elsewhere in the Caroline Islands, heavy pulling or hauling is performed to a leader–chorus chant, with the group doing the strenuous work during its response. During Catholic services, the music is sung by the whole congregation rather than a separate choir.

Indigenous sound-producing instruments include the conch-shell trumpet for signalling and a rolled-leaf oboe, made from a wound strip of coconut leaf, blown informally by both adults and children. By the 1950s a police whistle with a sound similar to the trilled whistle required at some phrase endings of indigenous songs had been adopted; in the 1990s, the guitar and electronic keyboard were the predominant Western instruments. The cassette tape recorder is used not only to play imported music but also as a means for young people to learn traditional chants recorded for them by their elders.

2. CHUUK. Formerly Truk, Chuuk is a cluster of high islands with a land area of about 118 km² in a huge lagoon encircled by a great reef. It is also a state that includes these high islands and groups of low islands with a total population of about 55,000. The peoples of these island groups have their own repertory; there are many different names for the same or similar song types, so only those widely recognized are used here. The people of the high islands of the lagoon and of certain low islands (especially the Mortlocks, which lie about 300 km to the south-east) are credited by other Micronesians with being very musical, their songs being noted for flowing tunefulness and their choral singing for vitality.

In the early 20th century, dance festivals preceded by months of rehearsal were among the most important occasions of the year. Both gesture dances (decried by Christian missionaries for their exhibitionist qualities)

and stick dances were reported, as were chants for canoe-building, hauling and food-carrying, and children's songs and lullabies. In analysing music recorded in the Caroline Islands in 1908–10, George Herzog (1936) differentiated a western and an eastern Carolinian style, both present in the recordings from Chuuk. The western Carolinian style, essentially chant (see §1 above), continues in Chuukese stick-dance chants; the more tuneful eastern Carolinian style survives in songs in a special language sung by *itang* (a prestigious class of traditional leaders with knowledge of ancient lore).

In the last decade of the 20th century, with different content and in different contexts, performing as a group remained highly valued. Singing by large groups, Catholic, Protestant and civic, is predominantly *a cappella* in indigenized four-part hymn-tune style. *Kolun fen/kolun fal* are songs of the Christian church that are sung in the vernacular (both translations of introduced hymns and locally composed hymns); all songs in Latin are called *kirie*. *Kolun fonu/kolun fenu* ('island songs') commemorate communal and other major events. They too are usually sung *a cappella* by a large group, but they may also be sung solo or by a small group and may be accompanied by guitar. In urban centres, both *kolun fen* and *kolun fonu* are sometimes sung with electronic keyboard or recorded accompaniment.

Love songs, a song type with many names (including *kolun setan*, 'songs of Satan'), often use foreign (Japanese, American or other Micronesian, especially Palauan) melodies. They are usually sung solo or by a group of three or four youths accompanied by guitar or, where available, electronic keyboard. In the traditional practice of *itanipwin*, a young man expresses his love for a young woman by serenading her at night with a song composed especially for her, singing it solo or with a small group of friends and guitar accompaniment. Another prominent song type, usually sung solo, expresses sadness, whether on departure of a loved one to a distant point, homesickness or unfulfilled hopes or desires.

Of the indigenous sound-producing instruments, only dance sticks for the *dukia/tokia* (war dances), originally wood and later bamboo, retain their former prominence. Use of the other instruments – conch-shell trumpet for signalling by chiefs, rolled-leaf oboe, a mouth flute and a nose flute (made from an aerial root of mangrove, used primarily for courting; fig.2) – have been discontinued. The harmonica replaced the nose flute and is prominently used in music for the *maas* (a marching dance incorporating a variety of introduced elements). The guitar (and, to a lesser extent, the ukulele) is used primarily to accompany singing and in the 1990s was often joined – and sometimes replaced – by the electronic keyboard and Western drums. Radio broadcasts and cassette recordings (both imported commercial pre-recorded and locally privately recorded tapes) also help to fill Chuukese youths' desire for music to permeate their lives.

3. KOSRAE. Kosrae is a high volcanic island that lies towards the eastern end of the Caroline Islands archipelago. With a land area of 117 km² and a population of approximately 7500 (mid-1990s), Kosrae is the smallest state in the Federated States of Micronesia.

Indigenous chant/song called *on* included *tafon* (love songs), *tan mas* (dirges), specialized work chants (e.g. *bas* for canoe-making) and chants with dance. For dance festivals, *usok*, a long, solemn, one-pitch chant that was

2. Nose flute player, Chuuk Islands, 1910

accompanied by arm and hand movements, was followed by *mulmul*, a 'melodious' two- or three-pitch chant with hand-clapping and graceful arm movements, and *ra*, a vigorous men's gesture dance. Other dances include *alol*, in which men danced to women's choral chanting; *manot*, performed by men and women dancing together; *salsal*, performed by titular chiefs to the accompaniment of women drummers; and *on in sak*, a men's stick dance. Indigenous instruments included *ukuk*, a shell trumpet, *asis*, a drum introduced from the Marshall Islands, a stone gong, and perhaps an aerophone (Sarfert, 1920, 487–518).

European contact began in the 1820s, and thereafter foreign traders, pirates and whalers introduced alcohol and diseases that disrupted the islanders' lifestyle. They also brought with them the chantey, hornpipe, jew's harp and harmonica. Protestant missionaries sent by the American Board of Commissioners for Foreign Missions arrived in 1852. They competed with the sailors for influence on the *tokosra* (later referred to as 'king'), as they sought to convert him and his people to their faith and to replace both indigenous and recently acquired Western secular music and dance with their hymns. After strong initial resistance, Kosraeans accepted Christianity, abandoned their indigenous music traditions and developed a vibrant tradition of hymn and gospel singing.

In the 1990s the predominant musical activity was *a cappella* choral singing in an indigenized hymn and gospel style that reinforced the contemporary democratic society's emphasis on group participation while retaining pre-contact hierarchical society's emphasis on perfect synchronization and competition. The island radio station records the periodic choral competitions among the four *kumi* (social/work units) of each village and repeatedly broadcasts the best performances to the entire island. The people of each village celebrate Christmas together at the village church in a long programme devoted largely to the singing of the children in the Sunday School classes and the *kumi*. Once every four years the people of the whole island, groups of overseas Kosraeans (e.g. from Pohnpei,

Guam, Hawaii and Nauru) who return home to celebrate Christmas, and often a group of Marshallese with ties to the mission school formerly located on Kosrae gather together at the head church to sing for each other in an all-day celebration. For this occasion, each village and overseas group has a member compose or arrange new *on* (songs) and a *mas* (march), and commits several evenings a week for about two months to learning and practising them. The special feature is the march in which several long lines of singers process and interweave to form figures such as a star and an X. Characteristically, both the songs sung standing in rows and those sung while marching feature gospel-style response and are sung loudly and enthusiastically with intense voice production at a high overall pitch level, with an obbligato by one or two women soaring high above the choral soprano part.

Popular songs, including American country and western, pan-Micronesian and original compositions, mostly sung in Kosraean and accompanied by guitar and/or electronic keyboard, are performed and enjoyed by Kosraean youths; some are recorded for radio broadcast. Stimulated by political self-determination (implemented in 1986), oceanic-style dance-with-chant/song has been recreated for performance at local and national civic events and in international contexts.

4. PALAU. Palau, called Belau by the people themselves, comprises a cluster of high islands in the south-western Caroline Islands, including Koror (the district centre), Babelthuap, Peleliu and Angaur, as well as the Kayangel atoll and over 300 mostly uninhabited rock islets. Some small atolls to the south, with closer cultural affinity to the central Carolines than to Palau, also belong to the Republic of Palau, which became independent in 1994 while remaining still in free association with the USA. Of the foreign administrations since 1886, strong influence has come from Japan and increasingly from North America. Christian missionaries have had less influence than in northern and eastern Micronesia.

There are two major musical styles in Palau: traditional and modern. The classical tradition was flourishing at the end of the 19th century, when foreign influences began to disrupt the traditional social structure and values. In the traditional milieu, music and dance had political and economic importance, as well as personally communicative, psychological and perhaps other functions. Contemporary genres are used principally for entertainment, school activities and religious services.

Two forms current during the heyday of the classical tradition, *klou chesols* (devout song in ensemble) and *derebesbes*, were sung by groups of older men in connection with council activities in and around the *bai* (community house). *Derebesbes*, a solo sung either entirely by one person or a verse at a time by each member of a council (in either case with yells between strophes by the whole group), includes a variety of song forms: *ulengokl chesols* (heroic song), *damalasoi chesols* (communicative song with a text ascribed to the fictitious character Damalasoi) and *rederad ra chesols* (miscellaneous songs). At funerals *kelloi* and *eldolem* (dirges) were sung by women. During festivals, usually held in clan-affiliated villages, both *ruk* (men's dances) and *ngloik* (women's dances) were performed; these consisted of introductory, standing, sitting, stick and stamping dances. Men also performed war dances on a triumphal return from battle. Children sang their own festival songs, visiting every house in the vicinity.

Most types of song were performed by both sexes, but except in *alall* (mock quarrel song exchanged between pubescent male and female groups), performance was differentiated. Other group songs included *keredekill* (occasional and topical song), *derebesiil* (sincere love-song) and *kerekord* (harmonious song, in which the singers lean towards each other, slightly covering their ears with their hands). Other solo songs included *rebetii* (a love-song referring to well-known historical events) and *kesekes* (a lullaby in epic style recounting the deeds of a legendary or historical hero of the village). Genres employing speech-song styles included *ongurs* (for work), *klaiskurs* (for racing), *dalang* (sarcastic recitation) and *ollai* (incantation). Children accompanied their games with songs and recitations.

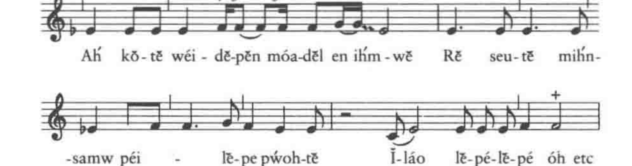
Each genre of classical Palauan music has its own characteristic tonal and rhythmic configuration, with prescribed phrases for different musical functions varying in length, melodic contour, rhythmic figure, dynamic design and sometimes agogic change (e.g. an introductory phrase characterized by a sustained note; a penultimate phrase introducing the highest note; a final phrase with a terminal crescendo). Strophic form predominates, but sequences of phrases are also used. There are usually between three and seven notes, adjacent notes being from 50 to 300 cents apart; the melodic range is narrow, usually no more than a 5th (400 to 700 cents), and the tessitura varies according to the requirements of the genre or sometimes personal preference. Melodies commonly move conjunctly. In polyphonic ensembles the roles were differentiated: *mesuchokl* (textual prompter), *mengiidr* (starter), *meliikes* (chorus leader), *mengesbch* (second soloist using falsetto and head tone) and *rokui* (chorus). The polyphonic progressions were both parallel and oblique.

Indigenous instruments (generally called *tumtum*) were the *ngaok* (reed or bamboo fipple flute with four finger-holes) played as a solo instrument and to accompany *derebesiil*; *tumtum ra lild* (bamboo jew's harp); *debusch* (conch-shell trumpet) for signalling; and dance sticks. These instruments are no longer appreciated by the majority of the population. Foreign instruments – primarily the guitar, ukulele and harmonica, and to some extent the mandolin and accordion – have become popular, especially with the younger generation.

Although the classical repertory is performed infrequently, some traditional stylistic elements survive through incorporation into new songs. For example, some aspects of the structure of classical *keredekill* are perpetuated in *boid*, *beches keredekill*, and even in *kesekes ra Modekngei* (a song for the modern local religion Modekngei). Some modern dances also use traditional stylistic elements. Other contemporary pieces are composed in essentially foreign styles – both other Micronesian styles and Japanese, European, American and Hawaiian idioms. Both the text and music of *beches chelitakl* (new song) show the influence of *kayōkyoku* (Japanese popular song) and American popular music. *Matmatong* (marching music and dance) reveals a more complex mixture of traditional Palauan, other Micronesian and foreign elements: it consists of a series of line-dances in which boys and girls dance together and incorporates harmonica music, songs with foreign influence, yells by the leader,

and stamping and body-slapping. It is often performed for tourists and outside Palau as representative of Palauan culture. Christian church music, apart from its voice production technique, is essentially European in style.

Beginning in the 1970s, two major trends emerged, particularly from the late 1980s. The first is a new popular song tradition, usually referred to as *chelitakl ra Belau* (Palauan songs), with accompaniment from guitar and electronic keyboard instruments, distributed commercially on cassette. The second is the explicit revival of the classical style, including its use in new compositions, particularly in connection with museum activities and participation in the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF).



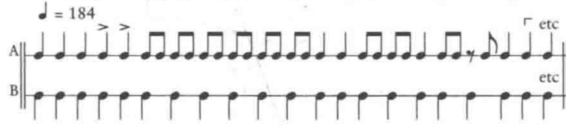
5. POHNPEI. Pohnpei (from *pohn*, 'on top of'; *pei*, 'stone altar'), formerly Ponape, is a high volcanic island in the eastern Caroline Islands with a land area of 345 km² and population of over 33,000. It is also a state of the Federated States of Micronesia (FSM) and includes Pohnpei Island, several atolls with cultural affinity to the central Carolines, and two atolls (Kapingamarangi and Nukuoro) that are culturally Polynesian. For many years, people from these outer islands and from Kosrae and Chuuk have travelled and settled on Pohnpei Island, some in enclaves that have perpetuated their own traditions. Now, with the capital of the FSM located there, the resident population of the urban centre is increasingly cosmopolitan.

European discovery of Pohnpei occurred in the 16th century, but the island remained relatively isolated until 1852, when American Protestant missionary schools were established, resulting in a great and continuing influence on Pohnpeian music. The following discussion concerns only specifically Pohnpeian music and dance.

The Pohnpeian word for song or singing is *koul*. That for sound production (playing musical instruments, radios and tape recorders, and beating *sakau*) is *keseng*. Pohnpeians distinguish broadly between two styles: *koulin kawa*, the older traditional style, and *koulin sarawi*, a later style resulting from incorporation of elements of Western hymn singing. More precisely, they distinguish four categories of song types and use: *koulin kawa* ('song of long ago'), pre-European contact chants/songs not associated with dance; *koulin kahlek* ('dance songs'), chants/songs for traditional and traditional-evolved dance; *koulin sarawi* ('sacred songs'), songs of respect for authorities (including traditional, Christian and government authorities); and *koulin sampah* ('world songs'), secular songs of many types, including foreign popular music. Few of the dance-songs, love songs, feast songs, children's songs and lullabies in the old traditional style are still known, though fragments of old chants for the *sakau* ceremony, *ngihs sakau*, and chanted oral history, *koulin poadoapoad*, with highly metaphorical language and archaic words, are an important link with the past. However, evolved forms and styles have contributed greatly to the post-colonial resurgence of expression of social and cultural identity through the performing arts.

Songs in the traditional style have a limited number of pitches, often only two or three, and are characterized by a conjunct melodic movement. The rhythm of most songs is complex because the metre of the text does not correspond with the underlying metre of the music (ex.1). Part-singing, usually in two parts and sometimes in three,

Ex.1 *Koulin kawa*, Pohnpeian traditional song, Uh district, Pohnpei; transcr. R. Kennedy

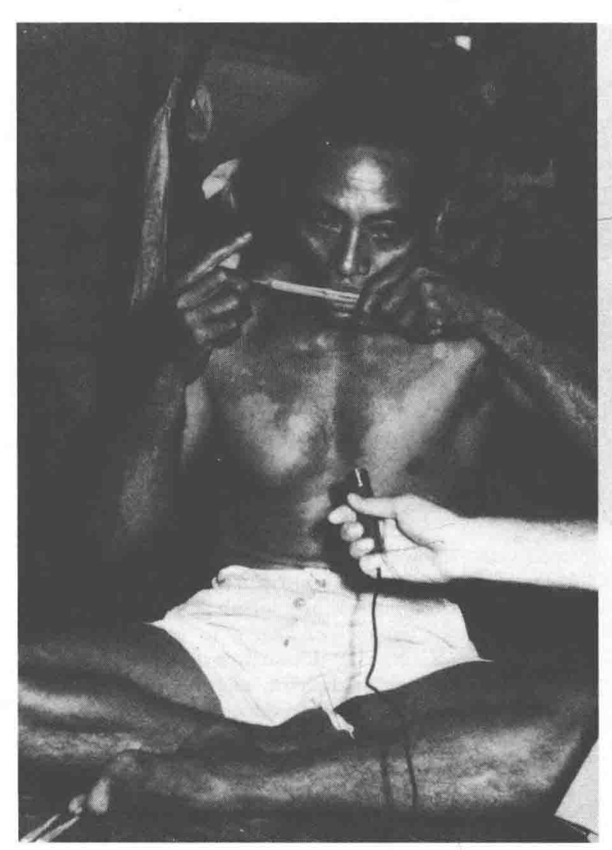


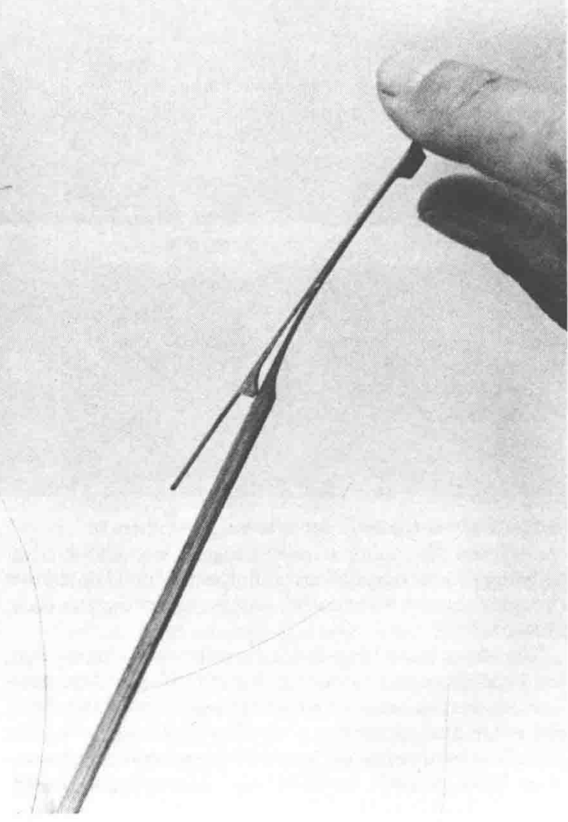
| = A structural subdivision | = a structural division
+ = Tone somewhat higher than written
♪ = Pitch indefinite, but approximately where the stem ends

is common; polyphonic intervals approximating to the 2nds and 3rds of Western music predominate.

Instruments associated with music in the traditional style are mostly obsolete, but the *sewi* (shell trumpet) is still occasionally used. The reed-grass or bamboo nose flute and the side-blown arrowroot mouth flute were formerly popular instruments; no one on the island can now play or even remember them. The *aip*, an hourglass drum covered with the bladder or skin of a fish, was played during festive occasions for signalling and reportedly in connection with dancing. It resembled that used in the Marshalls, but on Pohnpei it was beaten both with a hibiscus stick and with the hand; only a few islanders remember it. Pohnpeians also had a type of jew's harp, but the instrument now played is imported from Pingelap atoll (fig.3).

On Pohnpei the flat basalt slabs used for preparing the ceremonial beverage *sakau* (kava) are specially selected for their metallic sounds. Squatting in front of them, men pound the roots of the *Piper methysticum* with smaller stones. At frequent intervals they take turns to produce, on the edge of the slabs, specific rhythms that indicate stages in the preparation of the beverage (ex.2) and then





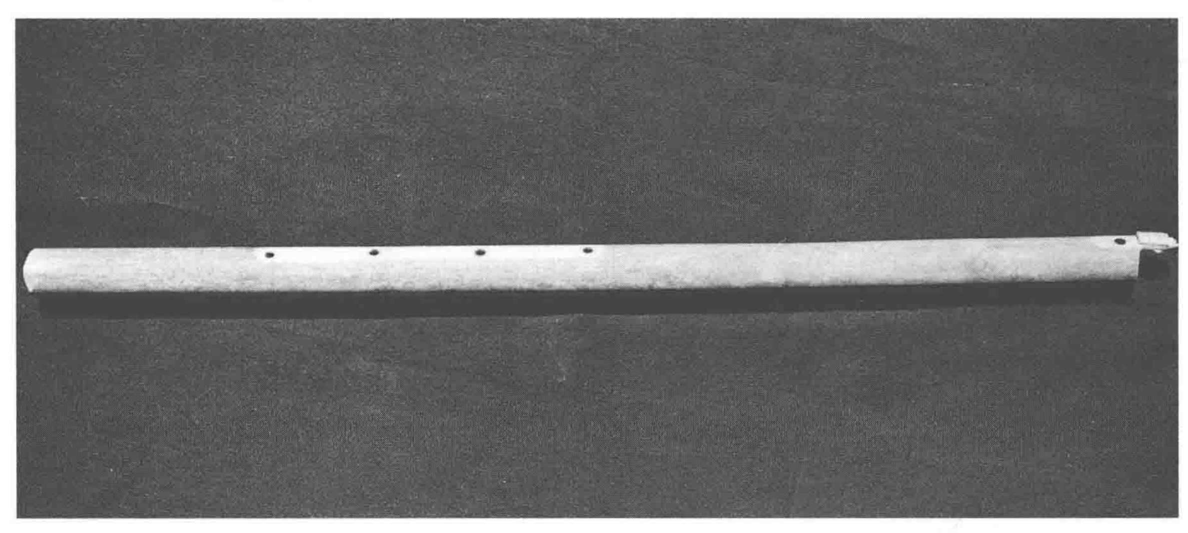
Ex.2 *Sukau* pounding rhythm, Uh district, Pohnpei; transcr. R. Kennedy

A = Special rhythm played on the edge of the basalt slab signalling a stage of the sakau preparation
B = *Sukusuk* (pounding of the sakau) (steady pounding)
⌜ = ♩ notes continued for a variable length, depending on the maceration of the sakau

unite in a special rhythm when it is finished. It was formerly common for certain women to dance during the final stage of preparation.

On special occasions (e.g. after a feast and ceremonial *sakau*, during governmental functions for Pohnpei State and FSM, to represent Pohnpei overseas and for tourists), four Pohnpeian traditional dances are sometimes performed simultaneously on tiered platforms, to one *koulin kahlek* (rather than each to a text originally associated with that dance). This practice is known to have existed at least as early as the period of Japanese control, between the World Wars. The *wehn*, which involves hand and leg movements, is performed by a row of young men standing on the top tier. The *kepir*, which incorporates stylized paddle movements, is performed by a row of young men standing on the second tier from the top. The *dokia* is performed by a row of young women seated on the tier below. Each woman holds two short sticks, one in each hand, which she strikes together, against her neighbours',

3. Jew's harp of Pingelap Island: (a) played by the late Makis Ohsai; (b) detail of the instrument



and on a long board laid across the women's laps, always in prescribed rhythms. The *sapei*, in which hand and head movements are important, is performed by a row of young women seated on the lowest tier. The dancers sing while performing the dance movements; each dance may also be performed separately.

Lehp (the Pohnpeian pronunciation of 'left') is an adaptation of a Western military drill that incorporates some traditional dance movements; the accompanying music is a Pohnpeian adaptation of late 19th- and early 20th-century Western music.

Group singing of hymns (*koulin sarawi*) in four-part harmony, both translations of Western hymns and new hymns composed by Pohnpeians, has been widely practised for more than a century on both religious and secular occasions, often to the accompaniment of the guitar or ukulele and recently to the electronic keyboard. However, various forms of other Micronesian, pan-Pacific, rock and roll, and other popular music and dance styles from the USA are increasingly important in stimulating creativity among young Pohnpeians, while a resurgence of activity in evolved indigenous styles is strengthening their sense of social and cultural identity ranging from the local level as villagers to the international as Pacific islanders.

6. YAP. Yap comprises four main islands covering about 100 km² and 13 coral atolls; the total population is around 12,000. Chant and dance were traditionally a central feature of village life in Yap. *Churuq*, usually translated as 'dance', also refers to the text and chanting. Traditionally *churuq* are performed by men or women, but not both together. Three genres of *churuq*, *saak'iy* (standing gesture dances), *puul nga buut'* (sitting gesture dances) and *gamel'* (bamboo-stick dances), were performed at village ceremonies, *mitmiit* (inter-village ceremonial feasts) and *guywol* (dance contests). Since the Federated States of Micronesia was established (1986), the most important occasions for dance are *guywol* at the celebration of Yap Day (1 March) and festivities associated with formal events of both State and Federation governments. Dance is no longer performed at funerals; however, some special events of the Catholic Church include dance with traditional-style chant and movements set to biblical or honorific texts.

The chants of *churuq* are performed by the dancers. They are strophic and have a narrow range, with several notes distributed around a central tone. The performance usually begins with an introductory solo call followed by strophes of chant, and ends with a shout by all the dancers. The dancers' vocalization and their movements should be perfectly synchronized. The most highly valued *churuq* are said by the Yapese to be in the language of Ulithi (a neighbouring atoll); however, many of them probably originated in atolls further east (e.g. Woleai, Ifalik) and were taken to Ulithi in a previous step of the chain of obligations within the Yap 'empire'. Most *churuq* concern mythological or historical events. There are three significant steps to the performance of a traditional *churuq*: *nga ni peqning e churuq* ('bringing-down ceremony'), figuratively from the rafters of the community house where all the valuables are stored, after which it is practised for several months; public performance at an event; and finally *matal churuq nga laang* ('hanging-up

4. *Ngal (external duct flute), Yap Islands*

ceremony') wearing full attire in the village. The *tayöer* ('request' dance) was another highly regarded genre for a *mitmiit*.

The *maas* (marching dance) is a modern *churuq* that has become popular since the late 1930s. The accompanying music is a series of *teempraa utaa* (see below). Both the *maas* and, probably after World War II, also the *gamel'*, is frequently performed by students, sometimes with both genders participating. 'Discotheque dance' developed in the early 1970s.

Vocal music is referred to as *taang*. Traditional recitation genres included *faleech* (transmitting recitation); *machib* (initiating recitation), *t'aay* (slandering recitation) and *kaan* (recitation to spirits). Traditional chant genres included *dafeal'* (council chant by a group of men and a concubine of a men's community house by turns), *taangiin ea gamar* (love chant), *taang ko unum* (drinking chant), *sibibi* (lullaby) and *gireeng* (work chant for hauling and canoe-lashing). Each genre had a basic, mainly five-note melismatic melody in strophic or phrase-sequence form. *Taangiin ea gamar* could be chanted only in limited places and on occasions such as a secret meeting with one's lover, or in the men's or women's community house. Most traditional *taang* had died out by World War II.

Teempraa utaa (Japanese-influenced popular songs) began to be composed in the late 1930s. From the 1960s, popular music incorporated elements of American and pan-Pacific pop. Foreign music heard in Yap is predominantly American and Palauan pop. Both radio (since 1964) and television (since 1979) broadcast Yapese dance and popular songs as well as foreign music.

Traditional Yapese instruments included the *ngal* (bamboo flute; fig.4), the same type as the *ngaok* in Palau (see §4 above), *yabul* (conch-shell trumpet), *uchif* (rolled-leaf oboe) and *gamel'* (bamboo sticks for dances, the same as the genre name), which was the only indigenous instrument used in the 1990s.

III. Kiribati (Gilbert Islands)

The 16 low coral islands (many are atolls) of the Gilbert archipelago lie in south-east Micronesia. Together with the Line and Phoenix Islands and Banaba, the Gilberts became independent in 1979 as the Republic of Kiribati. The total land area of 686 km^2, spread over more than 2·5 million km^2 of ocean, supports a population of about 76,000.

Music in Kiribati is primarily vocal, performed in ensemble and, especially for communal and festive occasions, associated with dance. Important to the indigenous culture are the traditional dances and associated dance songs collectively known as *ruoia*. A *ruoia* performance typically begins with an ensemble dance such as the *kawawa*, performed by a small group of men and women already in the *maneaba* (assembly house) to summon others to participate. Other introductory dances include the *arira* or *katika ni bee* (song for the tying on of clothing mats), and often the *wanibanga* and *wantarawa*. Following these are the main dances, which are performed by one to six dancers located in front of the ensemble. These include the *kamei*, considered the 'real *ruoia*', which can be danced by men or women; the female hip-shaking dance, the *kabuti*; and the seated *bino*. More rare are the *kamaototo* and the *tarae*; and the *tie*, *buka*, *buata*, *katio* and *boua*, are possibly obsolete. *Ruoia* genres are marked by slow arm, hand and head movements interrupted by pauses, and (except for the *bino*) small steps forward and backward. A standing chorus of singers (seated for the *bino*), provides rhythmic hand-clapping and body percussion accompaniment. For initial segments they mirror the arm movements of the dancers. Special dance suites (*nantekei*, *ietoa*) celebrate local historical events in the stratified societies of the two most northern islands.

The musical style of the *ruoia* dance-songs such as the *kawawa* belongs to pre-European Kiribati tradition. Song texts are through-composed and recited syllabically using scales of one to five pitches. Men and women sing in parallel octaves, marked by a few heterophonic deviations. Many songs consist of two to three (sometimes four) sections of related text and music, which may be immediately repeated in performance. For each, after the *akeia*, a solo introductory call that sets the pitch, a song leader sings the first line of text and is joined by the chorus at a designated point. The slow, rhythmically free recitation characterizing initial portions of these sections becomes more strict in the final segments, which are accompanied by both choral hand-clapping and body

percussion. Phrase endings employ characteristic melodic and rhythmic cadences, and main sections end with a *motika* (climactic cadential pattern) in both the music and dance. Dance-song genres are differentiated by melodic contour, rhythmic organization, musical form and the number of scale degrees.

Traditional *ruoia* are no longer generally composed; most of those still known and danced appear to have been composed before 1950. According to old custom, *kainikamaen* (performance knowledge), including rituals for song composition, training of composers and inspiration of performers, existed in numerous versions that were the heritage of different kin groups. The most knowledgeable practitioner was the *tia-kanikamaen*, a highly trained priest who was believed to compose songs with supernatural aid. While in a trance, the *tia-kainikamaen* received the words from the *anti* (spirits) and dictated them to assistants at the *nikawewe* (composer's place), after which the composer returned to full consciousness. With the assistants' aid he then combined them into a song text, for which he instantly 'knew' (i.e. spontaneously composed) the melody. In practice, however, new texts could be created for old melodies and vice versa.

The education of a *tia-kainikamaen* spanned years, often from infancy to the mid-20s. Training rituals and incantations took place at special locations such as the ocean, beach or smoky fires built in the bush. Ritual objects included symbols of power such as the rising sun or the first coconut to emerge from the spathe. After the initial stages, a trainee was considered a *tia-ototo*, one knowledgeable in song composing. Later training imparted the remainder of the vast knowledge relating to performing practice and inspiration.

Large *ruoia*, especially those for the emotionally infused *kainikamaen* competitions between kin groups known as *kaunikai*, were usually conceived at the *nikawewe*. A good composer could compose a small love *ruoia* at his own home for a paying customer, and *katake* (traditional solo songs, composed on a variety of topics) originated solely at home. Songs were allowed to be copied by other family groups without restriction; indeed, the composer was proud if his songs were imitated.

In the *kaunikai*, song texts were simultaneously offensive and defensive; they contained imagery and allusion intended to cause harm or death to rivals, as well as protective words and phrases for one's own group. Attractive and powerful songs were an indication of the power and superiority of a kin group's *kainikamaen* heritage, and, by extension, of their ritual knowledge and spiritual influence in extra-musical realms such as warfare. Spiritual contact was evident when a dancer attained a heightened emotional state marked by short screams, a fixed stare and trembling, among other things. Both song texts and dance choreography were consciously structured to facilitate the attainment of this condition.

In addition to the *kaunikai*, music and dance performance was appropriate for life-cycle ceremonies such as first menstruation, male coming-of-age, weddings, funerals, construction of *Maneaba* (meeting houses) and royal events (in the northern islands), as well as village entertainnents marking the lunar month, hospitality for visitors and preparation for warfare.

Vocal types not associated with dance included religious chants, toddy-cutting songs ('toddy' being the sap of coconut palm trees), and *katake*. Singing also accompanied traditional games such as the *karanga* (standing stick dance using one dance staff), *tirere* (seated stick dance using two small sticks) and *kabure* (seated chant with body percussion), which today are often incorporated into dance performances.

By the early 20th century, new forms of music and dance had developed in response to government and missionary censure of traditional performance and the introduction of hymn singing. The music incorporated Western scales and harmonies, but the movements were based on those of *ruoia* dances. New standing dances included the *kateitei*, *kakibanako*, *buki* and *kaimatoa*. They retained the sectional structure of music and text but were distinguished from *ruoia* by a different starting cue (*nako we*, 'let's go') and a seated chorus providing vocal and hand-clapping accompaniment only. The *kakibanako* has sections in both traditional and modern musical style, and the contemporary *bino* may be partially or totally new music. *Kainimeang* are unique dances from the northern two islands that feature different movement styles. Missionaries, who first arrived in 1857, also introduced new Samoan-type dances, most notably the *taubati*, with loose, swinging movements considered more appropriate for Christians.

I-Kiribati have enjoyed learning other Pacific dances and creating new styles. Joint British colonial adminstration with Tuvalu (the Ellice Islands) from 1872 to 1975 resulted in the adoption of the Tuvaluan *fatele* (*batere*) dance as light entertainment (*see* POLYNESIA, §III, 5). The *fatele*'s accompanying rhythmic instrument, a flat wooden box (*baoki*), is also used for the *kaimatoa* and *buki*. Eastern Polynesian dances are admired and performed at events such as wedding parties. The Gilbert Islands originally had no musical instruments, and even now *ruoia* dances are performed without instrumental accompaniment. However, wooden slit-drums, marching band drums and large cracker tins may accompany other borrowed or newly invented dances. Currently the two words *maie* and *batere* are the most common terms for such performances, especially when syncretic dances are included.

The use of composing rituals and shrines has declined during the 20th century, largely due to missionary and government restrictions on indigenous religious practices. Although the power of *kainikamaen* is generally recognized, many present-day composers have been trained using abbreviated versions of rituals; others attribute their compositions to the Christian God. Some continue to use incantations and other ritual activities, but composition has largely become a private rather than communal matter. A song is still judged by its ability to inspire a heightened emotional state in performers and onlookers.

Kainikamaen practice appears to be enjoying a revival in a relatively new vocal genre, the *kuaea* (choir). This musical style is marked by guitar and ukulele (sometimes electronic keyboard) accompaniment, Western musical traits and melodies employing series of repeated pitches and typical phrase endings. Other post-contact forms include church *kairi* (hymns), love songs, *anene* (contemporary songs sung in a relaxed fashion) and music provided by dance bands who play foreign pop and country tunes as well as local songs. Communal music and dance performance is often part of the proceedings of a social gathering called *botaki*, held for church, school, civic or *maneaba* festivities, welcome and farewell parties,

weddings and first birthday celebrations. On urban Tarawa atoll special social groups have formed, centring on *kuaea* or dance performance. More private songs are sung casually by individuals or small groups when working or relaxing. *Katake* are still remembered by some older individuals, and toddy-cutting songs are heard daily throughout the islands.

IV. Mariana Islands

Stretching northwards from Guam for about 560 km, the Mariana Archipelago of 16 mountainous islands lies *c*2400 km east of the Philippines on the western border of Micronesia. Total land area is around 1000 km², and the population in 1990 was about 176,000. The southernmost island, Guam, has been US territory since 1898. The rest of the islands make up the Commonwealth of the Northern Mariana Islands, freely associated and in political union with the USA since 1976.

1. Northern Mariana Islands. 2. Guam.

1. Northern Mariana Islands. Artefacts that have been radiocarbon dated to *c*1500 BCE establish the indigenous Chamorros, named after their chiefs, the Chamurri, as the earliest known inhabitants of Micronesia. Language and betelnut chewing link their culture with Palau, Yap, Sulawesi (Celebes) and the Philippines. Ethnicity reflects Negrito, Malay, Filipino and Chinese ancestry, with Spanish and Mexican influence after 1700. The Chamorros were skilled sailors and used the *sagman* outrigger canoe for travel in the Marianas. From about 850 to 1700 they quarried limestone monoliths called *lattes*, which supported house structures and were regarded as sacred ancestral abodes.

In 1521 Magellan discovered the Marianas and the Philippines for Spain. Between 1565 and 1815 the Acapulco–Manila galleons averaged bi-annual stops in Guam. A Franciscan, Fray Juan Pobre de Zamora, launched a nine-month effort to christianize the Chamorros in 1601. The first official effort began in 1668 with the Jesuit Padre Diego Luis de Sanvitores, who constructed the first church and school and introduced the teaching of plainsong chant.

Resistance to christianization, led by Chamorro chiefs and *makanas* (shamans), was overcome by the Jesuits aided by Spanish militia. By 1710 religious war and epidemic had reduced the population from 40,000 to 2700, mostly women and children on Guam. Ancient chant associated with the power of ancestor cults was extinguished. In 1676 the *Indio Apuro* agreed to stop teaching *mari*, the ancient Chamorro poetic debate based on extemporized couplets (Driver, 1993, p.18). Missionaries adapted this competitive poetic chant technique to the teaching of church doctrine, thus perpetuating this key feature of Chamorro oral and musical tradition. Musical expression that was acceptable to the missionaries survived in the 1700s through the '*magiganga*, a public festivity with slap-stick humour' (*Expediente formado*, 1987), and miracle plays.

Christianization was protested in religious processions by *urritao* (bachelor) song societies bearing ornate carved wooden *tinas* (phallic standards) to counteract the Christian plainsong chanted by students of the *collegio*. The *urritao* also chanted love songs in an allegorical language, *fino gualafon*. Notation of one chant in the ancient Chamorro language is based on a four-note scale (ex.3).

Ex.3 *Chamorro Chant* (Freycinet, 1826, 398)

ku, di - ku, di lin di li - ku.

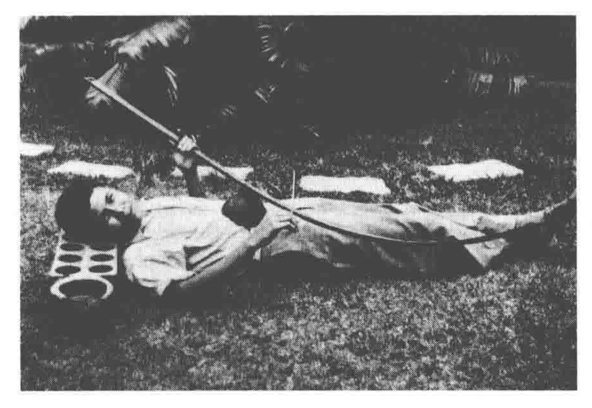
Translation by Illuminata Perez: 'You do this on purpose you women, sitting on my lap in front of me you tease me with your wad of betel, with the peper leaf and the areca nut. That you did, that you did, that you did, at your house, at your house, at your house. Diku, diku, di lin di liku'

Makanas invoked the *manganiti* (souls of dead ancestors) by chanting to the ancestors' skulls, to cast spells on those who did not show respect for the skulls, to cure one who was 'possessed' or to appeal to the skulls to make rain (*maran-anuchan*). In the 1990s the intonation of the rosary and the *novena* by traditional prayer leaders called *techas* (from the Spanish *endecha*) closely resembled the ancient chants, as did the *amaga* chants (*magas* meaning head, chief) that were intoned in courtship ritual. Jesuit efforts to change Chamorro religion established a psychologically important Chamorro counter-culture of survival through song.

In order to indoctrinate the Chamorros to Christianity, the Jesuits matched pre-Christian elements of European May festivals in honour of Mary, such as the Maypole Dance and the *canario*, with pagan Chamorro song and dance and the Dance of Montezuma from Mexico. This metaphorical dance of religious conquest incorporates masked dances similar to *Cristianos y Moros* and the *moresca*.

In the mid-19th century Chamorro historical song commentary developed in reaction to the visits of American and British whaling ships and traders. *Mari*, the Chamorro song poetry, readily absorbed similar Filipino song style and technique to produce the *chamorrita*, an extemporaneous song debate between two poets, expert in Chamorro legend, lore and language, who competed and were judged at village fiestas. They rhymed quatrains of two octosyllabic couplets.

The *chamorrita* also occurred as a dialogue song while fishing, planting, harvesting, roof thatching, tapping the coconut tree for sap to make *tuba* (a fermented beverage) and between a young man and woman during courtship. Dialogue song was sung from house to house until the 1950s, when air-conditioning extinguished that practice. Today it still provides a socially acceptable way for Chamorros to confront one another at a fiesta. Electric guitar accompaniment, country and western style and traditional *batsu* rhythm turned the *chamorrita* into popular song. The term is now generic for all songs in the Chamorro language.



In one ancient Chamorro dance, several women dance in a circle around a male hostage, prevent him from

breaking out, then crown him and regale him with gifts. This hostage theme is encountered in various village activities such as *hodgon songsong* (the work party) as a vehicle for women to demonstrate superiority over men. This hostage dance appears to resemble that of the Negritos of Pampanga in the Philippines. LeGobien describes an animation of the Chamorro matrilineal creation myth as another dance in which '12 or 13 women stand upright in a circle without stirring, singing verses of their poets, shell castanets in their hands, animating their songs with lively action and gestures.' This is similar to the Moro dancing of Mindanao, which consists chiefly of body contortions above the waist and movements of the arms, wrists and hands; the feet are used comparatively little. In the late 19th century the Spanish fandango became the traditional wedding dance. In 1898 Spain sold the islands to Germany, which in turn lost them to Japan during World War I. The schottische (men's round dance) was popular in the early 20th century and shows the German 'polka' influence. Chamorros danced the *kanaka* in the early 1900s, parodying the men's dances of the Carolinians. The Mexican *batsu* is celebrated today as the traditional Chamorro dance.

The *belembao* (musical bow), an icon of Chamorro music culture, may have come from Africa via South America or South-east Asia (fig.5). It is an arc-shaped monochord about five feet long with a calabash resonator. Strings were made of *balibago* (pineapple) fibre and struck with a stick. Chamorros resonate the half-gourd on their belly and call it the *belembao tuyan* (shaking belly), but its use is dying out. *Belembao patchot* designated first the jew's harp and later the harmonica. Chamorros are known to have had two kinds of bamboo flutes, and their use is known to have existed up to 1760. The conch-shell was used as a signal and ceremonial instrument.

Indigenous Chamorro music culture has its roots throughout island South-east Asia, but it does not overly identify with any one particular area and hardly at all with other Micronesian cultures. Its identifying characteristics are song, gesture, humour and the circle dance. Traditional music after 1850 bears Filipino and Mexican influence, and the popular *Chamolinian* ballads mix Chamorro and Carolinian words. American song and dance styles have had a profound influence in the 20th century.

2. GUAM. In the late 1990s modern Guamanian music was flourishing locally and experiencing exportation. Primarily vocal, it is a synthesis of Chamorro, Filipino, Latin American and other genres adopted and adapted through nearly 400 years of cultural contact and colonization. Most song texts are in Chamorro, some are in English. The accompaniment is played sometimes on a single guitar, but electronically amplified keyboards, plucked string instruments and percussion are commonly used. In some instances a saxophone or other wind instrument from the jazz band tradition is added. Pre-European contact forms of music and dance have not survived, but efforts to recreate traditional performing arts are being made through the creative interpretation of historical accounts. The use of the *triton* as a signal horn has been revived in some local performances. The traditional music of the *belembautuyan* was promoted by the last master of the instrument, Jesus Meno Crisostomo (1914–96).

5. Chamorro belembautuyan (musical bow)

Within the populace of nearly 150,000, each resident cultural group enjoys its own music and dance at social events, festive celebrations and in religious observations. For the rapidly expanding tourist industry and the commercial entertainment of residents, hotels provide pan-Polynesian and pan-Micronesian shows. Hotels and private enterprises import performing artists for special productions and help promote local musicians and groups. The Guam Council on the Arts and Humanities administers National Endowment for the Arts grants in the performing arts to individuals and community-based musical ensembles, and it regularly sponsors a delegation of musicians to the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF) and other regional cultural events.

Community organizations include amateur stage bands, choral and orchestral ensembles. Radio and television media increasingly offer programmes and advertising using locally produced Chamorro music. Music taught in schools is essentially Western, with some inclusion of local and regional music and dance. The University of Guam, established in 1968, instituted in 1993 a Bachelor of Arts degree in Fine Arts with a focus on Western music studies. The Micronesian Area Research Center at the University of Guam holds a major collection of research materials about Guam and the region.

V. Marshall Islands

The Marshall Islands lie in two parallel chains called Ratak and Ralik (usually referred to as the sunrise and sunset chains) about 1280 km long in north-eastern Micronesia. Together they comprise 20 atolls with more than 1000 islets and 5 raised coral islands. The total land area is about 180 km², with a population of approximately 45,000.

The first European discovery was made by Spanish navigators in 1526; the archipelago was named after the British Captain John Marshal, who sailed in company with Captain Gilbert along the Ratak chain in 1788. Germany took administrative control of the islands in 1888, followed by Japan after World War I. The Marshalls were under United Nations trusteeship from 1947 until attaining full self-government in 1986 as the Republic of the Marshall Islands, with a Compact of Free Association with the USA.

The most revealing information about pre-missionary music and dance lies in journals from two Russian expeditions led by Otto von Kotzebue between 1815 and 1826. Journal entries mention navigation and singing as the Ratak Islanders' principal pastimes and their favourite possessions as the boat and drum. Crew members enjoyed

being entertained by songs and dances: detailed passages describe commemorative songs composed in their honour, martial dances and *eb*, dramatic presentations described as pantomime with songs, accompanied by singing and drumming. Evenings of dancing and singing served to perpetuate both history and tradition.

Later accounts of traditional performance report sitting dances performed by either men or women, including solo dances by chiefs and women's stick dances. Also described are men's and women's standing dances, including men's stick dances, and tattooing rituals accompanied by singing and drumming. Dances were accompanied by a chorus of women singers, several of whom beat *aje* (hourglass drums). Demeanour was described as frenzied and unrestrained, with trembling of the hands and arms, upper body contortions, eye-rolling and 'wild' singing. However, musical changes were already obvious to these same witnesses. Traditional dances were said to be hard to find, and the *aje* drum, prevalent several decades earlier, was being replaced by tin cans. Church-influenced melodies were becoming customary, and newer dance styles were performed in a measured, tranquil manner.

Of all the foreign contacts, including explorers, traders, whalers, administrators and missionaries, the missionaries had the greatest impact on Marshallese music and dance. Missionaries (including some recently converted Hawaiians) of the American Board of Commissioners for Foreign Missions began establishing missions in 1857. As elsewhere, they sought to replace chants and dances associated with traditional beliefs with hymn tunes. Christian texts were translated into Marshallese, and new ones were written in the vernacular; in both cases musical phrases were extended to accommodate the textual sense, and the musical style of adapted hymn tunes with characteristic phrase endings is today used for both religious and secular songs.

In the 20th century the most important surviving indigenous vocal genres included navigation chants (*alin meto*, *alin jerakrōk*), *eb*, and chants for tattooing (*alin eǭ*) and imparting strength or courage (*roro*, *alin ṃur*). Lullabies (*alin kakiki*), juggling songs (*alin lejǫñjǫñ*), historical songs (*alin bwebwenato*), chants for harvesting, food preparation, canoe-making and fishing, and prayers for a safe voyage and good weather, were still performed in the early 1960s, but tattoo chants and perhaps some of the others are becoming extinct. In the late 1980s many traditional chants were said to be known only by older Marshallese.

The dance chant believed to exhibit the oldest musical style and text is the *jebwa*, a performance said to have been learnt from legendary beings called *noonniep* on Ebeju in the Ujae atoll. Although parts of the text are untranslatable (being in the *noonniep* language), Marshallese opinions about the chant's origin, meaning and performing practice are remarkably consistent, as are versions of the lengthy text collected at various times during the 20th century. Traditionally, the text was chanted by a group of women (*du*, accompanied by one or more drums), while men of high rank performed the energetic dancing with sticks (fig.6) and shouted responses. In 1988 *jebwa* was sung by a single male chanter, a modified form of the traditional drum was played, and the dancers were young men, including schoolboys. Although the length both of textual lines and of musical phrases is irregular, form is readily apparent through the repetition and recurrence of textual and melodic contours, cadential formulae and sectional divisions. The range is narrow, the melodic progression is mostly stepwise (and often sliding), the relationships between principal tones are microtonal, and the rhythm is simple but has no fixed pattern. *Jebwa* is highly valued for maintaining cultural identity and is often chosen for performance to distinguished visitors and for cultural festivals in the Marshalls and overseas.

6. Jobwa stick dance, Marshall Islands, 1962

Other surviving indigenous dances indude the *jiku* (men's standing stick dance from Majuro, today often performed by women), *leṃade* ('using the spear', men's standing stick dance), *jiṃōkṃōk* (women's seated stick dance from Likiep, using two short sticks), *joran* and *keton* (men's standing stick dances), *ebjijet* (men's and women's sitting dances) and *bwijbwij* (standing dance with foot-stamping from Mejit). Like the *jobwa*, several of these dances were obtained from supernatural sources, often during dreams. Although most historical sources indicate a traditional separation of the sexes during dances, in the late 20th century men and women may perform certain genres together.

20th-century secular song forms feature Western scales, melodic contours, metric structures and part-singing derived from hymn tunes. These songs are often composed for specific occasions and remain in the repertory of a village or social group. Types include *alin kaṃōḷo* (song for the *kaṃōḷo*, a festive occasion usually associated with a child's first birthday party), *alin būroṃōj* (sad song), *alin karwanene* (welcome song), *alin wa* (song for launching a new canoe/boat), *alin lokonwa* (sad song of departure), *alin mej* (song for a dead person), *alin ṃaiha* (love song, incorporating sexual metaphor), *alin emḷǫk* (song of remembrance) and *alin kaubowe* (cowboy song). Overwhelming grief can inspire the composition of *alin kāḷok* (song of flying away), stemming from the belief that extreme sadness causes one's soul to separate from the body and take flight. Some of these song genres existed

with traditional music well before the influence of missionaries.

A variety of contemporary dance forms exists, some specifically named. Standing dances are known generally as *eb/leep* (i.e. dance in Ralik/Ratak dialects) and *taidik* (folk dance). These dances are performed in columns, with hopping, shuffling, foot-stamping and arm movements, often miming an activity such as fishing or canoe-paddling. Sitting dances (*ebjijet*) feature arm movements that may be abstract, such as the *deelel* (fan dance) or enactments of specific tasks, such as extracting pandanus juice. The *jurbak* (jitterbug) is performed by columns of young boys. This is regarded as a new version of the *bwijbwij*, enhanced by dance steps learnt from North American servicemen during World War II. Vocal accompaniment is provided by a separate group of singers, a pre-recorded tape or the dancers themselves.

Christmas is an important musical occasion. In the Protestant Church, members from all the islets of an atoll gather for the whole day, and groups (*jebta*) sing both old and newly composed Christmas songs. Informal competition among groups fosters excellence both in performance and song composition. Groups enter and exit the church by dancing in a style called *piit*, marked by simple footwork, arm movements and body turns. Favourite Christmas and Easter songs are performed not only according to the church calendar but on any occasion for singing. Hymn-tune style singing is usually in four parts, but doubling of any or all parts is common. Marshallese choir conductors, as in some other Pacific islands, often move in an almost dance-like manner that incorporates the Western conductor's standard arm movements. Welcome and farewell parties, a child's first birthday, school and youth group functions, events of religious and civic importance, cultural festivals and casual social occasions are all considered appropriate for music and dance.

There were few instruments at the time of European contact. The hourglass *aje* drum was introduced from Melanesia, perhaps via Pohnpei, where the *aip* resembles it in structure (see §II, 5 above). It was single-headed and was held on the lap or under the arm. Finger- and hand-strokes and centre and rim positions were differentiated. One, two or three *aje* (apparently different numbers on different islands or atolls) were played by women to accompany chanting or singing, sometimes with dance or pantomime. The *aje* was also beaten by women to signal and encourage warriors from behind battle lines. It was not played after the early 20th century (as a result of Christian missionary work), and there is only one extant specimen in the Marshalls, in the Alele Museum on Majuro.

The *jilil* (shell trumpet) was primarily a signalling instrument: there are numerous accounts of its being sounded during battles by the highest-ranking man in a canoe and to sound an alarm or call people together. It was also played during dance activities: at the beginning of an event or major section of a dance-pantomime, extensively during a vigorous men's dance and with the *aje* to accompany a vocal duet. There is also a report of its being blown at the water's edge during a chant intended to calm high waves endangering a low coral islet. The *jilel* is still used, especially in outlying atolls. Dance sticks were of two types: short wooden sticks (*jiṃōkṃōk*) for a women's sitting dance and long wooden sticks or spears (*ṃade*), some with decorative plaiting, for men's standing dances. Bamboo, which was introduced subsequent to the keeping of written records, has also been used for men's dance sticks. The guitar, ukulele and harmonica are now considered by the Marshallese to be their principal *kōjañjañ* (musical instruments), and electronic keyboards are gaining popularity with bands that entertain at island functions and night clubs.

VI. Nauru

Nauru is a single, raised coral island of about 21 km^2 located near the equator in the western Pacific. The Nauruan people constitute 58% of an estimated population of 10,000 (1994) and comprise 12 matrilineal clans descended from the original inhabitants, castaways from the Solomons, Carolines, Gilberts and Marshalls. Other Pacific Islanders, Asians and Europeans, mainly employed by the phosphate industry, make up the remaining population. The Republic of Nauru has been independent since 1968, following several foreign administrations since German colonial times (1888–1914).

Pre-European Nauruan life permitted an abundance of activities incorporating music, many recreational and often competitive. Teams of young people enjoyed weeks touring the island singing, dancing and exchanging gifts while being entertained in return, a custom that continued into post-contact times. The pandanus harvest festival occasioned dances and distinctive songs. Ball games, wrestling competitions and the annual contests for catching frigate birds required special incantations, and victory parties for these events were marked by feasts, song and dance. Incantations were also used for kindling fires and for curing and causing illness in others. During the seclusion that marked first menstruation, young women were taught songs by their elders. Girls from prominent families were additionally honoured with communal singing, dancing (including special women's dances), feasting and games. Casual musical activity included topical song composition, dance improvisation and children's game songs. Men sang while fishing, building canoes and 'cutting toddy' (toddy being the sap of coconut palms, fermented to make a sweet beverage). Commemorative and other chants were often illustrated by string figures. Paul Hambruch, ethnographer for the South-Sea Expedition (1908–10), described Nauruan melodies as centring on the first pitch of the phrase, dropping and then rising in pitch level at the end of the line. He reported choral singing as strident, with rhythmic accompaniment. Until the 1880s, an important venue for musical activities was the village meeting house.

Musical instruments included a sharkskin-head hand drum made of a hollow pandanus log (extinct by 1910), played by seated men and women to accompany dances. Dance sticks, including single dance staves (approximately 1 to 1½ metres long) and pairs of rhythm sticks (approximately 20 cm long), provided rhythmic accompaniment for certain dances, and 'toy trumpets' were fashioned from pandanus leaves. The conch-shell trumpet (side-blown triton) was used for signalling, during battles and in religious ceremonies.

Written accounts of traditional dances from the early 20th century describe a war dance, seated dances (including a stick dance), a women's dance accompanied by the men and a dance performed by a man and woman in front of a seated chorus. A standing stick dance and dances based on birds such as the white sea swallow, black sea swallow and frigate bird also existed. Dance

movements included marching with stamping, turning and body percussion, while seated dances employed bodily-swaying and unison arm movement. Prior to an event, weeks of effort were devoted to dance rehearsals and costume construction. Short fibre skirts for women and dance mats for men were enhanced by accessories, including headpieces, sashes and girdles that were considered heirlooms. Songs, dances, legends and painted facial decorations were also regarded as family possessions.

Beginnning in the 1830s beachcombers and whaler ships initiated changes in Nauruan society, which accelerated after 1880 with the establishment of missions, a German administration and, in 1907, the phosphate industry. The missions exerted the most direct effect on music. The Revd Delaporte of the American Board of Commissioners for Foreign Missions arrived in 1899; by 1901 he had established a school that included Western singing in the curriculum, and by 1907 a Nauruan hymn book had been produced. Traditional life-cycle ceremonies and dancing were discouraged, and within several years many purely Nauruan dances had been supplanted by Kiribati forms. Despite the mission's attitude, annual dance festivals on the Kaiser's birthday were encouraged by the German administration. By 1910, Nauruans were playing European instruments; Hambruch (1914–15) saw harmonicas and a 13-piece brass band during his visit.

In the late 20th century Nauruans made a distinction between *iruwo* (chant) traditional musical style and *iriang* (song) music employing Western scales and harmony. *Iruwo* includes old dance and narrative chants as well as honorific, string figure, traditional children's chants and some lullabies. These melodies and associated dances have been revived to entertain visiting dignitaries and for celebrations such as the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF), which has featured music ranging from monotonic speech-like chants that rise in pitch at phrase endings to more melodic tunes based on three to four pitches. The music is rhythmic, with characteristic shouted phrase endings, intermittent vocal ejaculations and a narrow pitch range.

Iriang includes secular songs, hymns and imported children's songs. Accompanied by guitar and ukulele, modern Nauruan songs are sung for enjoyment. Many express love or patriotism, e.g. the national anthem, *Nauru Ubwema* (Nauru, Our Homeland), while others celebrate victories in competitions and sports. Contemporary North American and Hawaiian music are also popular, as are electronic keyboards, synthesizers and modern sound playback systems. Christmas is the most important musical event, celebrated with concerts and carol singing. In addition to choral singing during services, churches also sponsor singing and song composition competitions. Among non-Nauruans, I-Kiribati and Tuvaluan contract workers maintain their music and dance traditions in their communities.

Microphone (Fr. *microphone*; Ger. *Mikrophon*; It. *microfono*). A transducer which converts sound vibrations received from the air into variations of electrical current. The principle of the microphone is the exact reverse of that of the loudspeaker and is very different in size and appearance; however, at a low level of fidelity the two may be interchangeable (*see* PICKUP). Different methods of microphone design have resulted in a variety of directional characteristics, especially cardioid, omnidirectional and figure-of-eight, each of which has its specialized applications.

Microphones are used both for amplification of voices and instruments in live performance and in making recordings. Singing with a microphone necessitates the application of techniques such as turning the head aside from the microphone when taking a breath, and taking care to avoid 'pops' with loud plosive consonants such as 'd' and 't'. Live recording in concerts often involves only two microphones (often configured as a 'crossed' pair) for stereophonic imaging, whereas studio recordings of large forces may require each player or small group of players to be equipped with an individual microphone. For further information see T. Cary: *Illustrated Compendium of Musical Technology* (London, 1992), 273–95.

HUGH DAVIES

Microscopic musical instruments. The techniques of silicon chip manufacture can be used to make a variety of tiny mechanical structures. A side effect of this research has been the development of the world's smallest 'musical instruments'. Tuned resonators can be made of silicon, for example in the form of small beams which behave rather like xylophone bars. A research group from Cornell University has sculpted silicon into a 'nanoguitar' and a 'nanoharp' on this principle. Both have silicon 'strings' with a diameter of approximately one-twentieth of a micron (a micron is a millionth of a metre), which corresponds to only about 100 atoms. Both instruments are approximately a hundredth of a millimetre in length, comparable to the size of a red blood cell. The highest note of the 'harp' has a frequency of 380 MHz, some 16 octaves above the highest note on a grand piano and far beyond the limit of human hearing. Less whimsically, rather similar resonant devices are in regular use for such practical applications as accurate pressure sensors for aircraft.

J. WOODHOUSE

Microtonal instruments. Instruments specially constructed or adapted for performing music in microtonal tuning systems or to give accurate tuning in temperaments other than the 'standard' 12-note EQUAL TEMPERAMENT (ET). This article covers all such approaches, thus including not only unequal temperaments but also equal subdivisions of the octave that are more (occasionally less) than 12. Although some specialists limit the meaning of 'microtonal' to intervals that are less than a quarter-tone, others more logically apply it to all intervals that are smaller than the semitone, adopting the term 'macrotonal' for the few tunings that use larger intervals (primarily nine-, ten- and 11-note). This article deals only with Western instruments; instruments constructed in other parts of the world for the performance of music in systems of intonation other than 12-note ET are dealt with under their own headings.

Three main periods can be distinguished in the development of Western microtonal instruments: the work of

theorists in the 16th and 17th centuries, acoustic research in the second half of the 19th century, and the explorations of composers, performers and researchers throughout the 20th century. Until the end of the 19th century there was little interest in microtonal composition based on more than 12 equal divisions of the octave; but this has been the main preoccupation in the 20th century in this area, and many composers who are not primarily concerned with microtonal systems have nonetheless included microtonal inflections in their works at some time, whether for traditional instruments or in electro-acoustic music.

In this article instruments are described as having a certain number of notes to the octave; 'equal' and 'unequal' temperaments are respectively those in which the octave is divided into equal or unequal intervals by the notes; 'just' indicates JUST INTONATION, and 'mean' mean-tone temperament (both of which are unequal; *see* TEMPERAMENTS). On some ENHARMONIC KEYBOARD instruments and some instruments constructed since the 19th century certain pitches have duplicate keys for ease of fingering, so that there are more keys than notes to the octave. In other cases a single standard keyboard with 12 keys to the octave is used, together with switches, each of which assigns a specific intonation system to the keyboard.

1. TO 1750. Before the establishment of equal temperament in the course of the 18th century, a number of investigations were carried out into intonation and tuning systems, in many instances inspired by a renewal of interest in ancient Greece and the three genera (diatonic, chromatic and enharmonic) of the Greek modes. Those principally active in this area in the 16th century were the theorists Francisco de Salinas, who proposed the use of 19 notes to the octave and probably perfected mean-tone temperament, and Gioseffo Zarlino, who investigated systems of 17 and 19 notes to the octave and contributed significantly to the development of 12-note ET. In the 17th century Nicolaus Mercator suggested 53 equal divisions of the octave and Marin Mersenne and Christiaan Huygens 31; these result virtually in just intonation and mean-tone temperament respectively.

A few microtonal instruments with enharmonic keyboards were constructed during this period for the performance of music in specific intonations. In Venice Domenico da Pesaro built for Zarlino an enharmonic harpsichord with 19 notes to the octave (described in Zarlino's *Le istitutioni harmoniche*, 1558/*R*). Nicola Vicentino made instruments which he called the *arcicembalo* (by 1555, recently reconstructed by Marco Tiella) and *arciorgano* (by 1561); both had 31 notes to the octave with two manuals each having three terraces of keys, and they were designed to play in mean-tone systems. Around 1590 Elsasz built a *clavicymbalum universale* (19 notes, mean) for CARL LUYTHON. Over the next 100 years several other enharmonic harpsichords were constructed, principally in Italy, including those of Vito Trasuntino, Fabio Colonna, G.P. Polizzino (for G.B. Doni), Francesco Nigetti, Galeazzo Sabbatini and Nicolaus (or Jacopo) Ramerini.

2. 1750–1900. During the decades when 12-note equal temperament was becoming widespread in its use other intonation systems persisted, especially in solo performances on keyboard instruments; unaccompanied voices and string instrument players continued (and still continue) to adjust their intonation according to context. Special instruments, like Charles Clagget's 39-note grand piano called the Telio-chordon (patented in London in 1788), were rare in this period. By the time the majority of musicians and manufacturers had adopted equal temperament, in some cases as late as the middle of the 19th century, it was the turn of the practitioners of the new science of acoustics to explore different tuning systems. A number of pipe and reed organs were built or modified for this purpose, beginning with Henry Liston's 56-note 'euharmonic' pipe organ of about 1812. Some of them are described in Table 1. Instruments from this period that did not have a keyboard include General Thomas Perronet Thompson's enharmonic guitar (?1829; for illustration *see* JUST INTONATION, fig.5), the 31-note 'githárfa' (Ger. 'Guitharfe') built by the Hungarian physicist József Petzval in Vienna in 1862, and a quarter-tone trumpet (1893, now in the Odessa Conservatory). In 1864 a piano tuned in just intonation was built for the Russian Prince Vladimir Fyodorovich Odoyevsky.

3. 1900–30. Around 1890 Carl Andreas Eitz began to explore quarter-tones (*see* EITZ METHOD); similar interests were soon pursued by others, especially in Germany, and inaugurated a new phase in microtonal music. This was characterized by the appearance not only of a considerable number of compositions in various tuning systems, but also of a great variety of specially constructed instruments.

Before the 1890s only a few quarter-tone instruments were constructed; they included one inspired by the Greek modes and built around 1850 by Alexandre-Joseph Vincent and Bottée de Toulmon (for which Joseph Lubet d'Albiz wrote *Création harmonique: étoile musicale composée pour piano ou orgue à quarts de ton*, *c*1858), and a set of tuned glasses and an instrument with about 24 strings made around 1885 by George Ives (father of Charles). From 1890 a considerable number of quarter-tone pianos and reed organs were built (Table 2), as well as a few in other tunings. Some of these instruments have two manuals tuned a quarter-tone apart; others have three manuals, the third duplicating the first to allow alternative fingerings (on the manual furthest from the player the white keys are the same size as the black ones). Those instruments with a single manual, including the harmoniums by Max F. Meyer and von Moellendorf, have unconventional keyboard lay-outs (*see also* KEYBOARD, §3).

Much of the quarter-tone music written in this period involves retuning or fingering differently existing instruments. The earliest composition to use quarter-tones appears to have been Halévy's *Prométhée enchaîné* (1849), in the string parts; in 1898 the British composer John Foulds wrote a string quartet (now lost) that used quarter-tones, and from 1905 he included microtones for bowed strings in other works. The first important quarter-tone composition, and perhaps the first fully microtonal work, was Charles Ives's *Chorale* for strings; this was variously dated 1903–14 and 1913–14 by the composer, and was probably based on experiments carried out with two pianos tuned a quarter-tone apart about 1900–01. The *Chorale* is also lost, but it was arranged for two pianos by Ives as the last of his *Three Quarter-Tone Pieces for Two Pianos* (1923–4), from which Alan Stout has reconstructed the original. Quarter-tones also occur in

TABLE 1: Microtonal pipe and reed organs in the 19th century, often with special keyboard layouts, mostly for acoustic research (some with a limited compass); several of these instruments are preserved in museum collections.

Instrument	*Date*	*Specification*	*Inventor, builder*
'euharmonic organ'	*c*1812–7	12 keys, 49 notes (12 pedals), just	Henry Liston (Edinburgh?), Flight & Robson
'enharmonic organ'	1834	just	Thomas Perronet Thompson (London), built by Robson & Sons
'euharmonic organ'	*c*1850	12 keys, 50 notes (11 pedals), just	Henry Ward Poole (Boston, MA), with Joseph Abbey
'enharmonic organ'	*c*1850	just	Thomas Perronet Thompson, built by Robson & Sons [honorary mention at 1851 Great Exhibition, London]
'enharmonic organ'	1856	3 manuals, 65 keys, 40 notes, just, and ?12 notes, equal	Thomas Perronet Thompson, built by Robson & Sons
'justly intoned harmonium'	*c*1862	2 manuals, 12 keys, 31 notes, just, and 12 notes, equal	Hermann von Helmholtz (Heidelberg), built by J. & P. Schiedmayer
organ (unfinished?)	1867–?	100 keys, 100 notes, just	Henry Ward Poole
2 'mathematical harmoniums'	*c*1868	36 and 53 notes, just	Georg Appunn (Hanau)
'just English concertina'	*c*1870	14 keys, 14 notes, just	Alexander J. Ellis (London)
'enharmonic harmonium'	1872–3	84 keys, 53 notes, equal (= just)	Robert H.M. Bosanquet (Oxford), built by T.A. Jennings [restored in 1980s]
'harmonical' 'just harmonium'	} *c*1874	12 keys, 12 notes, just	Alexander J. Ellis
'enharmonic organ'	1875	84 keys, 48 notes, 'Helmholtz temperament' and 36 notes, mean	Robert H.M. Bosanquet, built by T.A. Jennings
'voice harmonium'	1875	45 keys, 45 notes, just	Colin Brown (Glasgow)
3 'harmon' harmoniums	1877–87	56 keys, 53 notes, equal (= just)	James Paul White (Springfield, MA)
'mathematical harmonium'	*c*1880	36 notes, just	Gustav Engel (Berlin)
Enharmonium	1889	20 keys, 20 notes, just	Shôhei Tanaka (Berlin), built by Johannes W. Kewitsch
harmonium	1891	45 notes, just	Joachim Steiner (Germany)
Reinharmonium	1892	5 manuals, 36 notes, just, Pythagorean, and 12 notes, equal	Carl Andreas Eitz (Eisleben), built by [J. & P.] Schiedmayer Pianofortefabrik
Reinharmonium	1892	5 manuals, 104 notes, just, Pythagorean, and 12 notes, equal	Carl Andreas Eitz, built by [J. & P.] Schiedmayer Pianofortefabrik
'syntonisch reingestimmte Orgel'	1893	20 keys, 36 notes, just	Shôhei Tanaka, built by Walcker

Ives's Symphony no.4 (*c*1912–18 and his unfinished *Universe Symphony* (*c*1915–28).

Other quarter-tone practitioners before 1930 included Julián Carrillo, who evolved the theory of *el sonido trece* ('the 13th sound') in 1895 (see MICROTONE), but wrote no microtonal music until 1922; Arthur Lourié, who between 1908 and about 1915 wrote a number of works, including a string quartet (1910), as well as a *Prélude* for quarter-tone piano (1915); Mikhail Vasil'yevich Matyushin included quarter-tones in his Futurist opera *Pobeda nad solntsem* ('Victory over the Sun', 1913); and several Soviet composers in the mid-1920s, including Georgy Mikhaylovich Rimsky-Korsakov, who founded the Petrograd society for quarter-tone music (1923) and directed its ensemble (1925–32), which included a quarter-tone harmonium, two pianos tuned a quarter-tone apart, retuned harp and, in 1932, the electronic Emiriton; Arseny Mikhaylovich Avraamov (who also devised an 'ultrachromatic' ⅛-tone 'universal system of tones'), Nikolay Malakhovsky and Aleksandr Aleksandrovich Kenel; and a number of musicians who developed or commissioned special instruments (see below). During this period quarter-tones were also briefly exploited in single works by Vittorio Gnecchi, Ernest Bloch and Alban Berg. Hans Barth featured his 1928 quarter-tone piano in several works, including a *Concerto* with string orchestra (1930), and many quarter-tone works were composed by Alois Hába and his students, and by Ivan Vischnegradsky.

Reed organs using other microtonal tunings were also constructed at about this time. Ferruccio Busoni, inspired in 1907 by reports of the second model of Thaddeus Cahill's TELHARMONIUM (which had 36 notes to the octave in just intonation), experimented in New York (probably in 1910 or 1911) with a rebuilt three-manual harmonium tuned in ⅓-tones; a two-manual ⅙-tone instrument constructed for him by J. & P. Schiedmayer was completed only in 1925, several months after his death. In Cambridge Wilfrid Perrett built a harmonium in just intonation with 19 notes to the octave (*c*1925) which he called the 'olympion'. An electric harmonium designed by Lev Termen around 1926 (but not completed) was tunable in subdivisions of up to 1/100-tones. Hába commissioned a ⅙-tone harmonium from August Förster in 1927. In 1932 Shôhei Tanaka, working in Tokyo, produced an instrument with 21 keys per octave (assignable to 46 notes) in just intonation. Around the same time the Polytone, a 60-key, 53-note harmonium with a special keyboard, consisting of ten rows of differently coloured keys, was constructed for the composer Arthur Fickénsher at the University of Virginia. From the early 1930s several 43-note harmoniums were constructed by Harry Partch under the names Ptolemy and Chromelodeon.

Microtonal instruments other than keyboards from the first half of the 20th century include the quarter-tone clarinet (*c*1906) of Richard Heinrich Stein; the 'intonarumori' (from 1913) of LUIGI RUSSOLO, in all of which divisions of at least ⅛-tone were possible; a quarter-tone violin (up to 1915) and a string instrument (1920) that combined features of the violin and balalaika, devised by Matyushin (who had published a quarter-tone violin tutor

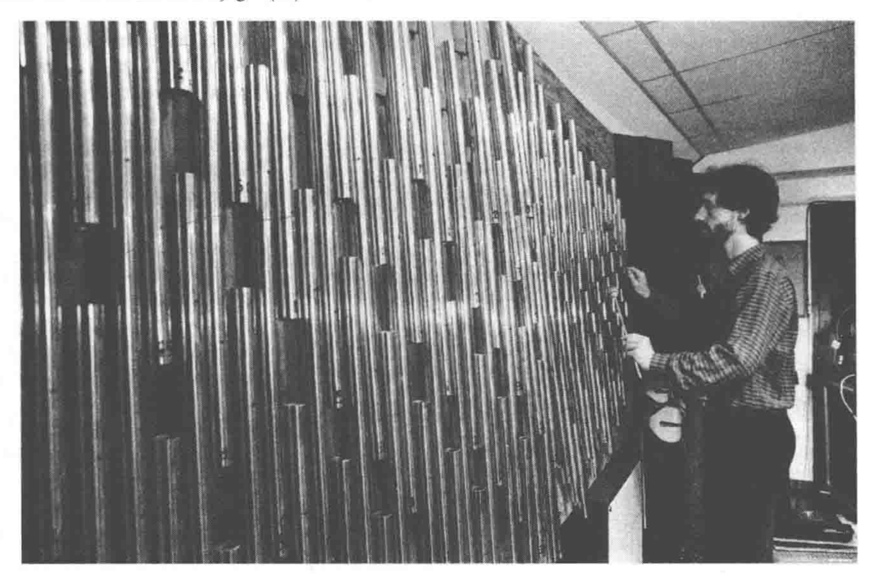
TABLE 2: Quarter-tone pianos and reed organs, 1890–1935

Instrument	*Date*	*Inventor, builder*
'achromatisches Klavier' (2 manuals)	1892	G.A. Behrens-Senegalden (Berlin)
harmonium (1 manual)	1902	Max F. Meyer (USA)
harmonium	*c*1906	Josef Anton Gruss (Franzensbad, Bohemia, now Františkovy Lázně)
harmonium (2 manuals)	1911	Jörg Mager (Aschaffenburg), built by Steinmeyer
piano (unfinished)	*c*1913–14	Arthur Lourié (St Petersburg), built by Maison Diederichs
'bichromatisches Harmonium' (1 manual)	1915	Willi von Moellendorf (Berlin), built by Otto Pappe
'Orthotonophonium' (harmonium)	1914	Arthur von Oettingen (Leipzig), built by Schiedmayer Pianofortefabrik
'enharmonium'	1921	Silvestro Baglioni (Rome)
piano (2 manuals)	1922	Ivan Vïshnegradsky (Paris), built by Pleyel
piano (2 manuals)	1924	Moritz Stoehr (New York)
piano (3 manuals)	1923–4	Alois Hába (Berlin), Ivan Vïshnegradsky, built by Grotrian Steinweg
piano (2 manuals)	1924	Alois Hába (Prague), built by Förster
piano (3? manuals)	1924	Ivan Vïshnegradsky, built by Otto Pappe
harmonium	*c*1925	Georgy Mikhaylovich Rimsky-Korsakov (Leningrad)
harmonium	*c*1927	Oliviero [?Olivieri], (Turin?)
piano (2 manuals)	1928	Hans Barth (New York), built by George L. Weitz of Baldwin
piano (3 manuals)	1925–9	Alois Hába, built by Förster
piano (3 manuals)	1928–9	Ivan Vïshnegradsky, built by Förster
2 pianinos	1931	Alois Hába, built by Förster
harmonium (3 manuals)	1931	Alois Hába, built by Förster

in 1912); Carrillo's $\frac{1}{8}$-tone *octavina* (which resembled a bass guitar), his $\frac{1}{8}$-tone *arpa citera* or 'harmony harp' (*c*1922), 14 other instruments in the same family tuned to subdivisions between $\frac{1}{3}$- and $\frac{1}{16}$-tones, and a quarter-tone trumpet and horn, all built during the 1920s; the six-string violins that formed part of a microtonal ensemble directed by Paul Specht in the mid-1920s; Eduardo Panach Ramos's $\frac{1}{3}$-tone, *citarina*-like 'triola'; and the quarter-tone instruments built for Hába (clarinets, 1924 and 1931, by F.W. Kohlert; trumpets with a fourth valve, 1931, by F.A. Haeckel; guitar, 1943).

A $\frac{1}{12}$-tone version of the ondes martenot was made in 1938 at the request of the Indian poet and composer Rabindranath Tagore for performing rāgas, and in the same year Messiaen composed two quarter-tone *Monodies* for solo ondes martenot. In 1930 Carrillo established the microtonal Orquesta Sonido Trece, which toured in Mexico during the next decade.

4. After 1930.



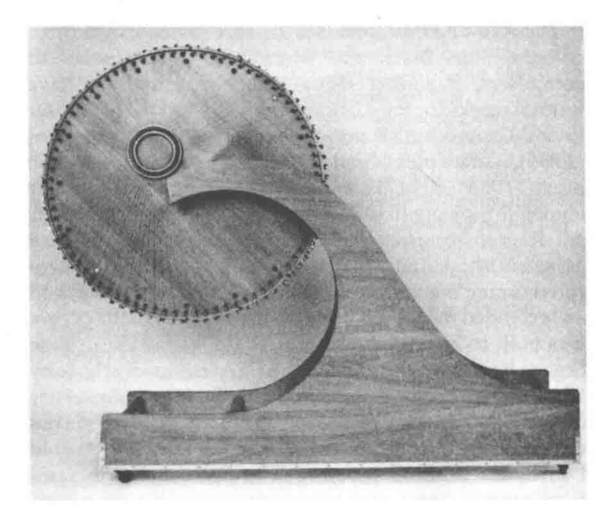
(i) Harry Partch and the California group. The first substantial range of less conventional microtonal instruments was constructed by the American composer Harry Partch from 1930; they employ a 43-note scale in just intonation. Besides inspiring a considerable number of instrumental inventions, including many later instruments in specific microtonal tunings, Partch's work has shown composers and performers that musicians who are reasonably skilful with tools can themselves create instruments appropriate to their ideas without much expense or assistance.

From the late 1940s Partch spent most of his time in California, where, as a result of his presence and ideas, a group of instrument makers concentrating on microtonal inventions has grown up. Ivor Darreg began to build and compose for new instruments in the mid-1930s (though initially he was probably unaware of Partch's work); he explored many equal and just systems. He re-fretted guitars in 17-, 19-, 22-, 24- and 31-note tunings and made several versions of three types of steel guitar with two or four separate sets of strings in different tunings (Kosmolyra, Hobnailed Newel Post and the bass Megalyra). The electrically amplified keyboard Megapsalterion (1971), which has 158 strings tuned to an overtone series, was based on his 'amplifying clavichord' (1940).

Ervin Wilson, working in West Hollywood from the early 1960s, has devised many lay-outs for keyboard and keyed percussion instruments in microtonal tunings, re-fretted guitars, and built several 'Tubulongs': tubular metallophones, usually tuned to give 31 equal divisions of the octave but sometimes in other equal or just tunings, including the 31-note Chromaphone and the 22-note Transcelest (1967), which has three rows of keys made from square brass tubing. The 19-note Hackleman-Wilson clavichord (1975) was built by Scott Hackleman to Wilson's keyboard design. Another 19-note clavichord was constructed at around the same time by Craig Hundley (now Huxley), a former student of Wilson's. Huxley's instruments also include a Tubulon (a large array of suspended aluminium tubes tuned in 53 equal divisions; fig.1) and the Blaster Beam; this is a water-filled aluminium beam 6 metres in length, along which 24 strings are stretched and amplified by means of movable magnetic and crystal pickups. Another influential Californian is the composer Lou Harrison, who has constructed many instruments in 12-note ET and other equal and just tunings since around 1940, including his 'tack piano', clavichords and copies of oriental instruments. Later he collaborated with William Colvig, and together they constructed in the early 1970s what was probably the first American gamelan (*see* Gamelan, §II).

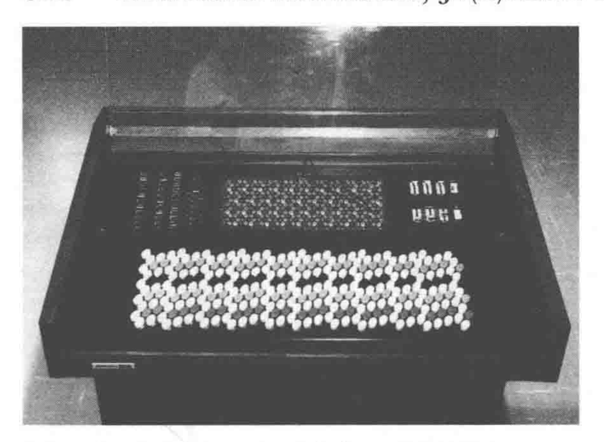
A younger group, who, unlike Partch did not restrict their work to a single tuning system, was centred on Jonathan Glasier and the Interval Foundation at San Diego (the Foundation published a quarterly journal from 1978 to 1987). In 1977 Glasier built a Harmonic Canon (modelled on that of Partch), which is tunable to any system; other instruments by him are an adaptation of a commercial Hawaiian guitar to create the microtonal 'Fender four-neck steel', and the Godzilla, which consists of tuned metal rods welded to a sawn-off oil drum. Glasier and others are also involved in improvisation, often with inventors of non-specifically tuned instruments, such as Prent Rodgers (who also built instruments that use 31-note equal or just intonation).

Cris Forster has made several instruments in 56-note just tuning: two of them, the Harmonic/Melodic Canon and Diamond Marimba, were inspired by Partch; a third, Chrysalis (fig.2), consists of a disc mounted vertically on a stand with 82 strings on each face, which radiate out from an off-centre circular bridge. The composer David Cope has constructed several percussion instruments



1. Craig Huxley (1980) playing his Tubulon

tuned to 33-note just intonation. Other inventions to come out of California include Tillman H. Schafer's Undevigintivox, a 19-note metallophone (early 1960s), and a more recent 53-note metallophone built for Larry A. Hanson. Schafer (now based in Boston), Warren F. Kimball and others have refretted guitars. Kimball and Skip La Plante in New York have built microtonal 'harmonic canons' inspired by Partch.

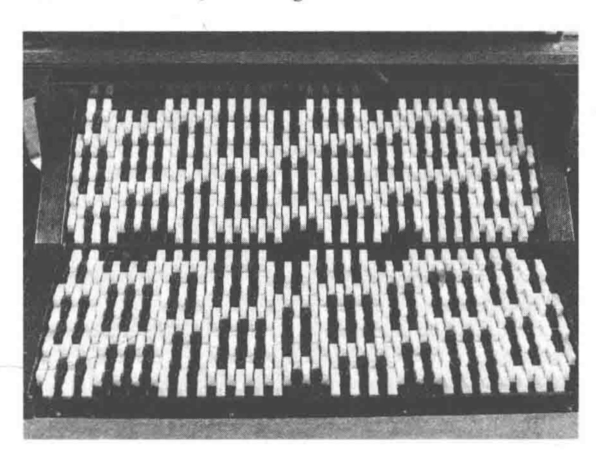


In California there has also been some use of microtones in jazz. In the mid-1960s the Hindustani Jazz Sextet explored both microtones and complex time signatures (from 5/4 to 33/16). The Sextet included two musicians who went on to form their own bands in the late 1960s: the trumpeter Don Ellis, who commissioned from Frank Holton & Co. quarter-tone trumpets with a fourth valve for the whole of his trumpet section; and the percussionist Emil Richards, whose Microtonal Blues Band consisted of several electro-acoustic instruments and a wide range of percussion from many cultures, tuned microtonally to give, for instance, 22, 24, 31, 33 and 43 subdivisions of the octave.

(ii) Electronic instruments. Since World War II, electronics have been widely applied to microtonal keyboard instruments, and electronic instruments have been used to perform microtonal music. In the late 1940s Percy Grainger, searching for means of producing 'gliding tones', simulated them by using $\frac{1}{6}$- and $\frac{1}{8}$-tone tunings respectively in the first two models of the CROSS-GRAINGER FREE MUSIC MACHINE. Between 1950 and 1957 Yevgeny Murzin developed the ANS, a photoelectric composition machine tuned to 72 equal octave divisions ($\frac{1}{12}$-tones). In the mid-1960s Robert Moog constructed three microtonal electronic keyboard instruments: one with 43 notes to the octave over a range of four octaves; one with 31 notes to the octave and a total of 479 keys for a range of seven octaves; and one with 137 keys. At about the same time a microtonal version of the Ondioline was produced for the composer Jean-Etienne Marie by Georges Jenny; this could be tuned in a variety of systems (e.g. divisions of the tone into between three and seven). On the basis of principles proposed by Alain Daniélou, Stephan Kudelski designed a 53-note unequally tempered keyboard instrument in the early 1960s in collaboration with the harpsichord builders Wayland Dobson and Jean Eicher; this was followed in the late 1970s by the S52, built by Claude Cellier and André Kudelski and tuned to 52 notes per octave, with a touch-sensitive keyboard the compass of which can be transposed within a total range of eight octaves. The 31-note Arcifoon was manufactured in Holland from 1971 (see §4 (iii) below). In the early 1970s George Secor and others developed the Scalatron (fig.3), in which each note is independently tunable; Kenneth Macfadyen's 'detunable organ' (1968–9, constructed by A.E. Davies & Son) is similarly conceived, though its tuning (including mean-tone) can be reset instantly while that of the Scalatron must by fixed one note at a time. An electronic organ constructed by Ivor Darreg in 1962 retunes itself automatically to any of several different systems. The *ekmelische Orgel* of Franz Richter Herf (1973–4), built with the assistance of Rolf Maedel, has three 84-note manuals tuned to 72 divisions of the octave; from 1971 Herf composed in this system.

Some synthesizer keyboards, which can be adjusted not only in range but also in compass, have been used to create any number of equal divisions of the octave. The

2. Chrysalis (1976) by Cris Forster



3. Second version of George Secor's Scalatron (1979–81), an electronic microtonal keyboard instrument; the 294 colour-coded keys provide up to 56 individually tunable notes to the octave and the instrument has a memory that can store up to 17 tuning systems

American composer Easley Blackwood has used Moog and Polyfusion synthesizers and the Scalatron in this way, and John Eaton has performed on the Synket in a number of his microtonal compositions; La Monte Young has used a Moog synthesizer and Terry Riley a Yamaha electronic organ to play music in just intonation. The digital EGG synthesizer added a manual with three rows of keys tuned in quarter-tones (197 keys in all) to an 85-note standard equal-tempered manual. In the early 1950s composers working in the electronic music studio at the Nordwestdeutscher Rundfunk in Cologne used various equal subdivisions of the octave or of larger intervals in order to avoid 12-note equal temperament: in Stockhausen's *Studie II* (1954) 28 semitones ($2\frac{1}{4}$ octaves) are divided into 25 equal intervals so that there are no octave relationships, and *Gesang der Jünglinge* (1955–6) uses up to 60 divisions of the octave with vocal material and 42 with electronic sounds.

(iii) Other developments. Microtonal keyboards have preoccupied inventors rather less in the period since World War II. The 31-note organ of Adriaan Fokker (1950) and its later electronic version the Arcifoon (1971) have a 31-note, equally divided octave, based on Christiaan Huygens's theories; they have a keyboard like that introduced by Bosanquet (see Table 1) with keys in three colours, blue, black and white (fig.4). A number of composers, including Hába and Vïshnegradsky, have written works for the 31-note organ. In Oslo the composer Eivind Groven built a non-tempered 36-note harmonium (1936), a small pipe organ (1954) and a 43-note electronic organ (1965), all in just intonation; around 1970 a similar complete pipe organ was constructed for him by Walcker. All four instruments use conventional keyboards with assignment facilities. In the 1940s A.R. McClure advocated tuning pianos and organs in mean-tone tuning, and an 'extended meantone organ' with 19 pipes to the octave was built to his specification in 1950; several mean-tone organs have been installed in the USA, especially those by Charles Fisk from about 1980 (his Stanford University organ has 17 pipes to the octave, and may be played either in mean-tone or well-tempered tuning). Arnold Dreyblatt's portable pipe organ in just intonation dates from around 1980, and Harold Waage's just intonation electronic organ from around 1985. Michael Harrison's modified 'harmonic piano' with 24 notes per octave, permits a choice of two different just intonation tunings.

A series of *pianos metamorfoseadores* (microtonal upright pianos with conventional keyboards), each in a different tuning from $\frac{1}{3}$- to $\frac{1}{16}$-tones, was planned by Carrillo in 1927; a $\frac{1}{3}$-tone grand was built in 1947 and the uprights (by the Carl Sauter Pianofortefabrik in Spaichingen, Baden-Württemberg) in 1957–8. The range of these pianos becomes smaller as the number of subdivisions of the octave is increased, so that the $\frac{1}{16}$-tone instrument has a compass of a single octave, in the middle range, with 97 keys. Many of Carrillo's instruments are housed in the Carrillo Museum in Santismo. From the 1930s Augusto Novaro, a former pupil of Carrillo's, built pianos that sounded less percussive than normal and were tuned in 14, 15 and 16 divisions of the octave in a system based on beats; he also constructed Novares, asymmetrical plucked string instruments in 15, 16, 53 and 72 equal divisions.

Activities in building microtonal instruments without keyboards have been largely concentrated in California; elsewhere developments have been sporadic. Since 1977 Dean Drummond in New York has built a family of Zoomoozophones: aluminium tube metallophones in 31-note just intonation, as well as the one-octave set of just intonation Juststrokerods. In Toronto the composer Gayle Young produced Columbine in 1977–8, a 61-note steel tube metallophone covering nearly three octaves in a 23-note unequal temperament based on frequency ratios; she followed it in 1980 with Amaranth, a koto-like instrument with 24 strings and movable bridges, which is tuned in various systems and can be plucked, struck and bowed. The Six-Xen was constructed for Xenakis's *Pléïades* (1979), written for Les Percussions de Strasbourg; this is a set of six 19-note metallophones, each of which provides different pitches in an unequal scale of 21 notes to the octave, consisting of alternate $\frac{1}{4}$- and $\frac{1}{3}$-tones. John Grayson in Vancouver employed non-equal tunings in some of his instruments, such as the Pyrex Marimba (1967) which has 24 notes in a compass of about one and a half octaves. Since Carrillo's death in 1965 the *arpa citera* has been redesigned in Cuernavaca by Oscar Vargas Leal and the composer David Espejo Avilés; several large *arpas armónicas* with 400 notes to the octave have been built, as well as smaller models, including a three-octave version with

4. The manuals of Fokker's 31-note pipe organ, 1945–50 (Teyler Museum, Haarlem); each manual has 143 black, white and blue keys, giving a 31-note octave tuned in equally tempered $\frac{1}{5}$-tones

100 notes in ET played by Pepe Aton Estevane since the late 1970s. Péter Eötvös has performed on a '55-chord', a specially built Hungarian *citera* tuned in intervals based on the golden section, which results in a logarithmic scale lacking any integral frequency ratios or interval steps of identical size. Pierre-Jean Croset's 18-string amplified 'lyre harmonique' (1976), tuned to natural harmonics, is based on the 'harmonic canon'. Since 1983 the composer James Wood has constructed keyed percussion instruments for use in his own compositions, including a quarter-tone marimba and the *microxyl* (microtonally-tuned stroked rods). Warren Burt wrote several works from 1985 for his four-octave set of aluminium tuning-forks tuned in 19-note just intonation. Markus Stockhausen's quarter-tone flügelhorn is a specially-modified Besson instrument. Eva Kingma of Groloo, the Netherlands, has patented a 'Key-on-key' mechanism for quarter-tone alto and bass flutes; based on her patent, quarter-tone flutes and piccolos have been built by Brannen Brothers Flutemakers in Woburn, Massachusetts.

Many of the new acoustic and electronic instruments produced by musicians and sound sculptors use non-tempered tunings that are microtonal but do not adhere to any specific system. Examples include some of the work of Mario Bertoncini and the Sonambient series of Harry Bertoia, which produce constellations of microtonal intervals. Microtonal systems are equally feasible with the techniques of DRAWN SOUND.

However, composers and performers more often prefer to use conventional instruments that are retuned or specially fingered (see INSTRUMENT MODIFICATIONS AND EXTENDED PERFORMING TECHNIQUES); works for microtonal piano have often been played on two adjacent instruments tuned a quarter-tone apart. Ben Johnston's *Sonata/Grindlemusic* (1965) requires a piano tuned in a just system in which only seven pairs of keys, mostly several octaves apart, give octave relationships. Just intonation is also used in La Monte Young's *The Well-Tuned Piano* (1964), which has been revived effectively since 1974 with a Bösendorfer piano. Serge Cordier has specialized in tuning pianos to equal temperament with justly tuned 5ths. Bjørn Fongaard wrote several works from the mid-1960s involving quarter-tone guitars, and the guitarist John Schneider performs in mean-tone, just and Pythagorean tunings. In the 1950s and 1960s Maurice Ohana used zithers tuned in $\frac{1}{4}$- and $\frac{1}{3}$-tones in several works. Henri Pousseur adopted a 19-note tuning in his solo cello piece *Racine 19* (1975), and quarter-tones have been used, primarily but not exclusively with bowed string instruments, in works by Boulez, Ligeti, Penderecki, Xenakis, Per Nørgård, Heinz Holliger, Alain Bancquart and others. Jean-Etienne Marie composed for some of Carrillo's instruments (several of which were in his possession), for the microtonal Ondioline and for synthesizers such as an Oberheim. Pavel Blatný wrote a Study for quarter-tone trumpet and jazz orchestra in 1964. Microtonal inflections and beats are featured in works by Giacinto Scelsi, Phill Niblock, Kenneth Gaburo, George Crumb, Sergey Slonimsky, Peter Sculthorpe and Alvin Lucier. Manfred Stahnke's orchestral *Metallic Spaces* (1978) uses $\frac{1}{12}$-tone tuning, and he has specialised in just intonation and beats. Larry Polansky has also concentrated on just intonation. Since 1989 Klaus Huber has composed several works that include bowed and plucked string instruments in $\frac{1}{3}$-tones.

In New York a variety of conventional instruments have been played microtonally, especially in the series of concerts given since 1981 under the title American Festival of Microtonal Music; these are organized by a leading participant, the bassoonist Johnny Reinhard. Refretted guitars and the Scalatron have also appeared in these concerts. Tui St George Tucker has specialized in quarter-tones since the 1950s, especially in her compositions for members of the recorder family. A number of microtonal ensembles have been active in the USA, including the Interval Players, The Newband, Sonora and John Catler's 31-note rock group, J.C. and the Microtones.

HUGH DAVIES

Microtone. Any musical interval or difference of pitch distinctly smaller than a semitone. Some writers restrict the term to quantities of less than half a semitone; others extend it to refer to all music with intervals markedly different from the (logarithmic) 12th part of the octave and its multiples, including such scales with fewer than 12 pitches as are used, for example, in south-east Asia.

Microtones encountered in music theory include the tiny enharmonic melodic intervals of ancient Greece, the several divisions of the octave into more than 12 parts, and various discrepancies among the intervals of just intonation or between a sharp and its enharmonically paired flat in various forms of mean-tone temperament. The Indian concept of a *śruti* might also belong in this list (*see* INDIA, SUBCONTINENT OF, §III, 1(ii)(a)). Intervals incompatible both to the just and to the Pythagorean diatonic scale appear in Arab music theory in the 10th century, in al-Fārābī's definition of the *ṭunbūr chorasanī* tuning, and proliferate subsequently (*see* ARAB MUSIC, §I, 3(ii)). The theory of Byzantine chant also mentions microtonal intervals, although indirectly at first, associating them with the *phthora*, which may denote alteration, modulation or microtonal inflection depending on the context. Manuscripts of the 15th and 16th centuries explicitly describe microtonal intervals as 'minute parts of the tone' or 'thirds or quarters of the tone'. Near Eastern musical traditions of the present (Turkish, Greek, Arab, Persian) show great abundance in microtonal inflections and scale intervals. Theoretical systems such as those by Kyrillos Marmarinos (1749), Chrysanthos of Madytos (1832), Suphi Ezgi (1933), Ekrem Karadeniz (1981) and Simon Karas (1989) specify 17, 24 or 41 individually named degrees within the octave and employ divisions of the octave into 36, 53, 68 or 72 equal intervals. The potential of these traditions as living repositories of microtonal music has not yet been sufficiently explored.

Theoretical divisions of the octave into equal microtones have included the 19 division employed by late Renaissance and early Baroque musicians including Costeley and Titelouze; the 31 division calculated by Christiaan Huygens in the 1660s (often dubiously attributed to Nicola Vicentino); the 55 division discussed by Joseph Sauveur in 1701 and attributed by G.A. Sorge in 1748 to Telemann; and the 53 division implicit in the Renaissance concept that the Pythagorean whole tone

(monochord ratio 9:8) could be divided into nine equal parts, four of which would comprise a Pythagorean diatonic semitone (ratio 256:243): thus the octave, consisting of five whole tones and two semitones, would implicitly contain 5 x 9 + 2 x 4 equal microtones. Theorists of the 17th century showed that the 53 division contains virtually pure 3rds as well as 5ths (*see* INTERVAL, Table 1), and later R.H.M. Bosanquet (1875) built a harmonium tuned to this scale.

The use of microtones in Western art music is essentially a 20th-century phenomenon, though Julián Carrillo had experimented with his 'sonido 13' system of equal-tempered quarter-tones in the 1890s. Two basic approaches may be distinguished. Either microtonal intervals are introduced as finer divisions within regular 12-note equal temperament, or they arise as a necessary condition of different tunings. The former sort of microtonal composition was practised by Carrillo, by Charles Ives early in the 20th century and by Alois Hába and Ivan Vïshnegradsky from the 1920s onwards. Hába also used smaller intervals, particularly the sixth-tone, and wrote a great many microtonal works, from piano pieces and string quartets to a full-scale opera. The capacity of string instruments to play microtones is limited only by the player's ear, but Hába's music required the construction of special instruments, including quarter-tone pianos, harmonium, clarinet and trumpet, all made in the 1920s and 30s. In the 1950s Carrillo had pianos built to play in every integral division of the whole tone down to the sixteenth-tone. Ives and Vïshnegradsky wrote instead for multiple pianos differently tuned.

The foremost problem in microtonal music – beyond the making and tuning of instruments – is perhaps that of harmony; this may have encouraged composers to look in other directions from the 1970s onwards. Another prompt would have come from the new availability of quarter-tones on woodwind instruments, facilitated by unusual fingerings. On the one hand, quarter-tones became normal in music where high virtuosity and speed are in the foreground and natural consonance is not an issue, such as that of Brian Ferneyhough and Chris Dench. On the other, they found a cogent place in the upper treble for composers who based chords on harmonic spectra, for example Tristan Murail, Gérard Grisey and Claude Vivier.

The harmonic question is differently settled, of course, when microtones are conceived not as additions to the equal-tempered chromatic system but as basic intervals in other tunings – tunings which have customarily been developed not in order to make available intervals smaller than a semitone but to find better approximations to just intonation than 12-note equal temperament can deliver. Harry Partch pioneered this approach, employing a 43-interval octave which made available frequency ratios involving the primes up to 11 and their multiples (his ascending scale begins 1:1, 81:80, 33:32, 21:20, 16:15, 12:11), and building his own instruments. Just intervals have also been achieved with a range of instrumental and vocal resources, notably by Eivind Groven, Lou Harrison, Ben Johnston, La Monte Young and James Wood.

Other composers have developed alternative equal temperaments, especially those which offer good simulacra of just intervals, as do the temperaments with 19, 31, 41, 53 and 72 intervals to the octave. Joseph Yasser argued for a 19-interval octave as a logical evolution from the 12-interval one of convention, just as the latter evolved from the 7-interval diatonic scale. Adriaan Fokker commissioned a pipe organ in 31-interval equal temperament, allowing accurate renderings of the just major 3rd and natural 7th. This organ has been used by other Dutch musicians such as Henk Badings and Hans Kox, and its tuning system has been applied by composers in the USA. Groven and Johnston have used 53-interval equal temperament, the 'Mercator system' favoured by earlier theorists. Easley Blackwood has composed with alternative equal temperaments on the piano, ranging from 13 to 24 intervals per octave.

Electronic music allows any kind of tuning without the need for virtuoso technique, retuning or the physical construction of new instruments, and without the complications of new notational systems, of which several kinds exist for equal-tempered quarter-tones, the most commonly used microtonal intervals. However, only in a few cases have composers set out to explore a defined microtonal system with electronic means. Examples include Stockhausen's *Studie I* (1953), in which there are 25 equal-tempered intervals within each stretch of two and a half octaves, and Krenek's *Spiritus intelligentiae, sanctus* (1955), with 13 equal-tempered intervals per octave.

Middelschulte, Wilhelm (*b* Heeren Werve, nr Kamen, 3 April 1863; *d* Oespel, nr Dortmund, 4 May 1943). German organist and composer. He first studied the organ with August Knabe in Soest, and later went to the Royal Academic Institute for Church Music in Berlin, where his teachers included August Loeschhorn (piano) and August Haupt (organ and theory). He later became associate professor there, and organist at the Lukaskirche, Berlin (1888–91). In 1888 he played the organ at the memorial service for Emperor Friedrich III. In 1891 he moved to Chicago to become Organist and Director of Music at Holy Name Cathedral. After giving three recitals from memory at the Columbian Exposition of 1893 he was invited to play with Theodore Thomas's Chicago Orchestra (later the Theodore Thomas Orchestra, then the Chicago SO) and was organist there from 1896–1918. He held a number of professorships in America, and from the 1920s returned to Germany every summer to give a concert tour; in 1925 he was appointed postgraduate chair in organ and theory at the State College for Church Music in Berlin. Middelschulte's organ compositions embody the theories of Bernard Ziehn, with whom he studied in Chicago, particularly the principle of 'symmetric inversion', whereby the strict inversion of the chromatic scale gives rise to a distinctive harmonic language.

BRINK BUSH

Middle Ages. *See* MEDIEVAL.

Middle C. A colloquial name for the note *c′* whose pitch is 256 Hz when *a′* = 440 Hz. It is probably so called because it is written on a leger line midway between two staves bearing a treble and bass clef respectively. It is also placed roughly at the middle of the keyboard; further, it is near the top of the male vocal range and near the bottom of the female range. Its central significance in the notation of Western art music dates from the Middle Ages, when Guido of Arezzo used the letter *c* as a clef in his staff notation system. It was later designated the first note of the *hexachordum naturale*, which included neither B♭ nor B♮. The note C sol fa ut, being the note at the centre of the medieval gamut that could be part of all three hexachords (*molle*, *durum* and *naturale*), thus assumed a pivotal role in the notation system, used as a point of reference, for example in the continued use of the C clef.

DAVID FALLOWS

Middle East. The Middle East as a musical area is recognizable in patterns of historical, geographical, religious and musical continuities, yet is also subject to discontinuities that result in part from extensive cultural and political conflict, and geographical and geo-cultural divisions (e.g. mountains/desert, urban/rural). Scholarly traditions espousing the musical unity of the Middle East are based primarily on the theoretical similarities in the art musics of the region; on the extensive presence of Islam throughout the region, with its historical, linguistic and aesthetic influences on musical practices in virtually all Middle Eastern societies, even non-Islamic; and on the geographical location of the Middle East, historically imagined as lying 'between' Europe and both Asia and Africa. If the musics of the Middle East display unity when viewed from the top down, discontinuity predominates when local practices or hybrid traditions are viewed from the bottom up. As a regional musical culture the Middle East is the historical template for tension between canonic traditions and extensive variation, religious ideologies and aesthetic resistance to them, and the pull between centralized repertories and fragmentation at geographical peripheries.

Geographically, the Middle East stretches from north-western Africa eastwards to Iran and into Afghanistan. The northern boundaries include the Mediterranean and Black Seas, but the influences of Middle Eastern musics reach far into south-eastern Europe, the Caucasus and Central Asia, even as far to the north-east as the Uighur area of western China. The southern boundaries are similarly impossible to draw with precision. They stretch along the Sahara, through eastern Africa into the Indian Ocean, but these boundaries have been permeable for centuries because of the exchange of musics across them. Musically, the geography of the Middle East is best defined by the ways its boundaries have facilitated musical exchange rather than by the containment of repertories and practices specific to the region.

The Middle East comprises four historically interlinked art music systems: Arab, Persian, Turkish and Maghribi, or North African. These art music systems were never entirely fixed and unchanging, although medieval treatises and modern nationalism emphasize their concentration of the representation of culture in a classicized core: usually a modal and theoretical framework, a distinctive repertory and instrumentarium and specific connections to literary and artistic traditions. In the regional and national cultures of the Middle East, the conditions of art music, even in fragmentary fashion, are often extended to other musical practices (to popular and traditional musics), thereby laying aesthetic and ideological foundations for the dominant presence of art musics and their historical symbolism.

Two other extensive sets of musics dominate the Middle East, albeit not primarily as distinctive art musics. The music of Jewish peoples, especially in the societies of the Sephardi diaspora along the Mediterranean littoral and in the communities of the eastern Mediterranean, such as Yemen and Iraq, occupies an important position in the histories and modernity of Middle Eastern music. The music of Christian church liturgies, especially those of the Roman Catholic Church in western Mediterranean societies and of various Orthodox traditions in the Levant, also stretch across the region, providing a network of unity.

Religion and religious attitudes toward music both unify and fragment the musical practices of the Middle East. The three major religions of the region, Islam, Judaism and Christianity, as well as several more localized religions (e.g. that of the Druze), share some fundamental musical concepts, although they also maintain some sharply different ones. A distinction between vocal and instrumental practices, particularly their relative acceptability, cuts across the religions of the Middle East. Cantillation traditions in Middle Eastern religions conform to the modal organization of the region. It is distinctive of the Middle East as a whole that religious doctrine plays a very significant role in determining what musics are allowable and in which circumstances, and how certain restrictions are placed on music-making, both sacred and secular.

Language and poetry have left their imprint on musical practices. In regions dominated by a particular art music there is usually a related literary tradition derived from a

dominant language, such as Persian music and the Persian language. Language may also directly affect both theory and practice in art music, notably in the ways musical metre relates to language and poetic use of language. It is further characteristic of the Middle East that the music in a single area may weave together repertories in different languages, for example, Arabic in the sacred practices, local dialects in traditional music practices, and several languages from outside the area in professional and popular music practices. Multilingual repertories, by extension, serve to connect regions in a complex network of related musical practices.

Within the Middle East topography, geography and political economy often produce musical landscapes that contrast with those represented by religious or art music practices. Around the Mediterranean musical exchanges may be found that reverse the influences of major language families and the major religions, making it possible to interpret many musical practices in southern Europe as influenced by the Middle East, not only because of the presence of Islam, but also because of the centuries of Ottoman domination in south-eastern Europe. The eastern Mediterranean has a special musical landscape of its own, as do the cultures that border the trade routes of the Red Sea and the Arabian Gulf. The musical geography of the Middle East has historically depended on the interaction between rural and urban societies. In particular, the Middle Eastern city has been characterized by extensive cosmopolitanism and hybridity, making it possible to construct music histories of the region around cities, stretching from the courts of the earliest Muslim caliphates in Damascus and Baghdad to the postmodern centres of the recording industry in Istanbul and Cairo.

The concepts and histories of music in the Middle East involve a number of paradoxes: the ways in which religious beliefs are used to reject some musical practices and accept others; the restrictions on musicians and music-making that give rise to alternatives; and the distinctions made between geographic and linguistic cores and boundaries, and between canonical art-music traditions at the centre of nationalistic thought and the seemingly infinite variations occurring at the peripheries. Historically, these have resulted from interaction with musics at the boundaries of the Middle East – European, African and Asian traditions – and the regular attempts to reject those musics.

I. Concepts of music

Religious texts may contain not only myths about the origins of music, but also the restrictions of allowable practice. In the *Pentateuch*, or *Torah*, music and musical instruments originate in several narratives. In the passages of *Genesis* known as the *Akedah* or 'binding of Isaac' (*Genesis* xxii), the sacrificed ram yields his horn, which symbolically becomes the *shofar*, the musical instrument used to mark significant beginnings and endings during the Jewish liturgical calendar, for example, *Yom Kippur*, the Day of Atonement. Through the Qur'an, as the accounts, or *aḥādīth*, of the Prophet's life report (cf Ibn Isḥāq Muḥammad, B1955, pp.105–6), the voice of God is revealed to Muhammad as possessing musical qualities, which in turn are extended conceptually to the recitation of the Qur'an itself.

Non-religious texts also contain fundamental musical concepts, though these often remain ambiguous in their specific identification of music. The Arabic, especially North African, poetic practices gathered in books referred to as *maqāmāt*, derive from musical practices used in conjunction with the performance of poetry, which utilized the modal structures also designated as *maqāmāt* (sing. *maqām*). Epic traditions are widespread in the Middle East and in the boundary areas of the Middle East, such as south-eastern Europe and Central Asian Muslim nations. The epics of the Middle East are found either in written texts that originate in the region (for example, the epic of Moses in the Bible) or in the oral traditions of transnational migratory peoples (the Hilālī epics of North African Bedouins). The performing practices of Middle Eastern epics reveal similar concepts of the relation between poetry and the composition of melody, as well as between the meaning of narrative and the accompanimental functions of musical instruments.

One of the most basic conceptual distinctions in the music of the Middle East separates theory from practice. Theory, in the broadest sense, means speculation about music and the investigation of music as a science. The earliest music theorists borrowed extensively from Greek concepts of music, and elements of Greek musical thought remain in some domains of music theory even in the modern era. The application of scientific theory to music depends on literate traditions, which both undergird the conception of music as a form of religious or philosophical aesthetics and serve as a framework for mathematical operations on music. In contrast, practice depends primarily on oral tradition and the contexts of music-making. Musical learning (for example acquiring skill as a reciter of the Qur'an or learning a musical instrument) takes place largely through oral tradition. In many scientific writings the gap between theory and practice is considerable and the concept that theory and practice differ continues to influence ontologies of music in the Middle East to the present.

The earliest concepts of music in Islam treat it primarily as sound that is experienced rather than sound that is produced. *Samā'* literally means 'hearing' or 'listening', and when applied to the allowability of music, *samā'* refers more specifically to the act of perception rather than to the performance of music itself. Great debates, the so-called '*samā'* controversy', about the extent to which listening to certain types of music was theologically acceptable or not, accompany the entire history of Islam, but versions of these debates are found in other religions of the Middle East, for example, in Judaism, in which hearing a woman's voice in the synagogue is proscribed and is a primary aesthetic-theological reason for excluding women from praying in the main sanctuary of orthodox synagogues.

Samā' and the physical experience of music plays a central role in the rituals of the mystical sects of Islam included under the rubric of Sufism. Though Sufi genealogies, beliefs and ritual practices vary in different Islamic societies, the concept of *samā'* as a component of and even name for rituals of remembering the name of God, *dhikr* ('remembering') is essential for transforming the body through musical experience into a vessel whose capacity to draw closer to God is heightened.

The exact nature of musical experience through *samā'* is open to great debate. In the Qur'an there is no specific reference to music, but Islamic theologians and Qur'anic exegesis regard certain passages as containing references to music or as referring obliquely to the Prophet Muhammad's attitudes toward music. Theological debates about music appear first in a body of literature called *ḥadīth* (plur. *aḥādīth*), the accounts of the Prophet's life. The *ḥadīth* chroniclers describe the Prophet either participating in musical activities or scorning them, and because both types of accounts are found, this body of literature fuels rather than quells the debates about what music is and to what extent certain musical practices are or are not acceptable.

Concepts of both theory and practice make their sharpest distinctions between vocal and instrumental musical practices. At the most fundamental level, in recitation and cantillation of religious texts, vocal practice is not music in any ontological sense. Recitation of the Qur'an and the call-to-prayer (*adhdhān*) that takes place in Muslim societies five times daily are not understood to be music, even though they often adhere fairly strictly to the Arabic modal structures, or *maqām*. The terms *mūsīqī* or *mūsīqā*, however, are frequently employed categorically to separate instrumental from vocal practices, thereby marking instrumental music with cognates of designations for music borrowed from the Greek language. These divisions between vocal and instrumental suggest further distinctions between Self and Other, relegating questionable musical activities, such as those associated with dance, to a domain of moral, intellectual and aesthetic otherness.

Otherness or foreignness in music frequently provide conceptual categories that resolve the *samā'* controversy, at least temporarily. Listening to foreigners (e.g. non-Muslims in Islamic society) is not the same as playing a music that is morally questionable or even that has been rejected as unacceptable. Instrumental musicians, for example in many Muslim courts, were often religious outsiders or foreigners. Orchestras with largely Jewish members often played in the courts of Iraq and Iran, and Jews even dominated national ensembles, such as the radio orchestra of Iraq, in the first half of the 20th century. Islamic law (*sharī'a*) itself recognizes the participation in Islamic society of certain types of acceptable 'others' or *dhimmīs*. The performance of outsiders in traditional musics is also widespread in the Middle East. The role of outsider may result from religious and gender differences, ethnic and linguistic differences, the knowledge of foreign repertories, especially those in languages foreign to an area and to the musician's status as a professional, which is one of the most marked categories of otherness in Middle Eastern music. The professional musician known as *'āshiq* ('lover' in Arabic) performs widely throughout the northern and north-eastern areas of the Middle East (from Turkey to Iran) and succeeds in part due to the presence of many such attributes of otherness.

Gender distinctions are present in virtually every music of the Middle East, either implicitly or explicitly. Musical genres are generally divided into those in which men participate and those in which women participate, both as practitioners and listeners. When men and women participate together, with relative equality or not, considerations of acceptability are often magnified. The gendering of musical genres, moreover, also leads to distinctions between the languages used for musical repertories. Men are far more likely to perform in traditions that use a classical language. In art, traditional and popular musics, instrumental musicians are largely male. Men dominate the public positions associated with religious music (for example the *muqri'* or reciter in Islam, or the *ḥassan* or cantor in Judaism), forming a 'priesthood' of sacred musicians. Women have had some success as popular singers during the 20th century by opening an even larger space for music's sexual character in modern societies, and homosexual and transsexual popular musicians have heightened and complicated the question of sexuality and otherness in music even more.

The conceptual ambivalence about music in Middle Eastern societies is linked to the way it serves as a source of power. On one hand, music can serve as a means of expressing imperialism and nationalism, for example, in the widespread nationalizing reforms of Atatürk in Turkey during the 1920s. The centralization of the Persian classical music system during the 20th century, as emblematized by the consolidation of the performing practices and modes called the *radif*, paralleled the centralization of national power in Iran, especially in the royal family prior to the Islamic Revolution in 1979. On the other hand, music may be used by musicians as a form of resistance. The Algerian popular music known as RAI first emerged in the mid-20th century as a voice for the disenfranchised in colonial Algeria, and since independence from France for many caught in the conflict between the opposing forces struggling for an Algeria under military or Islamic law. The Turkish popular music *arabesk* in different ways has provided a resistive voice for workers and ethnic minorities occupying the social periphery of the modern Turkish state.

Not all, or even most, musics in the Middle East are religious, but few concepts about music and its contexts are not related in some fundamental way to religious thought and practice. The major religions of the Middle East maintain strong positions about the functions of music in ritual and liturgy, and about the spiritual efficacy and moral acceptability of music. Religious doctrines both implicitly and explicitly create a place for music in human actions and often explicitly exclude music from certain actions. Music's presence at specific historical moments (for example the destruction of the temple and temple orchestra in Jerusalem with the inception and resolution of the Jewish diaspora) contributes to the history and practice of religions in the Middle East. Several crucial aesthetic and metaphysical debates – notably the *samā'* 'controversy' – are religious at their core.

However, there is very little agreement about the precise relationship between music and religion, not just in the mainstream of the major religions but in the regional and popular variants of these and the local religions that are distinct from Islam, Judaism and Christianity. Religious positions towards music are multi-faceted and may sometimes appear contradictory, and they change over time and according to circumstances. Despite these contradictory and contested positions, three basic positions of religion towards music are discernible. First, certain musical concepts and practices are inseparable from religion, which is to say, religion and music are inseparable at certain levels. The recitation of fundamental religious texts – the Qur'an and Torah – are performances

which draw on musical structures, even though they are not referred to as such. Second, religious dogma rejects some aspects of music and music-making, and when it does so, the proscriptive language is often unequivocal. The rejection of music frequently marks moments of sweeping religious change, for example, the call by 20th-century religious movements for social and political revolution. Third, religious doctrine may also be ambivalent or even mute about certain kinds of music and music-making, or religion may not have articulated positions on certain forms of music that did not exist when fundamental doctrines were written and became canonic. The third position is the most complex and common in the Middle East, and its prevalence is the primary reason that religious, especially Islamic, positions towards music are constantly undergoing debate and processes of reform, and that they often engender considerable and visible controversy.

The expression of religious texts often depends on musical performing practices. Recitation of a sacred text takes place at the nexus between speech and song. In the three major religions of the Middle East, the rules for recitation have been canonized, which is to say that recitation of the Qur'an or the Bible is not simply heightened speech, but rather a style of performance that one learns in certain ways. There are rules, and these rules have parallels in musical practice. Instrumental improvisation (*taqsīm*) in Arabic classical music, for example, contains many structures and rules that correspond to those sometimes used for vocal improvisation in public recitation of the Qur'an. Both rely on the *maqām* system of modes, which has its own distinctive music theory; both demonstrate a formal architecture that grows from phrases that are arch-like. The only restrictions are conceptual and rhetorical, and they do not directly affect sound itself, that is, *samā'* in a strictly Muslim sense of the concept.

When religious restrictions do become applicable, they are often unequivocal, at least on their surfaces. Within Islamic law, or *sharī'a*, there are detailed restrictions about which types of music are permissible or acceptable. The restrictive elements in Jewish religious law are not dissimilar from many in *sharī'a*, though they arise from quite different historical circumstances. Men praying in the orthodox synagogue, for example, should not experience the distracting qualities of women's voices, leading to the separation of men from women in the synagogue. Strict interpretations of Jewish law also ban musical instruments from sacred spaces, at least until the Messiah comes. Debates about the permissibility of instruments in the synagogue raged in the Jewish diaspora, and the restrictions have become law in modern Israel.

The ambivalence of religion towards music has several sources, not all of them related to one another. Unlike the Qur'an, the Jewish Bible is full of references to musical instruments (e.g. Psalm cl), and it employs formal genres (e.g. epics) that traditionally require musical performance. In no case is the ambivalence of Middle Eastern religion towards music more evident than in Qur'anic recitation. The Qur'an's criticism of aesthetic forms such as poetry is quite explicit. But within the *samā'* polemic there is agreement about the potential of musical sound to engage a listener's emotions, and this potential extends to Qur'anic recitation. There are two general approaches to the traditions of Qur'anic recitation. The first focusses on religious meaning in the text itself: prosody, clarity and other aspects of meaning that can benefit from skilful recitation. The second focusses on performance: knowledge of music theory and performing practice. Recitation practices, *tajwīd*, may rely on knowledge of music that is not substantially different from the knowledge of music required of secular musicians, instrumentalists, for instance. The use of *maqām* is usually quite specific, but the rules for using *maqām* have nothing to do with extra-musical factors connected to *maqām* theory. Schools where reciters would learn the rules of *tajwīd* employ terminology borrowed from music theory. Reception of the Qur'an – in other words, how those listening to a reciter respond to and play a role in moulding tradition – are tied to factors of musicality. Still, *tajwīd* is never about music, and its meaningfulness is ultimately independent from music, however the listener may perceive the presence of music.

The religions of the Middle East also contain crucial contexts from which music is inseparable. Music and musical performance are determining factors in the communal and spiritual interaction of mystical groups, such as Sufi brotherhoods in Islam or Kabbalists in Judaism. Central to Sufi performances is the practice of *dhikr*. Although *dhikr* is generally associated with Sufis, it derives its meaning from religious concepts that unify Islam as a whole. Despite differences in local uses of music, *dhikr* is conceptually similar in North Africa, Turkey, Iran and Central Asia because of its fundamental efficacy of drawing the faithful closer to experiencing God. The faithful 'remember' by constantly repeating the name of God, Allah, which becomes a symbolic act of remembering by performing the object of memory. The solitary *dhikr*, therefore, occurs when the faithful turns his or her thoughts inwards, concentrating only on the name of God and penetrating beyond the word to the unitary presence of Allah in all things.

Musicality operates within *dhikr* and other forms of ritual performance in Islam: it facilitates the expression of textual meaning, it coordinates dance and movement, it has specific emotional and psychological effects, it redefines time as ritual experience and it produces physical responses in the body. In the ritualized abrogation of distance between the human and God fundamental to Sufism, music has become an efficacious agent. It is this efficacy, which however does not lend itself to explanation in musical concepts, that gives music such a powerful presence in the musics of the Middle East.

II. Histories and historiographies of music

The history of music is interwoven into other historical processes in the Middle East: military and political histories, religious genealogies and histories of science, economic expansion and nationalistic consolidation. Traditional historiographical models, most of which privilege Islam as the determining factor in Middle Eastern history, parse the region's music history into four general periods: a pre-Islamic period; the period of Islam's expansion followed by a 'golden era' (7th–13th century); a long period of cultural stagnation equated with Ottoman imperialism (to the 20th century); and a modern era marked by growing nationalism in counterpoint with Islamic radicalism and conflict with the West.

Music theory and practice accompanied and chronicled the historical processes that framed these periods. As Islam expanded rapidly in the centuries following the

Prophet's death (632 CE), music responded to the new political and cultural systems mapped on the Middle East. During the spread of Islam many centralized forms of political and military control developed, and these find a parallel in the growing tendency towards court music, with theories and concepts conveyed in Arabic-language treatises. The effectiveness of Islam's spread, nonetheless, depended on accommodation to local and regional traditions, including local musical practices, and a tolerance for and incorporation of variant traditions.

In general, the history of music in the Middle East follows an alternating pattern of expansion and consolidation, with classical traditions forming around a theoretical core. These then spread to and beyond cultural peripheries, only to enter a new phase of consolidation. The early expansion of Arab musical practices, therefore, was followed by the emergence of Persian musical practices, which in turn led to a shift towards the dominance of Turkish theoretical writing with the rise and expansion of the Ottoman empire until the 17th century. Similar patterns characterized the nationalistic movements of the 20th century, in which the consolidation of national power frequently stimulated attempts to shape, even through legislation, a national musical tradition through the institution of written traditions, musical ensembles and music academies, as emblems of a national music history.

Music historiography was an integral part of the rise of theoretical writing in the Middle East after the spread of Islam. Some scholars, including those working in music and more broadly in the Islamic sciences, accorded music an important position in different forms of historiography. Music might symbolize local practices and hence provide a means of integrating diversity into a history, but it was also a component of the impetus to universalizing that influenced many historians of the Middle East. In his *Muqaddima* ('Introduction', which was to precede a universal history), Ibn Khaldūn (*b* 1406) mentioned music in the context of a world history, as well as in an ethnographic analysis of different cultures of the Mediterranean world. Historiographically, music is a component at both the core and the peripheries of his 15th-century world.

There are also popular traditions of music history. Music in Sufi brotherhoods, for example, depends extensively on transmission through ritual practice, which in turn elaborates a belief system that grows from a complex genealogy of saints and the historical events associated with them. Sufi performances, of which the most important are *dhikr*, serve as means of drawing upon the genealogy of past saints by musically narrating a brotherhood or sect's particular history. The 10th-century IKHWĀN AL-ṢAFĀ', who lived in the area near Basra, employed mystical concepts from an early form of Sufism to reformulate Greek, especially Platonic, music theory as a historiographical bridge between classical and Middle Eastern musical thought.

Music history in the Middle East suffers from an interpretative dilemma, generated by European perspectives on musical change. With the rise and decline of the so-called golden era, music history in the Middle East, so these perspectives hold, ceased developing. The absence of harmony and contrapuntal practices, accordingly, has been cited as evidence that musical development simply did not occur and that the music of the Middle East failed to enter a modern era. Such concepts of musical *ennui* contribute substantially to orientalist interpretations of the Middle East, ranging from those that hold on to the glory of a 'golden age' to those attempting to justify European control and colonialism in the Middle East. Music, therefore, enters a historiographical discourse about the Middle East as a place where people and nations have no history. This discourse pervades the entire music history of the Middle East, and modern and postmodern transitions in the region, such as 20th-century nationalism and Islamic radicalism, are frequently taken as additional evidence for these insidious historiographical practices.

With the European Enlightenment in the 18th century a new historiographical impulse was turned towards the music of the Middle East. Enlightenment philologists and early musicologists imagined the Middle East as the source of European music history and as a site of origins and authenticity. In this historiography which increasingly employed organicist and evolutionary concepts, Middle Eastern music cultures, especially those regarded as rooted in religious musics, were regarded as historically more authentic, but also more primitive, and music history in the region was imagined to be static and timeless. Scientific expeditions took place to the eastern Mediterranean, for example that which accompanied Napoleon to Egypt, producing a multi-volume encyclopedia on Egyptian culture, of which the final two volumes by Guillaume Villoteau were devoted to music and musical instruments. They encountered a world thought to be untouched by musical change, despite its vast religious and cultural variety. Whereas the music of the Middle East assumed an important position in the music histories of the 19th century, it increasingly acquired the aura of orientalism. By the beginning of the 20th century, accordingly, the musics of the Middle East very much belonged to Europe's Other.

The rise of the modern nation-state had an enormous impact on music historiography during the 20th century. As the empires that had extended political control of the region – the Ottoman empire, for example, as well as those of the British and French – lost their grip on the Middle East, new national governments arose that sought new ways to articulate nationalism in music. Music academies and the reform of musical practices by governmental edict re-examined the ways musical change had taken place in the history and even prehistory of the modern nation. Musical scholarship in the Middle East itself focussed more on national traditions – Turkish, Egyptian or Tunisian – than on the unity of the entire region.

During the 20th century there were, nonetheless, responses to the nationalist trend, notably the 1932 Cairo Congress on Arab Music. Sponsored by the Egyptian government, the congress invited musicians and ensembles from throughout the Middle East – from Morocco to Iraq – and delegations of musicologists and other musical scholars from Europe. The congress produced diametrically opposed agendas for the future of Middle Eastern music, with Middle Eastern scholars arguing for various forms of modernization, and European scholars urging Middle Eastern cultural ministries to preserve the integrity and authenticity of traditional practices.

The 20th century witnessed the growth of many new media and forms of mediation. The recording industry expanded rapidly in the Middle East, first in the urban

centres dominated by colonial or imperial powers, notably Cairo, Beirut and Istanbul, and then in regional and national centres. Because of the importance of live recording during the rise of radio from the 1930s, radio ensembles and regular musical performances provided one of the most important networks for the dissemination of diverse musical traditions and the emergence of new processes of exchange. Radio and recording not only provide the foundation for modern and postmodern histories of popular music, but also a complex set of channels between local musical practices across the region, and between these and the diaspora and refugee cultures outside the Middle East. The recording media not only historicize the past for these cultures, but make it possible for them to participate actively, if from a diaspora, in contemporary political and nationalist struggles.

III. Instrumental music

Within the Middle East there is considerable ambivalence and controversy about the presence of instruments in music and their role in society. Musical instruments in the Middle East may be seen as inhabiting five different conceptual categories. The first of these categories treats instrumental music as an essentially vocal and religious form of expression, hence regarding it with inclusivity and approbation. By extension, instruments can even serve as mediators of and for text and sacredness embedded in texts. In contrast, there is a second, widespread category in the Middle East that regards musical instruments as the antithesis of the sacred, asserting instead that they are associated with cultural activities that are profane, such as dancing. The third category includes the metaphysical attributes of science, which hold that instruments are used to measure and represent a purer, more abstract form of knowledge. Fourthly, there are musical instruments that conceptually belong to an aesthetics of 'art', creating distinctions between those instruments that are classical and those that are not. Fifthly, there are instruments derived from and suited to 'artifice'. This ontological sense of the artificial is most commonly encountered in traditional music, where creating the right sound for the right moment is essential.

The two historically 'most classical' instruments in Middle Eastern repertories, which cut across regional traditions and genres, are the 'ŪD and the QĀNŪN. Both instruments are chordophones, and both exhibit virtually every one of the metaphysical categories introduced above. The *'ūd*, a five-string lute with a pear-shaped body, provides the basis for Arabic music theory because divisions of its strings generate patterns of pitch and interval measurement. The *qānūn*, whose name, related to the modern English term 'canon', reveals its connection to Pythagorean theoretical speculation, also lends itself to the science of Middle Eastern music theory, especially during the earliest century of its history (as in AL-FĀRĀBĪ's writings of the 10th century). Both instruments demonstrate quite high status in the art musics of the Middle East because of these scientific connections, yet both cross the borders between repertories and genres, in effect centripetalizing the diverse music cultures of the region.

The bowed, spiked chordophone, known as KAMĀNCHEH or *kamanja*, possesses a timbral quality that is believed to mimic the voice most closely, and it is therefore a standard member, in one regional variation or another, in ensembles throughout the Middle East. Other instruments also embody concepts of human physicality and serve to embellish vocality. In classical thought the strings of the *'ūd* represent the bodily fluids. The rim-blown flute, NAY, lends itself to a wide range of vocally conceived timbres, largely because of performing practice and despite the diverse materials used to construct the *nay*, from plastic tubing to bamboo.

Instrumental music may interact with sacred music, enhancing or complementing the sacredness of vocal practices. There are some instruments, especially time-marking percussion instruments such as the *mazhar* or *mizhar* (a frame drum), that are permitted in some mosques; Sufi brotherhoods frequently use frame drums in the *dhikr* ritual performance, and in some Sufi traditions wind instruments (the *ney* in Turkey) are also used because of the ways they reflect and enhance the physical transformation that accompanies *sema* (*samā'*). Instrumental music represents or participates in everyday practices, that is in the rituals and traditional activities that contribute to a sense of community. The musical life of the marketplace (*sūq*), for example, includes contexts in which instrumental music has a defining presence. Dance, too, should be included within this second conceptual category, not least because of its link with instrumental music.

Musical ensembles often contain performers who come from 'outside' the culture in which they play, or are at least distanced from the contexts in which they play; in many Muslim courts, even into the 20th century, Jewish musicians often dominated ensembles. This also goes for professional musicians, whose specialization in instrumental music marks them as foreign. The *aşık* in Turkish traditional and popular music moves from one local setting to another, thereby displaying foreignness in each. The amateur status of many instrumentalists in art music is further evidence of the ways in which instrumental music occupies a domain separate from the everyday.

In the traditions of many courts, it was the instrumental ensemble that represented the highest form of art music, a status still evident in the *shālgī-baghdādī* ensemble of Iraq. In 20th-century attempts to use art music to symbolize the nation, artistic status of the highest order often accrued to the instrumental ensemble, such as the *ma'lūf* of Tunisia. Instruments acquire modern meanings because of the artifice that accompanies revival and the transformation of functions for contemporary social and political ends.

One of the functions for instrumental music in the modern Middle East is to provide a context for mediation and contact with Western and other musical practices. The mediating functions of instruments derive from the capacity to allow for exchange and adaptation, not least because of their ambiguous position in the metaphysics of music in the Middle East. Western instruments (such as the violin) have, for example, entered ensembles in many repertories, but when they do so, as in many ensembles of North Africa, they generally assume specifically Maghribi functions and express a Maghribi metaphysics of music. This capacity to mediate through indigenization also characterizes the ways in which professional traditional musicians (e.g. the *'āshiq*) employ an instrument such as the Turkish *saz* (*see* BAĞLAMA) investing that instrument with new possibilities for cultural translation.

In the popular musics of the Middle East instruments have yet another set of distinctive roles because of the ways they are used to facilitate mediation and change. Instruments serve as the basis for mixing and remixing in popular musics. Popular musics that lie at the core of attempts to foment social change may draw upon the symbolic power of a more classical instrument to empower those attempts, as in the case of the plucked-lute *saz* in popular Turkish *arabesk*. By mixing and remixing the instrumentarium, many popular musicians rely on a complex vocabulary of musical symbols that negotiate differences between Middle Eastern and European traditions and underscore the political dilemmas at the contested borders between Self and Other. In popular music of Sephardi and Eastern Jewish communities in Israel, *musica mizrakhit*, instruments from Arab traditions indigenous to those communities, for example, heighten the political message of easternness. The paradox of such complex meanings in the instrumentarium of popular music is that instruments, ontologically questionable in the Middle East, acquire the power in popular music to reimagine and remix the Middle Eastern qualities of music.

IV. Theoretical systems

The extensive presence of modal and metrical systems historically served as a form of relative unity throughout the Middle East and continues to do so, despite the ways its theoretical and cultural meanings have changed and acquired modern and postmodern functions. Mode has many meanings in the Middle East, but underlying modal thinking is a tendency towards large-scale musical systems corresponding to modal complexes with interrelated parts and the expression of cultural, political, and religious hierarchies through musical form and performance.

Mode represents complex systems of musical identity. In some repertories mode is so extensively systematized that discrete pieces and formal procedures are exchangeable with modal identity. In other repertories mode is much less formalized, providing instead barely more than a skeleton for improvisation or composition. Even if these two conditions suggest a continuum between mode as an actual composition and mode as a framework for improvisation or composition, each modal system in the Middle East can only be understood through the many varieties that such a continuum makes possible.

Mode possesses local functions, even while potentially connected more globally to the entire Middle East, for example through shared Islamic sacred musics and pan-Middle Eastern popular music. In a given music culture mode has vertical meanings, demonstrating the relations between different levels of a social hierarchy or between local traditions and art musics. Modal practice expresses the interactions between cultural core and peripheries, and in different ways it bounds genre, musical form and performing practice.

Middle Eastern modal systems are both similar to and different from those of neighbouring regions, especially the use of mode in Central and South Asia. In the Middle East there are fewer instances of specific references to the extra-musical, as in South Asian rāga, though there remains considerable evidence that Middle Eastern mode possesses meanings that are not strictly musical. The use of microtones to distinguish between different modes is one of the most characteristic aspects of Middle Eastern theory. Metrical systems, like those of South Asia, are additive and logogenic, but even more extensively so. Though some scholars have recently argued that the study of mode in the Middle East is anachronistic and that it places too much evidence on the purely musical, 20th-century music theories reveal instead that mode is used to participate extensively in modernization and nationalization, as well as in the creation of postmodern popular musics.

The history of Middle Eastern music theory begins with concepts of melodic mode in Arab music. The modern term *maqām* refers to both the larger system of melodic practices in Arabic-, Persian- and Turkish-speaking cultures, and to the entity of a single mode itself. Despite its centrality in Middle Eastern music theories and its extensive history, *maqām* exhibits more conceptual flexibility and exists in more different forms than the other major modal systems. Interpretations of *maqām* differ from region to region in the Arab world and among individual performers. There is considerable flexibility and diversity in the identification of a single *maqām* – a scale with a full complement of notes within the span of an octave or more or a smaller unit, such as a tetrachord, or a melodic motif or a repertory-specific formal procedure – marks performing practice.

Although *maqām* expresses certain types of hegemony in the Middle East (it provides the modal framework for Qur'anic recitation throughout the Middle East and much of the Islamic world), its own capacity to spill across borders and influence other music cultures (for example those of Greece) is considerable. Because of its historical, conceptual and terminological flexibility *maqām* also gives shape to local and regional practices. Just as Arab art music in Iraq has special formal and instrumental practices, such as the *shālghī* ensemble associated with the urban practices of Baghdad, so too are there special compositional and improvisational practices, such as large-scale suites identified by a single *maqām* and modulations derived from it. Historically, ethnic and religious minorities in Iraq and elsewhere (for example Kurds and Jews) utilized *maqām* in ways specific to their cultural and musical needs.

Metre in Arab music is generally referred to as *īqā'*, a concept that describes the system as a whole and individual metric patterns. In early Arab treatises *īqā'*, such as *Kitāb al-īqā'* ('Book on Rhythm'; no longer extant) by al-Khalīl (718–91), is treated as a component of prosody, and, although metric theory has undergone many changes, *īqā'*s still express certain aspects of Arabic poetry. The individual cycles of *īqā'* are additive, meaning that they consist of a composite of discrete units, whose character is determined by the ways in which different percussion strokes represent the sounds and duration and accentuation that more literally or entirely abstractly constitute a given model. In a sense *īqā'* is far less malleable than *maqām*, and it contributes more to defining the core than the peripheries of Arabic art music.

The modal system of Persian art music, the *radif*, is the product of a historical trajectory stretching from numerous individual and localized systems, many of them equivalent to and recognized themselves as *radif*s, to a relatively centralized and standardized modern *radif*. Still at the beginning of the 20th century, modal practice (as opposed to modal theory) lay in the hands of individual musicians, for whom a repertory and the concomitant performance represented a local tradition, often that

connected with a smaller urban centre or court, but also the system of pedagogy necessary for transmitting music orally and aurally. The conceptualization of *radif* as a centralized system did not fully emerge until the second half of the 20th century, and as late as the 1960s and 70s many musicians and scholars still referred to the *radif* as if it were a collection of its component modes, that is, as the *dastgāh* system or concept.

Already prior to the 1979 Islamic Revolution in Iran the systematization of mode was so extensive that there were several dominant, even canonic, *radif*s, which anchored art music in Tehran, the seat of national power. Versions were available in printed form, with Western notation modified to accommodate some of the distinctive differences within Persian music, especially microtones and the performing practices used by certain instruments. There are also recorded versions of the *radif* available on audio cassette.

As a modal system the Persian *radif* is distinguished by its wholeness, in which the many parts introduce variety and nuance at ever deeper levels but do so by proffering a more refined and complex structure to the whole. The 12 primary *dastgāh*s that constitute most *radif*s appear as a set of individual pieces, or *gushe*s, which provide different types of modal/melodic frameworks for any given performance or improvisation. *Gushe*s represent different genres, and each one has certain relative functions within a performance, such as beginning or ending, introducing dance rhythms, or effecting certain possibilities for modulation. Whether a musician plays only a few of the individual *gushe*s or enough to constitute an entire suite for large ensemble, the modal order of pieces is more or less preserved. The *radif* thus prescribes form in an additive fashion, beginning at the most detailed level.

The Persian modal system is highly hierarchical, and its embodiment of musical authority suggests many parallels to the ascription of authority in Iranian society. The *radif* also serves as a symbolic site for the interaction of tradition and modernity, that is, for the contradiction of different forms of authority.

Although the Turkish modal system has interacted extensively with Arab, Persian, and European modal systems, *makam* is distinctive in many ways. Any examination of modern *makam* practices must take into account a long history of written treatises and various forms of institutionalization. What *makam* means at any historical moment depends on social, religious and political conditions and on the ways these are negotiated by musical institutions. Already in the 16th century, Persian music took its place as an important activity in the Ottoman court. Throughout the centuries of Ottoman rule, however, modal practices were adapted by religious institutions, which, as in the case of the Mevlevi orders of Islam, were highly centralized and hierarchical, but also generated alternative, even resistive, music histories. When Atatürk established the Turkish Republic in 1923, a modernized theoretical system replaced those that had thriven for centuries in Ottoman courts and Mevlevi ceremonies. Radio and government-sponsored music academies replaced the courts, and music itself was reformed from the inside out, paralleling in its transformation other domains of nationalism and reform, such as the Turkish language.

The use of the concept *makam* is more restricted in Turkish than in Arabic and Persian art music. *Makam* more specifically designates melodic mode, especially the nature of melodic material and the ways it is generated through the mathematical division of the strings on musical instruments. Improvisation, or *taksim*, is related to *makam*, but it possesses its own body of principles. Similarly, concepts of tempo, rhythm and metre, broadly included under the concept *usul*, have an integrity quite independent from *makam*. Performing practice, especially the suite of Turkish music (*fasıl*) draws from all other areas of Turkish theory, but also interacts extensively with the social, political and religious functions of music throughout Turkish history. Turkish music theory, therefore, is highly developed in several distinctive areas – *makam*, *usul*, *fasıl* – so that any account of one area must also include the others at various levels in order to permit a larger historical picture of Turkish music as a whole.

Unlike art musics in the Middle East, many regional music theories have tended towards neither consolidation nor classicization. There are two traditional ways of viewing local theoretical systems. The first perspective looks from the top down, treating regional systems as variants of the art musics; the second perspective recognizes greater integrity at the local level, treating regional systems as entities unto themselves. The two perspectives have led to quite different, even opposed, interpretations of North African, or Maghribi, musics. Art music traditions have a long history in North Africa, for example, through the medieval exchanges between and among the Muslim, Jewish and Christian cultures of the Iberian peninsula and the western part of North Africa, including modern Morocco, Algeria and Tunisia. A considerable body of Arabic music theory emerged from these western areas of the Islamic world throughout the Middle Ages, much of which characterized the practices of Andalusian art music, one of the dominant traditions in the Islamic world until the dispersion of Muslims and Jews at the inception of the early modern era. As the music cultures of North Africa responded and contributed to the fragmentation of Andalusian art music, local and regional traditions emerged, some of which (for example the *ma'lūf* of Tunisia) possess an integrated theoretical system of their own. The most important questions are not whether one perspective is more correct than the other – both retain resolute adherents – but how they represent the different historical processes that influenced and are influenced by mode and music theory in the Middle East, and how the various regional traditions choose to represent themselves and why.

Art musics have by no means placed restrictive boundaries around modal practices, and there are numerous cases of modes spilling over into domains outside of art music, especially as responses to modernity. *Maqām* has historically been one of the unifying factors in the different traditions of Qur'anic recitation throughout the Middle East, thereby serving as a musical means of ascribing religious unity. Many popular musics in south-eastern Europe retain modal structures from Middle Eastern, especially Turkish, musics. Jewish instrumental or klezmer music in lands formerly controlled by the Ottoman Empire (for example in Romania and Bulgaria), not only uses but also recognizes Turkish *makam* as an element of music theory. The same is true for popular musics in the Muslim and non-Muslim populations of Bosnia-Hercegovina, Albania and Bulgaria. In modern Israel, Arab *maqām* is traditionally the modal framework

for the predominant system of Jewish cantillation and liturgical music, the Jerusalem-Sephardic style. Specific *maqāmāt* even have extra-musical meanings in the Sephardic Jewish liturgical calendar.

V. Local, regional and transnational musics

Throughout the Middle East the character and meanings of music differ considerably from place to place. On the one hand, musics may transmit local meanings and may narrate the long history of a single place; on the other, many musics exhibit geographic connections that reveal extensive fluidity and histories ceaselessly in flux. Middle Eastern musics only rarely function to connect rural cultures to the nation-state as, for instance, in Turkey. Instead in a myriad of ways, they respond to and negotiate publicly local historical and cultural conditions, and participate in the local construction of place in a changing and complex region.

Although many genres are identified by place the meanings attributed to them are diverse. Often hybrid genres combining sacred and secular, traditional and popular, oral and mediated traditions, they are performed by professionals rather than amateurs. Throughout the Middle East the music of a single place or community may comprise music of local or regional provenance, music from the 'outside' (albeit with some connection to a minority group physically present in the life of the community), music performed by professional musicians as well as religious music performed by local sects and musics mediated and mixed by recording and broadcasting for widespread consumption.

Ethnographic studies and expeditions during the 20th century consistently encountered music cultures that belied European models of isolation and united repertories. Lachmann's study in the 1920s of one of the two Jewish communities on the small island of Djerba, off the coast of Tunisia, failed to uncover isolation and authenticity which might connect modern musical practices to those of pre-diasporic Israel (J1940). The geographical and historical conditions on Djerba were presumably ideal for an isolated music, but instead Lachmann found extensive hybridity. Religious practices were presumably affected by the frequent pilgrimages that brought in traditions from the outside, as well as by exchange with local Muslim communities. Gender distinctions were so extreme that women's and men's genres were given separate categories. Even the two villages investigated by Lachmann and, later, Davis (J1984–5) contained music cultures that were markedly different from each other.

The Turkish village studied intensively by Lakshmi Tewari in the 1970s similarly did not demonstrate isolation, not least because the technologies that brought about hybridization were more developed (M1972). There was no single music shared by the village, but different groups, such as women's or religious groups, had their own musics. The musical practice most broadly shared was that of listening to the radio, which necessarily meant that the village's sense of place was mediated through the mixing of components from urban and national practices.

Performances by professional musicians throughout the Middle East permeate national and local boundaries. One of the forces behind these transgressions is the mobility of these musicians, who may perform from several repertories depending on where and for what purpose she or he is engaged. The *chārbeiti* (Persian: 'quatrain') is a verse form set to melodic types which vary regionally within Persian-speaking societies. In Turkey the *aşık* is the best-known professional musician to function in this way. Similar types of professional occur elsewhere in the northern Middle East, the *'āshiq* in north-eastern Iran, for instance, incorporates *chārbeiti* in his repertory. The repertories of professional musicians are sometimes multilingual, often making them emblems of foreignness and otherness, which in turn symbolize the fluidity with which musics move from place to place. When these musics come from the outside, however, this does not necessarily mean they have no local meaning.

Rural–urban distinctions largely break down in the musics of the Middle East; musics are frequently exchanged between urban and rural populations. There are musical traditions that make the rural cosmopolitan (e.g. via trade and migration) and the urban rural (e.g. via mass mediation). Accordingly, popular musics are not easily defined. Popular musics of the Turkish city (for example *arabesk*) depend on rural workers and the crossing of ethnic boundaries, especially by Kurds from eastern Turkey and the Black Sea region of the north-east. The ethnicity expressed by these musics is fluid and constantly reconfigured through hybridity.

VI. Gender and musical identity

Gender distinctions are present in all musical genres in the Middle East, and the impact of gender on musical identity is often quite extreme, although many genres are shared and sometimes also performance contexts, especially dance-songs. The significance of gender results from the ways it contributes to basic metaphysical notions of what music is and from the connections of gender to the conditions that determine the approbation of music. The boundaries between sacred and secular practices may also mark gender distinctions. The social acceptability of music in the public sphere may depend on the visibility or invisibility of certain aspects of gender. Instrumental music contains sharp gender distinctions, and the emergence of 20th-century popular music often paralleled the transformation of public attitudes towards gender as a component of social structure. To understand the construction of musical identity in the Middle East it is crucial to understand the ways in which music – all musics from the region – represents the meaning and presence of gender in society.

Historically, the musics of the Middle East have been represented as male-dominated practices. In part, this is understandable because of the public nature of many domains of male music-making, in other words the visibility of the music with which men are traditionally associated. The public recitation of the Qur'an or the call-to-prayer five times daily by the *muezzin*, for example, afford male religious professionals a public role. Neither form of religio-musical practice, however, is specifically restricted to men, at least according to religious tenets alone. The more such practices enter the public sphere, however, the more it becomes difficult for women to participate in them professionally. In the religions of the Middle East, therefore, public music-making often relies on musical specialists, even on a musical 'priesthood', to which women rarely have access. Specialization and professionalization are no less evident in classical and popular musics, both of which also take place in a type of public sphere. In the 21st century there are certain types of musical instruments that are almost exclusively played by men, such as those in the classical ensembles of the

Middle East. Whereas men dominate many genres of popular and professional folk music, women have made considerable inroads into these domains.

The domains of women's music are generally more private and may be somewhat restricted to the home, the family or a more contained community. It is in these domains, nonetheless, that ritual and rites of passage occur, which often demand of women musicians an extensive knowledge of traditional repertories. Throughout the Middle East women's music spills over into the public workplace, especially in rural and village societies. The musics associated with agricultural practices, for example, may constitute a domain of women's music. Many women's repertories reveal long histories of ethnic and religious exchange. The songs of women in Yemenite- or Iraqi-Jewish cultures, for example, might well contain texts in Hebrew, Arabic and several local Judaeo-Arabic dialects, which together indicate that such songs are not local and restricted to the Jewish community at all. The distinctions between public and private domains of women's music have religious origins, and it is therefore not uncommon to regard women who perform publicly as morally suspect or to mark women performers as culturally 'other'.

Middle Eastern musical identities do not always fall conveniently into categories of male or female; there are also gendered domains between those more easily identified as male or female. These form because outsiders are active in them, as in the case of rural areas of Turkey in which workers from outside a particular village are active in seasonal labour and accordingly bring with them repertories distinct from local ones. The in-between domain frequently enhances the potential for music and musical identities that are hybrid, especially when it facilitates linguistic and religious border-crossing. It is in the traditionally public domains of hybridity that dance has often taken place, which in turn has made the domains even more complex as gendered spaces, opening up possibilities for musical identities that express diverse forms of sexuality, and affording a public presence to transgendered and transsexual performers. Gender differences in music, therefore, may provide contexts for other types of difference.

Despite the seeming abundance of gender restrictions in the religious musical practices of the Middle East, women do have specific and very significant roles in the musics and musical concepts derived from religion. In Judaism, for example, God is understood to possess both feminine (*shekhinah*) and masculine (*tiferet*) attributes and these manifest themselves in religious musical practice. The feminine attribute emerges in some of the most significant ritual practices, notably the welcoming of '*shekhinah*' as the 'sabbath bride' at the beginning of Sabbath services in the synagogue. In Mediterranean Christian cultures, devotion to the Virgin Mary provides the basis for the proliferation of musical and ritual practices dominated by women. In Islam few religious tracts specify roles for women or men. Religious musics, nonetheless, reflect and reproduce many gender distinctions, creating contradictions between religious theory and practice, while giving music an important position in the articulation of gender distinctions.

Women musicians have a very distinctive presence in the history and historiography of Middle Eastern music. Cultural and music historians often use the numerous observations of 'dancing girls' in the pre-Islamic Middle East to distinguish the radical transformation that ensued with the spread of Islam. As contact between Western observers and the Middle East increased during the orientalism of the early modern and modern eras, women were most frequently stylized as exotic and erotic others, dancers and public performers symbolizing a world considered not yet as civilized as Europe. In contrast, little attention has been paid to the participation of women in local and regional music histories of the Middle East, especially those that provide the basis for venerating and transmitting the genealogies of saints, both in Islam and Judaism. In 20th-century popular music, women singers succeeded in winning a place in the public sphere and transforming the position of women in the Middle East on national and international levels.

Because of the particular forms of boundedness in Middle Eastern societies there is often a gender split between women's (closed) and men's (public) music-making. This split is clearest in religious practices, where men dominate the social and professional organization of music-making, in other words in the mosque or at times of public celebration. The distinction between private and public is further significant because of its impact on the representation of gender in music, both from within the Middle East and from the outside. Women who gain prominence as musicians in the public sphere are often identified as not belonging there. Especially within the aesthetics of radical Islamic groups women are not given a space in the 'public discourse' on music at all. The relevance of these exclusionary practices should not be underestimated, for there are foundational texts such as the *aḥādīth*, or commentaries on the life of the Prophet, that generate a rhetoric of gender criticism directed specifically at women in public.

Gender distinctions in the public religious discourse on music notwithstanding, women assumed a much more visible presence in public music-making in the 20th century. Though still rare, women may serve as reciters of the Qur'an and professional performers of religious genres. The Egyptian singer Umm Kulthum acquired her early vocal training in a village Qur'anic school and she did not entirely abandon the performance of musics with sacred themes during a career of unprecedented popularity in the Middle East. Popular music in the Middle East, with its history of modern and postmodern nationalisms, is unthinkable without women singers and women stars. At the end of the 20th century the gendered spaces of in-betweenness in Middle Eastern popular musics also became increasingly complex and public, with growing visibility and influence of transsexual and transgendered stars in Turkish *arabesk* and in international popular music, such as the Israeli transsexual Dana International, who won the Eurovision Song Contest in 1998.

VII. Popular music, modernity and the Middle Eastern diaspora

Increasingly during the second half of the 20th century the musics of the Middle East spilled across its borders, internal and external. The conditions of modernity – mass production and consumption, hybridization of styles and repertories, more intensive localization and more extensive globalization – have profoundly influenced popular musics in the Middle East and have expedited their participation in a transnational and international Middle Eastern diaspora. Historically, popular musics have

provided conduits for contact between the Middle East and the West, fuelling orientalist and colonialist fantasies, and creating a body of stereotypes that enhanced the aura of otherness that enveloped the Western image of the Middle East. 20th-century popular musics continued to bear witness to this legacy of two-way culture contact, but in the course of the century they increasingly gave voice to the changing conditions wrought by modernity. The Middle East is not simply a station on a global, world-music network as might be suggested by media promotion in the West: its popular musics arise from the region's political struggles and historical transformations, communicating these powerfully on an international level.

In the course of its modern history popular music has interacted in increasingly complex ways with the nation-states of the Middle East. The shifting political landscape of the region produces quite different forms of the nation-state, which in turn expose the contested nature of political and cultural borders in the region. Popular musics, in particular, form along these contested borders, sometimes articulating and buttressing them, at other times crossing and transgressing them. In the 20th century nations dominated by the centralization and nationalization of cultural resources, certain musical repertories and practices achieved a public presence and the concomitant popularity through parallel forms of centralization, for example by consolidating as national repertories of classical and semi-classical music, such as the *ma'lūf* in Tunisia, or the ensembles performing stylized forms of *mūsīqā 'arabiyya* in Egypt. National broadcasting systems and recording companies supported by the state substantially broadened the presence of popular musics in the national public sphere, where they affirmed the cultural divisions of modernity. In contrast, many popular musics in the Middle East have resisted or defied the institutions of 20th-century nationalism. Popular musics of stateless peoples, notably the Kurdish populations of Turkey, Syria, Iraq and Iran, circulate widely through recordings and radio broadcasts that musically represent the culture and political aspirations of a Kurdish state. The popular musics of modern Middle Eastern nations are often drawn into the complex historical tensions between centralization and fragmentation.

Traditional studies of Middle Eastern popular music have focussed on its great performers and composers, in particular, on its most visible stars, such as Umm Kulthm and Muḥammad 'al-Wahhāb Abd in Egypt, or FAYRŪZ in Lebanon. The stars of Middle Eastern popular music have enjoyed truly international fame; UMM KULTHUM (1904–75) might well have been the most popular singer of the 20th century, both because of her immense influence on the musical life of Egypt and because of the wide dissemination of her recordings in the Islamic world. The attention to stars remains justified, in part, by the distinctive ways in which certain genealogies empowered popular music to represent crucial political and ethnic problems. An extended genealogy of popular singers with Yemenite-Jewish heritages, beginning with Beracha Zephira in the 1930s and continuing with Ofra Haza and Dana International in the 1990s, draws attention to the social and political struggles of eastern Jews (Jews of Sephardic heritage and those from largely Muslim countries in the eastern Mediterranean) in modern Israel. The visibility of Algerian *rai* stars, such as Cheikha Rimitti in the mid-20th century and Cheb Khaled at the time of heightened violence between nationalist and Islamic forces in the 1980s and 90s, also attests to the powerful role of the popular singer in the nationalist arena.

The growing impact of the Middle Eastern diaspora on international politics generated radically different new frameworks for interpreting Middle Eastern popular music. Guest workers from the Middle East, particularly Moroccans and Algerians in France, and Turks and Kurds in central Europe, shifted the borders of popular music and rendered the relation between music and the nation-state even more complex. Cultural exchange – both conflict and cooperation – underwent various processes of displacement, with diaspora communities throughout the world (for example Palestinians in Detroit or Iranians in Los Angeles) using popular music to forge new identities that spread across the diaspora landscape. Some non-Middle Eastern Muslim communities (such as black American Muslims, or Sufi groups in South and South-eastern Asia) have turned to the Middle East for musical resources, and the global CD marketplace has itself provided the basis for a transnational Muslim diaspora music centred on the Middle East. The expansion of the Middle Eastern diaspora at the end of the 20th century provided a complex framework for the proliferation of popular-music styles and repertories, and globalized their availability in an international marketplace.

The conditions of modernity also created new possibilities for popular musics emanating from outside the Middle East to influence the region and the construction of its diverse identities. American and European popular musics have a considerable presence, and international styles, such as rap and hip hop, influence local musicians and national styles. Interpreted from a historical perspective, rock music has secured its presence in the popular-music culture of the Middle East not unlike many other musics that were 'foreign' and 'other'. There are rock genres that mark the élite status that comes from emphasizing connections beyond the region's borders, for example, to the cosmopolitan centres along the Mediterranean littoral. Rock and rap musicians in some parts of the Middle East also use popular music to articulate and critique more localized, national political dilemmas. The Israeli star Yehuda Poliker, for example, employs rock music to call for open dialogue with Palestinians. Rock music has the potential for levelling many of the class and gender borders marking the traditional cultures of the Middle East.

The historical contradictions between unity and discontinuity in the Middle East are fully evident in popular music. Processes of change, such as the religious radicalism that characterizes many nations, may spawn new popular repertories that cut across national boundaries and attempt to provide a framework for pan-Middle Eastern political consolidation. Popular musics also accumulate around the faultlines of the region, the persistent conflicts between nations at war, or the struggles of peoples and cultures excluded from the sanctioned national identities of modernity. Popular musics may provide heightened forms for nationalist sentiment, and they are among the chief sites for giving voice to resistance movements. Some popular musics may be religiously suspect, but others may provide new possibilities for religious expression. As individual, national and global identities in the Middle East undergo complex processes of change, popular music

articulates the shifting borders between tradition and modernity.

MIDI [Musical Instrument Digital Interface]. A hardware and software standard established in 1983 for the communication of musical data between devices such as synthesizers, drum machines and computers. It has virtually replaced earlier methods of playing one synthesizer from the keyboard of another, or of synchronizing the performance of one drum machine or sequencer to that of another. The information exchanged may include notes, program changes, volumes and other elements. The basic MIDI protocol provides up to 16 independent channels of information. However, some interfaces can provide multiples of 16, enabling many independent channels of information to flow between devices.

MIDI has various applications. It can be used to connect several synthesizers in order to thicken sound; to emulate multi-track recording, with the difference that tracks contain editable data rather than recorded sound; to control program changes and effects automatically or remotely; to edit synthesizer voices or samples, using MIDI connections to computers; to create effects such as delays using different instruments; to synchronize devices such as sequencers, drum machines and video, using MIDI time code; to automate mixing processes, such as fades and mutes; and to transmit notes and other musical events generated from computer algorithms.

See COMPUTERS AND MUSIC, §II; ELECTRO-ACOUSTIC MUSIC; ELECTRONIC INSTRUMENTS; SAMPLER.

DAVID BURNAND

Midland Institute School of Music. Birmingham conservatory constituted in 1886 as part of the Birmingham and Midland Institute, and renamed the Birmingham Conservatoire in 1989. *See* BIRMINGHAM, §7.

Midland Sinfonia. Orchestra founded in 1961, later called the English Sinfonia. It was based in NOTTINGHAM until 1984.

Midori (Goto) (*b* Osaka, 25 Oct 1971). Japanese violinist. At four she began violin lessons with her mother, Setsu Goto. In 1980 she was given a scholarship to study with Dorothy Delay at the Aspen Music School in the USA. Two years later she entered Delay's class at the Juilliard School in New York, where she also worked with Pinchas Zukerman. In 1982 she made her début with the New York PO under Zubin Mehta; she then toured Asia with the orchestra. The following year she played Paganini's *Caprices* before President Reagan on a televised Christmas show. After continuing her studies at the Professional Children's School in New York, she graduated in 1990 and began her international career. In 1993 she performed the Tchaikovsky Violin Concerto at the Proms in London. In 1994 she won the Suntory Award in Japan. Midori's repertory includes all the major concertos, many of which she has recorded; but her tone as heard in the concert hall is small and it is difficult to avoid the conclusion that she is a creation of the compact disc age. Her interpretations are sound but rather bland. She plays the 1722 'Jupiter' Stradivari and the 1735 'Ex-David' Guarneri del Gesù.

Mieg, Peter (*b* Lenzburg, canton of Aargau, 5 Sept 1906; *d* Aarau, 7 Dec 1990). Swiss composer, critic and painter. He studied the history of art and music, archaeology and literature at the universities of Zürich, Basle and Paris (1927–33), graduating with a dissertation on contemporary watercolours. His music teachers included C. Richter (Lenzburg), Hans Münch (Basle), and Emil Frey (Zürich); later he was a composition pupil of Frank Martin (1942–5). An art critic for Swiss and foreign publications, he worked in Basle from 1933, and in Lenzburg, where he was also active as a painter, from 1938.

A collaboration with Edmond de Stoutz and Paul Baumgartner in the early 1950s turned Mieg decisively towards composition. Influenced by Stravinsky, Bartók and Martin, he developed a style marked by the primacy of singable melody, condensed structures and transparent textures. Harmonies are often veiled: polytonality and fluctuating modalities are common; chromaticism and whole-tone scales are used colouristically. Distinctive rhythmic patterns are also characteristic. In 1991 the Peter Mieg Foundation was established in Lenzburg.

PETER ROSS/THOMAS GARTMANN

Mielck, Ernst (Leopold Christian) (*b* Viipuri, Finland [now Vyborg, Russia], 24 Oct 1877; *d* Locarno, 22 Oct 1899). Finnish composer. He studied the piano with Albert Tietze in Viipuri for some years and from the age of 14 studied at the Stern Conservatory in Berlin, where he was taught by Heinrich Ehrlich (piano), Robert Radecke and Ludwig Bussler (music theory), and Arno Kleffel (composition). From 1895 he studied composition privately with Bruch, according to whom he showed 'an easy, felicitous, and remarkable flair for invention'. He was established as a composer in 1897, when the Helsinki Philharmonic Society, conducted by Kajanus, performed his Symphony in F minor ('Fairy Tale Symphony'); it was the first symphony by a Finnish composer since Ingelius's work of 1847. In 1898 the Berlin Philharmonic performed Mielck's symphony, his *Dramatic Overture*, which had been commissioned by Kajanus, and the *Konzertstück* for piano and orchestra, with Mielck as soloist. He died from tuberculosis in the following year.

Described by Flodin as 'our Finnish Schubert', Mielck had an original talent, and he wrote skilfully for the orchestra in the spirit of Beethoven and the German Romantic symphonists. In a few works, such as *Suomalainen sarja* ('Finnish Suite'), he tried to incorporate Finnish folk music, but without real conviction.

WORKS

ILKKA ORAMO

Mielczarski, Mateusz (1812–68). Polish organ builder. He founded the original Warsaw school of organ building and is considered to be the most important Polish organ builder of the mid-19th century. He was a pupil of Karol Żakiewicz in Zgierz before setting up independently in 1838, working first in Łowicz and then in Warsaw from 1850 onwards. Working in a small, traditionally run shop near the cathedral, he built more than 120 organs, mostly of medium size, before his premature death in an accident at work on the Warsaw Cathedral organ. Earlier, he had rebuilt the St Anna organ (1858). His surviving organs, including his larger instruments, such as those built for the Cistercian abbey at Ląd and for Wilanów, near Warsaw, are marked by solid workmanship and good sound qualities. His degree of self-sufficiency and the fact that he produced stops of all types including reeds are worthy of note. The high quality of his work and his low prices enabled him to compete successfully with foreign builders who began to appear on the Polish scene in about 1840. A real enthusiast of his craft, Mielczarski trained a number of gifted builders, including Józef Szymański (who was later his successor) and Stanisław Przybyłowicz.

JERZY GOŁOS

Mielczewski [Milchevsky, Myltzewski], **Marcin** (*d* Warsaw, Sept 1651). Polish composer. A pupil of Franciszek Lilius, he is first heard of in 1632 as a musician of the royal chapel in Warsaw, where he had probably been active for a number of years, mainly as a composer. From 1645 until his death he was director of music to the king's brother, Karol Ferdynand Waza, Bishop of Płock (the bishop's court stayed mostly in Warsaw and at his residences nearby). His Polish contemporaries recognized Mielczewski as a composer of the front rank. Although only two of his works were printed in the 17th century, they were performed abroad, as is proved by manuscripts containing some of them in archives in the Czech Republic and Germany. Matthias Schacht included an entry on him in his *Musicus danicus* (completed 1687), and Nikolay Diletsky, probably one of his pupils, also referred to him and quoted extracts from his works in his treatise *Musikiyskaya grammatika*.

Mielczewski was indeed one of the leading Polish composers of his time, and his output was large and varied. The concertato principle dominates his entire

corpus of accompanied vocal works, and homophonic and polyphonic writing alike are subordinated to it. He composed a wide variety of sacred concertatos for both a few and many voices as well as many polychoral works, and he was the first to introduce the Venetian rondo concertato into Polish music. The style of his small-scale concertatos, in which the words are given full expression, suggests that he must also have composed secular vocal and instrumental pieces, such as madrigals, which have not survived. The accompanied masses and motets for large numbers of performers continued the polychoral tradition of the Venetian school and also include virtuoso solo passages in contrast to the tutti. His instrumental canzonas are clearcut in form and include arch structures. He also wrote variation canzonas, one of which is particularly characteristic; in every other section there is an exact or slightly modified quotation of a Polish folktune, some in dance rhythms – the mazurka is found here for the first time in Polish art music. Mielczewski also quoted popular Polish religious songs in his sacred works, thus giving them a specific local character: for instance, his *Missa super 'O gloriosa domina'* is based on a version of the tune of the song named in the title which is known only from Polish sources. He wrote other masses, and motets too, in a *prima pratica* style in which the plainsong cantus firmus is generally placed in the bass as a harmonic foundation.

Mielorth. *See* RÖMHILD, JOHANN THEODOR.

Miereanu, Costin (*b* Bucharest, 27 Feb 1943). Romanian composer, active in France. After attending the Music Lyceum in Bucharest he studied composition with Olah at the Bucharest Academy (MFA 1966) then with Stockhausen, Ligeti and Karkoschka in Darmstadt (1967–9). Settling in France in 1968, Miereanu became a French citizen in 1977. In Paris he studied music semiotics at the Ecole des Hautes Etudes en Sciences Sociales (DMA 1978) and the liberal arts at the University of Paris VIII (PhD 1979), where he also held posts as lecturer and assistant professor (1973–81). In 1981 Miereanu became professor of philosophy, aesthetics and art science at the Sorbonne. He also lectured in Darmstadt in 1982 and 1984. At Editions Salabert he became artistic director in 1981 then artistic and musical consultant in 1992.

Miereanu's work projects an originality of vision richly diverse in concept, texture and style. The interplay of various factors – time and space, text, sound and image, repetitive progressions and mathematical formulae – generates material. Developing from a compositional basis in which the techniques of Satie combine with a sublimation of the fundamentals of Romanian traditional music, Miereanu has achieved a sensuous sonic fabric. Many of his complex and often virtuoso works include visual components. (CC1, T. Bann)

OCTAVIAN COSMA

Mierzwiński, Władysław (*b* Warsaw, 21 Oct 1850; *d* Paris, ?14 July 1909). Polish tenor. He studied at Warsaw, Naples and Milan, and made his début at the Paris Opéra as Raoul in *Les Huguenots*. His appearance in London in 1880 marked the beginning of an immensely successful career. He appeared on all the principal European and American stages, singing the leading roles in *Guillaume Tell*, *Les Huguenots*, *Robert le diable* and *Il trovatore*. His voice was distinguished by its wide range, great strength and fine sound, and he was considered one of the most outstanding tenors of his time. A throat disease forced him to retire prematurely, and he died in poverty and obscurity.

ZOFIA CHECHLIŃSKA

Mies, Paul (*b* Cologne, 22 Oct 1889; *d* Cologne, 15 May 1976). German musicologist. He studied musicology with Leonhard Wolff as well as mathematics and physics at the University of Bonn, where he took the doctorate in 1912 with a dissertation on tone painting in music. He taught in Cologne from 1919 to 1939, except for a brief period of further study (1925–7), and in the late 1920s and early 30s he supervised several radio broadcasts for high schools. From 1946 to 1954 he was professor and director of the Institut für Schulmusik at the Staatliche Hochschule für Musik, Cologne. In 1946 he became a member of the board of directors of the Beethoven-haus, Bonn. In addition to his studies of the history of music in Cologne, Mies is known for his work on musical style and analysis (particularly of Beethoven's compositions) in which he attempts to describe the process of composition as well as assessing the music's effect.

M. ELIZABETH. C. BARTLET

Miessner, Benjamin F(ranklin) (*b* ?Huntingdon, IN, 1890; *d* Miami, 25 March 1976). American inventor and designer of electroacoustic instruments. Following an involvement with early radio research (from 1909), he invented several musical devices with his brother Otto, including the Rhythmicon, an instrument for producing complex rhythmic patterns, similar to Lev Termen's instrument of the same name developed in 1931. After selling his radio patents to RCA for a very large sum of money, Miessner set up a laboratory in Millburn, New Jersey in 1930 to explore further the possibilities of electrifying musical instruments.

Miessner sought first to develop a cheap and portable piano for educational purposes. After experimenting with different sound-producing elements and pickups he returned to strings with his Electronic Piano (1930–31), a grand piano fitted with electrostatic transducers and without a soundboard. Several upright electric pianos based on Miessner's patent were manufactured after 1935; the Bernhardt Electronic Piano; Dynatone (Ansley

Radio Corp); Electone (Krakauer Bros.); Minipiano (Hardman, Peck & Co.); and Storytone (Story and Clark). Their ultimate lack of success was partly due to the innovatory long sustain time made possible by omitting the soundboard, thereby rendering such instruments unsuitable for most of the standard repertory. In 1954 Miessner produced a 'stringless' electric piano based on struck tuned reeds, which was marketed by the Wurlitzer Co. until the early 1960s.

Other instruments designed by Miessner during the 1930s included harmoniums with up to four reeds for each note and two electrostatic pickups for each reed, to produce a range of timbres (the Everett Orgatron, later taken over by Wurlitzer, was based on Miessner's patents), and amplified instruments such as guitar, zither, mouth organ, violin, cello, saxophone and clarinet. Around 1939 Tom Adrian Cracraft's All Electronic Orchestra consisted of a Hammond Novachord and amplified string instruments designed by Miessner (*see* ELECTRONIC INSTRUMENTS, fig.1): these included the 'chromatic electronic timpani', comprising 13 short bass strings, tuned to a chromatic octave and mounted inside a rectangular frame, which were played with timpani sticks, the vibrations being made audible by electrostatic transducers; Termen produced a similar but electronic instrument at around the same time.

HUGH DAVIES

Mietke. German family of instrument makers, primarily of stringed keyboard instruments. Michael Mietke (i) (*b* Berlin, 1656–71; *d* ?Berlin, 1719) was established in Berlin as a maker of string keyboard instruments and harps by 1695 at the latest. Between 1697 and 1702 he is mentioned five times in the registers of marriages and baptisms as working for the court. The official maker to the court at that time was Christoph Werner, and Mietke became his successor in 1707. In 1719, recommended by J.S. Bach, Mietke delivered a harpsichord to the court at Köthen. Probably three harpsichords made by Mietke have survived: a single-manual harpsichord, which is signed and dated (Berlin, 1710), is preserved in Hudiksvall, Sweden, and a single- and a double-manual harpsichord are preserved in Schloss Charlottenburg, Berlin. The latter two are not signed, probably because they were made for the court. The single-manual belonged to Queen Sophie Charlotte. Heyde has suggested that the two-manual harpsichord at least was made by Werner, but nothing is known about the latter as a harpsichord maker. A Mietke harpsichord with a 16′ stop, offered for resale in Berlin in 1778, may have been made by a son. (For further details of these instruments, *see* HARPSICHORD, §4(iv) (a).)

Michael Mietke (i) had two sons who became harpsichord makers: Michael Mietke (ii) (*b* Berlin, bap. 5 March 1702; *d* Königsberg, April–August 1754) became maker of string keyboard instruments to the court in Königsberg in 1728; Georg(e) Mietke (*b* Berlin, bap. 31 Jan 1704; *d* ?Königsberg, 1770) left Berlin in 1729. In 1736 in Danzig he married for the second time, and moved to Königsberg in 1739, where in 1747 he obtained a licence to build 'Claviere, und musikalische Instrumenten'. Georg Friedrich Mietke (*b* Königsberg, 1746; *d* ?Königsberg, ?after 1805), son of Georg(e) Mietke, was taught by his father until 1765. In 1770 he became maker to the court.

DIETER KRICKEBERG

Mi fiolo. *See* RANIERI, GIOVANNI SIMONE.

Migenes [Migenes-Johnson], **Julia** (*b* New York, 13 March 1945). American soprano. As a child she appeared as Dolore in a Metropolitan Opera production of *Madama Butterfly*. After graduating from the High School of Music and Art in New York, she appeared on Broadway (*West Side Story* and *Fiddler on the Roof*) and then made her New York City Opera début as Annina in Menotti's *The Saint of Bleecker Street* (1965). In the early 1970s she pursued her career in Europe and studied in Cologne with Gisela Ultmann, a formative influence on her vocal technique and dramatic style. She became a popular performer with the Vienna Volksoper (1973–8), where her roles included Despina, Susanna and Blonde. She returned to the USA to sing Musetta in *La bohème* with the San Francisco Opera in 1978, and a year later first appeared with the Metropolitan Opera as Jenny in *Aufstieg und Fall der Stadt Mahagonny*. Other roles at the Metropolitan included Nedda, Musetta and the title role in *Lulu*, where her acting and singing in the 1985 production were highly praised. She also sang Salome in Geneva, Offenbach's Eurydice at the Deutsche Oper, Berlin (1983), and Massenet's Manon in her Covent Garden début (1987).

As a classical crossover artist, Migenes has more recently made successful ventures into television (she has hosted her own television variety shows in Germany and Britain), popular music and Broadway; in 1998–9 she toured with a one-woman entertainment, 'Diva on the Verge'. In 1984 she gained wide attention for her title role performance in Francesco Rosi's cinematic version of *Carmen*, starring opposite Placido Domingo. Her video recording of Poulenc's *La voix humaine* (1991) is also highly regarded, as is her performance as the lovelorn prostitute, Jenny, in a video of Weill's *Dreigroschenoper* (1991). Migenes's other recordings include Broadway hits *Man of La Mancha*, *Kismet* and Charles Strouse's *Rags*,

excerpts from Viennese operettas and recitals of traditional ballads.

KATHLEEN HAEFLIGER

Mighty Handful. *See* FIVE, THE.

Mighty Sparrow [Francisco, Slinger] (*b* Grand Roy, 9 July 1935). Trinidadian vocalist, composer and bandleader born in Granada. His family moved to Trinidad when he was one year old. He sang as a church choirboy, and made his professional début at 19, performing in the annual calypso tent competition held during Carnival under the sobriquet Little Sparrow. In 1956 he changed his name to Mighty Sparrow and won the Calypso Monarch Competition with his road march *Jean and Dinah*. That same year he initiated the famous 'calypso wars' with his friend Lord Melody, performing at the Young Brigade Calypso Tent. The following year, his tune *Carnival Boycott* was taken up as an anthem to demand better competitive conditions and pay for calypsonians, masqueraders and pan-men, and which led to the founding of the Carnival Development Committee. In subsequent years, his songs *Teresa* (1958) and *The Yankees Back* (1960) also became instant hits.

The appeal of Sparrow's calypsos stemmed from his strong voice, his simple melodies and, most of all, his clever, catchy lyrics. He reinvigorated the calypso form in the 1950s and brought the genre to international prominence. Between 1956 and 1974 he won the Road March competition six times and the Calypso Monarch competition seven times, before heading into retirement. In 1992 he returned to win the Calypso Monarch competition again. Through the early 1990s he worked with Barbadian producer Eddy Grant to reissue his classic recordings.

LISE WAXER

Mignon, Jean (*b* ?Paris, *c*1640; *d* ?Paris, *c*1707). French composer. He was the son of Pierre Mignon, cobbler and valet to the Prince of Condé. He was educated as a choirboy at Notre Dame, Paris, and later at the College of Fortet. At an unknown date he became choirmaster of Senlis Cathedral. In 1663, despite his father's intervention on his behalf, he applied unsuccessfully for one of the choirmasterships at the royal chapel. On 30 August 1664 he succeeded Pierre Robert, a successful applicant at the royal chapel, as choirmaster of Notre Dame, Paris. There he was made sub-deacon of St Denis-du-Pas on 3 June 1682; sub-deacon (canon according to the title-page of his mass of 1686) of St Jean-le-Rond some time between 1682 and 1686; and vicar of St Aignan on 5 February 1687. In 1683 he tried again for a choirmastership at the royal chapel and survived the first elimination only to be defeated in the second. On 21 June 1694 he retired from his position at Notre Dame and was succeeded by Campra. On the same date he was made canon of St Aignan, an honour reserved for those with whom the cathedral chapter was especially well pleased; he was the last choirmaster of Notre Dame to be so honoured. He was highly regarded in his day as a composer and musician and was one of the judges for the celebrated musical competitions held at Caen from 1669. His masses were reprinted as late as 1744. He also had some skill at poetry; in 1682 he sponsored a contest to write a sonnet in praise of the king using specified rhymes; according to contemporary sources this kept everyone busy for the whole season. His music, although contrapuntal, is in a simple, largely chordal and syllabic style, often with sparse imitation, square phrases, angular melodic lines and little affective response to the words. Its interest depends almost entirely on the drive of its dotted, dance-like rhythms.

WORKS

all published in Paris

Airs à quatre parties (1664)

Missa 'Iterum dico, gaudete', 4vv (1676)

Missa 'Gaudete in Domino semper', 4vv (2/1678; 1st edn lost)

Missa 'Vinea nostra floruit', 6vv (1678)

Missa in honorem Divi Joannis Baptistae 'Joannes est nomen ejus', 5vv (1682); facs. extracts in Chartier

Missa 'Psallite sapienter', 4vv (1686)

Missa 'Laetitia sempiterna', 4vv (1707); facs. extract in Chartier

7 airs, a 2, 1660[1]

Missa 'Magnificate Dominum mecum', 5vv, 2 choirs ad lib, lost, cited in Ballard catalogue of 1707

Psalms, motets, Te Deum settings: lost, cited in *Mercure galant* (1679–83)

WILLIAM HAYS

Mignone, Francisco (Paulo) (*b* São Paulo, 3 Sept 1897; *d* Rio de Janeiro, 2 Feb 1986). Brazilian composer and conductor. A son of an Italian immigrant musician, he began flute and piano studies with his father, continuing his piano training from 1907 under Silvio Motto. At an early age he played both of his instruments in local dance orchestras. He studied the piano, the flute and composition at the São Paulo Conservatory, where he was a pupil of Cantù and from where he graduated in 1917; although Mário de Andrade was his teacher for history and aesthetics, it was only later that Mignone came under Andrade's influence. By 1920, when he left for Europe, Mignone had composed and conducted several orchestral pieces. He studied under Ferroni at the Milan Conservatory, and there he wrote the opera *O contratador de diamantes* (1921), first performed in Rio de Janeiro in 1924; *Congada*, taken from the second-act ballet, achieved great popularity. A second opera, *L'innocente*, was presented in Rio with great success in 1928; the following year Mignone returned to the São Paulo Conservatory as a harmony teacher. In 1933 he moved to Rio and was appointed official conductor and conducting teacher at the Escola Nacional de Música; he also taught privately for many years. After a European conducting tour (1937–8) he visited the USA for the first time in 1942. In New York the League of Composers had some of his works performed and he conducted the NBC and

CBS orchestras in concerts of his music. During the next two decades he held many different appointments in Brazil, among them the music directorships of the Teatro Municipal, Radio Ministério da Educação e Cultura and Radio Globo.

In the first (*c*1917–28) of the three periods that may be distinguished in Mignone's output, his Italian background and training are evident in the Romantic structure and harmony of such pieces as the *Suite campestre*, the *Paráfrase sobre o hino dos cavalheiros da Kirial*, and the tone poems *Festa dionisíaca*, *Momus* and *No sertão*, the last a fantasy suggested by the work of Euclides da Cunha. At the same time, an interest in national idioms may be perceived in *Maxixe* and *Congada*, both based on Brazilian popular rhythms.

Mignone was strongly attracted by the ideals of musical nationalism eloquently propounded by Andrade, and about 1929 he began a new period of intensive creativity drawing on all manner of Brazilian folk and popular traditions, a period that lasted until around 1959–60. Typical of this nationalist style are the ballets *Maracatu de chico rei* and *Leilão*, the orchestral *Batucajé* and *Babaloxá*, and the four *Fantasias brasileiras* for piano and orchestra. The first ballet and the two orchestral pieces are on Afro-Brazilian subjects and use almost exclusively Afro-Brazilian themes, or themes akin to them in rhythm and melody. Nearly all of the collective numbers of *Maracatu* are stylized folk- or popular dances, and the orchestration is given individuality by the inclusion of popular percussion instruments. The *Fantasias* epitomize Mignone's style better than any other works of the period; all are rhapsodic pieces with a piano part recalling the captivating, spontaneous, virtuoso style of such popular pianist-composers as Nazareth. In a 1939 newspaper article Andrade mentioned the third *Fantasia*, *Babaloxá* and *Maracatu* as 'monumental landmarks', recognizing their importance in contemporary Brazilian music. The symphonic 'impressions' *Festa das igrejas*, which received international recognition after a Toscanini NBC SO performance in 1944, take some thematic material from the mestizo *caboclo* music.

In the 1930s and 1940s Mignone had most success in Brazil with solo songs and piano pieces. His first nationalist song, *Quando na roça anoitece*, is characteristic in its melody and guitar-like accompaniment; and the best of these songs are the *Seis líricas*, *Dentro da noite* and *Dona Janaína* from the cycle *Quatro líricas*, and *Pousa a mão na minha testa*. Of the piano pieces, the most overtly nationalist are the *Lendas sertanejas*, the *Quatro peças brasileiras*, *Cucumbizinho*, *Cateretê*, *Dança do Botocudo* and *Quase modinha*. Lyrical melodies, some taken from folksongs, within a prevailingly tonal harmony and frequent syncopated rhythms (as in *Nazareth* from the *Quatro peças*) point to a heavy dependence on urban popular music. Two sets of very Romantic waltzes, *Valsas de esquina* and *Valsas choros*, attempt to re-create the style of the improvised waltzes of early 20th-century strolling serenaders, of the popular piano pieces of such composers as Nazareth, and, in their melody, of the popular *modinhas*. These persistent references to national music were to some extent transcended in the Piano Sonata no.1 (1941).

Writing six years later in his book *A parte do anjo*, Mignone decided that 'my music will have to be gradually more refined technically, but clear, honest and easily understandable to the majority'. Such an intention appears to underlie the Piano Concerto (1958), a Romantic piece with colourful orchestration and brilliant bravura solo passages. Other orchestral and chamber pieces of the late 1950s indicate a turning away from direct preoccupation with national sources in favour of an attitude of such eclecticism that it is difficult to isolate constant features, although a tendency to polytonality, tone clusters, atonality and serialism can be discerned. Indeed, the *Variações em busca de um tema* (1972) were designed to accommodate 'all present-day compositional processes'.

In the 1970s Mignone returned to opera, with *O chalaça* (1973), one of the best works in the contemporary operatic repertory in Brazil, and *O sargento de milícias* (1978), both on librettos by H. Mello Nóbrega. He utilized a number of popular musical themes in the latter, regaining in the last few years of his life a strong attachment to nationalism, in which he found 'a message of richness, variety, atmosphere and local colour', as he stated in a 1977 interview. His works of the late 1970s and 80s, such as *Quincas Berro d'Agua*, *Nazarethiana*, several *Valses brasileiras*, and the *Choro* for two guitars, reveal this affinity with the many musical expressions of his country.

WORKS

OPERA

O contratador de diamantes, 1921 (3, G. Bottoni, after A. Arinos), Rio, Municipal, 20 Sept 1924

L'innocente (3, A. Rossato, after C. Espina Tagle), Rio, Municipal, 5 Sept 1928

Mizú (operetta), 1937

O chalaça, 1973 (2, H. Mello Nóbrega), Rio, 27 Nov 1976

O sargento de milícias (2, Mello Nóbrega, after M.A. de Almeida), Rio, Municipal, 15 Dec 1978

BALLET

Maracatu de chico rei (M. de Andrade), 1933; Leilão, 1941; O espantalho, 1941; Iara, 1942; O guarda chuva, 1953; Sugestões sinfônicas (tone poem-ballet), 1969; Quincas Berro d'Agua (J. Amado), 1979; O Caçador de esmeraldas (O. Bilac), 1980

GERARD BÉHAGUE

Mignot, de la Voye. *See* LA VOYE-MIGNOT, DE.

Migot, Georges (*b* Paris, 27 Feb 1891; *d* Levallois, nr Paris, 5 Jan 1976). French composer. His father was a pastor and doctor, and Migot's concern for spiritual and humane values was instilled from his earliest years. In 1909 he entered the Paris Conservatoire, studying composition with Widor, orchestration with d'Indy and music history with Emmanuel. Badly wounded at the outset of World War I, he resumed his studies after a long convalescence; he won three successive composition prizes (1918–20). In 1921 he won the Blumenthal Foundation Prize for French thought and art for a body of work that was already considerable and showed great originality. At the same time he was producing remarkable paintings (exhibitions of his work were held at the Georges Petit Gallery in 1917 and at the Marcel Bernheim Gallery in 1919); he also published a collection entitled *Essais pour une esthétique générale* (1920). The years 1920–39 were ones of constant struggle – in music, writings and discussion – against the neo-classical aesthetic which was dominating music in Paris. Always an independent, Migot took nothing from this or any other fashionable movement; instead he continued to pursue his own ideas, steadily adding to his monumental oeuvre. From 1949 to 1961 he was keeper of the Museum of Instruments at the Conservatoire. He was an Officer of the Légion d'Honneur.

His earliest works show a movement from harmonic writing to the linear style of such pieces as the Trio (1918–19) for violin, viola and piano. What distinguishes him from his contemporaries – Hindemith or Les Six, for example – is the uncompromisingly polyphonic manner which he progressively evolved. In his mature works, such as *Requiem a cappella* (1953), he achieved a line which is completely free from rigid metrical restriction and avoids any suggestion of definite tonality or modality. This melodic style is one of the most characteristic features of Migot's music. His use of timbre is also highly individual, whether in the unusual combinations of his chamber music (e.g. the *Quatuor* for flute, violin, clarinet and harp and the *Deux stèles* for solo voice, harp, celesta, tam-tam, cymbal and double bass), the subtlety of his orchestral scoring (most notable in the three concertante suites, 1924–6) or the adventurous sonorities of his piano works (e.g. *Le zodiaque*).

The flowing quality of Migot's music sets it in the tradition of Couperin, Rameau and Debussy. However, the visionary imagination displayed in such works as *Le sermon sur la montagne*, *La passion* and *Saint Germain d'Auxerre* is essentially original. Migot is set apart from other French composers of his generation by his impressive output of vocal works, which includes a large number of *mélodies* and over 70 choral works. The latter include six oratorios on the life of Christ, as well as other religious works (*Le petit évangéliaire*, *De Christo* etc.), some of which use his own texts based on the Gospels. His independent poetry, of which he published two volumes (1950–51), is concerned principally with spiritual themes. He insisted on a close spiritual link between text and music, scorning simplistic word-painting, but even in his secular and instrumental works the loftiness of thought is unmistakable.

WORKS
(selective list)

STAGE

Hagoromo (symphonie lyrique et chorégraphique, L. Laloy and Migot), 1920–21; La fête de la bergère (ballet), 1924; Le rossignol en amour (chbr op, Migot), 1926; Conte de fées (opéra chorégraphique, Migot), 1938; Mystère orphique (polyphonie chorégraphique, Migot), 1948; Le zodiaque (chorégraphie lyrique, 4, Migot), 1958–60

MARC HONEGGER

Migret, Giacomo. Composer, probably not identifiable with MEIGRET.

Miguel, Mariano Tafall y. *See* TAFALL Y MIGUEL, MARIANO.

Miguéz, Leopoldo (Américo) (*b* Niterói, Rio de Janeiro, 9 Sept 1850; *d* Rio de Janeiro, 6 July 1902). Brazilian composer and conductor of Spanish descent. His first

music studies were under Nicolau Ribas in Oporto, Portugal, where his father, a businessman, had settled. He returned to Brazil in 1871 and became associated in 1878 with the publishing firm Artur Napoleão. In 1882 his Symphony in B♭ was performed with considerable success. That same year he travelled to Brussels, where he had wanted to study since childhood and where he came under the influence of Wagnerian ideals; upon his return to Rio in 1884 he became the chief advocate of Wagner in Brazil. He served as conductor and director of an opera company for several years. After the proclamation of the Republic (15 November 1889), a hymn of his won first prize in the contest for selecting a new national anthem, but it became simply the *Hino à proclamação da República*. He was appointed director of the newly created National Institute of Music (1890), establishing and implementing new educational policies, and visited several European conservatories in 1895 to obtain ideas and suggestions for the betterment of the institute.

Miguez's works were strongly influenced by the philosophies and musical languages of Wagner and Liszt. He wrote the dramatic poem *Pelo amor!* (1897) and the opera *Os saldunes* (1901), both on librettos by Coelho Neto, the latter 'conceived in the most orthodox Wagnerian spirit', according to Corrêa de Azevedo. The symphonic poems *Parisina*, *Ave, libertas* and *Prometeu* rely on thematic transformation and exhibit the composer's efficient handling of development techniques and of the orchestral palette. His contributions to musical education and concert life in Rio in the last two decades of the 19th century were remarkable.

WORKS
(*selective list*)

Stage: Pelo amor! (dramatic poem, 2, Coelho Neto), 1897; Os saldunes (op, 3, Coelho Neto), 1901

Orch: Sym., B♭, 1882; Parisina, sym. poem, op.15, 1888 (Leipzig, 1895); Ave, libertas, sym. poem, op.18, 1890 (Leipzig, 1895); Prometeu, sym. poem no.3, op.21, 1892 (Leipzig, 1895); Suite à l'antique and Ouverture dramática, both 1890s

Pf: Noturno, op.10; Souvenirs, op.20; Scènes intimes, op.24

Other: Vn Sonata; Oda à Benjamin Constant; Hino à proclamação da República, 1890

GERARD BÉHAGUE

Mihajlović, Milan (*b* Belgrade, 3 July 1945). Serbian composer. He studied composition with Rajičić and conducting with Živojin Zdravković at the Belgrade University of Arts, where he later completed a master's degree in composition (1978). He also studied with Kelemen in Cologne and at the Orff Institute in Salzburg. He was an assistant at Radio Belgrade (1971–5) and in 1987 became lecturer at the University of Arts and president of the Society of Serbian Composers. In 1992 he co-founded the Composers' Rostrum, a festival of contemporary music held in Sremski Karlovci and Novi Sad. In his composition Milhajlović uses modes found in the music of Skryabin together with church modes and the pentatonic and whole-tone scales. His earlier works, for example *Prelude, Aria e Finale* (1976), are bright and expressive, while later pieces such as *Nokturni* ('Nocturnes', 1983) contain sounds that have a transparent quality. He has been referred to as the 'poet among Serbian composers' on account of the delicacy and refinement of his lyrical style. Several of his works have won national awards.

ROKSANDA PEJOVIĆ

Mihalič, Alexander (*b* Medzilaborce, 7 Aug 1963). Slovak composer. He studied composition with Podprocký at the Košice Conservatory (1982–5) before continuing his composition studies with Zeljenka at the Academy of Music and Performing Arts in Bratislava. In 1987 he received a scholarship to the Ecole Normale de Musique de Paris, where he studied with Yoshihisa Taira. Afterwards he remained in France, studying electro-acoustic composition with Michael Zbara at the Conservatoire National de Région in Boulogne (1988–90), with Donatoni at IRCAM (1988) and with Horacio Vaggione at the Université de Paris VIII (1989–90). In 1991 he studied musicology with Dufourt at the Ecole de Sciences Sociales de Paris, and in 1992 he joined the teaching staff at IRCAM. His piece *Skladba* (1987) won the Prix de Résidence at the international electro-acoustic competition in Bourges in 1988.

In his early works Mihalič combined a traditional musical vocabulary with techniques such as electronics and the creation of new sounds. He applied advanced technology in the form of sound diffusion, sampling, pitch modulation and electronic interaction, while using repeated, regular rhythms (intensified by means of gradation or continuos accelerando) as dynamic patterns, reducing melody to a minimum of one or two notes, as in *Kompozícia* (1990) and Music for String Quartet (1988). During this period he focussed on achieving a balance between rationality, intuition and instinctive musicianship. In 1991, however, he destroyed all his previous works. He then embarked on a multiple work-in-progress entitled *Encyclopaedia musicalis*, a project based on the

idea that various branches of science contain principles and laws applicable to music. Each work in this cycle can be varied according to chosen parameters, including computer applications.

YVETTA LÁBSKA-KAJANOVÁ

Mihalovich, Ödön [Edmund] **(Péter József von)** (*b* Feričance [now in Croatia], 13 Sept 1842; *d* Budapest, 22 April 1929). Hungarian composer and educationist. While still at school he began to take private music lessons with Mihály Mosonyi in Pest, but it was the influence of Wagner, whose first concert in Pest he attended in 1863, that finally decided him on a musical career. He wrote his earliest works, such as the overture to *Athéni Timon*, in about 1860; the first to be published was a *Faust Overture* for piano duet, which already showed the Wagnerian influence that was to characterize his later music. After reading philosophy in Pest, he went to Leipzig in 1865 to study composition under Moritz Hauptmann and completed his education in Munich under Peter Cornelius in 1866.

At about that time he met Liszt, Wagner and Bülow, whose friend he was to remain; their correspondence provides valuable glimpses into the music and musical life of the day. Mihalovich made his public début as a composer in 1865 when his march for orchestra was played by the Philharmonic Society of Pest, and in 1867 the revised version of his *Athéni Timon* overture was performed in Meiningen. The first complete concert of his orchestral works was given in Pest on 6 April 1870. In 1872 he became president of the Wagner Society in Pest, and in 1881 director of the Színitanoda (drama school). In 1887, shortly before the publication of his important essay on the country's system of musical education, he was appointed principal of the academy of music in Budapest, succeeding Liszt as head of the most important musical institute in the country. He remained in this post until 1919, during which time he greatly contributed to the school's attaining an international reputation and to the general development of Hungarian musical life.

Mihalovich was not only gifted with outstanding organizing and administrative talent, but also with foresight, as shown by his role in securing Mahler's appointment at the Royal Hungarian Opera House. As a creative musician, Mihalovich's significance was, as he recognized, minor; yet apart from its profound technical competence, his work shows an aristocratic sensibility. Many of his compositions are wholly under the influence of the New German School; and although his music bears little trace of a Hungarian nationalist idiom, his aversion to new music of the 20th century and even his rejection of the contemporary style of the Hungarian school did not prevent him from supporting the most talented figures of the younger generation: Bartók, Kodály, Weiner and Dohnányi.

JOHN S. WEISSMANN/KATALIN SZERZŐ

Mihalovici, Marcel (*b* Bucharest, 22 Oct 1898; *d* Paris, 12 Aug 1985). French composer of Romanian origin. He studied in Bucharest (1908–19) with Bernfeld (violin), Cuclin (harmony) and Cremer (counterpoint), and at the Schola Cantorum, Paris (1919–25), with d'Indy (composition), Saint Réquier (harmony), Gastoué (Gregorian chant) and Lejeune (violin). In Paris he also received advice from his compatriot Enescu. From 1959 to 1962 Mihalovici taught at the Schola Cantorum. He was a founding member of both the Society of Romanian Composers, Bucharest, and the Paris contemporary music society Le Triton; in 1964 he became a corresponding member of the Académie des Beaux-Arts.

A prolific composer who tackled all styles and forms, he was a strong advocate of neo-classicism and placed great emphasis on melody and counterpoint. His harmonic language ranged from chromaticism to serialism. The imaginative play of instrumental sounds and the constant rhythmic variation (often inspired by Romanian folk music) reveals Mihalovici as a composer who was contemporary in his outlook despite a rigorous, academic background. Works such as *Chindia*, *Rhapsodie concertante*, the First Sonata for violin and piano, the ballet *Karagueuz* and the Third String Quartet are remarkable for their transfiguration of Romanian folk elements, their original modalism and rhythmic definition. He was awarded the Louis Spohr Prize (1955), the Copley Prize (1962) and the George Enescu Prize (1966). He was married to the French pianist Monique Haas.

VIOREL COSMA

Mihály, András (*b* Budapest, 6 Nov 1917; *d* Budapest, 19 Sept 1993). Hungarian composer, conductor and teacher. He entered the Liszt Academy of Music in 1934 as a cello pupil of Schiffer, and he also studied in the chamber music class of Waldbauer and Weiner. Although he began his career as a cellist, he took private lessons in composition with Kadosa and Strasser. His artistic development was greatly affected by World War II and the political struggles of the period. In 1941 he joined the illegal Communist party; he directed workers' choirs and propagated new music (chiefly the works of Bartók, Schoenberg, Berg and Hindemith) within the framework of private concerts given by his own string quartet. His own compositions of the period, such as the Piano Trio and the First Quartet, came about under the influences of Bartók and the Second Viennese School. At the same time he became concerned with the problems of educating, and communicating with, a larger audience, and his first cantata, *Szabadság és béke* ('Freedom and Peace'), was composed for a Petőfi festival organized in 1942 to unite anti-fascist forces. In 1944 Mihály was arrested for his activities in the resistance movement.

After the liberation, in 1946, he composed his first symphony, subtitled 'Sinfonia da requiem', in memory of those killed as a result of war and persecution. Mihály became solo cellist at the State Opera, general secretary of the Philharmonia Society and general secretary of the Hungarian State Opera (1948–50). In 1950 he was appointed professor of chamber music at the Budapest Academy. As a summary of his evolution until then, he composed the Cello Concerto in 1953, mainly under the influence of Kodály. After this Mihály set himself to follow and assimilate the example of Bartók. The first works resulting from this intention were the Piano Concerto (1954) and the Fantasia (1955) for wind quintet and orchestra. These pieces exhibit a rather direct dependence on Bartók that was overcome in the Violin Concerto (1959), which incorporates neo-Baroque ideas.

In 1962 Mihály was appointed music adviser to the music section of Hungarian broadcasting. He received the Erkel Prize in 1964 for the third time; he had already been awarded the Kossuth Prize in 1955. A group of elaborate

chamber pieces was succeeded by the Third Symphony (1962), constructed as a fresco of isolated points and close, in technique and aesthetic, to pre-serial Schoenberg. In 1964–5 Mihály composed a three-act opera to his own text, *Együtt és egyedül* ('Allied and Alone'), drawing on his wartime experiences. From 1965 he became more closely connected with avant garde-music. He founded the Budapest Chamber Ensemble in 1968 for the performance of new Hungarian and foreign works. Concurrently his own music grew more widely known internationally with performances in Zagreb, Darmstadt, Warsaw and London. Works written during this period, such as the Three Movements (1969) for ensemble and the orchestral *Monodia* (1971), show Mihály employing clusters, controlled aleatory writing and other novel developments. In the mid-1970s he stopped composing because of other obligations. He was general director and occasional conductor of the Hungarian State Opera (1979–86); after his retirement he continued to teach at the Liszt Academy and led chamber music classes, mainly in Scandinavia.

JÁNOS KÁRPÁTI/PÉTER HALÁSZ

Mihelčič, Pavel (*b* Novo Mesto, 8 Nov 1937). Slovene composer. He graduated in 1963 from the composition class of Bravničar at the Ljubljana Academy of Music and continued his studies there as a postgraduate (MA 1967). Between 1963 and 1982 he taught music theory at the Ljubljana secondary school of music and then worked as music editor at Radio Slovenia; in 1995 he was appointed assistant professor of composition at the Academy of Music. He has served as president of the Society of Slovenian Composers (1984–92), and in 1992 he became chairman of the Slovenian section of the ISCM. He is a highly respected music critic. In 1979 he received the Prešeren Foundation Award, one of Slovenia's most important cultural accolades.

His compositions are characterized by their formal accessibility and by their striking musicality. Some of his earlier works have an improvisational quality, possibly as a result of Mihelčič's preoccupation with jazz during his youth. His form of expression is predominantly modern and intimate in character. His works for orchestra are colourfully orchestrated, and, thematically, take their inspiration from Slovenian folk music (e.g. *Prizori iz Bele Krajine*, 'Scenes from Bela Krajina'; *Slike, ki izginjajo* 'Disappearing Pictures'; *Sen prve mladosti*, 'The Dream of First Youth'; and the Concerto 'Solange').

MATJAŽ BARBO

Mihevc, Marko (*b* Ljubljana, 30 April 1957). Slovene composer. He graduated from the composition class of Srebotnjak (1980) and the conducting class of Anton Nanut (1986) at the Academy of Music in Ljubljana. After further composition study with Burt at the Hochschule für Musik in Vienna he was awarded the MA (1991). In 1995 he became a lecturer and head of composition at the Academy in Ljubljana. He is a leading figure in Slovenian composer organizations and a founder of the Night of Slovenian composers, the largest annual contemporary music event in Slovenia.

His music touches the very core of debates surrounding music of the 20th century. It leads to a confrontation on several levels between all of music's parameters and in a postmodernist way interrelates past and present. Mihevc blends tonality with atonality and melodic linearity with textural fields, producing a vectorial turbulence rather than restrained stasis; this is particularly true of his symphonic poems *Equi*, *In signo tauri*, *Miracula* and *Alibaba* and of his vocal-instrumental works *Proverbia* and *Enigmata*.

WORKS

Stage: 'IO' (ballet), 1980; Aladin in njegova čudežna svetilka [Aladdin and his Magic Lamp] (children's op, M. Mihevc), 1981

MATJAŽ BARBO

Mihi, Orazio. *See* MICHI, ORAZIO.

Mijwiz [mijwez, mizwaj, mizwij]. Reed instrument, normally a double clarinet, of the Middle East, with two parallel pipes of the same length. *Mijwiz* is the vernacular term for 'pair'. Each reedpipe, about 30 cm long, consists of two sections which fit together and are fastened by string and tar (which at the same time join the two pipes). The small, upper part (about 7 cm) is the actual idioglot single reed (there are two, one for each tube); the tongue is 2 cm long and is down-cut (i.e. it sticks up in the direction of the tube). The tops of the tubes are closed so that the breath must pass through the tongue, and the entire section must be placed deep in the mouth to produce the sound. The two playing pipes generally have six holes. The placing of the hands varies according to the players, the relationship of left hand to lower notes and right to higher changing from one village to the next. The range of the instrument is more than an octave but the player usually uses a range of a wide 4th (between 4th and a 5th). Playing requires circular breathing. The *mijwiz* is never played with one of the tubes providing a drone; two melodies are played simultaneously, in unison. One of the tubes is usually tuned slightly higher than the other, which has the effect of producing acoustic beats as a desired characteristic.

The *mijwiz* is mainly found in Syria, western Iraq, Lebanon, northern Israel and Jordan. The playing style along the Mediterranean coast is florid, with fioritura, arabesques and features of free improvisation in a nervous, rapid tempo; this contrasts with the more accented, heavier and less ethereal style used in the hinterland. The nasal quality is found everywhere. The instrument is generally played alone, but it may accompany a singer, when it is supported by a *darbukka* (goblet drum). Its repertory is drawn from sing tradition, decorated by the performer. Particular pieces are not known, except for the *dabka* dance. It is associated with shepherds, and in Lebanon it was in the past sometimes used to lead funeral processions.

CHRISTIAN POCHÉ

Mikeš, Adolf (*b* Hradec Králové, 23 Dec 1864; *d* Prague, 26 May 1929). Czech piano teacher. After preliminary musical education at Hradec Králové, he studied law and painting in Prague and later in Vienna. On his return to Prague he continued music studies with Josef Klička and Jindřich Kàan, becoming the latter's assistant at the conservatory from 1891 to 1898. Unsuccessful in his pursuit of a solo career, he turned to teaching and founded his own piano school, first in Plzeň (1898) and later in Prague (1903). He carefully studied the Deppe piano method which, in combination with Batka's principles of music education, he elaborated as the basis of his own method. Harmony, music history, theory and aesthetics were also taught at his school. When he refused to submit the school to an official inspection he was obliged to retire and hand it over to his pupils; after 1918 he was professor at the Prague Conservatory.

Mikeš made a valuable contribution to the Czech school of piano playing, both by broadening its range through his introduction of the Deppe method and by teaching many distinguished players, a number of whom later became professors at the Prague Conservatory. His importance goes beyond his pedagogical activities; he was also an enlightened musical personality, who published many articles in newspapers and music journals and gathered round him a group of progressive musicians, among them the composer Vítězslav Novák. Mikeš also attempted a reform of keyboard shape, constructing a rounded keyboard in 1902, some years before Fred Clutsarn's fan-shaped keyboard.

MIROSLAV K. ČERNÝ/R

Mikhashoff [Mychasiw; MacKay], **Yvar Emilian** (*b* Troy, NY, 8 March 1941; *d* Buffalo, NY, 11 Oct 1993). American pianist and composer. He studied at the Eastman School of Music, the Juilliard School of Music, the University of Houston and the University of Texas, Austin (DMA 1973). Mikhashoff's teachers included Armand Basile, Adele Marcus and Beveridge Webster. In 1968 he received a Fulbright scholarship to study composition with Boulanger in France; other awards included two New York State research fellowships (1974, 1978) and an American-Scandinavian Foundation grant (1982). In 1973 he joined the music department at SUNY, Buffalo, where he taught for 20 years, and where he also co-founded and directed the North American New Music Festival.

Mikhashoff commanded an extensive repertory of contemporary piano works and toured widely in the USA and in Europe, where he established a reputation as an advocate of 19th- and 20th-century American music. For the 1982 Holland Festival Mikhashoff produced 'Revolution and Revelation', a series of nine programmes offering a survey of American music from the colonial era to the 20th century. For the Almeida International Festival of Contemporary Music and Performance (London, June 1985) he organized 'At the Tomb of Charles Ives', 20 programmes 'in celebration of American experimental music, 1905–1985'.

In June 1988 in Berlin, Mikhashoff performed an eight-hour piano marathon that included 80 piano works from eight decades of American music. Mikhashoff commissioned piano works from American composers including Henry Brant, John Cage, Lukas Foss and Lejaren Hiller and from Per Nørgård, Sylvano Bussotti and other prominent Europeans. In commemoration of the sesquicentennial of the city of Buffalo in 1982 he commissioned piano works from 15 composers and in 1983 he invited 88 composers from 30 countries to contribute to his International Tango Collection. His own music was most influenced by Debussy; however from 1974 it also reflected both central European and Amerindian folk music. He transcribed many works by Copland, Puccini, Auric, Thomson, Krenek and Nancarrow for chamber ensemble.

Mikhaylova [Michailova], **Mariya** [Maria] **(Aleksandrovna)** (*b* Khar′kiv, 22 May/3 June 1866; *d* Molotov [now Perm′], 18 Jan 1943). Russian soprano. She studied in St Petersburg, Paris and Milan, and made her début in 1892 as Marguerite de Valois (*Les Huguenots*) at the Imperial Opera, St Petersburg; she remained there until 1912, making frequent tours in Russia and one each to Prague (1903) and Tokyo (1907). She created the role of Electra in Taneyev's *Oresteya* (1895); her repertory also included Mozart's and Auber's Zerlina, Aennchen (*Der Freischütz*), Carolina (*Il matrimonio segreto*), Berthe (*Le prophète*), Juliet, Nannetta (*Falstaff*), Gilda, Lakmé, Micaëla, Tamara (*The Demon*) and Glinka's Lyudmila and Antonida (*A Life for the Tsar*). With a pure, musical voice, she was the first singer to achieve world fame through the gramophone alone. She also undertook many salon engagements.

HAROLD BARNES/ALAN BLYTH

Mikhaylova, N. *See* ZEYFAS, NATAL′YA MIKHAYLOVNA.

Mikhaylov-Stoyan, Konstantin Ivanovich (*b* Golyam Boyalak, Bessarabia, 25 March 1853; *d* Sofia, 13 June 1914). Bulgarian tenor. He was the first Bulgarian opera singer and producer, and one of the founders of Bulgarian opera. Born Konstantin Ivanovich Mikhaylov, the son of Bulgarian emigrants to Bessarabia, he adopted the typically Bulgarian name Stoyan in order to stress his origins. He studied in Odessa, sang in a choir as soloist, worked as a teacher and studied for several months at the St Petersburg Conservatory. He also toured Russia in various opera companies, and in 1888 became soloist at the Bol′shoy Theatre in Moscow. There he sang until 1899, when he went for the first time to Bulgaria to give concerts. He returned to Russia as guest artist in different opera houses (in 1902 together with Chaliapin) and in Helsinki; he was also lecturer at the music school in Vilnius, and in 1905 became headmaster of the music school at Rostov-na-Donu.

In 1907 Mikhaylov-Stoyan gave successful concerts in Bulgaria with two other Bulgarian opera singers from Bessarabia (Ivan Vulpe and Bogdana Gyuzeleva-Vulpe). This led to the foundation in the same year of the Operna Druzhba (Opera Association), which marked the beginning of opera performances in Sofia. Mikhaylov-Stoyan's repertory included many leading tenor parts from operas by Verdi, Wagner, Gounod, Mascagni and above all by Russian composers, and a large number of Bulgarian folksongs. In addition, Mikhaylov-Stoyan staged several operas in Sofia and wrote many articles in both Bulgarian and Russian, as well as a book entitled *Po vaprosa za osnovavaneto na Balgarskata narodna opera* ('On the foundation of the Bulgarian National Opera', Sofia, 1907).

LADA BRASHOVANOVA

Miki, Minoru (*b* Tokushima, Shikoku, 16 March 1930). Japanese composer. He was brought up in a musical household, several members of his family being accomplished performers on Japanese instruments. At high school he had his first encounters with European music as a member of a choral group. He studied composition with Ifukube and Ikenouchi at the Tokyo National University of Fine Arts and Music from 1951 to 1955. In 1953 he won second prize in the Japanese radio competition for orchestra works with *Kōkyōteki sangakushō* (or *Trinità sinfonica*), and after graduating he continued to write large works for European orchestra while supporting himself by composing for films, particularly documentary and educational ones. Around 1960 he turned his attention to choral music, then in 1962 he composed his first piece for traditional Japanese instruments, *Sonnet* for three *shakuhachi*. Together with a number of players on Japanese instruments he organized the Ensemble Nipponia (now Pro Musoca Nipponia) in 1964, and Miki established himself as a leading composer for traditional forces. Furthermore, Miki took the group on overseas concert tours 13 times, acting as its artistic director until 1984. In 1970 an anthology of his music was issued on disc, winning the *grand prix* at the Arts Festival of the same year.

Miki mastered the techniques of European art music with astonishing rapidity; his command is displayed fully in the early Expressionist orchestral works, which already show a sensitivity to instrumental timbre and a fascination with extra-European music. His early instrumental works and a large number of choral pieces of 1960–63 demonstrate his attempts to combine European and oriental features in his own style. However, the formation of the Ensemble Nipponia marked a turning-point: from then on he gradually departed from the European tradition and began to explore original techniques appropriate to Japanese instruments. In doing so he depended a great deal on effective combinations of timbre and a strong sense of rhythm; his rhythms may be determinedly violent, irregular in beat or completely free and improvisatory, while he has benefited from his close contact with performers in developing music requiring a high degree of virtuosity. Indeed, much of his music after 1960 has been written for specific artists, in particular the Tokyo Liedertafel and Pro Musica Nipponia. In 1968 he met the *koto* virtuoso Keiko Nosaka, for whom he has written a series of pieces, and with whom he collaborated in the invention of a new 20-string *koto*, the *nijūgen*. He has also composed many pieces for the marimba virtuoso Keiko Abe.

After the success of his opera *Shunkin shō* in 1975, Miki turned his interest to opera, accepting two commissions to write operas to English librettos: *An Actor's Revenge* for the English Music Theatre (1979) and *Jōruri* for the Opera Theatre of St Louis (1985). In these works he used Japanese instruments alongside the Western orchestra, and their international success is due primarily to the composer's skill in blending elements of Japanese and European music in a way both natural and subtle. In 1983 he presented *Utayomizaru*, a folk-inflected smaller-scale work for three Japanese instruments and percussion. Designated a musical-opera or folk-opera by the composer, its success encouraged him to found a music-theatre ensemble, *Utayomi-za* (later *Uta-za*) in 1986, in order to further develop his ideas on music drama. As melody became an increasingly important element for him after the mid-1980s, his melodic lines became more expressive and suited to the text. At the same time, his interest in traditional instruments extended to include those of China and Korea as well as of Japan. In a visit to Korea in 1989, Pro Musica Nipponia performed his chamber work for the same year, *Soul*, with a Korean ensemble. In 1994 his *Folk Symphony 'Den Den Den'* was performed to celebrate the inauguration of Orchestra Asia, an ensemble containing diverse Asian instruments. Throughout his career he has composed over 350 film scores, most notably for the French-Japanese film *Ai no korīda* ('L'empire des sens').

MASAKATA KANAZAWA

Mikołaj z Krakowa [Nicolaus Cracoviensis] (*fl* 1st half of the 16th century). Polish composer and organist. He is known from works signed N.C. or Nicolai Crac. in two Kraków keyboard tablatures: the Jan z Lublina tablature (in *PL-Kp*) and the Kraków Tablature formerly in the Monastery of the Holy Ghost. The two manuscripts have 40 compositions in common including two ascribed to N.C. Some works signed N.Z. in the Kraków Tablature may also be by this composer (see White). The works, many bearing dates (from 1537 to 1546), include some pieces specifically for keyboard, and also intabulations of vocal works. Some of the vocal pieces signed N.C. may be transcriptions of unidentified compositions by other composers. It is uncertain how many of the dances following 'Sequuntur coree' (*Kp* Jan z Lublina tablature, ff.213*v*–224*r*) are attributed to N.C.

The composer is of great importance for his contribution to the development of polyphony in Poland: Mikołaj z Krakowa's works illustrate the process of transition from three- to four-part polyphonic textures, and the transcriptions of contemporary popular dances and dance-songs are the oldest Polish examples of this type of composition.

WORKS
all intabulated for keyboard, in Jan z Lublina tablature, PL-Kp

ZYGMUNT M. SZWEYKOWSKI

Mikroutsikos, Thanos (*b* Patras, 13 April 1947). Greek composer and administrator. After receiving piano tuition in Patras, he moved in 1962 to Athens, where he studied mathematics at the University (1966–70). From around 1969 to 1971 he studied composition with Papaoïannou, while continuing piano lessons with Hara Tombra. In the mid-1960s Mikroutsikos became involved with left-wing politics, joining the Lambrakis Youth Movement headed by Theodorakis and composing popular songs to texts by eminent left-wing figures. Additionally, he also wrote songs and incidental music for a number of theatre companies; his collaborations with the theatre director Henri Ronse in the 1980s took him to Vienna, Paris and Brussels. Under his directorship the short-lived Patras Festival (1986–90) set new standards for this type of cultural activity in Greece. His directorship (1991–3) of Moussiko Analoghia ('Musical Passages'), a key section of the Athens Concert Hall responsible for the main programme of events, was equally successful. Mikroutsikos's service in the Papandréou government as Deputy Minister of Culture (1993–4) and then Minister of Culture (1994–6) saw the restructuring of a number of important musical institutions, including the National State Opera in Athens.

The most highly acclaimed Greek composer since Theodorakis of both art and popular music, Mikroutsikos resists any hard-and-fast distinction between those two categories; no style or compositional technique is rejected out of hand. The song-cycles and cantatas of the 1970s, such as *Moussiki praxi ston Bertolt Brecht* ('A Musical Praxis on Bertolt Brecht', 1972–8) and *Euripides IV* (1979), present a captivating blend of the unusual and the commonplace, their stylistic ingredients ranging from bel canto to atonality and even rock. In his later concert music the style is essentially harmonic, exploring the interplay of densities and timbres and the juxtaposition of tonality and atonality, whether in the nightmarish musical images of *I kolassi mias epochis* ('The Inferno of an Era', 1989) or the intimate, elegiac atmosphere of *Slow Motion* (1990), a classic of the modern Greek orchestral literature; these are examples of the beginning of the composer's gradual transformation into a tragic composer, spiritually akin Shostakovitch or Schnittke. From 1998 to 1999 he was artistic director of the joint Athens and Epidaurus Festivals.

WORKS

(*selective list*)

Dramatic: Une saison en enfer (lyrical drama, 4, H. Ronse, after A. Rimbaud), 1984-; I epistrofi tis Elénis [The Homecoming of Helen] (op, 1, C.D. Lambrakis), Athens, Concert Hall, 8 June 1993; 4 film scores, incid music for 46 plays incl. Fuente Ovejuna (L. de Vega), Thessaloniki, State Theatre of Northern Greece, 1977

Choral: Semata [Signals] (Y. Ritsos), 1973; Asphyxia (Ritsos), male chorus, 1973–4; Dhoxastiko [A Song of Glory] (Euripides), 1979–81; Kapnon apothroskonda [Rising Smoke] (Y. Koutsohéras), 1986; On a Travel (J. Skelton, Y. Seféris, J. Gracen Brown), 1987; To kynighi [Hunting] (Aristophanes), children's chorus, 1991; Epigramma (Philippos Thessalonikeus), 1v, mixed chorus, fl, gui, 1997; Dimitriou engomion [In Praise of Demetrius] (Archbishop Symeon), 1997; Pénde dhimotika tragoudhia [Five Folksongs], 1999

Other vocal: 19 works incl. Moussiki praxi ston Bertolt Brecht [A Musical Praxis on Bertolt Brecht], 2 male vv, 2 cl, pf, 1972, 1978; Kinglidhoma I [Balustrade I] (Ritsos), nar, S, pf, tape, 1973–6; Apohaeretismos ke antithésseis [Farewell and Contrasts] (C. Cavafy, B. Brecht, Seféris, Ritsos), nar, S, Bar, ob, cl, bn, tpt, trbn, pf, 1975; Cantata ya ti makronisso [The Makronissos Cant.] (Ritsos), 2 solo vv, inst ens, 1976, 3rd rev. for 2vv, small orch, elec ens, tape, 1982; Spoudhi sto Vladhimiro Mayakovski [A Study on Vladimir Mayakovsky] (Mayakovsky, trans. Ritsos), B, bn, hn, tpt, pf, 1976–82; Euripides IV (Euripides: *Orestes*, *Ion*), nar, S, A, T, B, bn, tpt, hn, pf, 1979; Sonata tou selinofotos [Moonlight Sonata] (Ritsos), B, pf, 1979–81; Nuit avec ombre en couleurs (P. Willems), Mez, str qt/str orch, 1983–4; Warna (Willeus), Mez, str qt/str orch, 1983–4, rev. Mez, str orch, hpd, pec, 1996; Mémoires brisées (A. Rimbaud, Michelangelo), Bar, fl, cl, bn, hn, pf, str qnt, 1991; Anepileptos thanatos [Irreproachable Death] (A. Sikelianos), S, fl, a fl, ob, cl, tpt, 2 hn, 1996; numerous popular songs

Inst: Piece, tpt, 1973–6; Preludes, gui, 1981; Trio no.1, pf, b gui, drums, 1983; Opera ya énan (flautista) [Opera for a Flautist], fl, 1983–4; Duo, a sax, b gui, 1985; I kolassi mias epochis [The Inferno of an Era], orch, 1989; Music for Two, vn, pf, 1990; Slow Motion, str orch, 1990; Doodle, pf 1991; I thalassa [The Sea], str, tpt, 1991; Gui Conc., 1992; For Sax and Strings and Love and Dreams, 1996 [in memoriam M. Hadjidakis]; In memoriam Dmitri Shostakovitch, orch, 1997; Music, vn, pf, str, 1997; Ballet Music, nos.1–3, pf, 1997–8; Polyrrhytmia, perc, 1997; Suite, gui, str, 1997; Kaliméra sas kyrie Hadjidaki [Good Morning Mr Hadjidakis], suite, pf, 1997–8; Lacrima in Old and Modern Style, pf, 1998; Mia istoria ya pénde paedhia [A Story for Five Guys], 5 perc, 1999

Tape: Adelfos [Brother] (Y. Himonàs), 1979

Principal publisher: Nakas

GEORGE LEOTSAKOS

Mikuli, Karol (Narcyz) [Miculi, Carol (Carl)] (*b* Czernowitz [now Chernovtsy], 20 Oct 1819; *d* Lemberg [now L'viv], 21 May 1897). Polish pianist, composer, conductor and teacher. According to an unpublished history of the family written in 1935 by Karol's nephew Stefan Mikuli, *Familie Ritter von Mikuli*, Mikuli came from an Armenian merchant family named Aksanian which settled in Moldavia; Stefan also gave Karol's date of birth as 22 October 1821. Mikuli studied medicine in Vienna for a year, and in 1841 moved to Paris, where until 1847 he was a pupil of Chopin. His circle included Alfred de Musset, H. Heine, George Sand and F. Liszt, the latter becoming a lifelong friend.

He also studied composition under N.H. Reber. As a pianist he made successful tours of France, Austria, Russia, Italy, Poland and Romania. In 1858 he settled permanently in Lemberg and became artistic director of the Galician Music Society, whose symphony orchestra and chorus he conducted, and with which he introduced Schumann's orchestral music to Poland. He was also director and professor of the Lemberg Conservatory, where he taught the piano, composition and theory. After 1887 he opened a separate piano school which he ran with his wife, S. Kluczenko. Among his pupils were Raoul Koczalski, Stanislaw Niewiadomsk and Mieczyslaw Soltys. In the last years of his life Mikuli suffered from a persecution mania and withdrew from active musical life.

Mikuli composed a large number of piano works (for both two and four hands) as virtuoso practice pieces, which were often in the form of lyrical miniatures and dances. He also wrote chamber music, songs and choral works, such as the mass composed for the consecration of Czernowitz Cathedral. The chamber music includes numerous paraphrases and arrangements of popular works; all his music is in an early Romantic style. His 1864 textbook *Der Canon* remains unpublished; however Mikuli's Chopin edition (Leipzig, 1879) long enjoyed wide circulation. As a pupil for whom Chopin had a high regard, and whom he made his assistant, Mikuli was able to take into account the directions and remarks of the composer himself.

JERZY MORAWSKI

Mikulka, Vladimír (*b* Prague, 11 Dec 1950). Czech guitarist. He studied with Jiří Jirmal at the Prague Conservatory from the age of 15. His first major success was in 1970 when he became the youngest winner of the Concours Internationale de Guitare in Paris organized by ORTF. He was the first guitarist from postwar Eastern Europe to establish himself in the West; since then he has toured throughout the world, gaining a high reputation for his precise technique and stylistic felicity in music of all periods. He has been a faithful advocate of Czech music, working closely with Štěpán Rak and other guitar composers, and his collaboration with the Russian Nikita Koshkin and others has also generated many important works. Based in Paris, where he teaches the guitar, Mikulka has made numerous fine recordings, including works by Rak.

JOHN W. DUARTE

Mila, Massimo (*b* Turin, 14 Aug 1910; *d* Turin, 26 Dec 1988). Italian music critic and writer. He graduated from Turin University with a thesis on Verdi (1931) which helped to revive Verdi scholarship in Italy. He was arrested for anti-fascist activities in 1929 and again in 1935, and given a seven-year prison sentence which he served until 1940. He was a founder of the resistance group 'Giustizia e Libertà' (1940–45), and after the war helped in reorganizing the government. He taught music history at Turin Conservatory (1953–75) and Turin University (1962–75), and worked as music critic of the prestigious weekly publication *L'espresso* (1955–67), and the newspapers *L'Unità* (1946–67) and *La stampa* (1967–88).

Mila was the editorial board of *La rassegna musicale* and the *Nuova rivista musicale italiana* and was a member of the S Cecilia Academy (from 1956), and of the Accademia Filarmonica Romana. He received numerous prizes and awards, including the diploma of merit from the Scuola della Cultura e dell'Arte (silver medal, 1972), the Viareggio Prize (1950, for his book *L'esperienza musicale e l'estetica*), the Viotti d'Oro (1981) and the international Antonio Feltrinelli prize of the Academy of the Lincei for arts and poetry criticism (1985). He was also honoured with the Festschrift *Il melodramma italiano dell' Ottocento: studi e ricerche per Massimo Mila* (ed. G. Pestelli, Turin, 1977).

Mila's *Breve storia della musica* (1946) was the first compact and comprehensive account of the subject in Italian. He also wrote basic volumes on Brahms, Stravinsky, Bartók, Verdi and Mozart. His theory of the 'unknowable nature of artistic expression', explained in *L'esperienza musicale e l'estetica* (1950), suggests that an artist may achieve the highest possible aesthetic expression (in Croce's sense) even though his aims may be only technical; such composers as Stravinsky were examined in this light. As a critic he took a generally conservative approach towards avant-garde music, responding chiefly to Italian composers. His work outside music included translations of Goethe, Schiller, Hesse and Wiechert, criticism (for example, on his friend Pavesi), novels and articles on mountaineering.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Miładowski, Florian Stanisław (*b* Minsk, 4 May 1819; *d* Bordeaux, 8 July 1889). Polish pianist, conductor, teacher and composer. He was the son of Fabian Miładowski, a music teacher who gave him his first piano instruction. He was famous as a prodigy and gave concerts at the age of ten. Later he studied piano with F. Thiebe in Vilnius. Further study followed at the Gesellschaft der Musikfreunde in Vienna with Joseph Fischhof (counterpoint), Franz Hauser (singing), Simon Sechter and A. Hölzl (composition). After a short stay in Berlin, where he befriended Mendelssohn, and a visit to France, he returned to his own country, where he taught music and conducted the then celebrated orchestra of Benedykt Count Tyszkiewicz at the Czerwony Dwór (Red Manor), near Kaunas. He next moved to Vilnius, where he taught music. In 1854 he and Moniuszko founded the Society of St Cecilia, the aim of which was the cultivation of church music. He then spent some time at his estate in Macki, near Minsk, but in 1862 left for France, where he worked in Strasbourg, Metz, Nancy and Bordeaux. Miładowski composed a number of orchestral works, some chamber music (a string quartet and three piano trios) and pieces for piano (three sonatas, lyrical miniatures and dances). He also wrote an operetta *Konkurenci* ('The Rivals'), to a libretto by M. Łapicki and W. Syrokomla (Minsk, 12 Feb 1861), and numerous religious works. During the period 1857–60 he also published reviews and articles in *Ruch muzyczny*.

JERZY MORAWSKI

Milan (It. Milano; Lat. Mediolanum). City in Italy, capital of Lombardy.

1. Up to 1500. 2. 1500–1700. 3. 18th century. 4. 19th century. 5. 20th century.

1. UP TO 1500. Milan probably existed before the invasion of the Gauls or the Celts, to whom the foundation of the city in the late 5th century BCE is attributed. The political and economic importance of Milan grew further in the 3rd century CE, and in 313 Constantine promulgated the famous edict favouring Christianity there; with Constantius II (352) Milan became the effective capital of the Roman Empire. Soon afterwards AMBROSE, who came to be the symbol of Milan, arrived in the city; at first he was consular governor (*c*370), and he was elected bishop by the people in 374. Milanese (also called Ambrosian) chant is the earliest Western repertory of liturgical music to have survived parallel to the Gregorian repertory, and only in the 20th century had it begun to be undermined as a result of liturgical reforms. The independence of the Milanese rite was due to the political and ecclesiastical authority commanded by the city during the Middle Ages, and it was reinforced by the prestige

associated with Ambrose, to whom the Milanese chant and liturgy had been traditionally attributed, together with the introduction of antiphonal singing from the East. It is certain only that he wrote the texts for four or six hymns. Milanese chant is characterized by a strong Eastern influence (Byzantine and Syrian) but built on a nucleus apparently of local origin. The long tradition of Milanese chant was fostered and maintained through the establishment of a *schola cantorum* conducted by a *magister chori puerorum*, which may have been founded by Ambrose. His successor, Simpliciano, is said to have enlarged the *schola* and appointed at least three *magistri cum ferulis*. The Milanese chronicler Landolfus the Elder reported that Archbishop Ariberto d'Intimiano (1018–45) reorganized the *schola* and the children were taught in the cathedral by four priests, including Arialdo and Azzone in the first half of the 12th century, and Eriprando and Ogero in 1144. Perhaps during Ariberto's tenure, but at least in the first half of the 12th century, the practice of two-voice polyphony was known at the cathedral.

The only Ars Nova composer connected with Milan appears to have been Jacopo da Bologna, who was at the Visconti court during the reign of Luchino (1339–49) and after 1352. The Milanese were always specially inclined towards religious music, about which the first official document was issued by the provincial council in 1311. When it was decided that a new cathedral be built, Gian Galeazzo Visconti, in his proclamation establishing the prerogatives of the deputies entrusted with its construction (1394), included regulations for the cathedral's music. In the same year the first organist was appointed, magister Montus a Prato, and the cathedral *cappella* was essentially established. Matteo da Perugia was appointed *biscantor* in 1402, remaining until 1407 and later returning in 1414 for two years; from 1411 the post was held by Ambrogio da Pessano. Matteo was in effect the first of a long series of outstanding *maestri di cappella* and was followed by Beltrame Feragut (1425–30), Ambrosius da Pessano (appointed 1430) and Santino Taverna.

There is evidence of only limited musical activity in the Duchy of Milan under the rule of the Visconti (to 1447) and during the short-lived Ambrosian Republic (1447–50). This changed with the advent of the Sforza family, which began in 1450 with Francesco I (*see* SFORZA). Under Francesco, who had married Bianca Maria Visconti, but especially under his son and successor, Galeazzo Maria, sacred and secular music reached its greatest splendour. The cathedral *cappella* grew to include 12 first-rate singers with Giovanni Molli and Gaffurius (1484–1522) as *maestri*, and in 1491 Bartolomeo Antegnati built a fine organ in the cathedral. Galeazzo Maria Sforza established a court ensemble in 1473, recruiting the best French and Flemish singers and composers, which by 1474 included 18 *cantori di camera* and 22 *cantori di cappella*, and which became one of the most important ensembles of the period; Weerbeke (?1471–80), Josquin (?1473–?1479), Johannes Martini (1474) and Compère (1474–5) were among the members of the *cappella* at its height. But many musicians began to leave the Sforza court after the murder of Galeazzo Maria in December 1476. Under Galeazzo's brother Ludovico il Moro, who seized power from his brother's widow in 1479, splendid musical festivities, some with sets and machinery designed by Leonardo da Vinci, were organized at court; Bellincioni's *Festa del Paradiso* with music by Gaffurius was staged for the wedding festivities of Gian Galeazzo Sforza and Isabella of Aragon in 1489. The high level of musical life at court was largely due to Beatrice d'Este, Ludovico's wife. Ludovico also established a Gymnasium in Milan in 1492 at which Gaffurius lectured on music; other professors included Luca Pacioli and Facius Cardanus. During his 38 years in Milan, Gaffurius established a reputation as one of the leading musical figures of the time; he wrote his major theoretical treatises and composed most of his music there. Although the cathedral *cappella* was dominated by Italians and the court *cappella* by Netherlanders, the relationship between the two was cordial and there were frequent interchanges of musical forces.

2. 1500–1700. In 1535 Sforza rule ended, and for nearly two centuries Milan came under Spanish rule; a long period of general decadence began, which had repercussions in musical development and inhibited the development of an autonomous tradition. Nevertheless religious music, fostered in particular in the cathedral, maintained its traditionally high standards. Gaffurius was succeeded as *maestro di cappella* by Mathias Werrecore (1522–50), Olivero de Phalanis (1550–51), Simon Boyleau (?1557–63 and 1572–4), Ruffo (1563–72) and Bartolomeo Torresani (who also appears to have worked under the name of Hoste da Reggio). The Council of Trent and the Counter-Reformation had considerable consequences for the city's musical life, mainly because of Cardinal Carlo Borromeo, Archbishop of Milan from 1560 until 1584: interpreting the recommendations of the Council, he established a more rigorous code affecting both the character of religious music and the discipline of the musicians who performed it. One of the new rules banned all instruments except the organ in church; Ruffo wrote a series of masses accordingly in 1570, and many of his later masses were written to render the text as intelligible as possible in accordance with the wishes of Cardinal Borromeo.

During the early 16th century secular music continued to be practised even if it had lost the splendour that had characterized the Sforza court. The Spanish governors also employed musicians at their court; Ferrante Gonzaga (in Milan from 1546) had an instrumental and a vocal *cappella*, with the madrigalist Hoste da Reggio as *maestro*, and among his musicians was a cornett virtuoso, Moscatello, and the young Lassus, who was probably there in 1547–9. There was no shortage of festivities or sumptuous performances accompanied by music; notable ones took place in 1548 on the occasion of the visit to Milan of Philip of Spain and in 1559 to celebrate the peace of Câteau-Cambrésis. In 1563 Giaches de Wert was *maestro di cappella* to Governor Gonzalo Fernández de Córdoba; in 1573 Giovan Leonardo Primavera was *maestro* to Luis de Zúñiga y Requesens. Outside the court, music was practised by many accomplished noble amateurs; preference was given to the lute by most players and composers, and a Milanese school of composers of lute music centred on Francesco Canova da Milano (including Joan Ambrosio Dalza, Marco Dall'Aquila, P.P. Borrono, Alberto da Ripa, G.G. Albuzio, G.P. Paladino and Perino Fiorentino) began to develop. Madrigals were also greatly favoured and were published in costly editions by such composers (many of them *maestri* in Milan) as Lassus, Hoste da Reggio, Wert, Primavera, Ruffo, Boyleau, Pietro Taglia, Gioseppe Caimo, Maddalena Casulana, Vicentino and

Michele Varotto, printed in Milan by Castiglione, Moscheni, Ponzio, Piccaglia and Pontano; these printers also published editions of canzonettas and villanellas by such composers as Vecchi and Giovanelli.

The violin and viol families were also popular in instrumental music, Milan being the centre of the region most important in the early history of the violin; the first use of the term *violino* appears in 1538 in a document describing some of the musicians brought by Pope Paul III to the peace conference at Nice in 1538 as *violini Milanesi*. Virtuoso players became famous outside Italy; for example, by 1590 almost all the players of violins and viols employed by Queen Elizabeth I of England were Italian, including various members of the Lupo family headed by Ambrose Lupo of Milan. The Milanese Riccardo Rognoni was the author of one of the early important violin methods (1592). This predilection for instrumental music was noticeable in the 16th century and continued in the 17th; many canzonas (the *canzon francese* was much favoured) and instrumental capriccios were composed by musicians employed in the city churches, for instance Florentio Maschera and Francesco Rognoni Taeggio. Such compositions were often performed in patricians' houses and dedicated to noble patrons, frequently taking their title from a patron's name ('La Brasca', 'L'Aresa' etc.). The most notable among the noble amateurs to hold academies in their palazzos were the Brivio brothers, and the Arese and Valera families.

The first known sonata *per violino e basso continuo* and the first *sonata a tre* were published in the collection *Concerti ecclesiastici* (Milan, 1610), composed by G.P. Cima, a local musician who became the leading composer of the Milanese instrumental school in the early 17th century. These two musical forms were substantially developed in the 17th century by Lombard composers, mainly from Brescia and Bergamo, rather than Milan; similarly, Lombards from Cremona and Brescia became the outstanding lute and violin makers at that time. Biagio Marini, *maestro di cappella* at S Maria della Scala (1649–52), published his op.16 of three- to six-part chamber pieces at Milan in 1649.

A considerable number of organ works (ricercares and canzonas) were also published by such composers as Gian Paolo and Andrea Cima, and Francesco and Gian Domenico Rognoni. The end of the 16th century marked a decline in the popularity of the lute, which was increasingly replaced by the harpsichord or the Spanish guitar. The Milanese school of dancing-masters, including Pompeo Diobono and Virgilio Braccesco, became established around Cesare Negri and attained international fame. Negri was the author of the dance treatise *Le gratie d'amore* (1602), dedicated to Philip III of Spain, which is illustrated with dance figurations (fig.1) and their music, and provides a comprehensive record of the social and theatrical dance music of the period.

During the 17th century the results of the rigorous restrictions imposed by the Counter-Reformation became increasingly extensive, so that religious music became almost totally predominant. Musicians had to compose madrigals of a religious character (such as Orfeo Vecchi's *La donna vestita di sole*, 1602); secular madrigals were often presented in sacred guise – Monteverdi's madrigals, for example, were mainly known in Milan in a religious arrangement by Coppini (1607–11). Collections of vocal music by Milanese composers were also published in the

early 17th century, such as the *Concerti de diversi eccellentissimi autori* (RISM 1608[13]), published by Lomazzo and edited by Francesco Lucino, a musician at the cathedral; it included concertante pieces by such composers as G.C. Gabussi, Gastoldi, G.D. Rognoni and G.P. Cima.

After the departure of Vincenzo Ruffo (*maestro di cappella*, 1563–72), the cathedral *cappella* continued its tradition of excellent *maestri*, most of whom were also prolific composers of sacred music. Carlo Borromeo and, later, his cousin Cardinal Federico devoted their personal attention to the *cappella* which was in turn entrusted to Boyleau (1572–4), Pietro Ponzio, Gabussi (1582–1611), Vincenzo Pellegrini (1612–30), Ignazio Donati (1631–8), G.B. Crivelli (1638–42), A.M. Turati (1642–50), Michel'Angelo Grancini (1650–69), G.A. Grossi (1669–84), C.D. Cossoni (1684–93) and G.M. Appiani (1693–1714). Grancini was outstanding among these *maestri*; he was active in Milanese churches from 1622 and was renowned for the expressive singing style of his polyphonic writing, clearly influenced by Monteverdi. Polyphony also flourished during the 16th century in other Milanese churches with musical establishments, among them S Maria della Scala, S Ambrogio, S Marco, S Simpliciano, S Celso and S Eufemia, and in the convents. The strict polyphonic style gave way to a more expressive style using a few voices and continuo. Among local composers was the nun Caterina Assandra, who published a collection of motets in the new concertato style in Milan in 1609.

In so austere a climate there was little opportunity for the development of opera. However, some public festivities with music were arranged when distinguished visitors came to the city. In 1594 *Il precipitio di Fetonte* was performed with musical *intermedi*, and in 1599 the pastoral fable or *ecloga Arminia* by G.B. Visconti with music by Camillo Schiafenati was performed for the visit of the Infanta Isabella and her husband Archduke Albert of Austria. These performances were generally given in

the great hall of the ducal palace opened in 1598 in the presence of Archduchess Margherita of Austria, wife of Philip III of Spain. (Later scholars have referred to the hall as the Salone Margherita, though there is no mention of this name in contemporary documents.) The ducal palace also contained the small Teatrino della Commedia (from 1686 the Regio Nuovo Teatro; closed 1729) used for *commedia dell'arte* and opera performances by touring theatrical companies, among them the famous 'Fedeli' of G.B. Andreini, which included his wife Virginia Ramponi, creator of the title role in Monteverdi's *Arianna* in Mantua.

Opera gradually acquired greater status in Milan. At the beginning of the 17th century the main theatrical productions came from Venice. Benedetto Ferrari's *Il pastor regio* was staged in 1646 and Cavalli's *Giasone* in 1650. These were performed by the Febiarmonici, who also gave Strozzi and Francesco Sacrati's *La finta pazza* in about 1650, probably in the Borromeo family's private theatre at Isola Bella, Lake Maggiore, in whose archive the score of this opera has been rediscovered. *Orione*, an opera specially written for Milan by Cavalli, had its première at the Teatro Regio in 1653. After 1670 the dependence on Venice decreased and a certain amount of local operatic production began to take shape, in part because of the local librettists Francesco Lemene and Carlo Maria Maggi.

3. 18TH CENTURY. The end of the Spanish domination of Lombardy and the advent of Austrian rule in 1706 was the beginning of a new age of prosperity and peace which lasted until 1797 and saw a flowering of culture and the arts. In 1699 the Nuovo Regio Ducal Teatro had been built by order of the Spanish governor, Vaudemont, on the site of the great hall. The theatre burnt down on 5 January 1708, and until a new theatre was built on the same site, opera was staged on a smaller scale in the Teatrino della Commedia. In 1717 a new theatre, the Regio Ducal Teatro (sometimes known as the Teatro Regio Ducale) was built by the architect Giovan Domenico Barbieri. It had five tiers of boxes, each with an anteroom where servants could prepare refreshments. Although one of the largest in Italy, the new theatre had the defect of being too long and narrow, providing a poor view of the stage (fig.2). It was inaugurated on 26 December 1717 with Gasparini's *Costantino*. For 59 years, until 25 February 1776 when it in turn burnt down, this was the centre of musical and social life in Milan. The city was still not a creative force in opera, but rather an eclectic and receptive centre open to widely varying tendencies. Its productions shone for the scenery of the Galliaris, for the ballets in the intermezzos, arranged by fine choreographers such as Le Picq, Noverre and Angiolini, and for the singers, who were among the best in Italy: the castratos Carestini, Bernacchi, Tenducci and Farinelli and the prima donnas Tesi, Bordoni, Gabrielli and Aguiari. In about 1740 the orchestra numbered 45 (fig.3). From the beginning intermezzos had been inserted between the acts of operas, as in Naples and Venice, but after 1738 they were usually replaced by ballets. During Carnival (26 December to February) two *opere serie* were performed. Already in 1718 a third opera was performed in August.

3. Interior of the Regio Ducal Teatro, with a sonnet to Violante Vestris in honour of her performance as Apamia in Hasse's opera 'Tigrane', 1750: engraving by Marc'Antonio dal Re

The eclectic operatic repertory included works by composers from all parts of Italy as well as foreigners, but many were Milanese, the most distinguished being G.B. Lampugnani (*Candace*, 1732, *Angelica*, 1738, performed with intermezzos from Pergolesi's *La serva padrona*). *L'ambizione superata dalla virtù* by the Milanese symphonic composer G.B. Sammartini was staged at the Regio Ducal Teatro in 1735 in honour of the new sovereign Carlo Emanuele III of Savoy during the short period of Franco-Sardinian domination (1733–6).

The 18th-century Milanese musical scene, closely linked with that of Vienna, was of a high standard; this was due, in particular, to the presence of Sammartini, who spent his entire life in Milan. He was *maestro di cappella* in several Milanese churches and took a leading role in the city's musical life, composing and conducting music for religious and state occasions. His vocal and instrumental music, notably his symphonies, whose harmonic and thematic relationships clearly indicate the emerging Classical style, soon became recognized outside Italy, and he was considered the leading figure in a Milanese symphonic school including Brioschi, Galimberti, Giorgio Giulini, G.B. Lampugnani and Melchiorre Chiesa. During Lent, when the theatres were closed, private concerts 'di sinfonia e di canto' continued, while in the churches, especially the Jesuit church of S Fedele, sacred cantatas were performed, many of them by Sammartini, who from 1728 was *maestro di cappella* of the Congregazione del SS Entierro which met at S Fedele.

Gluck was in Milan from 1737 until 1745 as a guest of Count Antonio Maria Melzi and probably studied with Sammartini, whose influence is evident in his early work, in particular *Le nozze d'Ercole e d'Ebe* and *La contesa de' numi*. Four of his operas were first performed in Milan: *Artaserse* (1741), *Demofoonte* (1743), *Sofonisba* (1744) and *Ippolito* (1745).

Johann Christian Bach was in Milan from 1757 to 1762. His patron was Count Agostino Litta, who enabled him to study with Padre Martini in Bologna. His style was influenced by that of Sammartini and other Milanese symphonists and this in turn had some influence on Mozart's style. By 1760 Bach was appointed one of the

4. Design by Fabrizio Galliari for Salieri's 'L'Europa riconosciuta', Act 1 scene i, Regio Ducal Teatro alla Scala, Milan, 1778: pen and ink with colour wash

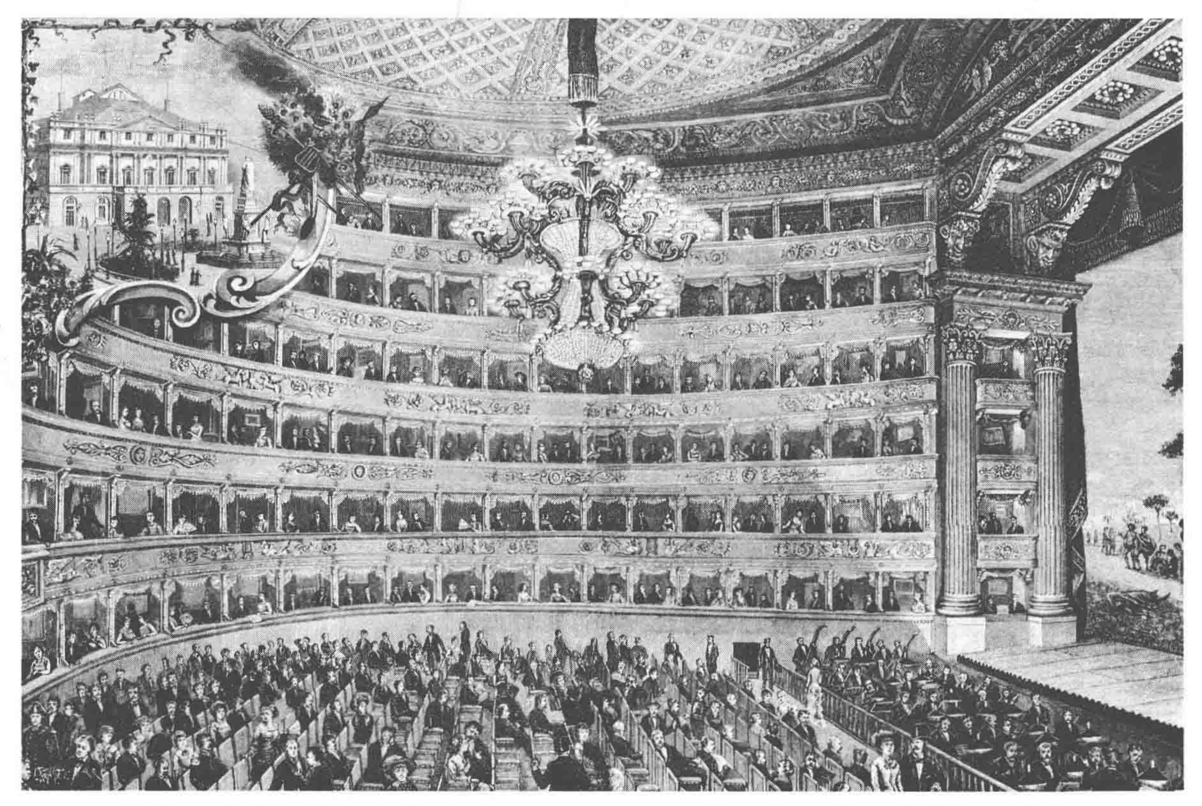
organists of Milan Cathedral and his opera *Catone in Utica*, written for Naples in 1761, was revived in the Regio Ducal Teatro the following year.

The Milanese of the mid-18th century had a keen interest in orchestral music, and concerts were organized on the ramparts of the Castello Sforzesco, where a large orchestra gave open-air performances several times a week. The vogue of instrumental and symphonic music was such as to encourage the establishment of the Accademia Filarmonica (1758), whose members were primarily noblemen, but whose musical backbone was formed by Sammartini and other musicians. Those seeking admission to the Accademia were required to pass stringent tests and each member was obliged to compose a sonata or overture annually. In the second half of the 18th century Milan was one of the most enlightened Italian cultural centres, with thinkers and men of letters such as the Verri, Cesare Beccaria and Giuseppe Parini. This was the atmosphere in Milan when the young Mozart visited the city for the first time in 1770; he was warmly received and met several musicians, including Sammartini. He returned at the end of the year to direct performances of his new opera *Mitridate, re di Ponto*, which he had written for the Regio Ducal Teatro. He again visited Milan in 1771 for the first performance of *Ascanio in Alba*, a *festa teatrale* to a text by Parini (commissioned for the wedding of Archduke Ferdinand of Austria and Maria Ricciarda Beatrice d'Este, at which Hasse's *Ruggiero* was the main operatic event), and in 1772–3 for the première of *Lucio Silla*. Both works were given at the Regio Ducal Teatro.

The cathedral *cappella* continued to flourish and musicians of high repute competed for the posts of organist and *maestro di cappella*. The *maestri* were Carlo Baliani (1714–47), G.A. Fioroni (1747–78), Giuseppe Sarti (1778–87), Carlo Monza (1787–93) and N.A. Zingarelli (1793–4), all of whom were active in other Milanese musical institutions and as composers.

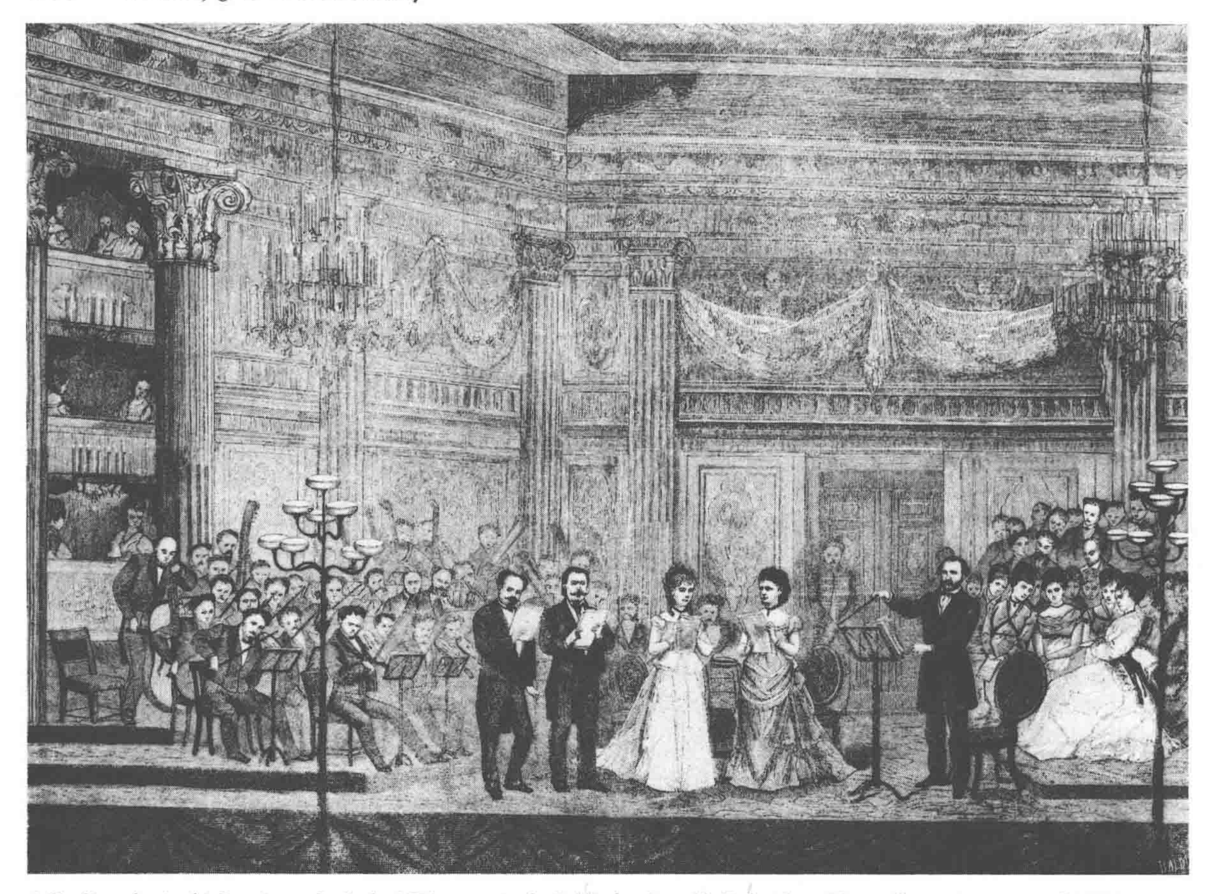
Opera, however, remained the main attraction. The theatrical spectacles received new impulse through Archduke Ferdinand, from 1771 Governor of Lombardy, who was very fond of opera and theatre. When the Teatro Regio Ducale burnt down on 25 February 1776, the archduke persuaded his mother, the Empress Maria Theresa, to approve a proposal by the Milanese nobility to build two new theatres designed by Giuseppe Piermarini: the Teatro Grande, or Regio Ducal Teatro alla Scala, and the smaller Teatro della Cannobiana. Until they were built a temporary wooden theatre, the Teatro Interinale, was erected to a design by Piermarini in the garden of the palace that had belonged to Bernabò Visconti. Between September 1776 and Carnival 1777–8 spectacles were staged in the Teatro Interinale. On 3 August 1778 the Teatro alla Scala was inaugurated with Salieri's *L'Europa riconosciuta* to a libretto by Verazi, with ballets choreographed by Claudio Le Grand and Giuseppe Canziani (fig.4). The theatre took its name from the site previously occupied by the church of S Maria della Scala (named after Bernabò Visconti's wife Beatrice della Scala). The architect was Piermarini, the interior was painted by Giuseppe Levati and Giuseppe Reina and the curtain, depicting Parnassus (at Parini's suggestion), was the work of Domenico Riccardi. The horseshoe-shaped theatre had five tiers of 194 boxes, a large royal box opposite the stage, a gallery and stalls (fig.5); each box had an anteroom as a cloakroom. Visibility and acoustics were excellent from every point. The exterior had a façade of three orders with a pediment, central projection and three-arched portico with a terrace above. The theatre overlooked a narrow street; it was only in 1857 that the piazza was opened out to its present size.

The Teatro alla Scala (as it came to be known) soon became one of the most famous in Italy; it represented one of the main centres of development of Italian opera, the genre that dominated Italian musical life in the 19th century. It also became a centre of Italian social and political history: in 1793 it was the scene of festivities for the coronation of Emperor Joseph II; in 1797 the end of Austrian domination and the advent of Napoleonic rule was celebrated by the performance of a tragedy-ballet, where the royal box was divided into six smaller boxes reserved for the 'liberated people'; also in 1797 the revolutionary opera *La congiura pisoniana* was first performed there; and in 1805 impressive performances for the coronation of Napoleon as King of Italy were given there. During the Napoleonic period of transition,



operas from the old repertory were staged alternately with cantatas and other works. (For the theatre plan and interior, *see* ACOUSTICS, fig.22)

The Teatro della Cannobiana (or Canobbiana), built on a site adjoining the schools founded in 1554 by Paolo da Cannobio, opened on 21 August 1779 with Salieri's *La fiera di Venezia* and *Il talismano* by Salieri and Giacomo Rust. The Cannobiana also staged drama and ballet and, during the Republic, patriotic displays and festivities. It was used chiefly for comic opera and *semiseria*, especially when La Scala was closed.



4. 19TH CENTURY. At the turn of the century Milan began to develop into a modern city based on the activity of a prosperous middle class, which eventually turned it into the most important industrial centre of Italy. Lombardy was returned to Austrian control in 1815 and renewed Viennese connections resulted in a large patrician and upper class supporting cultural life.

A new era of Italian opera began with the success of Rossini (*La pietra del paragone*, 1812), who quickly came to dominate Italian opera along with Donizetti and Bellini; from then on, Milan's musical history became virtually identified with that of Italian opera, of which La Scala was perhaps the most notable centre (it was also at that time that cycles of Mozart operas began to be mounted there). Important operas had their premières at La Scala and helped to establish the theatre's reputation: Rossini's works dominated the period 1812–20 (including *Aureliano in Palmira*, 1813; *Il turco in Italia*, 1814; *La gazza ladra*, 1817; and *Bianca e Falliero*, 1819); Meyerbeer had successes with *Margherita d'Anjou* (1820) and *L'esule di Granata* (1821); Mercadante with *Elisa e Claudio* (1821), *Il giuramento* (1837) and *Il bravo* (1839); Donizetti with *Lucrezia Borgia* (1833) and others; and Bellini had three successes particularly important for the theatre, *Il pirata* (1827, commissioned by Barbaia and initiating the composer's fruitful collaboration with the librettist Romani), *La straniera* (1829) and, after an initial failure, *Norma* (1831).

By the 1830s La Scala was one of the leading opera houses in Europe; 40 premières were given in that decade and in 1839 Verdi's first opera, *Oberto, conte di San Bonifacio*, was performed there. Ricordi bought the publishing rights, and the theatre's director, Bartolomeo Merelli, commissioned three more operas from the young composer. The first, *Un giorno di regno*, was a failure and was withdrawn after its first performance in 1840, but *Nabucco* (1842) and *I Lombardi alla prima crociata* (1843) were great successes; in fact, *I Lombardi* came to represent the drive towards unification and the patriotic choruses often incited demonstrations in the theatre. Although Verdi is closely associated with La Scala, his career there was chequered, and his works until *Otello* in 1887 had their premières elsewhere (with the exception of revisions); there was hissing and chatter during the Milan performances of *La forza del destino*, *Un ballo in maschera* and *Aida*, and Milanese critics accused Verdi of not knowing how to write for singers and of imitating Wagner. The Requiem, written for Manzoni, was given at La Scala in 1874 only a few days after its first performance at S Marco (fig.6), and Verdi did return to La Scala with the premières of his last two operas, *Otello* (1887) and *Falstaff* (1893). Many other Italian composers were presented at La Scala during the second half of the 19th century, including Petrella, Faccio, Marchetti, Boito,

6. Verdi conducting his Requiem at La Scala, 1874: engraving by Baldi after Oswaldo Tofani from 'Nuova illustrazione universale' (14 June 1874)

Ponchielli and Catalani. The works of foreign composers were also brought to the theatre and, after initial failure, Wagner's operas were enthusiastically received under Franco Faccio's direction.

The best Italian singers performed at La Scala throughout the century, while the most notable conductors were Alberto Mazzucato (1859–68), Faccio (1871–91) and Toscanini (1898–1903). Alessandro Sanquirico was the theatre's leading stage designer and scene-painter from 1817 to 1832; besides setting new standards of design in Rossini's *opere serie* and the operas of Mozart, Bellini (fig.7), Donizetti and Meyerbeer, he influenced opera stage design throughout the 19th century and into the 20th. Carlo Ferrario, who was the leading Milanese scene-painter of the second half of the 19th century, worked at other theatres as well as at La Scala, making a return to more realistic design. Ballets were produced there by such great choreographers as Salvatore Viganò and Gaetano Gioja.

Throughout the 19th century alterations and improvements were made to the theatre, the most important of which were the enlargement of the stage in 1807, the overall restoration in 1838, and the removal in 1857 of the tall houses that had made it impossible to have a perspective view of the façade. Gas lighting was installed in 1860 and electric lighting in 1883. There have traditionally been four annual seasons: Carnival to Lent (initially reserved for *opere serie*), and autumn, spring and summer, when *opere buffe* were mounted. The administration of La Scala had at first been supported by the proceeds of the dramatic company which used the theatre until 1803, but from 1806 to 1918 the theatre was supported, with varying success, by its joint owners: the state, then the city, box holders, impresarios and patrons. During the Austrian Restoration, the administration was in the hands of the government, but afterwards the theatre attracted such adventurous impresarios as Domenico Barbaia (1826–32) and Bartolomeo Merelli (1835–50 and 1861–3). In 1897 the city withdrew its subsidy and Duke Guido Visconti di Modrone formed a syndicate to take over the theatre's management, appointing Toscanini artistic director in 1898, with Giulio Gatti-Casazza as manager.

There were several minor Milanese theatres that mounted opera during the 19th century. Despite several substantial interruptions the Teatro della Cannobiana continued its activities, particularly when La Scala was closed. Many works by second-rate composers had their premières there, as did Donizetti's *L'elisir d'amore* (1832). In 1894, under the ownership of the publisher Sonzogno, the theatre was renamed the Teatro Lirico Internazionale and opened with the Greek composer Spyridon Samaras's *La martire*; it was later known simply as the Teatro Lirico and passed into other hands. In 1897 Caruso made his Milan début there in the première of Cilea's *L'arlesiana*. The Teatro Carcano, modelled on La Scala, was built by Giuseppe Carcano in 1803 and opened that year with *La Zaira*, sometimes attributed to Vincenzo Federici but

more probably by Francesco Federici. Of the operas that had their premières there, few were memorable, though Donizetti's *Anna Bolena* (1830) and Bellini's *La sonnambula* (1831) were notable exceptions. In 1882 the first concert of Wagner's music in Milan was given there by Faccio. The Carcano had largely lost its importance by the mid-century and by 1900 it was no longer used for music. The Teatro di S Radegonda was opened in 1803 in a Benedictine convent, remodelled to accommodate drama and opera; it was demolished in 1882. The Teatro Lentasio opened in 1801 as a marionette theatre, but also presented opera and drama from 1805 to 1853. The Teatro Re was built by Carlo Re, opening in 1813 with Rossini's *Tancredi*; after the 1848 revolution it was used primarily for drama, though operas were occasionally mounted until its demolition in 1872, the final performance being Rossini's *Il barbiere di Siviglia*. In 1815 the Teatro Fiando was opened, offering a variety of entertainments including marionette plays, drama, opera and ballet; the building was demolished in 1868, rebuilt and renamed the Teatro Gerolamo. The Teatro Manzoni (so-called from 1873) was built in 1872 as the Teatro della Commedia to replace the Teatro Re. It initially concentrated on performances of drama and music, particularly *opere buffe* and operettas, and over the next 50 years gradually raised its standards to occupy an important place in the city's theatrical life; however, soon after 1900 its musical activity ceased. The Politeama Ciniselli, a private theatre, was acquired by Count Francesco Dal Verme, demolished and rebuilt, reopening in 1872 with Meyerbeer's *Les Huguenots* as the Teatro Dal Verme. The most modern theatre of its time, it primarily gave drama and grand opera; first performances there included Puccini's first opera *Le villi* (1884) and Leoncavallo's *Pagliacci* (1892).

One of the city's most important institutions, the Milan Conservatory, was founded during the Napoleonic era; from 1803 there had been attempts to establish a residential conservatory based on the traditional Italian model, and in 1807 the conservatory, partly modelled on the Paris Conservatoire, was instituted by Napoleonic decree, principally to train musicians for the city's main musical institution, La Scala. The conservatory was housed in the convent attached to the church of S Maria della Passione, where it has remained, and all the students were resident. Simon Mayr was asked to take up the post of director in 1808, but he preferred to remain in Bergamo and it was subsequently offered to Bonifazio Asioli, *maestro di cappella* and music director at the court of Viceroy Eugène de Beauharnais (Napoleon's stepson); he accepted, and held the post until the fall of the Kingdom of Italy in 1814. Among the first professors were the violinist Alessandro Rolla, the horn player Luigi Belloli and the pianist Piantanida. The founding of the Milan Conservatory initiated the founding of a series of conservatories all over Italy. Under Austrian rule the conservatory underwent some changes; literary and historical studies were added to the teaching of music and it was opened to non-resident students. Outstanding 19th-century directors were Francesco Basili (1827–37), who refused admission to Verdi in 1832, Nicola Vaccai (1837–44), Alberto Mazzucato (1872–7) and Antonio Bazzini (1882–97). The conservatory soon became the most important music school in Italy, attracting such pupils as Puccini and Catalani to study with professors of the stature of Ponchielli (1880–86).

During the 19th century Milan became one of the most important centres of Italian publishing, dominated by the firm of RICORDI; it was established in 1808 by Giovanni Ricordi, a modest artisan, typographer and copyist, and developed by his descendants, who turned it into a flourishing and powerful business, also serving as a patron to support and stimulate composers. By 1811 Giovanni Ricordi was appointed publisher to the Milan Conservatory; in 1814 he was prompter and exclusive copyist to La Scala, which gave him rights to publish the music performed there, and in 1825 he bought its musical archives. Ricordi absorbed Artaria in 1837, further consolidating its power, and in 1839 the firm published Verdi's first opera; with the exception of three operas published by Lucca in 1846–8, Ricordi published all his subsequent operas and most of his other works. Lucca

7. Original production of Bellini's 'Norma', La Scala, Milan, 1831, designed by Alessandro Sanquirico

had been established in 1825 and became Ricordi's chief rival from about 1840. In 1842 Ricordi initiated the *Gazzetta musicale di Milano*, Italy's first regular musicological and critical journal, with Lucca issuing the rival publication *Italia musicale* (1847–59). From 1874 the firm of Sonzogno began to specialize in music under Edoardo Sonzogno; in 1888, when Ricordi absorbed Lucca (which had taken over Canti and several other smaller music publishers), Sonzogno proved to be Ricordi's main rival, being the publishers of many *verismo* composers, for instance Mascagni and Leoncavallo. Ricordi, however, published all but one of Puccini's operas and, with the absorption of Lucca, had gained Italian rights to publish those of Wagner.

Although the tradition of instrumental music began to wane with the rise of opera, Milan remained one of the most important centres for its cultivation. During the first half of the 19th century instrumental music was performed in Milan more than in any other Italian centre, partly because the tradition established during the previous century was continued by such figures as Rolla and other professors at the conservatory, and partly because of the presence of the occupying Austrian nobility, who were directly connected with the musical activity at Vienna. This resulted in the foundation of several circles for amateur performances, such as the Società del Giardino, the Nobile Società and the Società d'Incoraggiamento. Concerts of chamber music were also held in many aristocratic houses.

The decade 1850–60 was almost devoid of instrumental music, but thereafter it started to revive. The court *cappelle* were dissolved with the establishment of the Kingdom of Italy and were replaced throughout Italy by philharmonic societies and other private associations founded by members of the aristocracy and wealthy middle class. The Società del Quartetto was founded in Milan in 1864 (similar organizations were established in other Italian cities) with members like Mazzucato and Boito as its intellectual backbone. Boito was actively associated with the 'Scapigliatura', a mainly literary movement which aimed at revitalizing and reforming the arts. The group reflected, in part, the disillusionment that followed the enthusiasm of unification. Boito published music criticism in the *Giornale della Società del quartetto*, promoting greater simplicity in art. From 1872 the orchestra of La Scala gave concerts under Faccio for the Società del Quartetto and in 1878 it took part in the Exposition Universelle in Paris; its success was so great that the following year the Società Orchestrale della Scala was formed with Faccio as director, giving two annual seasons of concerts in the spring and autumn. The orchestra played an important role in renewing interest in instrumental music and Faccio did much to establish high standards. Of lesser importance was a short-lived society founded in 1863 by Gustavo Adolfo Noseda on the model of the Concerts Populaires de Musique Classique initiated by Pasdeloup in Paris in 1861.

5. 20TH CENTURY. Milan continued to grow as a thriving industrial city supporting a wide range of musical activity. La Scala further expanded its prestige and in addition to presenting the standard repertory and works by Puccini, Franchetti, Leoncavallo and Giordano, mounted the first Italian productions of many foreign works, including Tchaikovsky's *Yevgeny Onegin* (1900), Strauss's *Salome* (1906), *Elektra* (1908) and *Rosenkavalier* (1911), Debussy's *Pelléas et Mélisande* (1908), Musorgsky's *Boris Godunov* (1909) and Falla's *La vida breve* (1934). After World War II several important works had their premières there, for instance Milhaud's *David* (first staged performance, 1955), Poulenc's *Dialogues des Carmélites* (1957), Pizzetti's *L'assassinio nella cattedrale* (1958) and *Il calzare d'argento* (1961), Stockhausen's *Donnerstag aus Licht* (1981), *Samstag aus Licht* (1984) and *Montag aus Licht* (1988) and Berio's *La vera storia* (1982). Many other works were given their Italian premières at La Scala, for example Britten's *Peter Grimes* (1947), Prokofiev's *The Love for Three Oranges* (1947), Walton's *Troilus and*

8. 'Casino Ricordi', headquarters (1844–67) of the publishing firm Ricordi, next to the Teatro alla Scala: engraving after Alessandro Sanquirico, c1845

Cressida (1956) and Janáček's *The Cunning Little Vixen* (1958).

In 1920 the theatre became a self-governing body, 'Ente Autonomo del Teatro alla Scala'; Toscanini was then appointed artistic director and established a reputation for consistent excellence in performances during what was called 'the great Toscanini period'. He formed a new orchestra of 100 players and a chorus of 120; while the stage and auditorium were being reconstructed he took the company on a tour of Italy, the USA and Canada. His regime culminated in the company's visit to Vienna and Berlin in 1929. His eventual resignation had many causes, including political ones. Artistic directors succeeding him have included Erardo Trentinaglia (appointed 1931), Jenner Mataloni (1935), Carlo Gatti (1941), Gino Marinuzzi (1944), Antonio Ghiringhelli (1948), Victor De Sabata (1953) and Francesco Siciliani (1957), while conductors have included De Sabata, Giulini, Abbado and Muti. The La Scala company has also toured to Munich (1937), London (Covent Garden, 1950 and 1976), Johannesburg (1957), Edinburgh (1957), Brussels (1958), Moscow (1964), Montreal (1967) and Washington, DC (1976). After being seriously damaged by bombing in 1943, La Scala was one of the first buildings in Milan to be rebuilt after the war. It was reconstructed to its original designs (capacity now 3000) and was reopened on 11 May 1946 with a concert conducted by Toscanini containing works by Rossini, Verdi, Boito and Puccini. In 1955 the Piccola Scala (cap. 600) was built next to La Scala for performances of early opera and small-scale contemporary works, opening with Cimarosa's *Il matrimonio segreto*. It closed in 1983.

The Teatro Nuovo was built in 1938 and has always alternated productions of drama and concerts. It has a permanent orchestra and since World War II has played a particularly important role in the dissemination of new music. In addition, from 1959 to 1994 the Milan radio orchestra of the RAI gave public concerts in the conservatory, with Bruno Maderna as permanent conductor from 1971 to 1973. The Teatro Angelicum was built in 1939 specially for concerts of sacred music; its regular chamber orchestra was founded in 1941 primarily to present Italian instrumental music of the 17th and 18th centuries. Its activity ceased in 1992. The orchestra of the Società dei Pomeriggi Musicali aims to bring artists and audiences up to date with new works. The Polifonica Ambrosiana, founded in 1947 by Giuseppe Biella, devotes many of the programmes it organizes to medieval, Renaissance and Baroque music, as does Musica e Poesia a S Maurizio, managed by the city of Milan. Many solo and chamber concerts are given in the city under the auspices of the Società del Quartetto, Società dei Concerti, Musica Rara and other groups.

The Studio di Fonologia Musicale was opened in 1955 at the Milan branch of the RAI on the initiative of Berio and Maderna, and was directed by Berio until 1961. This electronic studio gave rise to a vigorous promotional and organizing activity, attracting composers of every tendency, from Pousseur to Cage. It also resulted in the publication of the magazine *Incontri musicali* (1956–60) and the establishment of a concert series, run by Berio and Maderna, under the same title; among the musicians who took part in the series were Scherchen, Boulez and Cage.

After the unification of Italy (1870) the conservatory came under state control, and in 1901 it was renamed the Conservatorio di Musica G. Verdi; it continued to be one of the most important music conservatories in Italy. 20th-century directors have included Pizzetti (1924–34), G.F. Ghedini (1951–62) and Jacopo Napoli (1962–72). Most of the conservatory buildings were destroyed in the 1943 bombing, but have since been reconstructed. The conservatory has a large library of over 250,000 volumes, including rare manuscripts and early editions, the collection that Noseda bequeathed to the library and the musical archives of the church of S Barbara in Mantua, as well as a collection of instruments. Other schools of music are the Scuola di Musica di Milano and the Civica Scuola di Musica, while the University of Milan has a music department.

Publishing in Milan remains centred on Ricordi, which began opening branches elsewhere from the beginning of the 20th century. After World War I the firm began to publish new editions of works by earlier composers and also continued to publish contemporary Italian works. The Milanese firms of Carisch, Curci and Suvini Zerboni (founded 1930) are among the leading publishers of contemporary Italian music.

In addition to the library at the conservatory there is an important archive at Ricordi which includes all Verdi's autographs. The Museo Teatrale alla Scala (opened 1913) has a large collection of musical autographs and manuscripts, letters and portraits of composers, opera librettos and drawings and etchings by important stage and set designers. The Castello Sforzesco has a museum of instruments, containing about 650 instruments from the Renaissance to the 20th century; the Civica Raccolta delle Stampe Bertarelli holds 11,000 illustrations of musicians and other theatrical personalities. The Ufficio per la Ricerca dei Fondi Musicali Italiani, founded in 1965 and housed in the conservatory library, contains the union catalogue of manuscript and printed music (up to 1900) in Italian libraries.

MARIANGELA DONÀ

Milán, Luys [Luis] (*b c*1500; *d* after 1560). Spanish musician and writer. He is best known as the author of the first printed vihuela music, the *Libro de musica de vihuela de mano intitulado El maestro* (Valencia, 1536/R1975; ed. R. Chiesa, Milan, 1965, and C. Jacobs, University Park, PA, 1971). Along with his earlier booklet, *Libro de motes de damas y cavalleros, intitulado El juego de mandar* (Valencia, 1535), it was composed during his residence at the Valencian court of Germaine de Foix, where he remained until at least 1538. Nothing of Milán's earlier life is known, although it is possible that he was the nobleman of the same name mentioned in Valencian documents in 1516. His last book, *El cortesano* (Valencia,

1561), clearly inspired by Castiglione, offers valuable insight into life at the Valencian court and Milán's own musical practice. With an air of self-assurance and conceit, Milán refers to himself in *El maestro* as a second Orpheus. Testimony to his musical ability is found in poems published in the 1560s by Juan Fernández and Gil Polo.

El maestro is the earliest Spanish collection of independent solo instrumental music and accompanied songs, and is the first printed Spanish tablature. It is also the earliest known music to provide verbal tempo indications. In most cases, a single tempo prevails throughout each piece, expressed in terms such as 'algo apriessa' (somewhat fast), 'compás a espacio' (a slow measure) or 'con el compás batido' (with an agitated beat). For works in the 'gallant style' (*de tañer de gala*), which alternate passages of chords and diminutions, he advocated a more flexible tempo in which 'all that is chordal is to be played slowly and the diminutions fast, pausing briefly at each fermata'. *El maestro* is unique among Spanish tablatures in being notated in a similar way to Neapolitan tablatures with the highest line of the staff indicating the highest-pitched course.

The prefatory texts of *El maestro*, as well as its title 'the teacher', advertise that it was designed with a didactic purpose, with the pieces arranged in increasing difficulty following 'the same manner that a teacher would do with a student who had never played'. Even the easiest pieces, however, call for considerable instrumental dexterity. The book instructs in the reading of tablature, selection of strings and the tuning of the vihuela. It also includes an explanation of the modes that specifies the superius rather than the tenor as the voice by which mode is determined. The book is further arranged symmetrically in two parallel *libros*, each of which is formed by a combined cycle of genres, modes, and styles: fantasias (modes 1–4), idiomatic works (modes 1–8), fantasias (modes 5–8), pavans (modes 1–8; only in bk 1), Spanish and Portuguese villancicos, romances, Italian sonnets. Despite its novelties, *El maestro* is also a unique link with past generations of instrumental improvisors. The style of Milán's music sets itself apart form the work of all later Spanish instrumental music and, according to the author's own testimony, it is the work of a self-taught musician, an improviser who composed directly on the vihuela, later committing his works to notation.

The largest group of pieces in *El maestro* is the 40 fantasias, designated as such by Milán because they 'proceed from the imagination and industry of their author'. As the first known examples of their genre in Spain they display a high level of sophistication and stylistic maturity. They are composed of multiple independent episodes that achieve coherence through their narrative continuity. They are based on a simple rhetorical model and unified by strong adherence to the modes. Thematic material is derived from the composer's reservoir of improvisatory formulae, many of which recur almost identically in different works. These range from occasional passages of strict imitation to others based on idiomatic devices, chiefly passage work or occasionally arpeggios. Milán's textures usually evoke an imitative style, but they are most frequently crafted as pseudo-imitation, built from short, accompanied melodic units that are reiterated at different pitches or in sequences to create the illusion of an imitative texture. The fantasias follow a characteristic tripartite scheme, beginning with an extended episode based on imitation or a combination of polyphonic and idiomatic devices, and continuing with a series of shorter episodes. The final episode is nearly always repeated as a signal of approaching conclusion, and a brief coda is frequently added. This style and structure also applies to the *tentos* in the gallant style. Also designated as fantasias, because they are original works, the six *pavanas* are similarly composed, within the confines of the dance rhythm. Two of these are based on Italian melodies, and the final one, in triple metre, is given as a galliard in at least one other contemporary source.

Milán's songs are notated with the sung melody shown in the tablature in red. This is a clear indication that the vihuelist would normally also have been the singer; the pitch register of the sung part is often quite high. Milán described himself as singing to his own accompaniment on a number of occasions in *El cortesano*. The Spanish and Portuguese villancicos are settings of popular love poetry and follow the formal pattern ABBA. Two versions are provided for 10 of the 12 of them, simple homophonic settings in which the singer embellishes with 'quiebros' (trills) and 'glosas' (diminutions), and alternative versions where the vocal part is to be sung unadorned while the vihuela part is written with added rapid dimiutions. The romances also have embellished accompaniments. Three of them deal with frontier themes of the reconquest, while one is based on the siege of Troy. All the Italian sonnets are through-composed settings. In one of them, *Madonna per voi ardo*, Milán suggests that the diminutions may be omitted from the accompaniment. The only sonnet by a known poet, *O gelosi d'amanti* by Sannazaro, was also set as a vihuela song by Mudarra.

For an illustration from *El maestro*, *see* VIHUELA, fig.2; for an extract *see* TABLATURE, fig.6.

JOHN GRIFFITHS

Milan, Susan (*b* London, 3 Sept 1947). English flautist. She studied at the RCM with John Francis and at the GSM with Geoffrey Gilbert and also attended masterclasses with Marcel Moyse. She made her solo début at the Wigmore Hall in 1967. The following year she became

principal flute of the Bournemouth Sinfonietta, and from 1973 to 1981 she was principal flute of the RPO. Since then she has concentrated on a solo and chamber music career and on teaching. She was appointed a professor at the RCM in 1983 and travels widely to perform and to give masterclasses. From 1990 to 1994 she was chairwoman of the British Flute Society. Milan has made numerous recordings, particularly of the French repertory with which she feels a close affinity, and is the dedicatee of works by many composers, notably Robert Saxton, Richard Rodney Bennett, Robert Simpson and Roger Steptoe. Her strongly projected playing is characterized by its rich tone and romantically expressive style.

EDWARD BLAKEMAN

Milanese chant. *See* AMBROSIAN CHANT.

Milani, Francesco (*b* Bologna; *fl* 1600–48). Italian composer. He seems to have spent his career at S Petronio, Bologna. He was a singer there in 1600–10, a trombonist (with a pay increase) from 1611 until 1629, and *maestro di cappella* from 1630-48. He was a member of the Accademia dei Filomusi under the name 'Il Solitario'. His small output of sacred music shows a bias towards the *stile antico*, particularly in the case of functional liturgical music such as psalms and hymns. That his vesper psalms for four voices, published as *Vespri per tutto l'anno* (Venice, 1635), can be performed 'con l'organo e senza' indicates this; the pieces are all *alla breve*, and some are written for the old 'high clef' combination. The hymn settings seem to have been written in accordance with a new reform by Urban VIII, the pope at that time: they were published in 1635 under the title *Hymnorum Urbani VIII* (even though the extant manuscript copy in *I-Bc* dates from 12 years later). In the double-choir *Letanie e motetti* (Venice, 1638), the old style contrasts with a more up-to-date one; the second choir is sometimes lower in range, and some pieces (e.g. *Dilecta mea*) have much dance-like triple time. The best work in the set, however, is not a double-choir one but the very attractive and expressive *Ave verum* for five voices and organ.

JEROME ROCHE/R

Milano, Francesco da. *See* FRANCESCO DA MILANO.

Milano Franco d'Aragona, Giacomo Francesco (*b* Polistena, Calabria, 4 May 1699; *d* San Paolo Bel Sito, nr Naples, between 30 Nov and 12 Dec 1780). Italian harpsichordist and composer. Prince of Ardore, Marchese of San Giorgio and of Polistena and Duke of San Paolo, he was a virtuoso harpsichord player and was highly thought of as a composer. He was chosen as one of the ten leading Neapolitan composers to set to music the *Tragedie cristiane* by Duke Annibale Marchese. From June 1741 to May 1749, and from July 1750 until May 1753, he was in Paris as an ambassador, and subsequently was state counsellor in Naples, a post he held until his death. He was also a patron of music: he established a musical chapel in his palace and in Paris organized concerts at which the city's leading musicians appeared. The opinions of a variety of his contemporaries on his compositions and harpsichord playing have survived: the Duke of Luynes described him as an excellent accompanist and a remarkable improviser; Jean-Jacques Rousseau praised his considerable skill in improvising at the keyboard; and his teacher Francesco Durante, to whom Milano Franco d'Aragona dedicated his *Salve regina*, praised him in the frontispiece to his own *Sonate per cembalo* (RISM A/1 D 3974 erroneously dated 1732, not published before 1741; see Magaudd and Costantini)). Geminiani's *Sonates pour le violoncello et basse continuo*, op.5, and Domenico Lalli's opera *La Ginevra*, performed in May 1733 at the Teatro S Samuele in Venice, are both dedicated to Milano Franco d'Aragona. Metastasio praised his compositions in a number of letters, from which we know that he set the librettist's *Giuseppe riconosciutto* and a *Via crucis* by another author.

DANILO COSTANTINI, AUSILIA MAGAUDDA

Milanollo, Maria. Italian violinist, sister of TERESA MILANOLLO.

Milanollo, (Domenica Maria) Teresa (*b* Savigliano, nr Turin, 28 Aug 1827; *d* Paris, 25 Oct 1904). Italian violinist and composer. She learnt solfège from her father and studied the violin with Giovanni Ferrero, Mauro Caldera and Giovanni Morra. She made her début on 17 April 1836 in the theatre of Mondovi before moving with her family to France. After giving five concerts in Marseilles, she went to Paris in 1837 and met Lafont, who recognized her talents and took her with him on tours to The Hague, Amsterdam and elsewhere in the Netherlands. In December 1836 she gave a benefit concert in Brussels which marked the beginning of her lifelong concern for the poor.

Early in 1837 the Milanollo family went to England. Teresa performed with Johann Strauss (i) and was for a time the protégée and pupil of Francis Mori. In 1838 she toured Wales with the harpist Charles Bochsa, giving 40 concerts within a month. She then returned with her family to France and began teaching music to her younger sister Maria (*b* Savigliano, 19 July 1832; *d* Paris, 21 Oct 1848) before both completed their violin training with Bériot. In 1840–41 Teresa studied with Habeneck in Paris, and in 1842 the sisters began a series of extended European concert tours which took them to England, Belgium, France, Germany, Bohemia, Switzerland and northern Italy, rivalling Paganini in artistic and financial success. For a time they settled in Brussels, where Teresa studied composition with Ferdinand Kufferath. During their second visit to England, in 1845, they appeared at the Philharmonic Concerts; their benefit concerts and

quartet performances in Lyons surpassed the earlier successes of Thalberg, H.W. Ernst and even Liszt in that city.

In autumn 1848 Maria died suddenly of tuberculosis; Teresa went into mourning for two months before giving a concert in Paris for the benefit of the Association des Artistes Musiciens. She virtually retired for the next two years, giving only benefit concerts. In 1852 she resumed full-time playing, touring France, Switzerland, Germany and Austria; she interrupted this tour only once, to recover from an injury to her thumb. From 1855 to 1857 she made few appearances. The day of her last public concert, on 16 April 1857, she married Théodore Parmentier, a military engineer and an amateur musician of some repute, who wrote for the *Revue et gazette musicale*.

The high point of Milanollo's career was her six-year period of concert tours with her sister. Teresa's playing was said to be full of warmth and feeling, while Maria's was brilliant and sparkling; to these characteristics they owed their respective nicknames, Mlle Adagio and Mlle Staccato. A Frankfurt critic wrote of them: 'Maria plays like a prodigy, Teresa like an angel'. But the most eloquent praise of Teresa's playing came from Joachim who, according to Moser, said that

> he had hardly ever heard then, or since, such accurate or charming violin playing; her technique was secure in every respect, and even in very difficult passages, her bow moved fluently and her tone was full of inner warmth. She was for him, in short, one of the most delightful and sympathetic artists that he had ever met.

The sisters were known particularly for their benefit concerts for the poor, in Savigliano and throughout France; when Teresa had recovered from her sister's death she established the Concerts des Pauvres in Lyons.

Milanollo's compositions include opera transcriptions for two violins and orchestra, numerous pieces for solo violin (including a *Fantaisie élégiaque*, written in memory of her sister in 1853) and an Ave Maria for male chorus.

E. HERON-ALLEN/ALBERT MELL

Milanov [née Kunc; Ilić], **Zinka** (*b* Zagreb, 17 May 1906; *d* New York, 30 May 1989). Croatian soprano. She studied at the Zagreb Academy of Music, and with Milka Ternina, Maria Kostrenčić and Fernando Carpi, making her début as Leonora (*Il trovatore*) at Ljubljana in 1927; she was the leading soprano at the Zagreb Opera from 1928 to 1935, singing such roles as Sieglinde, the Marschallin, Rachel and Minnie. After appearances at the Deutsches Theater, Prague, in 1937 and at the Salzburg Festival the same year (where she sang an acclaimed Verdi Requiem with Toscanini), she began a long association with the Metropolitan Opera, making her début as Leonora (*Il trovatore*) and appearing every season (except for 1941–2 and 1947–50) until her farewell performance as Maddalena de Coigny (*Andrea Chénier*) in 1966; with the company she gave 424 performances in 14 works – notably as the principal Verdi and Puccini heroines, but also as Norma, Donna Anna, Santuzza, Maddalena de Coigny and La Gioconda. She appeared at the Teatro Colón (1940–42), San Francisco and Chicago, but her European performances after 1939 were few: as

Zinka Milanov as Maddalena de Coigny in Giordano's 'Andrea Chénier'

Tosca at La Scala (1950), and as Tosca and Leonora at Covent Garden (1956–7).

Milanov's *lirico spinto* voice was one of translucent beauty as well as great power, and she was able to spin out the most exquisite *pianissimo* phrases, although she was not always wholly reliable in pitch or steadiness. While she rarely delved deeply into a character, she dominated her roles by virtue of her majestic deportment. Her voice can be heard in pristine form in relays from the Metropolitan on the 1940s, notably as Amelia (*Un ballo in maschera*) and La Gioconda. Among her studio recordings, her Leonora (*Il trovatore*) and Aida reveal her lustrous tone and finely moulded phrasing, as do a 1939 broadcast of the *Missa solemnis* and a 1940 broadcast of the Verdi Requiem, both under Toscanini.

JOHN WHENHAM

Milanuzzi [Milanuzii], **Carlo** (*b* Sanatoglia [formerly S Natoglia], nr Camerino; *d c*1647). Italian composer and organist. Though born in central Italy he spent much of his life in the north. He became an Augustinian monk and was in Venice some time before 1618, working at S Stefano. In 1619 he was organist of the Augustinian church at Perugia and returned north by 1622 to be *maestro di cappella* of S Eufemia, Verona. From 1623 to 1629 he was organist of S Stefano, Venice, and from 1629 to about 1634 of Finale di Modena. In 1636 he was *maestro di cappella* of Camerino Cathedral, and his last known appointment, in 1643, was once more in the Venetian area, as *maestro* and organist of S Mauro, Noventa di Piave. He was also known as a preacher and literary figure, publishing the pastorale *Giacinto felice & Amarilli consolata* (Venice, 1625) and the literary collections *Arpa amorosa, tocca con poetica mano* and *Scherzi, devozioni*.

Milanuzzi contributed significantly to the genre of the solo aria in at least nine books of 'ariose vaghezze', eight of which survive. They are mostly short arias in a tuneful style that was rapidly gaining popularity in northern Italy in the 1620s; many are very charming. No doubt aiming at as wide an audience as possible he included letters for the guitar, and there are some Spanish dances for guitar in op.9, among them a very early example of the folia melody. He was one of the most progressive secular monodists of his day, and forward-looking developments in the strophic aria in the 1620s and 30s are clearly reflected in his output. A characteristic feature of Milanuzzi's aria style is the sequential repetition of a melodic-rhythmic motif that corresponds to a recurring verse unit of the same number of syllables, as in *Dal ciel d'amor seren*, op.9; he often sacrificed sensitivity to textual accent for clarity of musical design. Op.11 includes monodies by Monteverdi, Berti and Miniscalchi. The earlier concerted secular pieces for two to four voices in op.3 have gracefully ornamented melodies, and some are in a simple binary form.

Milanuzzi's numerous and diverse sacred compositions all employ concertato features, typically a few voices with continuo; their small-scale performance requirements (or large-scale if using the flexible performance options as in op.16) reflect his employment in religious establishments with modest performing forces. Though his collection of solo motets does not survive, he did append some motets for solo bass to op.13, and in the litanies of op.5 he adopted the cantilena style, in which there are extended solo passages unified by a tutti. The influence of the aria is felt in the 'walking' crotchet bass figures of op.19 which become like ground basses when, as sometimes occurs, they are repeated often enough (even in different keys). A genuine ground bass does indeed appear in parts of a psalm from op.14, an indication that in setting long psalm texts Milanuzzi felt that some kind of repeated material would help to unify a work: in several pieces he brought back his opening theme at the words 'Sicut erat', while once he brought back the opening text as well, just as Monteverdi did in some of his Venetian psalms. Milanuzzi was certainly one of the foremost minor composers to experiment with the unifying of psalm settings: since his psalms are for more modest forces than those of most other Italian composers of the period, such structural interest was all the more necessary to prevent monotony. Even his masses (op.16) are basically for only three soloists and organ, though there are optional parts for ripieno and instrumental ensemble that make them more like the festive orchestral masses of the time.

JEROME ROCHE/ROARK MILLER

Milchevsky, Marcin. *See* MIELCZEWSKI, MARCIN.

Milde, Hans (Feodor) von (*b* Petronell, nr Vienna, 13 April 1821; *d* Weimar, 10 Dec 1899). Austrian baritone. He studied in Vienna and with the younger Manuel García in Paris. From 1845 to 1884 he was engaged at the Hofoper, Weimar, where in 1850 he sang Telramund in the first performance of *Lohengrin*, conducted by Liszt. He also sang the Dutchman and, later, Hans Sachs and Kurwenal. He took part in the revival of Berlioz's *Benvenuto Cellini* (1852), created the title role of Cornelius's *Der Barbier von Bagdad* (1858) and Ruy Diaz in the same composer's *Der Cid* (1865). He sang the High Priest in the first stage performance of *Samson et Dalila*, at Weimar (1877).

ELIZABETH FORBES

Milde-Agthe, Rosa von [née Agthe, Rosa] (*b* Weimar, 25 April 1825; *d* Weimar, 25 Jan 1906). German soprano. She studied in Weimar, where she was engaged at the Hofoper from 1845 to 1867. Under the name of Rosa Agthe, in 1850 she sang Elsa in the first performance of *Lohengrin*, conducted by Liszt. The following year she married the baritone Hans von Milde. She created Margiana in Cornelius's *Der Barbier von Bagdad* (1858) and Chimène in the same composer's *Der Cid* (1865). Her repertory also included Lucia, Pamina, both of Gluck's Iphigenias, Leonore (*Fidelio*) and Lady Harriet (*Martha*).

ELIZABETH FORBES

Mildenburg von Bellschau, Anna. *See* BAHR-MILDENBURG, ANNA.

Milder-Hauptmann, (Pauline) Anna (*b* Constantinople, 13 Dec 1785; *d* Berlin, 29 May 1838). Austrian soprano. She was brought up in Constantinople and Bucharest, before moving to Vienna, where she studied with Tomaselli and Salieri (on Schikaneder's recommendation) and also had instruction from Neukomm (on Haydn's advice). She made her début as Juno in Süssmayr's *Der Spiegel von Arkadien* (1803), and sang Leonore in all three versions of Beethoven's *Fidelio* (1805, 1806 and 1814). Her voice was described by Haydn as 'like a house' and by Griesinger as 'like pure metal'.

In 1808 she made a successful tour, and was admired by Napoleon, among others; in 1816 she was appointed court *prima donna assoluta* in Berlin. In 1810 she married a jeweller, Peter Hauptmann, whose difficult personality seems to have lain behind a later faltering in her career. She achieved her greatest triumph in 1812 in Gluck's *Iphigénie en Tauride*, and was largely responsible for the Gluck revival in Vienna and Berlin. Gluck's heroines suited her imposing presence and her magnificent full, rich and flawless voice; she made Weigl's *Das Waisenhaus* and *Die Schweizerfamilie* famous. Cherubini wrote *Faniska* for her, and Schubert *Der Hirt auf dem Felsen* and the second *Suleika* song. In 1829 she left Berlin over a quarrel with Spontini and visited Russia, Sweden and Denmark; in the same year she sang in Mendelssohn's historic revival of Bach's *St Matthew Passion*. Her last public appearance was in Vienna in 1836.

F.A. MARSHALL/CHRISTOPHER H. GIBBS

Mildonian, Susanna (*b* Venice, 2 July 1940). Italian harpist of Armenian parentage. She studied with Margherita Cicognari at the Venice Conservatory from the age of ten. In 1959 she won first prize in the first-ever Israel Harp Contest. Continuing her studies in Paris with Pierre Jamet, she gained a *premier prix* at the Conservatoire in 1961, following these successes with first prizes in the Geneva (1964) and Marcel Tournier (1971) competitions. She was solo harpist of the Belgian National Orchestra for 14 years, and in addition to maintaining an important international career she teaches in the Flemish section of the Brussels Conservatory. Her impressive discography includes the first recording of the Spohr F major Concerto for violin and harp (with Ruggiero Ricci), the concertos of Villa-Lobos and Ginastera and much solo and chamber music.

ANN GRIFFITHS

Miles, Alastair (*b* Harrow, Middx, 11 July 1961). English bass. He studied with Rudolf Piernay, Richard Standen and Bruce Boyce at the GSM, and then at the National Opera Studio (1986–7). He made his operatic début with Opera 80 as Trulove (1985), and the following year made an outstanding impression in a concert performance of Rossini's *Otello* in London. In 1988 Miles made his débuts in minor roles at the ENO, WNO and Covent Garden, and the same year appeared as Dikoj (*Kát'a Kabanová*) with Glyndebourne Touring Opera. In 1989 he sang Colline at the ENO, the Spirit Messenger (*Die Frau ohne Schatten*) and Raimondo (*Lucia di Lammermoor*) with the WNO, and Lamoral (*Arabella*) at

Glyndebourne. He has subsequently undertaken major roles with the same companies and appeared in Amsterdam, Vienna and San Francisco, most notably as Mozart's Figaro (a role he has recorded with Mackerras), Rossini's Don Basilo and Alidoro, Rodolfo (*La sonnambula*), Raimondo, Zaccaria, Fiesco, and Gounod's and Berlioz's Méphistophélès. He made a much-praised Metropolitan début in 1997 as Sir Giorgio (*I puritani*). On the concert platform and on disc he has been much admired in Handel, especially as Saul, as Elijah and in the Verdi *Requiem*. Miles's true, firm bass is deployed with ease and flexibility through a wide range, and he has become an impressive actor. He is also an accomplished recitalist, at home in several idioms.

ALAN BLYTH

Miles, Jane Mary. *See* GUEST, JANE MARY.

Miles, Philip Napier (*b* Shirehampton, Gloucestershire, 21 Jan 1865; *d* King's Weston, Gloucestershire, 19 July 1935). English composer and patron. Though heir to a large estate, King's Weston (designed by Vanbrugh in 1714), he studied in Dresden, and then with Parry and Dannreuther in London, thereafter devoting his energies to promoting music in the Bristol area. He supported Boughton's Glastonbury Festivals, and in 1924, 1926 and 1927 presented festivals of his own in Bristol where, in 1924, his one-act operas *Markheim* and *Fire Flies* were first performed (13 October) and Falla's *El retablo de Maese Pedro* received its British première (17 October). A three-act opera *Westward Ho!* (E.F. Benson after Charles Kingsley's novel) had been heard at London's Lyceum Theatre (4 December 1913), but later full-length operas (including a setting of John Masefield's *Good Friday*) seem not to have been staged. *Markheim*, composed in 1919 to a text drawn from Robert Louis Stevenson's tale of murder and redemption, received a Carnegie Award (1921). Its declamatory style, fluctuating time signatures and tritonal harmonies create a powerful effect. More typical, however, is the delicate Romanticism of the choral ballet *Music Comes* (Glastonbury, 1920) and such songs as *My Master hath a Garden* (1933). Although opera was his passion, he wrote in all forms, including a Symphony in C.

MICHAEL HURD

Milestone. American jazz record company. It was established by Orrin Keepnews and Dick Katz in New York in 1966. Among the musicians who recorded regularly for the label were Lee Konitz, Joe Henderson, McCoy Tyner, Sonny Rollins and Ron Carter. By 1972 the label had been acquired by Audio Fidelity and the following year it was sold to FANTASY. In 1978 the company sponsored the quartet Milestone Jazzstars (Rollins, Tyner, Carter and Al Foster), which toured the USA and recorded. From that decade into the 1980s it was better known for its reissues of material from Keepnews's earlier label Riverside than for new recordings, but from the late 1980s it reacquired significance for its new recordings by veteran players (notably Tyner with his big band and in duos with Stephane Grappelli) and by young jazz musicians. (O. Keepnews: *The View from Within: Jazz Writings, 1948–1987*, New York and Oxford, 1988)

BARRY KERNFELD

Milewicz, Antoni. *See* MILWID, ANTONI.

Miley, Bubber [James Wesley] (*b* Aiken, SC, 3 April 1903; *d* New York, 20 May 1932). American jazz trumpeter. He moved to New York at the age of six, and studied the trombone before learning the cornet. He was active professionally from 1920 with Mamie Smith, and in 1923 joined Elmer Snowden's Washingtonians, which shortly afterwards came under the leadership of Duke Ellington. Miley remained with Ellington until early 1929, and then worked with Noble Sissle, with whom he travelled to Paris later that year, Zutty Singleton and others. In the last months of his life he led his own orchestra.

Miley's melodic and rhythmic styles were influenced by King Oliver and Johnny Dunn; he is noted for having begun the practice of using a plunger mute in conjunction with a straight mute, thus achieving a wa-wa effect by combining two techniques employed separately by Oliver. His growl effect was adopted by Sidney De Paris, Cootie Williams, Ray Nance and many other jazz trumpeters, and formed an important element of Ellington's style. He was the most impressive of the early Ellington soloists, and collaborated on or strongly influenced many of Ellington's early compositions; the better sections of *Black and Tan Fantasy* (1927, Bruns.), *East St Louis Toodle-oo* (1926, Voc.) and *Doin' the Voom-Voom* (1929, Vic.) are thought to be Miley's work.

J.R. TAYLOR

Milford, Robin (Humphrey) (*b* Oxford, 22 Jan 1903; *d* Lyme Regis, Dorset, 29 Dec 1959). English composer. He studied at the RCM with Holst, Vaughan Williams and R.O. Morris. Able to devote himself almost entirely to composition, Milford soon developed into a prolific composer in all genres. He made his first impact with a Double Fugue for Orchestra, published in 1927 by the Carnegie Collection of British Music, and the oratorio *A Prophet in the Land*, performed at the 1931 Three Choirs Festival. Despite successful first performances, many of his more ambitious orchestral works, including the Violin Concerto in G minor (1937), remained in manuscript; other works, including a full-scale opera, *The Scarlet Letter* (1958–9), adapted from the novel by Hawthorne, has remained unpublished and unperformed. Milford reached his widest audience through his choral works, chamber music and songs. The collection *A Book of Songs* (Oxford, 1926) demonstrates the individuality of his creative gifts. Simple, diatonic and much influenced by folksong, his music has been of particular service to amateurs.

1. Darius Milhaud

avant garde of the 1920s, whose abundant production reflects all musical genres. A pioneer in the use of percussion, polytonality, jazz and aleatory techniques, his music allies lyricism with often complex harmonies. Though his sources of inspiration were many and varied, his music has compelling stylistic unity.

1. Life. Though born in Marseilles, Milhaud grew up in the nearby town of Aix-en-Provence. His father was a well-to-do almond dealer who lived and worked at the Bras d'Or, a former inn where the Milhaud family had been established since 1806. From his earliest years Milhaud was exposed to the songs of the *amandières*, the women who sorted the almonds on the ground floor of the house while singing Provençal airs and comic songs of the café-concerts. Milhaud admitted in his autobiography that he was a 'rather neurotic' child, and even as an adult easily prone to anxiety, yet noise must have been a constant feature of life at the Bras d'Or. Half awake in the morning, or in bed at night, he would hear the clamour of the men and women at work, and the 'soft sound of fruit falling into the baskets and the monotonous and soothing drone of the machines'. It was at night too, before falling asleep, that he would hear a mysterious music he was quite unable to imagine written down, music he later realized was a premonition of polytonality.

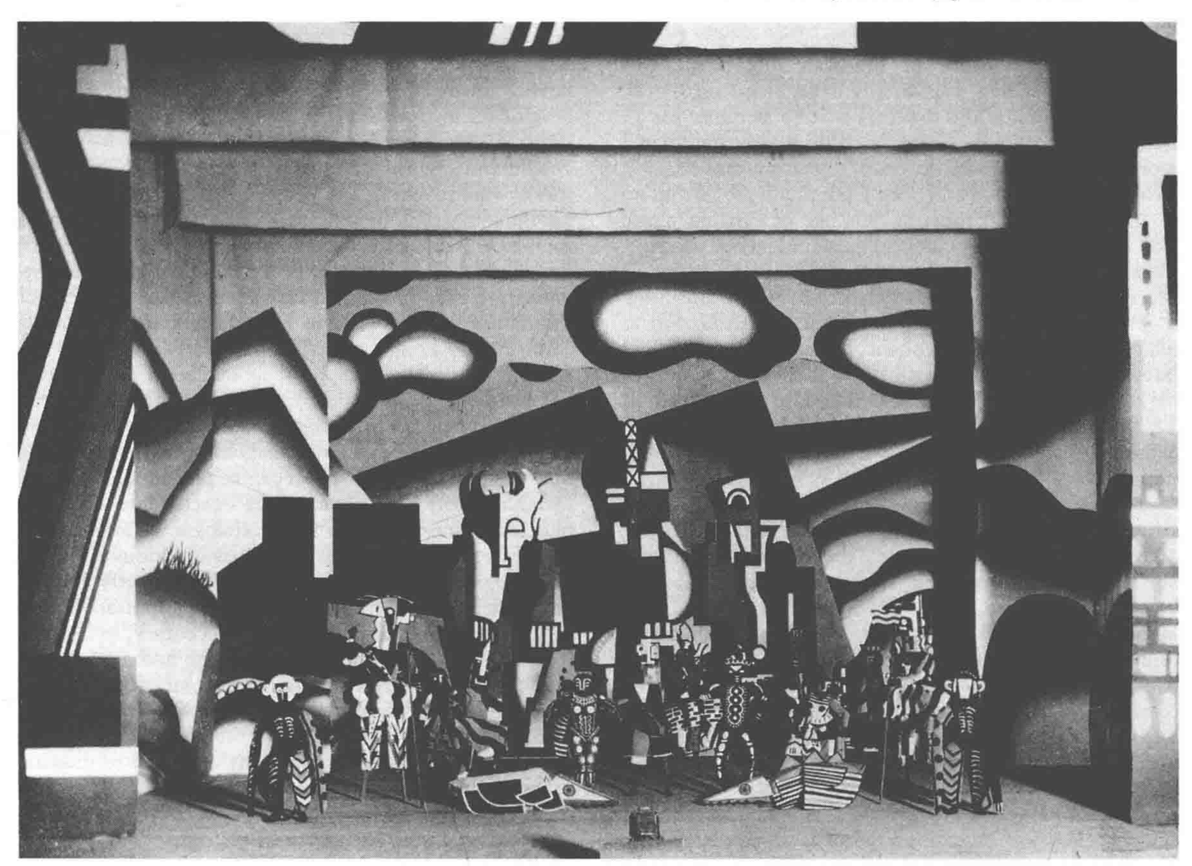
He was profoundly marked by Provence, a region of striking contrasts: hot sun and grateful shade, harsh, arid landscapes with a majestic river, the Rhône, running through the heart of it. From the fishing villages to the great, desolate plain of the Camargue, as a young man he would go on long walks, absorbing the landscape and light of Provence. Judaism was a no less important element in his make-up, and, though not a strict orthodox Jew, he always had deeply-held religious beliefs. Aix is the heart of the Comtat Venaissin, where the Jews have their own liturgy and were for centuries under the special protection of the Pope, a situation that forms the background to his opera *Esther de Carpentras*.

His father was an excellent amateur pianist and pillar of the local musical society, and his Italian mother (née Allatini) was a fine contralto. (He himself came to possess a beautiful baritone voice.) His musical disposition was soon clear: from the age of three he played duets with his father, which 'at once instilled in me a sense of rhythm', and at seven he took up the violin, progressing well enough to give recitals and, from 1902 to 1907, play second violin in the quartet of his violin teacher, Léo Bruguier. In 1905 they studied Debussy's quartet, which was such a revelation for Milhaud that he at once bought the score of *Pelléas*. The same year he started to take harmony lessons with a local teacher who used the treatises of Reber and Dubois. He was bored, but he had started to compose, and his letters of the time prove that, despite his success with the violin, he already realized that composition was to be his real occupation.

Highly important also in his early years were two exceptionally close friendships, complementary in many ways, and corresponding to different aspects of Milhaud's character. Léo Latil, the son of a local doctor, was an earnest Roman Catholic of a dreamy, poetic disposition, with a deep love of literature and music. Armand Lunel, who became a novelist and historian as well as librettist for Milhaud, had a more philosophical and also more playful disposition. For these three young men, literature, music and aesthetics were the main subjects of conversation and of the numerous letters that have survived. At first deeply impressed by Maeterlinck and the rather morbid, oniristic symbolist poets, they changed radically when, in 1908, they discovered the poetry of Francis Jammes. Jammes's homely simplicity and love of nature came like a breath of fresh air, and in these early years Milhaud not only set many of his poems, but made an opera of his play *La brebis égarée*. 'When I started to compose', he recalled, 'I at once sensed the danger in following the paths of impressionist music. So much woolliness, perfumed billows, rocketing pyrotechnics, shimmering finery, vapours and wistfulness, marked the end of an era whose affectation I found insurmountably repugnant. The poets saved me.' (Despite this he always had immense love and respect for Debussy's music. He had taken part in the first, private, performance of the *Sonata for viola, flute and harp* in 1916, on which

occasion he went to see Debussy for advice: that was their only meeting.)

In 1909 he went to Paris to study at the Conservatoire. He was to stay there until 1915, though he returned to Aix regularly for holidays; his main teachers were Berthelier (violin), Dukas (orchestral playing), Leroux (harmony), Widor (fugue) and Gédalge (counterpoint, composition and orchestration). Gédalge had the most decisive impact on him, and he gained a mastery of French academic counterpoint that was to remain, for better or for worse, an important part of his technical apparatus. He also became an excellent orchestrator and a competent conductor, while gaining proficiency as a pianist quite unaided. Paris also exposed him to a much wider range of musical styles. During the early years in Aix, he had attended concerts in Marseilles, but nevertheless, until his arrival in Paris he had been more or less cut off from recent developments in music. Now he discovered the music of, among others, Fauré, Ravel, Koechlin, Satie, Bloch, Magnard ('I really believe that [the music of] Magnard helped me to find my own path'), Roussel and Wagner (which repelled him from the start), and also *Boris Godunov* (a score he kept next to *Pelléas*), *Petrushka* and *The Rite of Spring* (which he analysed in 1914 with Koechlin). He was fascinated, if puzzled, in 1910 by Schoenberg's piano pieces op.11 and a few years later by the op.19 pieces.



Milhaud described his first meeting with Paul Claudel in 1912 as 'the great stroke of luck in my life'. Though 24 years older, the poet, playwright, diplomat and fervent Roman Catholic was to become not only a frequent source of texts but also a close personal friend. Gide was also an important, if passing influence: 'Gide's prose has an enchanting rhythm that is highly attractive for a composer', he later remarked, and he set extracts from Gide's novel *La porte étroite* as a kind of song cycle, *Alissa* (1913). One of the themes of the novel, the 'desire for purity through so much suffering and sacrifice' had deeply impressed him, as had the themes of adultery and forgiveness in Jammes's *La brebis égarée*. These Christian preoccupations are, too, a surprising but constant feature of his correspondence with Latil and Lunel at this time. As he matured such ideas lost their importance, yet they reflect a truly catholic spirit that led him to write several works of specifically Christian inspiration, such as the Te Deum in the Third Symphony, the *Cantate de la croix de charité*, *Pacem in terris* (a papal encyclical) and many works with texts by Claudel, including *Christophe Colomb*.

At the outbreak of World War I Milhaud was unable for medical reasons to join the armed services, and found work helping Belgian refugees. In 1915 came the shattering news of the death of Léo Latil at the front. In 1916 Milhaud took up a job in the propaganda department of the foreign ministry. With the turmoil of war and the loss of such a close friend, his world was thoroughly shaken, so when Claudel, as newly appointed minister to Brazil, offered him the post of attaché in charge of propaganda, he accepted with alacrity. In early January 1917 he embarked at Lisbon, conscious of leaving behind him his 'little habits, his little fads, his little flat full of little objects from the 1830s'. In Brazil he discovered the tropical forest, the sounds of which were ever after to haunt his music, and Brazilian popular music, whose rhythms had a wonderfully liberating effect on his works. His official duties consisted of translating coded messages and accompanying Claudel on his travels, but he also organized concerts and lectures in aid of the Red Cross. Leaving Brazil on 23 November 1918, he returned via the West Indies and New York, and arrived in Paris on 14 February 1919.

Though in Brazil he had not been completely cut off from French musical life, for Ansermet, Artur Rubinstein, Nizhinsky and the Ballets Russes had visited Rio, he now plunged into the postwar effervescence of Paris. This was the period of the Bar Gaya, soon to be renamed 'Le boeuf sur le toit' after Milhaud's Brazilian pot-pourri, the Cirque Médrano with the Fratellini brothers, Les Six (not that this is of any importance for his music), the 'Wiéner concerts' and the Saturday evenings in Milhaud's flat when poets, artists and musicians would share their latest work. It was a time of renewing old acquaintances (with Koechlin, Honegger and Poulenc among others) and especially of making new friendships, including that of Satie. During the 1920s he also made journeys that were crucial to him as man and composer: to London in 1920 (bringing the revelation of jazz) and Vienna in 1921 (he went with Poulenc and Marya Freund to meet Schoenberg, Berg and Webern), and concert tours of the USA (1922 and 1927) and USSR (1926, with his cousin Madeleine Milhaud, whom he had married in 1925, and Jean Wiéner). Throughout the decade, compositions flowed with unfailing regularity and growing success. As a pianist he gave numerous concerts, mainly of his own works, while his most notable achievement as conductor was the French première of *Pierrot lunaire* on 15 December 1921 (first part only) and 12 January 1922 (complete). He also wrote music criticism regularly for the *Courrier musical* from 1920 to 1924; some articles of this period, including 'Polytonality and Atonality', are crucial to an understanding of his musical aesthetics. (His *Notes sur la musique* includes a representative selection.) By the end of the decade he had established himself as a major composer, especially with the remarkable success of his multimedia opera *Christophe Colomb* in Berlin in 1930.

The next ten years were marked by an increasing amount of film and incidental music (from which he was able to recuperate a number of concert works: *Scaramouche*, *Suite provençale*, etc.). Indeed, from 1935 to 1938 he composed little else. He continued his activity as a music critic for the daily *Le jour* (1933–7) and occasionally other publications. Unhappily, during this decade his paralysing attacks of rheumatoid arthritis became increasingly severe and frequent: by 1948 he would be permanently confined to a wheelchair.

Knowing that his name was on the Germans' wanted list of prominent Jewish artists, Milhaud was obliged, after the fall of France in 1940, to emigrate to the USA. During the crossing he received a telegram from Mills College, Oakland, offering him a teaching post, which he accepted. Later he also taught at the summer school in Aspen, Colorado, and from 1948 to 1951 he was honorary director of the Music Academy of the West in Santa Barbara. In 1947 he made his first return to France and became professor of composition at the Paris Conservatoire. Since he only gave up his Mills post in 1971, the latter part of his life was divided between the two countries. With the constant round of concerts, this all meant a lot of travel, yet despite his handicap, he relished it: 'Travel is one of the most necessary things for my

2. Design by Fernand Léger for Milhaud's ballet 'La création du monde' by the Ballets Suédois, Paris, 1923 (Dansmuseet, Stockholm)

imagination . . .. I love travel and I need it . . . whatever the destination'. To the continuing prodigious output of compositions was thus now added intense activity as a teacher. Milhaud's approach was characteristically undogmatic: 'teaching composition involves, I believe, allowing [students] to liberate themselves from all the conventional formulae . . . helping them, by a sort of cleansing process, to realise their often sensitive and refined personalities, which many years of strict but necessary exercises have prevented from flowering'. Among his pupils number many French and American composers, as well as the jazz pianist Dave Brubeck.

Milhaud composed almost to the end and left no unfinished works. His last, a wind quintet, was written for the 50th anniversary of his marriage to Madeleine, his inseparable companion, helpmate and muse.

2. WORKS. There is scarcely a genre not represented in Milhaud's output. From grand opera to children's piano pieces, everything seems to be there in extraordinary profusion. Capable of composing anywhere, even while travelling he was not disturbed by the presence of other people or by ambient noise. He found his musical voice very early on, and there was neither anguish in creation, nor any problem of language or expression, let alone of technique. He rarely made sketches or notes.

Such serenity in the act of creation – allied to an independence of mind and musical style, an indifference to criticism (unless from his close friend, the Belgian musicologist Paul Collaer), and a seriousness of purpose that his sense of fantasy sometimes seems to belie – meant that he was receptive to many and varied sources of inspiration. Provence was a seemingly inexhaustible stimulus whether as a setting for opera and ballet (*Les malheurs d'Orphée*, *Le carnaval d'Aix*, *La cueillette des citrons*, *La branche des oiseaux*) or as a direct musical source (the *Chansons de troubadour* and the *Suite provençale* include 18th-century Provençal themes while *Barba Garibo* uses songs and dances from the Menton area). The Symphony no.8 is a portrait of and homage to the river Rhône. Similarly the Comtat Venaissin was a setting (*Esther de Carpentras*) and its liturgy a source of music (e.g. *Etudes* for string quartet) or a stimulus to composition (*Liturgie comtadine*). A more generalized Jewish inspiration is apparent in many works, from the *Poèmes juifs* to the *Ode pour Jérusalem*. In his epic opera *David* he portrays the warrior-king's life and its effect on present-day Israelis; in one of his most powerful works, *Le château de feu*, he remembers the holocaust, as in *Ani maamin*; the *Service sacré* and the *Service pour la veille du sabbat* are liturgical works.

Milhaud's attachment to these origins was inclusive, not exclusive. Provence was part of the Mediterranean, which for him extended all the way from Istanbul to Rio de Janeiro. A globe-trotter both physically and musically, he used themes from, or composed in the style of, folk music from many other countries. His suite *Le globe trotter* evokes France, Portugal, Italy, the USA, Mexico and Brazil. *Kentuckiana* and the *Carnaval à la Nouvelle-Orléans* use local American tunes. The *Suite française* is based on French themes, and the third act of his opera *Le*

pauvre matelot is entirely constructed from French shanties. The influence of Brazilian folk music was exceptionally strong, anecdotally in *Le boeuf sur le toit*, a medley of tangos and maxixes written as music for an imaginary Chaplin film, and much more profoundly in a work such as *Saudades do Brasil* ('Memories of Brazil'), two suites of original and deeply felt piano pieces that go far beyond musical tourism. His use of existing music also extended to older classical music. He made arrangements of *The Beggar's Opera* and *Le jeu de Robin et Marion*; he wrote works using the music of Corrette (*Suite d'après Corrette*), François Couperin (*Introduction et allegro*), and the little-known 18th-century composer Baptiste Anet (Viola Sonata no.1, *L'apothéose de Molière*), whose Tenth Violin Sonata he also transcribed. In *La bien-aimée* he transformed Liszt's arrangements of Schubert waltzes, writing for a mechanical piano and orchestra.

His fascination with jazz began in London in 1920, where he heard the Billy Arnold Jazz Band, recently arrived from New York. Noting the subtle use of timbre and the complex rhythmic vitality, he was inspired to write *Caramel Mou*, a shimmy. Two years later, on tour in the USA, he heard the Paul Whiteman Band, and on his return composed the *Trois rag caprices*. The decisive, overwhelming experience, however, was the jazz of the blacks in Harlem: 'Against the beat of the drums, the melodic lines criss-crossed in a breathless pattern of broken and twisted rhythms'. Out of this – in 1923, the year before Gershwin's *Rhapsody in Blue* – came *La création du monde*, a highly successful blend of jazz and classical elements (including a properly developed fugue). Yet this seems to have got jazz out of his system, for in 1926 he was able to announce to American journalists that jazz no longer interested him – though he later recommended it to young classical musicians as it 'would teach them to count four beats in a 4/4 bar . . .. A fault of rhythm or of beat is so much more serious than a wrong note'.

Percussion plays an important and highly effective part in *La création du monde*, yet Milhaud had already shown himself to be a notable 20th-century pioneer in the use of unpitched instruments, in several works which antedate, for instance, those of Varèse. *Les choéphores* (1915–16) includes three movements written for rhythmically recited text (solo and chorus with whistles) accompanied solely by percussive instruments with sirens, though it was not until after experiencing the Brazilian forest that he wrote sections of music exclusively for percussion. The long percussion episodes in *L'homme et son désir* (1918) are a direct imitation of the sounds he heard there after dark. In later examples he was attracted by the dramatic force of percussion, allied in some cases to a chorus (*La mort du tyran*, *Christophe Colomb*). He also wrote the first Percussion Concerto (1929–30) and perhaps the first work to include music for performance by the audience, clapping, stamping and whistling in *Musique pour San Francisco*. No less pioneering was his use of metrically uncoordinated music in *Cocktail* (1920) for solo voice and three clarinets and the lost *Aérogyne femme volante* (1921), though it was not until the 1950s that this 'controlled aleatory technique', as he called it, really entered his textural vocabulary (for example in *Etude poétique* – his only work of *musique concrète* – and *Neige sur la fleuve*). The *Suite de quatrains* and the String Septet mix aleatory and fixed elements, and *Adieu* is his first score in which contrapuntal relationships are enriched by having instruments play simultaneously in different tempos (cf also *Musique pour Graz*, *Musique pour Ars Nova*, *Hommage à Igor Stravinsky*).

Milhaud's sense of fantasy, coupled with his often quirky inventiveness, led him to be stimulated by almost anything unusual, be it an instrument, such as the ondes martenot (which he used several times in the 1930s, largely in incidental music) or the Pleyela piano (*La bien-aimée*), the use of musical cryptograms, which encipher the names of friends, as in *La couronne de Marguerite* ('Marguerite Long'), *Le chat* ('Marya Freund') and the Symphony no.10 ('Oregon'), or extended palindromes (*Christophe Colomb*, Part I, scene iv and Part II scene xvi). On being given a manuscript book containing 84 pages of eight staves, he was inspired to write two string quartets (nos.14 and 15) that can be played separately or simultaneously, his music fitting exactly into those 84 pages. It amused him to set a catalogue of agricultural machinery to music, with total artistic seriousness (*Machines agricoles*), and – though a lover of poetry and the composer of one of the largest and most important bodies of song and choral music in the 20th century, to texts by a remarkably wide range of poets – he had a particular fascination with setting prose. *Alissa*is an early example, and, in his first surviving opera, *La brebis égarée* subtitled a 'musical novel', he even sets the stage directions to music. Moreover, he was specially attracted to didactic or scientific prose, whether an 18th-century political harangue (*La mort du tyran*), a papal encyclical (*Pacem in terris*) or a plan for universal education (*Hommage à Comenius*).

Despite the impression his music usually gives, he had at times, and especially during the early years, a distinctly theoretical turn of mind, a feature that sets him quite apart from his contemporaries. This comes out especially in his researches into polytonality, which might be better called in his case 'polymodality', for he almost never used the functional relationships that characterize tonality. Already in *Agamemnon* (1913) he constructed his score on a series of 13 chromatically descending pedal notes, above which a recurrent theme appears, always at the same pitch, thus creating various polymodal combinations. In *Les choéphores* and *Les euménides* several movements are based on a pre-established sequence of polymodal chords, and for once sketches exist which indicate the extensive preliminary work; the vocal and instrumental lines are all derived from these basic harmonies. The most complex example of this technique is the Finale from *Les euménides*, where Milhaud predetermined not only the sequence of chords to serve as the basis for multiple ostinatos but also the number of different modes to be used in each section, and even derived the sung notes from a number of constructed matrices.

This chordal polymodality was (quite apart from its inherent fascination) a means for Milhaud to come to terms with large-scale construction. His early style, until about 1913, had been notably unsuccessful as regards form. The effusive, rhapsodic and vaguely Debussian style of his first works (mainly songs) is characterized by long, shapeless, often interminable phrases, and piano parts that are largely chordal or arpeggiated. There is little variety of texture in the course of a movement, and the

harmony, the predominant parameter, is repetitive and monotonous. In a letter to Lunel of 1911, Milhaud recognized this, realizing he must write purely instrumental music in order to develop form. By 1914 he had begun to move away from this early style, using more chromaticism, moving to outright dissonance and the first hints of polymodality. Textures became lighter, the piano writing less heavy, and he developed a growing awareness of rhythm as a means of articulating form.

Counterpoint entered his music only during his time at the Conservatoire, and it was not until he went to Brazil that it became an important textural element. If the fine Sonata for flute, oboe, clarinet and piano, his first work to show a clear influence of Brazilian folk music, still shows lingering traces of Debussy and Ravel, in *Le retour de l'enfant prodigue* (1917) his mature style burst forth, with melody and harmony integrated into a balanced framework of polymodal counterpoint. (The role played by Koechlin in his research into polymodality has yet to be adequately investigated. It was undoubtedly important, as was the more general influence of Koechlin, to whom *Les choéphores* is dedicated.)

With polymodality now linear, Milhaud developed a new, shorter, more pliable phrase with which he was better able to construct form, and melody became the basis of his style. The ultimate in pure, linear polymodality is his Fifth String Quartet, dedicated to Schoenberg. But aside from the compelling musical reasons for adopting polymodality, Milhaud said that 'a polytonal chord is much more subtle when soft and much more powerful when violent than a tonal combination'. To go further, it gave a kind of sound and texture he instinctively preferred. He had – a result perhaps of his childhood experience surrounded by noise – a very high tolerance for simultaneity: in many works, polymodal or not, there is simply so much (sometimes too much) going on at the same time.

Milhaud's theorizing extended to establishing a clear view of the French tradition within which he worked. In various articles of the 1920s he developed his view of modern music as composed of two complementary traditions: the diatonic, Latin tradition, which gave rise to polymodality, and the chromatic, Germanic tradition, which gave rise to atonality. For the latter, as exemplified by the Second Viennese School, he had only admiration and respect, though he realized his path lay elsewhere, in the footsteps of Rameau, Berlioz, Gounod and Chabrier.

These were the basic elements of Milhaud's style and aesthetic. Though they evolved, they did not change radically, and the further course of his output can be traced quite briefly.

Few of his works of the 1920s are in the spirit of Les Six, however one might seek to define it. The *Trois poèmes de Jean Cocteau* would no doubt qualify, as might *Le train bleu* or the orchestral Serenade. *Le boeuf sur le toit* had nothing to do with Les Six until it was hijacked and turned into a ballet by Cocteau. Ironically, in the only work to which all members of the group contributed, the *Album des six* (1920), Milhaud is represented by a Mazurka he wrote in 1914. More important to his music of the 1920s was the confirmation of opera as a major and continuing thread. He wrote relatively little chamber music during this time, but seven operas in the space of five years, ranging from the miniature 'opéras-minutes' (*L'enlèvement d'Europe*, *L'abandon d'Ariane*, *La délivrance de Thésée*) to opera on the grandest scale. The decade ended with *Christophe Colomb* and *Maximilien*, the former a justly celebrated work (possibly the first to use film), the latter one of Milhaud's most riotously noisy scores. Together with the later *Bolivar*, these huge works of pageantry and spectacle reveal his connection with Berlioz.

The works of the 1930s are characterized by a greater tendency towards through-composition, in comparison with the clearcut sectional divisions of the earlier works. Along with this came a thickening of the light, contrapuntal textures which had characterized his music of the 1920s. The decade saw him providing a vast amount of incidental and film music – a means of earning a living, but also, as Milhaud acknowledged, an excellent lesson in discipline and humility. The opera *Médée* is perhaps his finest work of this period: a fascinating study of a woman scorned, graphically portrayed in some of the composer's most angular, expressionist music.

His preoccupation with the war in Europe was given expression in several works, including *Bolivar* and the *Suite française*, the movements of which were composed with folktunes from various regions of France as those regions were being liberated. Two other masterpieces were to stem from the experience of the war: the *Six sonnets composés au secret* for chorus, to poems Jean Cassou wrote in captivity, and *Le château du feu*, also with a text by Cassou, and dedicated to the memory of close relatives deported during the war. In the 1940s Milhaud also wrote extensively for the standard symphony orchestra, having started his series of 12 fully fledged symphonies in 1939.

Then in the course of the 1950s emerged what might be called his 'final' style. Counterpoint returned to his music, as did lighter textures, more supple rhythms and a particularly mordant harmonic language. This development can be seen by comparing the operas *David* and *Fiesta* (with a libretto by Boris Vian), though it comes out especially in the chamber music which, in his late years, he produced abundantly. His 18 string quartets (1912–50) were followed by the four extraordinary string quintets, a sextet and a septet (one of his most acidulous and spikily refreshing chamber compositions).

Vocal music had again become an important constant in his output; examples include one of his most beautiful song cycles, *Tristesses* (a sign that Jammes was still part of his universe), as well as the splendid *Adieu* (one of two works on texts by Rimbaud). Choral music was another important genre, either *a cappella* or with orchestral accompaniment. His symphonies continued under the guise of the 'Music for' series, and in 1964 he produced his one real operatic failure, *La mère coupable*, a work full of bustle and commotion and very little inspiration that completes a Beaumarchais trilogy with *Il barbiere di Siviglia* and *Le nozze di Figaro*. Yet the 1960s saw too a further refinement and purification of his style, especially in his chamber music, and from his last years come two of his finest achievements: an opera-oratorio, *Saint Louis, roi de France*, notable for its astonishing long-breathed lyricism, and the cantata *Ani maamin* which succeeds despite Wiesel's interminably lachrymose text. That Milhaud's inspiration was not failing him is clear also from *Les momies d'Egypte*, a lively romp for vocal quartet and mime or dance with a *Commedia dell'arte* text by Regnard in an amusing mix of French and Italian, and the *Etudes sur des thèmes liturgiques du Comtat venaissin*,

the composer's final work in a form he had so assiduously cultivated, and his last homage to his Judaic roots. The chief glory of Milhaud's later works are the superb slow movements. Sometimes funereal in character, they are all (whether in symphonic, chamber or operatic works) of extraordinary beauty and intensity, often exploiting the extreme high register as never before. There is a distillation of melody in these later works, articulated across fluctuating modes, transparent textures and subtly shifting instrumental colour.

WORKS

OPERAS

La brebis égarée (3, F. Jammes), op.4, 1910–14; Paris, OC (Favart), Dec 1923
Les euménides (3, P. Claudel after Aeschylus), op.41, 1917–23; [Brussels, Belgian Radio, 1949]
Les malheurs d'Orphée (chbr op, 3, A. Lunel), op.85, 1925; Brussels, Monnaie, 7 May 1926
Esther de Carpentras (comic op, 2, Lunel), op.89, 1925–6; Paris, Radio Rennes, 1937; stage, Paris, OC (Favart), 1 Feb 1938
Le pauvre matelot (complainte, 3, J. Cocteau), op.92, 1926; Paris, OC (Favart), 16 Dec 1927
L'enlèvement d'Europe (1, H. Hoppenot), op.94, 1927; Baden-Baden, July 1927 [pt 1 of trilogy]
L'abandon d'Ariane (1, Hoppenot), op.98, 1927; Wiesbaden, April 1928 [pt 2 of trilogy]
La délivrance de Thésée (1, Hoppenot), op.99, 1927; Wiesbaden, April 1928 [pt 3 of trilogy]
Christophe Colomb (2 pts, Claudel), op.102, 1928; Berlin, Staatsoper, 5 May 1930; rev. version, Graz, Oper, 27 June 1968
Maximilien (3, R.S. Hoffman, after F. Werfel), op.110, 1930; Paris, Opéra, 5 Jan 1932
Médée (1, M. Milhaud), op.191, 1938; Antwerp, Opéra Flamand, 7 Oct 1939
Bolivar (3, M. Milhaud, after J. Supervielle), op.236, 1943; Paris, Opéra, 12 May 1950
David (5, Lunel), op.320, 1952–3; concert perf., Jerusalem, 1 June 1954; stage, Milan, La Scala, 2 Feb 1955
Fiesta (1, B. Vian), op.370, 1958; Berlin, Städtische Oper, 3 Oct 1958
La mère coupable (3, M. Milhaud, after P.-A. Beaumarchais), op.412, 1964–5; Geneva, Grand, 13 June 1966
Saint Louis, roi de France (op-orat, 2 pts, Claudel, H. Doublier), 1970; RAI, 18 March 1972; stage, Rio de Janeiro, Municipal, 14 April 1972

BALLETS

L'homme et son désir (Claudel), op.48, 1918
Le boeuf sur le toit (Cocteau), op.58, 1919
La création du monde (B. Cendrars), op.81, 1923
Salade (A. Flament), op.83, 1924
Le train bleu (Cocteau), op.84, 1924
Polka for L'éventail de Jeanne (Y. Franck, A. Bourgat), op.95, 1927
La bien-aimée, op.101, Pleyela (player pf), orch, 1928 [after Schubert and Liszt]
Les songes (A. Derain), op.124, 1933
Moyen âge fleuri, op.152d, 1936
Moïse (Opus americanum no.2), op.219, 1940
Jeux de printemps, op.243, 1944
Les cloches (after E.A. Poe), op.259, 1946
'Adame Miroir (J. Genet), op.283, 1948
La cueillette des citrons, op.298b, 1949–50
Vendanges (P. Rothschild), op.317, 1952

JEREMY DRAKE

Milhouse [Millhouse]. English family of woodwind makers. Richard Millhouse (*b* Newark, 4 March 1724; *d* Newark, 29 Sept 1775) married in 1753 in Fledborough, when he was described as a turner. The few surviving instruments stamped 'Millhouse Newark', including a fine bassoon dated 1763 in the Sheffield Museum, may confidently be ascribed to him; those stamped 'Milhouse Newark' and also 'Milhouse London' may be presumed to be by his elder son Richard Milhouse (*b* Newark, 10 Aug 1759; *d* West Retford, 3 Aug 1845). Little is known of his career; his father's will of 1775 instructed his executors to find him a partner to help him run the business until he came of age. He seems to have worked intermittently in Newark and London (Holden's Directory of 1805 lists him in Soho). He was once again in Newark, listed between 1822 and 1836 as a maker, before moving to Trinity Hospital in West Retford.

The most important member of the family was his younger brother William Milhouse (*b* Newark, 14 Aug 1761; *d* after 1834), who married in Newark in 1786. He moved to London and had opened a shop at 100 Wardour Street by mid-1787, moving at the end of 1797 to 337 Oxford Street. For nearly 50 years he enjoyed the highest reputation as a maker of woodwind instruments. His trade cards describe him as 'Manufacturer to their Royal Highnesses the Dukes of Kent & Cumberland'; he stamped his instruments 'W. Milhouse London'. An article in *The Harmonicon* (1830) states that 'Great improvements have been made on this instrument [the oboe] by Millhouse, the only maker in England of any celebrity'. He is also noted for his bassoons, which have survived in comparatively large numbers; he also published some music. In 1822 he was joined by his son Richard Milhouse (*b* London, 3 July 1796), who ran the business alone from 1835 to 1840. *See* OBOE, §II, 2(i), fig.4(c), §III, 3(ii), fig.25(c).

Militärtrommel (Ger.). Side drum. *See* DRUM, §II, 2.

Military band (Fr. *harmonie*; Ger. *Militärkapell*, *Musikkorps*; It. *banda*, *corpo di musica*; Sp. *banda*). A term dating from the late 18th century used of a regimental band of woodwind, brass and percussion instruments. It is also applied to an ensemble of any sort that plays military music, including signals and military calls. In British usage it refers (misleadingly) to mixed wind bands of all types; *see* BAND (i), §§II–III.

□

Military calls. Signals intended to transmit information, commands or encouragement to an army during battle or in camp, to a navy during engagement or on voyage, and to royal and noble households at court and on tour, and also employed to embellish ceremonial occasions. Military calls are played on various musical instruments, including trumpets, bugles, flutes, drums and kettledrums, and are usually, but not exclusively, performed monophonically.

For discussion of various types of military call, *see* CHIAMATA; MILITARY MUSIC; SENNET; SIGNAL (i); SONNERIE (i), (1); TUCK, TUCKET.

PETER DOWNEY

Military music. Instrumental music associated with the ceremonies, functions and duties of military organizations. The function of military music was threefold: to give signals and pass orders in battle; to regulate the military day in camp or quarters; and 'to excite cheerfulness and alacrity in the soldiers'. Military music in the form of bugle and trumpet calls together with drum beatings could identify friend or foe before the general adoption of national uniforms.

The drum and trumpet, and latterly the bugle, were introduced to solve the problem of control in battle once armies had grown too large for control by the human voice to be effective. With the advent of the all-weather metalled road, it became possible for the large-scale movement of formed bodies of troops to be planned and performed to a timetable. For this a uniform and even marching beat was required and the military band, consisting of brass, woodwind (mainly reed) and percussion instruments, was evolved, supported by the drum and six-keyed flute (corps of drums) combination, and in Scottish regiments by that of the drum and bagpipe. This role has now disappeared with the increasing mechanization of modern war.

Before the days of radio and television military bands could be employed to project a positive image of the

military in their relations with the civilian population, and were so used in the war-time recruiting campaigns that were a feature of the 'nation in arms' concept. This aspect has diminished in scope and appeal with the progressive reduction of armed forces, and today military music is only heard in connection with ceremonial occasions and, rarely, in public concerts given by service bands, while the use of music on the field of battle has been obsolete since the conclusion of the South African War of 1899–1902. (Pipers were used in World War I to play on the line of march to and from the trenches: the practice of playing attacking troops 'over the top' was stopped early on due to the high casualties among pipers.)

This article discusses the origins of European military music, and especially its use in Britain and North America. For more detailed discussion of the history, instrumentation and repertory of military bands, *see* BAND (i); *see also* FELDMUSIK and HARMONIEMUSIK; for military calls and signalling, *see* MILITARY CALLS; SIGNAL (i); and TUCK, TUCKET.

1. Antiquity. 2. Europe from the Middle Ages. 3. Britain. 4. North America.

1. ANTIQUITY. In ancient times instruments – most commonly trumpets and horns – were used in warfare or other military contexts mainly for signalling or to frighten the enemy. A well-known example is the horrible noises made by the Celtic trumpets that are depicted on the Gundestrop cauldron in *Judges* vii. 16–22 refers to Gideon's night attack with *shofarot* (rams horns) and torches. There are many illustrations of Egyptian soldiers holding trumpets similar to those found in Tutankhamun's tomb, and *Numbers* x. 2–10 describes the manufacture and use of similar instruments. The few Mesopotamian reliefs which may depict military scenes show no instruments besides trumpets.

The only instrument shown in the hands of a soldier in ancient Greece is the salpinx, represented by a somewhat dubious instrument in the Museum of Fine Arts, Boston, which resembles none of the ancient iconography and has no secure provenance, and by short pottery instruments, some 30 cm long, from the Archaic period in Cyprus. The Roman army used three different trumpets: long and straight (tuba) long and curved (buccina), and short and curved, made of oxhorn cornu, the J-shaped lituus seems to have been a civilian or cultic instrument. A very few of these trumpets have survived, along with a much greater number of mouthpieces. Because the two longer instruments were portrayed on mosaics together with the organ in the circus, it has been suggested that they were used in concerted music; however, it seems more likely that the trumpets signalled while the organ provided the musical elements.

There are extensive accounts, dating from Greek and Roman times, of military calls blown on trumpets, horns and other wind instruments (see Walser, 1972). Tacitus, for example, speaks of them in his *Germania*. Drums, commonly thought today to be the most essential military instrument, seem not to have been used by European armies until about the 13th century CE. However, the Roman salii, or military dancers, accompanied their dances by beating on their figure-eight-shaped shields, a custom which has been recorded among the Zulus and elsewhere. Vigetius (*De re militari*, *c*300 CE) and other writers testify that Roman soldiers, apparently unique among early European armies, marched with a step measured both in time and in length. There is no evidence for any Roman accompaniment to the march, though the men may have sung chants such as that still favoured by drill sergeants today. Military music was also used in Roman times to accompany ceremonial displays: for instance, a ceremony with musical accompaniment called the *classicum* was performed at the solemn conclusion of a festive day in front of the *praetorium*, or commander's lodgings.

Drums seem to have been equally rare in western Asia until slightly before the 13th century. The commonest military instruments were horns of various types: sometimes large S-shaped instruments, rearing above their players' heads like the trunks of elephants, sometimes C-shaped, and often straight. The use of drums and bells for signalling and giving orders, as well as for emblems of status, is attested in China from at least the 7th century BCE. Not only were normal drums used but bronze skeuomorphs, instruments similar to the metal drums still associated with the Karen peoples of Myanmar and known from the Dong-son culture of South-east Asia, were awarded to successful generals.

2. EUROPE FROM THE MIDDLE AGES. Military bands, in the sense of a diverse group of instruments playing some form of concerted music, first seem to have appeared in India or the Middle East in the 12th century. This can probably be linked to the adoption of the shawm, the only melodic instrument of that period powerful enough to stand up to the groups of long trumpets and kettledrums portrayed in Moghul and medieval Persian iconography. While signalling was certainly part of their duties, the main function of these bands seems to have been to produce a loud, sustained noise which would encourage their own forces and perhaps disconcert the enemy. These bands were encountered, and then to some extent emulated, by the Crusaders, and this led to the establishment of town bands and *Stadtpfeifers* of later medieval Europe.

In his account of Richard I's crusade to the Holy Land, Geoffrey of Vinsauf wrote, in 1188: 'The Turkish army appear around on every side with trumpets, drums, and horrid clang, ready to attack', and in 1191:

> In front came certain of their admirals, as was their duty, with clarions and trumpets; some had horns, others pipes and timbrels, gongs, cymbals and other instruments, producing a horrible noise and clamour. The earth vibrated from the loud and discordant sounds, so that the crash of thunder could not be heard amid the tumultuous noise of horns and trumpets. They did this to excite their spirit and courage, for the more violent the clamour became, the more bold were they for the fray.

Geoffrey's description of the battle for Constantinople dwelled on the drowning out of the city's alarm bells by the horns, trumpets and many percussion instruments of the advancing Turks. As late as 1526, at the battle of Mohács in southern Hungary, where the Christian army suffered a devastating defeat, their only musicians – the cavalry trumpeters and kettledrummers, and the infantry musicians playing fifes and drums – were solely employed in playing calls, while the Turks fielded a whole band playing trumpets, oboes, cymbals and drums so loudly that the sound rose above the din of battle.

The 13th century saw the introduction of more sophisticated wind instruments made of expensive metals, and of families of instruments in various sizes. In Arezzo in 1240, the German Emperor Friedrich II commissioned

'four tubae and one tubecta' to be made of silver. The tubecta was probably similar to the instrument known to Dante as the *trompetta*, but throughout the European Middle Ages there was some vagueness about the naming of instruments and their grouping in families of trumpets, horns, trombones and tubas. Wood and metal wind instruments existed in many hybrid forms. At the smaller European courts various wind and percussion ensembles, including the *alta* (*see* ALTA (i)), provided music for ceremonies and entertainment, hunting and military purposes. By the time of Emperor Maximilian (1459–1519) the shawm family dominated German military music. Hans Burgkmair's woodcuts for Maximilian's triumphal procession (*Triumphzug Maximilians I*, 1526) show a variety of instrumental ensembles (fig.1). Henceforward the combination of fife and drum was referred to as the *kleines Feldspiel*; it began to be distinguished from the *grosses Feldspiel* (i.e. wind band) in the 19th century. The use of fife and drum by Swiss and German mercenaries in the early Renaissance as an aid to marching in step led Arbeau (*Orchésographie*, 1588) to calculate the number of drum patterns to the league and to emphasize the essential requirement that the rhythmic pattern, however complex it became, must always show clearly which foot was which.

No clear chronology can be drawn up for the institution of permanent ensembles and regionally standardized music for calls and ceremonials. The first guilds specifically for trumpeters and kettledrummers were founded under Emperor Charles V (1500–58). The introduction of gunpowder in Europe in the 14th century and the development of hand-held firearms increased the volume of sound in battle. In the cavalry the 'instrument of command' became the trumpet; in the infantry, the drum. A code of calls for the trumpet and beats for the drum was devised which covered most of the manoeuvres likely to be required in battle; other calls were designed to indicate the nationality of the troops concerned. Two trumpet calls feature in Jannequin's chanson *La bataille*. *My Ladye Nevells Booke* (1591) contains imitations of what were presumably the usual trumpet calls of the time in England. Machiavelli in his *Libro della arte della guerra* (1521) and Zarlino in *Le istitutioni harmoniche* (i, 1558) cast light on the use of trumpets, kettledrums and flutes in Italian military music, and their function in providing a marching rhythm. The notes on calls and other musical pieces made by Hendrich Lübeckh and Magnus Thomsen (*c*1600) are of Danish provenance. Cesare Bendinelli's trumpet tutor *Tutta l'arte della trombetta* (1614) contains trumpet calls, as does Mersenne's *Harmonie universelle* (1636–7). However, these examples are by no means characteristic: military calls necessarily had to be kept secret, and new signals for specific events had to be devised so that they would be understood by the musicians' own side but not by the enemy.

By the 17th century European armies distinguished between two types of musical units, the 'field music' and the 'band of music'. The field music consisted of the company musicians of a battalion or regiment. When assembled, the field music was under the command of a drum-, fife- or pipe-major, who was part of the headquarters staff. Its principal function was to sound the signals and commands that governed military life. The band of music, on the other hand, served ceremonial and social functions. It was composed of professional musicians, often civilians, and was a separate unit under the control of a music master or bandmaster. Its members frequently were capable of playing a number of different string and wind instruments. In many cases military bands were paid by the officers' corps as their personal employees; this was true of military bandmasters in Austria-Hungary up to the beginning of World War I.

Hans von Fleming's *Der vollkommene Teutsche Soldat* (1726) gives the first clear account of the state of military music in Germany: when and for what purposes military musicians were employed, and which musical ensembles were attached to a unit. Fleming states that military music was necessary in both war and peace, to assist the order of marching in battle and in retreat (the cavalry tattoo), and to accompany ceremonies of mourning and rejoicing. Soldiers could be recruited with the aid of music (the Hungarian *verbunkos* dances of the time of Maria Theresa were famous in this capacity), and music helped to keep the men cheerful and ready to fight. According to Fleming

1. Mounted trumpet and kettledrum players: woodcut by Hans Burgkmair I from the 'Triumphzug Maximilians', designed c1516–18

the musicians serenaded their colonel in the morning and evening with marches, entrées and minuets. Besides the older groups of fifes and drums he mentions the 'regiment's *Hautbois* and drums', and three different kinds of trumpeters – court trumpeters, field trumpeters and ship's trumpeters. Of these, he says, some could read music, while some blew calls and trumpet pieces that they knew by heart.

In the 17th and 18th centuries clearly defined types of ensembles emerged in the West to play military music, influenced by the *mehter* – the wind and percussion bands of the élite janissary troops of the Ottoman Empire – encountered during the wars with the Turks. By the end of this period the concept of 'Turkish' music was well established in German-speaking countries, both as a type of composition (music *alla turca* and 'Turkish marches' by Gluck, Haydn, Mozart, Beethoven and other composers) and as the term for a military band comprising brass, woodwinds and 'Turkish' percussion instruments such as the Turkish crescent, cymbals and bass drum. Forms of military bands and wind bands (*see* HARMONIEMUSIK) thus merged with 'Turkish music' (*see* JANISSARY MUSIC) to create the basis of the modern symphonic wind band (*see* BAND (i), §II, 2(i) and §III).

During the first half of the 19th century the military band evolved from an ensemble serving a purely military function to one capable of performing a wide range of musical and cultural tasks, helping the army to make contact with the civilian population. This evolution was accompanied by a gradual growth in the size of bands, and by far-reaching developments in the design of brass and woodwind instruments. By the mid-1800s the band repertory included original works and arrangements by leading composers of the day.

3. BRITAIN. In the days before the general adoption of national uniforms the identification of friend or foe was a perennial difficulty, and this gave rise to the composition of drum beatings and calls designed to indicate the nationality of the troops concerned, of which the English and Scots marches have survived.

The continental wars of the 16th and 17th centuries involved units of English and Scottish mercenaries. The fife, the 'Almain whistle' made famous by the Swiss and German Landsknechten (mercenaries), began to be heard in the British army. In the later years of King Charles II's reign it was gradually ousted in favour of the hautboy. From 1746, however, the fife began to return as the instrument of the infantry, and found a role accompanying the drum in signalling the four principal events of the soldiers' day: Reveille, Troop, Retreat and Tattoo.

On each of these four occasions the drums beat and the fifes played a prescribed sequence of tunes around the camp or through the streets. The tunes were laid down in *The Drum and Flute Duty*, the earliest edition of which appears to have been issued in 1759. At Reveille the soldiers lay in bed until the drums ceased. When the Troop was beaten, the soldiers paraded, the colours were trooped down the line, and the troops marched off to drill or other training. Retreat beating had to continue for at least 15 minutes to allow soldiers to make their way home before the roll was called and the camp gates locked. At Tattoo the drums beat and the fifes played for half an hour to allow the soldiers time to drink up and return to their billets before the music ended.

The first date in England for a military oboe band (with horns or trumpets) has not been established, but horns were usual by the mid-18th century. Handel's *Music for the Royal Fireworks* (1749) illustrates the scoring and orchestration then possible for an open-air wind ensemble (24 oboes, 12 bassoons, nine trumpets, nine horns and three timpani). In 1762 the Royal Artillery raised a 'Band of Musick' consisting of eight men playing ten instruments: pairs of trumpets, horns and bassoons, and 'four hautbois or clarinetts'. Such ensembles were the predecessors of today's military bands. The officers financed the bands themselves by subscribing to a fund from which musicians were engaged and instruments purchased. As the musicians were not enlisted soldiers, they could, and often did, refuse to play for an event that fell outside their contract. In 1783 the officers of the Coldstream Guards wished their band to accompany an 'acquatic excursion' to Greenwich. The musicians resigned en bloc; a replacement band was recruited from Hanover, organized on German lines and consisting of enlisted musicians playing clarinets, horns, oboes, and bassoons. Other regiments were quick to follow the example of the Coldstream in recruiting German musicians.

The raising of volunteer regiments at the end of the 18th century much increased the number of small bands, which usually consisted of two clarinets or oboes, two horns, two bassoons (often played from one part), one trumpet and commonly a serpent. Their repertory comprised marches and quicksteps varied by an occasional military rondo, often composed by local bandmasters. Much of this music was published at the time. Haydn, who was the first *Harmoniemusik* conductor at Eszterháza castle in Eisenstadt, wrote marches for this combination on his first visit to London. Sometimes there were extra parts for small flutes in B♭ or for flutes in F, and for a small Turkish percussion ensemble of long drums and cymbals.

In 1844 it was conceded that 'the formation of a band of music [was] essential to the credit and appearance of a regiment' (*The Kings Regulations*, 1844). By then the invention of the valve had released the brass instruments from the restrictions of their natural harmonic range, and the appearance of the tuba and its associated family of instruments in 1835 had further increased the musical potential of the band. The cost of the band was still borne by the officers, to whom the new instruments meant additional expense. One way in which they could obtain some return on their outlay was by hiring the band out for paid performances. To secure these the band had to play to an acceptable standard, and it thus became customary to engage a civilian musician, frequently from Germany, to train and conduct the band. Not until the establishment of the Military School of Music at Kneller Hall, Twickenham, in 1857 was the army able to produce its own qualified bandmasters.

In the mid-18th century the British army adopted the cadenced step, and marching music was therefore required. Although marches were being composed in the 17th century, and illustrations of the period show troops marching in step, the scarcity of level areas on which troops could manoeuvre, together with the total absence of metalled roads, would seem to indicate that such music was restricted to formal ceremonial occasions. Even in the 18th century the size of parade grounds was limited and so marches did not need to be very long. Most

marches of the time consisted of two simple sections in common time played at 72 beats to the minute, the 'ordinary step' of the British army, the *Parademarsch* of the Prussian, and the *pas ordinaire* of the French.

The situation changed radically with the appearance of the macadamized road surface in the first decade of the 19th century. It was now possible for columns of troops to march in time and step for long distances, and music became essential to ensure that an even rate of progress was maintained. Longer marches both for the band and for the fife and drum combination began to be composed, with the 'trio' now an integral part of the march. The rate of marching was also increased to 108 paces to the minute, the 'quickstep' of the British, the *Geschwindmarsch* of the Prussian, and the *pas redoublé* of the French. The improved instrumentation available to the military band also enabled more ambitious concert pieces to be performed, and selections from popular operas and operettas as well as arrangements of classical and symphonic music came to feature regularly in band programmes.

The concept of the regimental march, that is a marching tune associated with one particular regiment, is common to most armies. The British army is unique, however, in that the tunes which its regiments and battalions played when passing in review order, when entering barracks and at the end of every band programme tended to be arrangements of folksongs associated with the counties and districts to which regiments were linked in 1881, although a few played marches specifically composed for them by their bandmasters.

During the 19th century the keyed marching flute evolved from the simple six-holed fife. By 1868 flutes and piccolos in different keys were being issued to the Corps of Drums, as well as bugles which had taken over the role of 'instrument of command' from the drum at the beginning of the century. This enhanced flute component permitted a wider range of music to be played, and marches on the same melodic scheme as those of the military band began to be composed. On the line of march, the band and the Corps of Drums played alternately, but the beating of Reveille, Retreat and Tattoo remained the province of the Corps of Drums until the custom lapsed in the years between the two world wars.

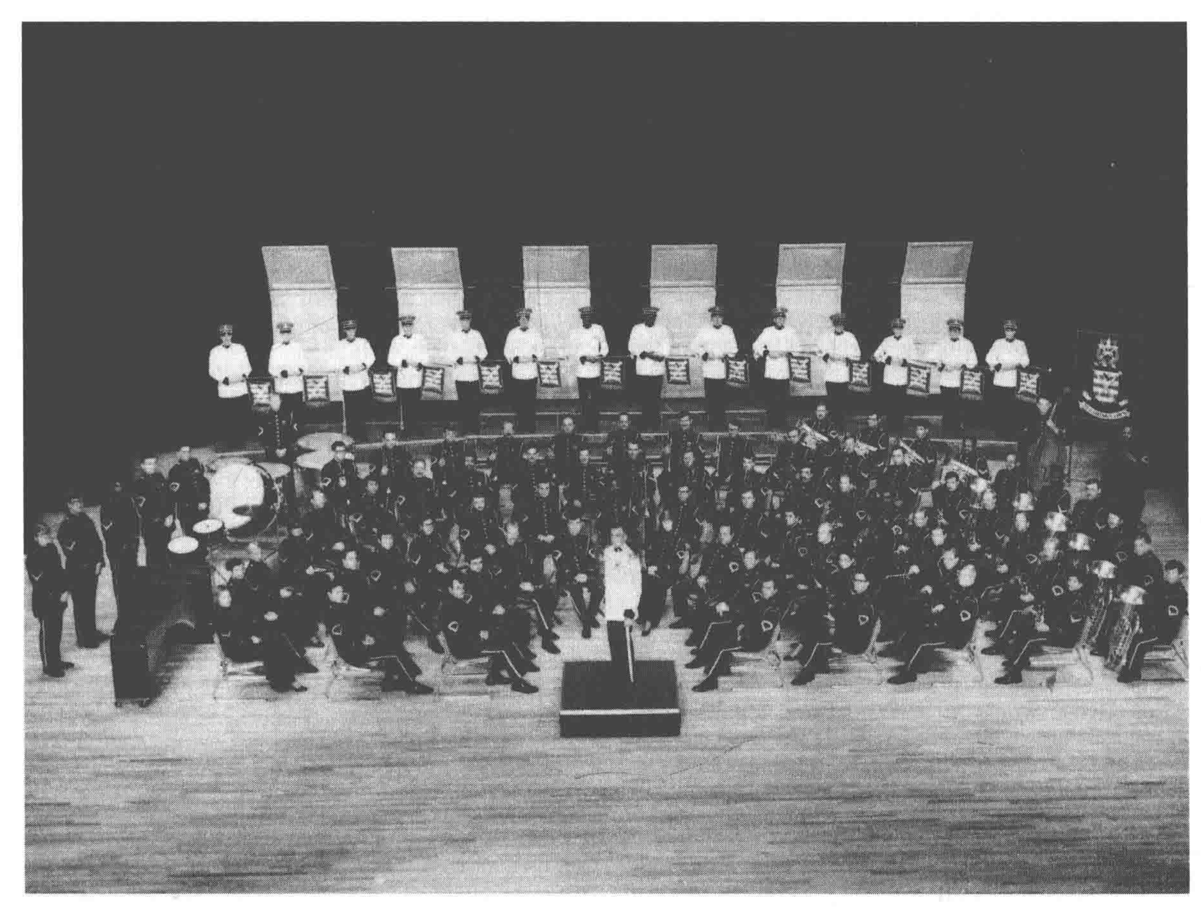
Pipers were first authorized for highland regiments in 1854, although they had been a feature of these regiments since their first raising in the 18th century. Over the 19th century the fife gave way to the highland bagpipe in all the Scottish regiments, and the band of bagpipes and drums replaced the Corps of Drums, except in the Scots Guards, by 1918. An essential step toward standardization of the military bands of the British army was taken at the Instrumentation Conference held on 7 December 1921 at the Military School of Music. It was agreed to take the tenor horn out of use and introduce the saxophone. Well-known composers were encouraged to write original works for military band, following the example of Holst's Suites nos.1 and 2. The challenge was taken up by Vaughan Williams (*English Folk Song Suite*, 1923; *Toccata marziale*, 1924) and Gordon Jacob (*William Byrd Suite*, 1923). Holst also wrote *Hammersmith* (1930).

The altered conditions of the second half of the 20th century led to the abolition of the military band in the infantry and cavalry regiments of the line. However, representative bands were formed for the infantry and the Royal Armoured Corps, infantry units retaining their Corps of Drums and pipe bands.

4. North America. In North America, as in Europe, armies distinguished between the 'field music' and the 'band of music'. The principal function of the field music was to sound the 'camp duties', a system of musical signals and commands which all personnel were expected to recognize and instantly obey, and which regulated military life. The drum was used in the infantry, while mounted units used the trumpet. During the colonial period British signals were used; in the Revolutionary era the basis for American practice was Friedrich von Steuben's *Regulations for the Order and Discipline of the Troops of the United States* (1779). This ordered nine 'beats' of the drum into use: 'The General', 'The Assembly', 'The March', 'The Reveille', 'The Troop', 'The Retreat', 'The Tattoo', 'To Arms' and 'The Parley'. Also included were 12 signals that were not regulated by the clock, or did not apply to the whole army. (For a full explanation of these and other calls, see Camus, 1976.) As the *Regulations* contained no music, the Continental Army's musicians depended on British practices and on the teachings of the army's Inspector of Music, John Hiwell, and regimental drum-majors. The drum beats gave the signals and command, with fife melodies added by the last third of the 18th century to make the signals more easily recognizable. In ex.1 an interpretation of the 'Drummer's Call' is combined with a fife melody found in a manuscript of Giles Gibbs (1777).

The first printed drum manuals in America appeared in the early 19th century; in these, as in early manuscripts, drum beats were not notated conventionally, but rather described. David Hazeltine, in his *Instructor in Martial Music* (1810), described the 'Drummer's Call' as 'a ten and a stroke, a flam and a stroke, and one flam, twice over; then a ten and a stroke, then a flam and a stroke, five times over; then one flam'. Comparison with contemporary British and American works shows that his ten-stroke roll more often consisted of seven or nine strokes, and by the time of the Civil War it had become an 11-stroke roll. (For a listing of fife tutors of this period, see Warner, 1967.)

The fife and drum were used to sound the camp duties until well after the Civil War. The orderly drummer would beat the 'Drummer's Call' to assemble the company drummers and fifers for one of the day's routines, such as Reveille, Troop, Retreat or Tattoo. By the end of the 19th century, when the bugle supplanted the fife and drum, a new set of signals was developed. US Army manuals of



1957 list 20 calls and four ceremonial compositions, but except for 'Taps', which is still played at funerals, these have fallen into disuse.

The colonial field music evolved from English models. Each infantry company included one or two drummers and fifers, and each troop of horse had a trumpeter. An American infantry regiment with eight line companies might have a field music of as many as 16 drummers and fifers. Irish and Scottish settlers sometimes used bagpipes instead of fifes, and bugles were later used by light infantry and detached mounted parties. Black Americans, required to serve but in many colonies forbidden to bear arms, were often musicians. Field musicians, who were paid and ranked as corporals, were usually given rudimentary rote training by the battalion's drum- or fife-major. While primarily signalmen, they were required to do duty as soldiers. In battle the drummers remained with their companies, beating signals as required, and normally marching immediately behind the advancing line. The musicians were expected to attend the wounded after battle, and were responsible for carrying out punishments. Boys, especially the children of soldiers or widows, were taught the fife and drum (for one such veteran's fascinating reminiscences, see Meyers, 1914). Because of their importance as signalmen, military musicians in the 18th century were usually dressed in the reverse colours of the regimental uniform (the musician's coat being the colour of the regimental facings). This enabled their commanders to locate them quickly in the smoke and confusion of battle.

During the colonial and Revolutionary periods the military drum was a snare or side drum between 38·1 and 45·7 cm in height and diameter. A two-headed cylindrical wooden shell with two or more gut cords stretched across the bottom membrane, and the drum was normally emblazoned with the arms or crests of the king or colonel, later the American eagle. When not in use it was suspended from the shoulder by means of a plaited cord, or drag rope. The bass drum, adopted by European bands near the end of the 18th century with the vogue for janissary or Turkish music, did not become a part of the American field music until the early 19th century. Kettledrums were rarely included in the field music, but mounted regimental bands could use timpani instead of snare and bass drums.

The early fife was a one-piece, wooden transverse flute about 60 cm long; it had six finger-holes and was pitched in D. In the late 18th century C and B♭ fifes became standard, but most military music continued to be written in the keys of G and D. The trumpet, a cylindrical tube made of brass or silver, usually had two rings to which an emblazoned banner could be attached. Early trumpets were in D, but by the Civil War the regulation trumpet was in F. Confined to the natural harmonic series, its range for military purposes was from the 3rd to the 9th or 10th partial. The bugle horn, a short, curved, wide-bore horn, was used in the late 18th century by light

2. *The US Army Band (1980) under Colonel Eugene W. Allen, with the Herald Trumpets (on raised level at rear)*

infantry and dismounted units to differentiate them from the line infantry. In the early 19th century the conical tubing was lengthened and coiled, resulting in an instrument pitched in C or B♭. The bugle or field trumpet gradually replaced the fife and drum, and by the end of the 19th century was the principal military signalling instrument; at this time it was pitched in G with a tuning-slide to F for use when performing with bands.

Technological advances in the 20th century relieved the field music of the duty of sounding signals, and with some exceptions the units were disbanded. Some vestiges of earlier practices remain: the US Army Band's Herald Trumpets, for example, open ceremonies and announce the arrival of the president and other dignitaries. Many traditions of the field music are carried on in revived 'ancient' fife and drum units, pipe bands, and modern drum and bugle corps. The Company of Fifers and Drummers in Ivoryton, Connecticut, coordinates the activities of more than 150 traditional fife and drum corps throughout the USA and Canada, and maintains a research library and museum. The US Marines maintain a drum and bugle corps, and Canada supports ten pipes and drums bands.

For a general discussion of the development and instrumentation of the band of music, *see* BAND (i), esp. §III, 4, and §IV, 4. Each branch of the US armed services (the army, navy, marines, air force and coast guard) has a special band, often with its own traditions. The US Marine Band is the oldest in continuous operation (since 1798); the army and navy also have special academy bands. These bands, which may have as many as 165 members, frequently comprise one or more marching units, several small groups, a chorus and a chamber orchestra, as well as the full symphonic band. In addition, in the late 1990s there were 38 regular army, ten navy, 13 Marine Corps, 16 air force, 19 army reserve, 55 National Guard and 11 Air National Guard bands.

Canada maintains four 45-piece Regular Force professional brass and reed bands. Canada also has seven Regular Force voluntary brass and reed bands, five naval reserve bands, 42 land forces reserve bands and three Air Reserve bands. Every military band is required to function as a concert as well as marching band, and to provide small jazz, rock and popular combos for social occasions.

Milka, Anatoly Pavlovich (*b* Poles'ye, Belorussian SSR [now Belarus], 16 Dec 1939). Russian musicologist. He began his career as a violinist, and studied musicology

with Dolzhansky, Druskin, Slonimsky and Kon at the Leningrad Conservatory (1962–70). He became a member of the Philosophical Association of the Russian Academy of Sciences (1982) and the International Bach Society (1988), and was chairman of the musicologists' section of the Leningrad-St Petersburg Union of Composers (1986–96). From the early 1980s he has held a chair at the St Petersburg Conservatory, specializing in polyphony and textual criticism. Milka has studied the music of J.S. Bach, Tchaikovsky, Slonimsky and others. One of the foremost Russian Bach scholars, he has drawn conclusions about the organizing principles of Bach's cycles using textual and graphological methods, and has proved that the placing of the canons in the original edition of the *Musikalisches Opfer* was altered by Bach and not by Schübler; he has also shown that the 'Berlin autograph' of *Die Kunst der Fuge* incorporates two versions of the completed cycle. He developed a theory of functional tendencies as attributive properties of music, which he saw as belonging not only to harmony and musical structure but to all elements of musical language and form. His later work concerns polyphonic theory and methodology, and he has introduced the concepts of 'maloy imitatsionnoy formï' ('insufficient imitative form') and 'kanonicheskoy intensivnosti' ('canonic intensiveness') as indicators of thematic saturation in imitation and canon.

KIRA YUZHAK

Millán (*fl* early 16th century). Spanish composer. The identity of this prolific song composer, who had 24 settings in the Cancionero Musical de Palacio (*E-Mp* 1335), is not clear. Barbieri maintained that there was a singer named Francisco Millán in the Castilian royal chapel in 1501 to 1502, but he gave no reference and the name has not been found in more recent archival research. It has been suggested that his songs were performed with instrumental accompaniment, but no instrumentalist of that name has been found in pay documents of the royal household. Four of Millán's songs are included in the original layer of the Cancionero, believed to have been compiled in about 1500, but the majority were added later, over the first two decades of the 16th century. Stylistically, the works attributed to 'Millán' belong to the generation of composers such as Peñalosa and Mondéjar. In the absence of any concrete information on his identity, it is tempting to suggest that he might have been the vihuelist Luís Milán, especially given the apparently instrumental-style accompaniment to the setting of the *romance Durandarte, Durandarte*. This version, however, does not correspond to that included in Milán's *El maestro* (1536), although the two are based on the same melody. Any suggestion that Milán and Millán were the same person remains hypothetical; given that Milán is thought to have died in 1561, he would have to have composed the earliest of the Cancionero songs as a very young man.

Millán is one of the most important and best-represented composers in the Cancionero Musical de Palacio. Of the 24 songs, one (*Ved, comadres, que dolencia*), is copied twice in the manuscript; in addition, the music of *Si ell esperança es dudosa* is also used for *Pues la vida en mal tan fuerte*, and *Temeroso de sufrir* adds a contratenor part to the three-voice version in *Porque de ageno cuidado*. Most of the songs are villancicos, with a three-line refrain or *estribillo*, and almost all set poems of courtly love full of the puns, verbal witticisms and emotional contrasts typical of the lyric verse of court poets at this period. The music is similar in style to that of Juan del Encina, essentially syllabic and homorhythmic and with succinct, clearly defined phrases; but frequent use of imitation, normally at the beginning of phrases, is a characteristic of Millán's music. Usually the imitation

involves only two voices, but sometimes all three participate. The predominant mode is Mixolydian, and duple metre is used except in a handful of cases. His settings of two traditional ballads – *Durandarte, Durandarte* and *Los braços trayo cansados* (another setting of which, attributed to Peñalosa, is preserved in *E-Bbc* 454) – are conspicuous for the rhythmic independence of the lower voices. Only three other songs by Millán are in the more popular idiom: *Ved, comadres, que dolencia, No husies de buen tempero* (a pastoral dialogue in the manner of Encina) and *Serrana del bel mirar*, a concise musical narrative, or *serranilla*, of the meeting between a beautiful mountain girl and a lovesick shepherd-courtier, during the course of which the composer introduces three popular refrains, almost in the manner of an *ensalada*.

WORKS

for 3 voices unless otherwise indicated

Edition: *La música en la corte de los Reyes Católicos: Cancionero musical de palacio*, ed. H. Anglès, MME, v, x (1947, 1951) [A i, ii]

Al dolor que siento estraño, A ii, no.457; Aunque no spero gozar, A ii, no.366; Durandarte, Durandarte, 4vv, A ii, no.445; Es de tal metal mi mal, A ii, no.334

Los braços trayo cansados, A ii, no.446; Maravilla es como bivo, A ii, no.368; Mios fueron mi coraçon, A i, no.185; No husies de buen tempero, A ii, no.295

O dulce y triste memoria, A ii, no.452; O vos omnes qui transistes, A ii, no.232 (macaronic love-song); ¿Para qué mi pensamiento? A i, no.195; Porque de ageno cuidado, A ii, no.319; Pues la vida en mal tan fuerte, A ii, no.333; Que mas bien aventuransa, A i, no.147

Señora, después que os vi, A ii, nos.339, 450; Serrana del bel mirar, A i, no.71; Si el dolor sufro secreto, A ii, no.367; Si ell esperança es dudosa (= Pues la vida en mal tan fuerte), A ii, no.351; Sufriendo con fe tan fuerte, A ii, no.323; Sy no piensas remediar, A i, no.194

Temeroso de sufrir, A ii, no.448 (music of Porque de ageno with added contra); Ved, comadres, que dolencia, 4vv, A i, no.122, ii, no.449

TESS KNIGHTON

Millant. French family of violin and bow makers. The brothers Roger (*b* 1901; *d* Aug 1990) and Max (*b* 1903) began their apprenticeship with their grandfather, Sebastian Auguste Deroux, and then worked for Dykes & Son in London. In 1923 they opened their own business at 51 rue de Rome, Paris. They succeeded in establishing a fine reputation and gained first prizes at international exhibitions in Cremona and The Hague (1949) and Liège (1954). Their violins and cellos are patterned after an original model that combines characteristics of Amati and Guarneri, while their violas, from 1953 to 1960, slightly recall the Tertis model. Their instruments show excellent craftsmanship and choice of wood; the varnish is usually a transparent orange-red. Besides being labelled, their instruments are marked with the letters ORMM enclosed in a losange of purfling below the button. Bows branded R & m millant and R & m.m. were made for the Millant workshop by various Mirecourt bow makers.

The brothers collaborated on a *Manuel pratique de lutherie* (Paris, 1952) and Roger Millant published a study of J.-B. Vuillaume (London, 1972); they retired as makers in 1969. Roger Millant's son Jean-Jacques (*b* Paris, 29 Oct 1928; *d* Clichy, 6 Feb 1998) served his apprenticeship with the Morizot brothers at Mirecourt (1946–8) and trained further at his family's shop in Paris before opening his own workshop at 3 rue d'Edinbourg in 1950. He moved his shop to the rue Général Foye, then to the rue de Mont d'Or before settling at 17 rue de Bucarest, where he continued to work until his death. In 1971 he was named 'Meilleur Ouvrier de France'. His elegant bows follow the Peccatte school; many of them are mounted with either ivory or tortoiseshell frogs. The bows, which are branded J.J. MILLANT À PARIS, enjoy a fine international reputation.

Max Millant's son, Bernard Georges Louis (*b* Paris, 13 May 1929) served his apprenticeship in violin making with Amédé Dieudonnée (1946–8) and in bow making with the Morizot brothers (1949). He then trained at the shop of Rudié in New York before opening a shop at 56 rue de Rome, Paris, in 1951. Bernard has made over a hundred instruments and numerous bows, achieving distinction in both fields and receiving numerous awards. His bows are branded either BERNARD MILLANT À PARIS or BERNARD MILLANT PARIS and often have the year of manufacture stamped in very small digits on the bottom facet of the butt. Like his cousin, Bernard's work is usually modelled after Peccatte, although the bow heads are slightly more squared. Bernard is a foremost expert on the authenticity of French bows.

JAAK LIIVOJA-LORIUS/PAUL CHILDS

Millar, Edward (*fl* 1624–43). Scottish musician. He graduated MA from Edinburgh University in 1624 and probably subsequently taught music in Edinburgh. His manuscript collection of psalm settings dated 1626 was known and described by Cowan, but has since disappeared. After Charles I's Scottish coronation at Holyrood in 1633, regular choral services were re-established at the Scottish Chapel Royal; Millar was appointed Master of the Choristers in 1634 and in 1635 his fine edition of psalm settings was printed in Edinburgh. In this collection the 104 anonymous settings of the Proper Tunes are by Scottish composers of the late 16th century. Millar wrote in his preface: 'I acknowledge sinceerely the whole compositions of the parts to belong to the primest Musicians that ever this kingdome had, as *Deane John Angus, Blackhall Smith, Peebles, Sharp, Black, Buchan* and others famous for their skill in this kind'. Some of these settings can be identified from other sources as wholly the work of Peebles, Buchan and Kemp. In many cases, however, Millar seems to have made 'composite' pieces by taking phrases from different settings and fitting them together (sometimes even transposing the parts) to form a more or less pleasing whole. This perhaps helps to explain Millar's further comment in the preface: 'collecting all the sets I could find on the Psalmes, after painfull tryall thereof, I selected the best for this work, according to my simple judgement'. In other sections of the book, certain settings of Common Tunes and psalms 'in reports', new to the 1635 Psalter, may be Millar's work. A musical commonplace-book (called the MacAlman MS in MB,

xv, 1957, 3/1975) containing psalmody, Scottish Renaissance partsongs and cittern music in Millar's hand is signed and dated 1643.

KENNETH ELLIOTT

Millard. *See* MÜLLER, ERNEST LOUIS.

Miller, Dayton C(larence) (*b* Strongsville, OH, 13 March 1866; *d* Cleveland, 22 Feb 1941). American acoustician. He studied at Princeton (DSc 1890) and held appointments there before becoming head of the physics department at the Case School of Applied Science, Cleveland. He was an accomplished flautist, and wrote extensively about the instrument, provided a catalogue of literature on the flute, and gathered an important collection of flutes (now in the Library of Congress, Washington, DC). His most important contribution as an acoustician was the development in 1909 of the 'phonodeik', which incorporated a diaphragm of thin glass closing the end of a receiving horn; this allowed him to analyse waveforms of various instruments – by means of a thin wire attached to the centre of the diaphragm, which passed over a spindle pulley, the rotation of the spindle (due to movement of the diaphragm) was recorded by light reflected from a mirror affixed to the spindle. He also carried out experiments on organ pipes and trumpets having walls of different thicknesses, although his conclusions about the desirable qualities for the containing walls of an instrument have been challenged by more recent studies. He became an expert on engineering acoustics and was responsible for the design of many concert halls. His 32-element harmonic synthesizer won him a medal from the Franklin Institute.

Miller's *The Science of Musical Sounds* (New York, 1916) incorporates the results of his charting of instrument waveforms; his *Anecdotal History of the Science of Sound* (New York, 1935), if it leaves something to be desired as a historical work, is the first broad history of acoustical studies.

JAMES F. BELL, R.W.B. STEPHENS/MURRAY CAMPBELL

Miller, Edward (*b* Norwich, 30 Oct 1735; *d* Doncaster, 12 Sept 1807). English organist, composer and historian. His father was a paviour, and he was apprenticed to that trade but absconded and studied music under Charles Burney; he played the flute in Handel's oratorio orchestra during the 1750s. On 15 July 1756 he was elected organist of Doncaster, in succession to John Camidge, on the recommendation of James Nares. In 1779, when the post of Master of the King's Band of Musicians became available on Boyce's death, the Marquis of Rockingham applied to the Duke of Manchester on Miller's behalf, but the position was given to John Stanley. In Doncaster Miller came to know Herschel, later the Astronomer Royal, and helped bring him out of obscurity. He played an active part in musical life in his native East Anglia and in the Doncaster region, and directed the Sheffield Festival of 1788. He took the MusD degree at Cambridge in 1786. Miller was first married in 1763; his wife died ten years later, and he remarried in 1796. He was said to be a simple and warmhearted man, with generous philanthropic tendencies.

Of his publications, *Elements of Thorough Bass and Composition* is a practical work containing examples for performance, and *Institutes of Music* is a book of rudiments for beginners. In *The Psalms of David* he attempted a reform of metrical psalmody; this volume includes the tunes 'Rockingham' and 'Galway', and had what has been claimed as the largest number of subscribers for any musical publication in England. In *David's Harp* he collaborated with his son, a Methodist clergyman, in adapting and composing about 300 tunes to Wesley's selection of hymns. His best instrumental works, the six flute solos, are reminiscent of Arne in style. The harpsichord sonatas are of slighter content, and the 'easy voluntaries' for organ are ephemeral works; Miller also 'adapted' Corelli's sonatas opp.1–4 for the organ and harpsichord. His *History and Antiquities of Doncaster and its Vicinity* (1804) is a work of substance and scholarship; it also includes some personal biographical information.

WORKS

all printed works published in London

VOCAL

A Collection of New English Songs and a Cantata (*c*1755)
Elegies, Songs and an Ode, op.3 (1770)
Anthem and Hymn, op.6 (1789); anthem *GB-Lbl**
The Psalms of David for the Use of Parish Churches (1790)
12 Canzonets, v, pf, op.10 (*c*1800)
Sacred Music, containing 250 of the most Favourite Tunes (*c*1800)
David's Harp (with W.E. Miller) (*c*1803), 100 of the 300 tunes are by E. Miller
Dr Watts's Psalms and Hymns set to new Music, 3, 4 vv (1802; with second pt., 2/1805; ed. for choirs as Psalm Tunes composed in 4 parts, *c*1805)
An Anthem Performed on a Commencement at St Mary's Church, Cambridge, and a Hymn (1805)
Te Deum, Jubilate, Magnificat and Nunc dimittis (org pt. only), *GB-Cu*
Songs pubd singly: Fair Sophia (H. Walpole) (1788); Serious Epigram (W. Jones) (1788); Ye Britons Bold (1790); I'm monarch of all I survey (1790); The Afflicted African (1790); Britons ever shall be free (F. Osborne) (*c*1794); The Negro Boy (*c*1795); I'll live no more single, glee (*c*1799)
Other songs, glees etc. (see Fowler)

INSTRUMENTAL

Short Airs or Minuets, fl, hpd (*c*1754)
6 Solos, fl, hpd/vc, op.1 (1761)
6 Sonatas, hpd, 3 with vn/fl, op.2 (*c*1765)
12 Progressive Lessons, pf/hpd, with fl/vn, op.8 (1791)
24 Exercises in all the Major and Minor Keys, op.7 (1791)
16 Easy Voluntaries, org, op.9 (1797)

Arrs. of Corelli sonatas: op.1, org, op.2, hpd/pf (1789); op.3, org, op.4, hpd/pf (1789)

WRITINGS

Institutes of Music, or Easy Instructions for the Harpsichord, op.4 (London, 1783)
Letters on Behalf of Professors of Music . . . to the . . . Directors and Managers of the . . . Commemoration of Handel (London, 1784)
Elements of Thorough Bass and Composition, op.5 (London, 1787)
Thoughts on the Present Performance of Psalmody (London, 1791)
The New Flute Instructor . . . also a Dictionary (London, 1799)
A Musical Primer (London, 1807)

J.M. BLACK

Miller, Ernest Louis. *See* MÜLLER, ERNEST LOUIS.

Miller, George (*fl c*1765–90). Woodwind instrument maker, possibly of German extraction, active in England. *See* ASTOR.

Miller, (Alton) Glenn (*b* Clarinda, IA, 1 March 1904; *d* between London and Paris, ?15 Dec 1944). American dance-band leader and trombonist. He attended the University of Colorado briefly, and in 1924 joined Ben Pollack's band on the West Coast. After moving to New York with Pollack in 1928 he performed as a freelance for several years, working at times with Red Nichols, Smith Ballew and the Dorsey brothers as both arranger and trombonist.

In 1934 Miller helped organize a band for Ray Noble, then in 1937 he formed another of his own. The following year he put together a second group. Eventually, in March 1939, the band was chosen to play the summer season at the prestigious Glen Island Casino in a suburb of New York, which led to another important engagement, at Meadowbrook, New Jersey, in spring of the same year. Both places offered frequent radio broadcasts, and by midsummer the Miller orchestra had developed a nationwide following. In autumn 1939 it began a series of radio broadcasts for Chesterfield cigarettes, which increased its already great popularity. Thereafter the band was in constant demand for recording sessions, and appeared in two films, *Sun Valley Serenade* (1941) and *Orchestra Wives* (1942). Miller's enduring popular hits from this period (all recorded for Bluebird) include *Moonlight Serenade*, *Little Brown Jug* (both 1939), *Pennsylvania 65000* (1940), *Chattanooga Choo Choo* and *A String of Pearls* (both 1941).

In October 1942, as a patriotic gesture, Miller disbanded his group and joined the US Army Air Force with the rank of captain. He assembled a high-quality dance band to play for the troops, which in 1944 moved its base to England. On 15 December Miller set off by aeroplane in bad weather for Paris to arrange for his band's appearance there, but the aeroplane never arrived, and no trace of it was found. Miller was mourned internationally and attained the status of a war hero. His recordings remain popular in the USA and also in Britain, and at times various Glenn Miller orchestras, under several leaders, have been formed to play his music.

Miller led one of the most popular and best-remembered dance bands of the swing era. In his lifetime he was seen as an intense, ambitious perfectionist, and his success was built on the precise playing of carefully crafted arrangements. He was particularly noted for the device of doubling a melody on saxophone with a clarinet an octave higher. His arrangements were seamless and rich. Paradoxically, however, although he had many hits with sentimental ballads performed by such singers as Ray Eberle and Marion Hutton, it was his swinging riff tunes, for example *In the Mood* (1939, B♭) and *Tuxedo Junction* (1940, B♭), which became most famous. In 1943 he published Glenn Miller's *Method for Orchestral Arranging* (New York).

JAMES LINCOLN COLLIER

Miller, James (*b* 11 Aug 1704; *d* London, 22 April 1744). English priest, playwright, moral and political satirist and librettist. Family penury delayed his education (he matriculated at Wadham College, Oxford, in 1726) and he wrote to earn a living. His plays were initially successful, but his strong, well-expressed and personalized criticisms of degenerate taste, political corruption and religious slackness prevented his prospering. Initially critical of Handel for writing Italian opera (irrational and non-British), he praised him for his oratorios in *Harlequin Horace, or The Art of Modern Poetry* (London, 1731) and *The Art of Life, in Imitation of Horace's Art of Poetry* (London, 1739). His one libretto, for Handel's oratorio *Joseph and his Brethren* (1743), a sentimental drama about an idealized biblical prime minister, is illuminated by his famously implacable opposition to the government of Sir Robert Walpole; it is also a defence of Christianity against deism. *The Pigeon-Pye* (London, 1738), a skit on Miller, associates him with Handel's music and singers. Handel subscribed to Miller's *Miscellaneous Works in Verse and Prose* (London, 1741), dedicated to the figurehead of the patriot opposition, Frederick Prince of Wales. In 1743 Miller acquired the valuable living of Upcerne, Dorset (previously held by his father), but he did not live to enjoy it. His posthumously published sermons had 337 subscribers.

RUTH SMITH

Miller, Jonathan (Wolfe) (*b* London, 21 July 1934). English theatre and opera director. A polymath whose achievements in both the sciences and the arts are extraordinarily varied. He studied medicine at Cambridge, and as one of

the four co-authors and performers of the Oxbridge revue *Beyond the Fringe* (1961) he became widely known in London and later New York. Regular television appearances added to his reputation as subsequently did theatrical productions of Shakespeare, Chekhov, Beaumarchais and other classic authors.

Miller's first venture in opera was with the British première (New Opera Company, 1974) of Alexander Goehr's *Arden must Die*; this led to Glyndebourne (*The Cunning Little Vixen*, 1975) and thence to close associations with Kent Opera and the ENO. For Kent, Miller produced operas by, among others, Mozart (*Così fan tutte*), Verdi (*Rigoletto, La traviata, Falstaff*), Monteverdi (*L'Orfeo*) and Tchaikovsky (*Yevgeny Onegin*), which had as their common factor an imaginative avoidance of all extraneous decorative effect and, often, a compelling economy of physical movement. For the ENO, Miller's stagings, which have included *Le nozze di Figaro*, *The Turn of the Screw*, *Arabella*, *Otello*, *Il barbiere di Siviglia*, *Tosca*, *Der Rosenkavalier* and *La traviata*, have been on the whole somewhat more uneven in quality – although his transplantations of *Rigoletto* in a 1950s New York setting (1982) and *The Mikado* in that of an English 1920s hotel (1986) proved among the company's most celebrated productions. A criticism of Miller's work which was heard more frequently in the 1980s was that the many fertile intellectual ideas on which he was able to draw sometimes failed to enliven the actual stagings, which could seem stiff and insecure in command of a large stage or theatrical space. Miller has worked regularly in Italy, France and the USA; his 1991 début at the Metropolitan was with *Kát'a Kabanová*. He has also worked at Covent Garden, where he made his début in 1994 with *Così fan tutte*.

MAX LOPPERT

Miller, Philip Lieson (*b* Woodland, NY, 23 April 1906; *d* New York, 23 Nov 1996). American music librarian and writer on music. He studied piano and music theory at the Manhattan School of Music (1923–7) and singing at the Institute of Musical Art (1927–9). Beginning in 1927, he was associated with the Music Division of the New York Public Library, first as a reference assistant (1927–45) and later as assistant chief (1946–59) and chief (1959–66); during his tenure the division was transferred to Lincoln Center and the Rodgers and Hammerstein Archives of Recorded Sound and the Toscanini Memorial Archives were established. He served as president of both the Music Library Association (1963–4) and the Association for Recorded Sound Collections (1966–8). Miller had a particular interest in vocal music, recordings and the recording industry, but he wrote many reviews and articles on all areas of musical literature for such journals as *American Record Guide*, *High Fidelity*, *Saturday Review*, *Notes*, the *Association of Recorded Sound Collections Journal* and *Musical Quarterly*. He was highly regarded as a mentor and role-model by American music librarians.

PAULA MORGAN

Miller, Silverius [Franz]. *See* MÜLLER, SILVERIUS.

Milleran, René (*b* Saumur, *c*1655; *d* after 1713). French linguist and amateur lutenist. All that is known about him is what can be gleaned from his publications and his manuscript collection of lute music (*F-Pn* Rés.823; facs., Geneva, 1976). In his first book (*La nouvelle grammaire françoise*, Marseilles, 1692) he is described as professor of French, German and English, and as *interprète du roi dans sa Cour de Parlement*. In 1699 he was in Milan as professor of languages at the Hospice des Pénitenciers. His knowledge of languages and the places of publication of his books (including Milan, Amsterdam and Brussels) imply that he travelled widely. The lute collection was probably compiled in the 1680s, since it contains a transcription from Lully's *Persée* (1682) and Lully is described as *surintendant de la musique du roi*. Milleran stated that he was a pupil of (?)François La Baulle and Charles Mouton. Although amateur in presentation, the manuscript is notable for containing arrangements from Lully by Mouton, and it also reveals Milleran as a real lute enthusiast in the list he gives of significant French lutenists going back to the 1620s, some of whom are known only from this source.

DAVID LEDBETTER

Millerd. *See* MÜLLER, ERNEST LOUIS.

Millet, Jean (*b* Montgesoye, Doubs, 1618; *d* Besançon, 10 Feb 1684). French musician and ecclesiastic. He served the two principal churches of the metropolitan chapter of Besançon as *enfant de choeur*, singer, organist, canon and, most notably, as *sur-chantre*. He was responsible for several books relating to the service in Besançon, of which the *Directoire du chant grégorien* (intended as a primer for the training of choir members) includes innovative ideas: a method for simplifying the singing of melismatic chant by elimination of unnecessary notes, and a solmization system based on four syllables (*re*, *mi*, *fa*, *sol*) rather than the Guidonian hexachord. His most significant work, however, is *La belle méthode*, a vocal tutor concerned with ornamentation of *airs*, which contains his only known surviving music – four *airs* and two motets.

ALBERT COHEN

Milleville. French family of musicians from Paris, largely active in Italy.

(1) **Pierre** [Pierreson] **Milleville** (*fl* Ferrara and Rome, 1504–19). Singer and ?composer. He was the first professional musician of this family and is first heard of as a singer in the ducal chapel at Ferrara in August 1504. He remained at Ferrara until the temporary dissolution of the chapel in 1510. He may have gone from there to the chapel of the Marquis of Mantua from 1511 to 1516. He is mentioned in Rome in 1517, and as being among the singers in the private chapel of Pope Leo X in 1518 and 1519. According to Ferrarese chroniclers, Duke Alfonso d'Este I, after a visit to France and England in spring and early summer 1504, brought back to Ferrara a remarkable 12-year-old boy, who was gifted both as a singer and as a composer. This report is complemented by Pierre Milleville's presence in the chapel from 1504, but no compositions by him are known.

(2) **Jean Milleville** (*b* before *c*1500; *d* ?after 1573). Music teacher. According to Fétis he went to the Ferrarese court in about 1530 at the request of Renée of France, the daughter of Louis XII, who had married Duke Ercole II of Ferrara in 1528. According to Weyler, he was a singer at the court of Ferrara from 1534 to 1550 and was perhaps already in service there in 1530. Although Valdrighi stated that the teacher of the Princesses of Modena from 1544 to 1573 was Alessandro Milleville, Solerti and Campori gave the entire document from the account books of the Duchess of Ferrara from which this notice seems to have been taken: it mentions paying a sum 'A milleville chantre' for teaching the princesses, presumably the duchess's daughters. It seems likely, then, that Valdrighi confused Alessandro with his father, Jean, and that the princesses were of Ferrara, not of Modena, and were taught by Jean. In locating a motet by Jean in a book by Attaingnant, Fétis identified Jean with Maistre Jhan of Ferrara, but this was probably an error since Maistre Jhan seems to have been at Ferrara from at least 1522.

(3) **Alessandro Milleville** (*b* Paris, ?1521; *d* Ferrara, 8 Sept 1589). Organist and composer, son of (2) Jean Milleville. That Milleville was born in Paris is reported only by Fétis, who did not give his source. Although Fétis derived Alessandro's birthdate from the assertion that he went to Ferrara in 1530 at the age of nine (for which assertion no source is given), this birthdate is probably correct, for Superbi said that Milleville died at the age of 68 and Borsetti said that he died in 1589. He was a tenor in the papal chapel from October 1552 to June 1558. From April 1560 until his death he was second organist (under Luzzaschi) at the Ferrarese court. He was the teacher of Ercole Pasquini, of Vittoria Aleotti and, presumably, of his own son Francesco. He is said to have been a fine organist and may have been an important figure in the Ferrarese organ school, which included Jacques Brunel and Luzzaschi and reached its height in Pasquini and Frescobaldi. No organ music by him survives. His madrigals of the 1580s do not indicate that he had a strongly individual personality as a composer of secular music. His madrigal books appear to have circulated only locally, and, with one exception, his pieces appeared only in specifically Ferrarese anthologies.

6 madrigals, 5, 6vv, 1581[5], 1582[5], 1583[10], 1586[10], 1591[9], 1593[3]

(4) **Francesco Milleville** [Padre Barnabá, Milleville Ferrarese] (*b* ?Ferrara, ?*c*1565; *d* after 1639). Composer and organist, son of (3) Alessandro Milleville. Fétis, the only source of information concerning Milleville's birthdate, said that he was organist to the King of Poland and to Emperor Rudolf II before going to Rome in 1614. After going to Italy Milleville became *maestro di cappella* of Volterra Cathedral, according to Sartori. The title-pages of his publications show that he held numerous posts in Italy between 1616 and 1628: in 1616 he was at Gubbio, in 1619–20 at Chioggia, in 1622 at S Giorgio, Ferrara, and in 1627–8 at S Benedetto, Siena. In 1632, according to Sartori, he was organist of Arezzo Cathedral. The dedication of op.20 to the abbot of the monastery of S Giorgio, Ferrara, may indicate that Milleville had returned to Ferrara by that time.

WORKS
all published in Venice

ANTHONY NEWCOMB

Millhouse. *See* MILHOUSE.

Millico, (Vito) Giuseppe (*b* Terlizzi, nr Bari, 19 Jan 1737; *d* Naples, 2 Oct 1802). Italian soprano castrato and composer. About 1744 he came to Naples, where he attended one of the conservatories; in 1757 he made his

début as a singer in Rome. He worked at the Russian court, 1758–65, then returned to Italy; at Parma in 1769 he sang Orpheus in *Le feste d'Apollo* by Gluck, who took him to Vienna, where he created Paris in *Paride ed Elena* (1770). In 1772 he went to London and again appeared as Orpheus; he was with Gluck in Paris in 1774, and in Zweibrücken and Mannheim. In 1775 he returned to Italy and appeared in Venice, Florence, Milan and Rome before returning to Naples in 1780. There he was appointed 'Musico Soprano della Real Cappella' and acted as a singing teacher to the Bourbon princesses Maria Teresa and Luisa Maria and to Lady Emma Hamilton. In close cooperation with the poet Raniero de' Calzabigi he set to music *Ipermestra, o Le Danaidi*, and composed several other operas, including *Le cinesi* and *L'isola disabitata* for the princesses. The published score of his opera *La pietà d'amore* bears an acknowledgment to Gluck and his ideals in the foreword, addressed to the opera's librettist, Antonio Lucchesi.

Millico composed several cantatas and, more importantly, numerous arias, canzonettas and duets, often with harp accompaniment. The fact that many of these works were published individually and in collections, along with the extraordinarily wide circulation in manuscript of the smaller vocal and instrumental compositions, thought to be late works, testifies to their popularity and to Millico's reputation as a singer, composer and teacher.

WORKS

STAGE

Componimento dramatico (1, L. Godard), Naples, after 1780

La pietà d'amore (op, 2, A. Lucchesi), Lisbon, 18 Dec 1783 (Naples, 1782)

Ipermestra, o Le Danaidi (op, 5, R. de' Calzabigi), 1783

La figlia di Jefte (pasticcio, 3, G. Lucchesi), Naples, Fondo, 1785

La Zelinda (op, 3, Lucchesi), Naples, Fondo, 17 April 1786

Le cinesi (op, 1, P. Metastasio), ?Naples, Real Palazzo, ? between 1786 and 1793

L'isola disabitata (op, 1, Metastasio), ?Naples, Real Palazzo, ? between 1786 and 1793

L'avventura benefica (op, 3, G.S. Poli), Naples, Real Palazzo, 14 July 1797

Doubtful: Ecuba e Climene; Achille in Sciro (pasticcio, Metastasio); Esther (5, J. Racine)

GERHARD CROLL, IRENE BRANDENBURG

Milligen, Simon van (*b* Rotterdam, 14 Dec 1849; *d* Amsterdam, 11 March 1929). Dutch teacher, critic and composer. He was an organ pupil of J.A. Klerk and Samuel de Lange (i) and a composition pupil of Bargiel and Willem Nicolaï. In 1871 he was a piano teacher in Middelburg and in 1873 he was an organist in Groningen, where he continued his studies with J. Worp. From 1875 to 1888 he was director of the music school in Gouda, leaving his post to make the acquaintance of Franck and d'Indy in Paris. After returning to the Netherlands in 1890, he settled in Amsterdam, working as a newspaper critic until 1906. In 1894 he edited the *Weekblad voor muziek* and from 1902 until 1916 the journal *Caecilia*; he also promoted modern French music. In 1906 he was appointed to the board of the Vereeniging voor Noord Nederlands Muziekgeschiedenis, and in 1913 he became professor of music history at the Amsterdam Conservatory, a post he held until his death. He wrote a study of early Christian church music, *De kerkzang van de eerste christelijke periode tot onzen tijd* (Groningen, 1908), and a comprehensive history of music, *Ontwikkelingsgang der muziek* (Groningen, 1912). From his compositions a cycle of Romanian songs has been praised. (A. Averkamp: 'In memoriam Simon van Milligen', *TVNM*, xiii/1–2 (1929), 101–3)

JAN TEN BOKUM

Millington, Barry (John) (*b* Hadleigh, Essex, 1 Nov 1951). English critic and writer on music. He studied at Cambridge (1971–4), where he was taught the organ by Gillian Weir. He worked on the editorial staff of *Grove6* and then wrote criticism for the *Musical Times* and newspapers, notably *The Times* (1977–82 and from 1988), and in 1992 he became reviews editor for the *BBC Music Magazine*. In 1999 he founded and became artistic director of the Hampstead and Highgate Festival; in the same year he served as dramaturgical adviser on the new production of *Lohengrin* at the Bayreuth Festival. Millington's central interest is the music of Wagner; he has particularly addressed the issue of anti-Semitism, and political issues generally, especially in relation to the music dramas. He has contributed to *The Oxford Illustrated History of Opera* (Oxford, 1994), as well as numerous periodicals, including *Opera*, the *Cambridge Opera Journal*, *Wagner* and the *Musical Times*.

JEFF DEAN

Millioni [Milioni], **Pietro** (*fl* early 17th century). Italian composer and guitarist. He was one of the most important and prolific composers of the *battute* style of guitar playing. His earliest surviving works indicate that he had been producing guitar books for some time: two of the three books published in 1627 are reprints, including the fourth impression of *Il primo, secondo, et terzo libro*

d'intavolatura. This comprises one of the clearest and most representative selections of early guitar music. It has a thorough preface explaining chordal alfabeto and various ornamental strumming techniques, such as the *trillo* and the *repicco*, which were then carefully notated into the same pieces when they reappeared in the fourth and fifth books. Some of the material that reappeared in Millioni's later books includes additions and changes: *Corona del primo, secondo, e terzo libro*, for example, contains a system for tuning 12 guitars at different pitches, as well as an alfabeto for the chitarrino (four-course guitar). The stroke alignment of these later books is often quite haphazard, making them more difficult to read than the earlier ones. Millioni's name, along with Lodovico Monte's, also appears on *Vero e facil modo d'imparare ... la chitarra spagnuola* (Rome and Macerata, 1637). Millioni was probably no longer alive in 1661 when his *Nuova corona d'intavolatura di chitarra spagnuola* was reprinted 'secondo il vero originale'; the original edition, now lost, may have been one of his earlier books and appears to have been plagiarized by both Foriano Pico (1628) and Tomaso Marchetti.

WORKS

Il primo, secondo, et terzo libro d'intavolatura (1624), lost, mentioned in *MersenneHU*; pubd as Quarta impressione del primo, secondo, et terzo libro d'intavolatura (Rome, 1627), 2 ed. in Hudson (1982)
Seconda impressione del quarto libro d'intavolatura di chitarra spagnola (Rome, 1627), 4 ed. in Hudson (1982)
Prima impressione del quinto libro d'intavolatura di chitarra spagnola (Rome, 1627)
Prima scielta di villanelle accomodate con l'intavolatura per cantare sopra la chitarra spagnola (Rome, 1627)
Corona del primo, secondo, e terzo libro d'intavolatura di chitarra spagnola (Rome, 1631)
Nuova corona d'intavolatura di chitarra spagnola novamente ristampata secondo il vero originale (Rome, 1661)

Vero e facil modo d'imparare a sonare et accordare da se medesimo la chitarra spagnuola (Rome and Macerata, 1637), with L. Monte

GARY R. BOYE

Millner, Silverius [Franz]. *See* MÜLLER, SILVERIUS.

Millöcker, Carl (*b* Vienna, 29 April 1842; *d* Baden, nr Vienna, 31 Dec 1899). Austrian composer. The son of a goldsmith, he studied the flute at the Vienna Conservatory (1855–8) and theory with F.J. Zierer and Laimegger. In 1858 he played at the Theater in der Josefstadt and in 1864, on the recommendation of Suppé (from whom he had received some practical tuition), he became conductor at the Thaliatheater in Graz. There his first one-act pieces, somewhat in the style of Offenbach, were produced in 1865 and there he also married one of the theatre's singers. In 1866 he obtained a position as conductor at the Theater an der Wien, but because of the lack of opportunities he moved to the Harmonie-Theater, where another short operetta, *Diana*, was produced.

In 1868 Millöcker was appointed conductor at the Deutsches Theater in Budapest and in 1869 returned to the Theater an der Wien as second conductor. In the course of his duties there he composed songs and incidental music for many short theatrical pieces, first gaining attention with his score for *Drei Paar Schuhe* (1871). From 1873 to 1876 he edited the *Musikalische Presse*, a monthly magazine of piano music and articles. He also began writing full-length operettas, his first successes being *Das verwunschene Schloss* (1878) and *Apajune, der Wassermann* (1880), which like his later major works starred the leading Viennese operetta singer of the time, Alexander Girardi. His greatest success came with *Der Bettelstudent* (1882), and in 1883 he was able to give up his conducting position to concentrate on composition. *Gasparone* (1884) was almost as well received. The most successful of his later operettas was *Der arme Jonathan* (1890): set partly in the USA, it was performed in London (with some additional numbers by Isaac Albéniz) and in the USA, where it was particularly popular. In 1894 Millöcker suffered the first of several strokes which partly paralysed him and eventually led to his death. He was twice married.

Millöcker's success in the late 1870s and the 1880s established him with Johann Strauss and Suppé as one of the three leading exponents of Viennese operetta. His music lacked the vigorous appeal of Suppé's and the melodic facility of Strauss's, as a result of which he has remained the least known abroad. Yet, at its best, his music combines much of the qualities of both, especially in *Der Bettelstudent*, which remains a repertory piece in Austria and Germany. Several numbers from other operettas are familiar, notably 'Er soll dein Herr sein' from *Gasparone* (which also became popular in Germany in bastardized form as 'Mutter der Mann mit dem Koks ist da') and 'Ich bin der arme Jonathan' from *Der arme Jonathan* (both for Girardi). Unfortunately, other than in *Der Bettelstudent*, Millöcker's music is frequently represented in arrangements that grossly distorted his style to suit the tastes of the 1930s. *Die Dubarry* (1931), to a totally new libretto, had a score arranged by Theo Mackeben from *Gräfin Dubarry* and other pieces, with alien structures and orchestration, while a 1932 revision of *Gasparone* by Ernst Steffan also introduced other material and reduced the scale of Millöcker's comic-opera structures. Millöcker's theatrical expertise remains clearly evident, however, in *Der Bettelstudent*, a work that admirably displays his rich invention and accomplished theatrical workmanship. He bequeathed his scores to the municipality of Baden.

many MSS at A-Wst and the archives of the municipality of Baden

OPERETTAS

most operettas published in Vienna (vocal score) about date of first performance; first performed in Vienna, Theater an der Wien, unless otherwise stated

Der tote Gast (1, L. Harisch), Graz, Thalia, 11 Feb 1865
Die beiden Binder (1, G. Stoltze), Graz, Thalia, 21 Dec 1865
Diana (1, J. Braun), Vienna, Harmonie, 2 Jan 1867
Der Dieb (1, A. Berla), Budapest, 1868/9
Die Fraueninsel [Die verkehrte Welt] (3, after T. Coignard), Budapest, Deutsches, 1868/9
Abenteuer in Wien (3, Berla), 20 Jan 1873

Das verwunschene Schloss (3, Berla), 30 March 1878
Gräfin Dubarry (3, F. Zell and R. Genée), 31 Oct 1879
Apajune, der Wassermann (3, Zell and Genée), 18 Dec 1880
Die Jungfrau von Belleville (3, Zell and Genée), 29 Oct 1881
Der Bettelstudent (3, Zell and Genée after V. Sardou: *Les noces de Fernande*), 6 Dec 1882
Gasparone (3, Zell and Genée), 26 Jan 1884
Der Feldprediger (3, H. Wittmann and A. Wohlmuth), 31 Oct 1884
Der Vice-Admiral (3, Zell and Genée), 9 Oct 1886
Die sieben Schwaben (3, Wittmann and J. Bauer), 29 Oct 1887
Der arme Jonathan (3, Wittmann and Bauer), 4 Jan 1890
Das Sonntagskind (3, Wittmann and Bauer), 16 Jan 1892
Der Probekuss (3, Wittmann and Bauer), 22 Dec 1894
Nordlicht, oder Der rote Graf (3, Wittmann), 22 Dec 1896

OTHER WORKS

*c*40 other theatrical pieces, mostly for Theater an der Wien, incl. Drei Paar Schuhe (1871); Die schlimmen Töchter (1876); Ein Blitzmädel (1878); Ihr Korporal (1878); Die Näherin (1880); Ihre Familie (1881): for detailed list see *GänzlEMT*
6 heitere Lieder, Bar/B, pf (Vienna, 1872)
Lebensphasen, quodlibet, v, pf (Vienna, 1872)
Miscellaneous songs and dances

ANDREW LAMB

Millot, Nicolas (*d* after 1589). French composer. In December 1559 a Noel Millot was registered as one of the 12 clerks at the Ste Chapelle, Paris; this may have been Nicolas Millot, who is named as a singer in the royal chapel in several Parisian documents between 1560 and 1590. His four-voice settings of Accace d'Albiac's *Proverbes de Salomon* were published in 1567 with a dedication to Charles IX who in 1572 sent him from Chambord to Tours to find two boy choristers. In 1575 he won the silver lyre prize in the St Cecilia competition at Evreux for his chanson *Les espis sont à Ceres*, and was described as 'one of the *maîtres de chapelle* to King Henri III'; when he resigned this post to the castrato Estienne le Roy in March 1585, he was reported to have been 'sous-maître de la chapelle de musique du Roy' for over 20 years. In 1578 he was referred to as a singer ('haute-contre') and composer at the royal chapel. His last recorded appointment was as *maître des enfans* in the chapel of the queen mother (Catherine de' Medici); his signature appears (in a weak hand) on a will in 1590.

30 polyphonic chansons by Millot were printed at Paris between 1556 and 1578. They include settings of poems by Eustorg de Beaulieu (*Voici le beau temps*), Guillaume Guéroult (*Susane un jour*) and Ronsard, as well as popular verse (e.g. *J'ay l'alouette* which is related to the folksong *L'alouette, gentille alouette*). His musical style is predominantly old-fashioned, resembling that of the Parisian chansons of Sandrin, Janequin and Arcadelt; the courtly pieces are generally homophonic with occasional imitative passages, and the rustic songs are more syllabic and contrapuntal. Only rarely does the contemporary tendency towards a treble melody and homophonic texture appear. The 20 *Proverbes* do not use Gindron's Huguenot melodies, as Janequin's settings do, but are freely composed.

WORKS

Les [20] proverbes de Salomon mis en musique, 4vv (Paris, 1567)
30 chansons, 3–5vv, 1556[20], 1556[21], 1557[15], 1559[10], 1559[13], 1567[11], 1569[10], 1569[17], 1570[4], 1570[9], 1572[2], 1578[14], 1578[15]; 1 ed. in Thibault and Perceau; 1 ed. F. Lesure, *Anthologie de la chanson parisienne au XVIe siècle* (Monaco, 1953); 1 ed. F. Dobbins, *Oxford Book of French Chansons* (Oxford, 1987); 26 ed. in SCC, xix (1991)

FRANK DOBBINS

Mills. Welsh family of musicians, educators and pioneers in congregational singing.

(1) **Henry Mills** (*b* Llanidloes, 1757; *d* Llanidloes, 28 Aug 1820). Minister. His singing impressed the celebrated preacher Thomas Charles of Bala during a Methodist revival in 1780 and made him responsible for improving congregational singing in the district, despite the opposition of some of the elders who objected to his youth and his ability to play several instruments.

(2) **James Mills** (*b* Llanidloes, 1790; *d* Llanidloes, 1844). Conductor, son of (1) Henry Mills and his first wife. Continuing his father's activities, he attracted as many as 70 students to his weekly classes in the rudiments of music – a surprisingly high figure for the size of the district. He composed several anthems and hymn tunes.

(3) **Richard Mills (i)** [Rhydderch Hael] (*b* Llanidloes, March 1809; *d* Llanidloes, 24 Dec 1844). Composer and teacher, son of (1) Henry Mills and his second wife. He was 15 when his hymn tune 'Maes-y-llan' was published in *Seren Gomer*, the first Welsh-language newspaper. His collections of hymn tunes *Caniadau Seion* (1840, suppl. 1842) and *Yr Arweinydd Cerddorol* (1840–5) greatly influenced congregational singing in Wales and were landmarks in its improvement. He composed about half the tunes in these books; the latter contains a 78-page introduction to rudiments, and advice on singing and interpretation. Mills followed the general practice of printing in open score with the melody in the line above the bass. Most tunes were in four parts although there was much controversy over whether tunes should be sung in harmony at all, or in three parts instead of four.

(4) **John Mills** [Ieuan Glan Alarch] (*b* Llanidloes, 19 Dec 1812; *d* London, 28 July 1873). Minister, writer and musician, grandson of (1) Henry Mills and his first wife. In 1838 he travelled throughout Wales lecturing on music and temperance and founding music societies. His 'grammar of music' (*Gramadeg Cerddoriaeth*) published in the same year ran to several editions. Ordained a Calvinistic Methodist minister in 1841, he took charge of a church in Ruthin but moved to London in 1846 to pursue missionary work among the Jews. In 1863 he became pastor of the Welsh church in Nassau Street. He published many theological works in Welsh and English. His music books waged an active campaign for better congregational singing, better metrical consistency between hymns and tunes and a wider general knowledge of the rudiments

of music. With (3) Richard Mills (i) he was particularly influential in the admission of congregational singing as an essential part of Welsh nonconformist worship, which made possible the choral movement of the later 19th century. His other books include *Y Salmydd Eglwysig* (1847), *Elfennau Cerddoriaeth* (1848), *Y Canor* (1851), *Yr Athraw Cerddorol* (1854, with Thomas Williams 'Hafrenydd') and *Y Cerddor Dirwestol* (1855). He published *Y Cerddor Eglwysig* (1846, suppl. 1847) and a second edition of *Y Canor* (1859) with his brother, another Richard Mills. He also wrote articles in Welsh and English on Jewish life ('Iddewon Prydain', 1852, and 'British Jews', 1853); and his contributions to Cassel's *Bible Dictionary* were regarded as authoritative.

(5) **Richard Mills (ii)** (*b* Llanidloes, 1 Oct 1840; *d* Rhosllanerchrugog, 18 May 1903). Musician and printer, son of (3) Richard Mills (i). Trained as a staff-notation compositor, he supervised the music publishing of Hughes & Son in Wrexham to 1877, then established his own press in Rhosllanerchrugog. In 1894 he started the *Rhos Herald*, which he edited until his death. Throughout his life he conducted various choral societies in Denbighshire. His partsongs were popular and a few of his hymn tunes such as 'Arweiniad' are still remembered.

OWAIN EDWARDS/TREVOR HERBERT

Mills, Charles (Borromeo) (*b* Asheville, NC, 8 Jan 1914; *d* New York, 7 March 1982). American composer. He was musically self-taught, and at the age of 17 earned his living by playing the saxophone, clarinet and flute in jazz bands. In 1933 he went to New York to begin composition studies with Max Garfield; he subsequently studied with Copland, Sessions and Harris. For eight years he was radio critic of *Modern Music* and was head of the composition department of the Manhattan School in 1954–5; throughout his career, however, he concentrated on composition. He wrote in traditional forms such as fugue, sonata and concerto, and composed many works for recorder (he was an accomplished recorder player). His music shows the influence of the spirituals and folksongs heard during his childhood in the Carolinas, and the jazz of the dance orchestras in which he played as a young man. He was a convert to Roman Catholicism in 1944, and this experience is evident in the spirit of reverence and contemplation found in subsequent works. Among the awards Mills received is a Guggenheim Fellowship (1952). (*EwenD*)

WORKS

Orch: Sym. no.1, e, 1940; Sym. no.2, C, 1942; Sym. no.3, d, 1946; Pf Conc., 1948; Theme and Variations, 1951; Toccata, 1951; Prelude and Fugue, 1952; Prologue and Dithyramb, str, 1954; Concertino, ob, str, 1957; Sym. no.4 'Crazy Horse', 1958; Serenade, wind, str, 1960; In a Mule Drawn Wagon, str, 1969; Sym. BARBARA A. RENTON/R

Mills, John (*b* Kingston upon Thames, 13 Sept 1947). English guitarist. He studied with John Williams at the RCM (1966–9), and attended the Segovia Summer School at Santiago de Compostela. He made his début in London in 1971, and has subsequently appeared in Canada, Australia and South-east Asia. He taught at the Nelson School of Music, New Zealand (1985–8), and in 1987 was appointed professor at the RAM in London; he is also head of guitar at the Welsh College of Music and Drama in Cardiff. He has made many transcriptions for the guitar, and published *The John Mills Classical Guitar Tutor* (Shaftesbury, 1981). A prolific recitalist, Mills has consolidated and extended the tradition of Segovia, both in repertory and in his exploration of the rich tone-colours of the guitar. His playing has been praised for its expressive sensitivity, which is combined with a subtle virtuosity and technical mastery.

GRAHAM WADE

Mills, Richard (iii) (*b* ?1798; *d* London, 28 Nov 1870). English music publisher, successor to ROBERT BIRCHALL.

Mills, Richard (John) (iv) (*b* Toowoomba, 14 Nov 1949). Australian composer and conductor. After studying arts at the University of Queensland and taking private piano and theory lessons with Lovelock, he studied at the Guildhall School, London, with Rubbra (composition) and Gilbert Webster (percussion) and worked as a percussionist in London orchestras. He returned to Australia as a percussionist with the ABC orchestras, taught at the Northern Rivers College of Advanced Education (1982–4), then the Queensland Conservatorium (1984–7), and during this period he appeared as a composer or guest conductor with all the ABC orchestras. Since 1987 he has been chiefly a freelance composer-conductor: he was artist-in-residence with the Australian Ballet (1987–8), then the ABC (1989–94), artistic adviser to the State Orchestra of Victoria (1987) and the Brisbane Biennial (1995–7), and artistic director of the Adelaide Chamber Orchestra (1991–6) and the WA Opera (since 1996). He was chairman of the Australia Council Music Fund (1996–8).

Mills's central achievement has been his sustained contribution to orchestral repertoire. His background as an orchestral player and his grounding in traditional theory with Lovelock and Rubbra led to his developing a polished orchestral craft and a language which is eloquent and effectively written. His orchestral works have been frequently performed in Australia and they have also been played by the BBC Scottish SO and the City of Birmingham Symphony. Starting with the attractive *Overture with Fanfares* (1981) he has written more than 20 works for large orchestra, making particularly colourful use of wind and percussion. His Trumpet Concerto (1982), *Soundscapes* (1983) for percussion and orchestra and *Bamaga Diptych* (1986), a work evoking far north Queensland, reveal a composer of a rich harmonic palette, superb instrumental craft, and energetic rhythmic imagination.

He has also been a successful composer for the theatre. *Snugglepot and Cuddlepie* (1987), his ballet for the Australian Ballet based on the fairy tales of May Gibbs, has become a favourite, and since the success of his two-act opera *Summer of the Seventeenth Doll* (1996), commissioned for the Victorian State Opera, he has increasingly focussed on dramatic works. He has also produced chamber works and choral settings which are less well known, although no less polished. One of the most frequently performed and commissioned of Australia's composers, he has won the Albert Maggs Composition Award, two Sounds Australian awards (1988, 1991) and the Australia Council Don Banks Fellowship (1996).

WORKS
(*selective list*)

Stage: Earth Poem/Sky Poem (music theatre), 1993; Snugglepot and Cuddlepie (ballet), 1987; Summer of the 17th Doll (op, 2, P. Goldsworthy, after R. Lawler), 1994–6, Melbourne, State, 16 Oct 1996

Orch: Toccata, 1976; Music for Str, 1977; Fanfares, perc, orch, 1980; Fantasia on a Rondel, 1981; Ov. with Fanfares, 1981; Tpt Conc., 1982; March 'Australia Victorious', 1983; Soundscapes, perc, orch, 1983; Castlemaine Antiphons, 1984; Bamaga Diptych, 1986; Sequenzas concertante, 1986; Fantastic Pantomimes, 1987; Aeolian Caprices, 1988; Fanfare, 1988; Seaside Dances (after e.e. cummings), 1989; Snugglepot and Cuddlepie Suite, 1989; Fl Conc., 1990; Vc Conc., 1990; Tenebrae, 1992; Vn Conc., 1992; Conc., vn, va, orch, 1993; The Code of Tupsihore, 1997; Millingimbi Fuscaes, 1997; Sym. WARREN BEBBINGTON

Mills College. College in Oakland, California, USA, near San Francisco. It has been an important centre for new music since the 1930s. *See* SAN FRANCISCO, §§2 and 5.

Mills Music. American music publisher. With his brother Jack (?1892–1979), Irving Mills (*b* New York, 16 Jan 1894; *d* Palm Springs, CA, 21 April 1985) established Jack Mills, Inc. (later Mills Music) in New York in 1919. The firm built its reputation on developing the work of unknown songwriters; among those whose early careers it assisted were Zez Confrey, Hoagy Carmichael, Sammy Fain, Jimmy McHugh, Dorothy Fields, Harold Arlen, 'Fats' Waller and Duke Ellington. The leading publisher of piano novelties, it became one of the most important dance-band publishers before World War II; its pioneering dance-combo orchestrations were called 'orchettes'. Mills himself managed Duke Ellington and Cab Calloway, produced records for several dozen jazz bands and in 1937 founded the short-lived Master and Variety record labels; he collaborated as lyricist on hundreds of popular songs. By 1949 Mills Music and its subsidiary American Academy of Music owned nearly 20,000 copyrights in popular, educational and 'standard' (classical, light classical and film) music, including works by Roy Harris, Leroy Anderson, Antal Dorati and Morton Gould. The firm was sold in 1965, became part of Belwin-Mills. in 1969 and was later purchased by Simon & Schuster; in 1985 it was sold to Columbia Pictures Industries, Inc.

JOHN EDWARD HASSE

Milne, Hamish (*b* Salisbury, 27 April 1939). English pianist. He studied at the RAM (where he was later appointed a professor) with Harold Craxton and subsequently in Rome with Guido Agosti, a prime influence on his technique and musicianship. He made his London recital début in 1963 and his Proms début in 1978. His pioneering work on behalf of Medtner has earned him worldwide recognition, and his affinity for Medtner's music is finely captured on his recorded cycle of the complete piano works and the music for violin and piano (with Manoug Parikian). A lover of challenging musical byways (his first recording was of the Reubke Sonata and Busoni's arrangement of Liszt's Fantasia and Fugue *Ad nos, ad salutarem undam*), Milne is also a sensitive, lucid exponent of much mainstream repertory, notably the music of Beethoven, Schumann, Chopin, Liszt and Brahms. His other recordings include the complete Weber sonatas and two Schumann recitals, where his playing is characterized by poetic insight, affection and scholarly scrupulousness.

BRYCE MORRISON

Milne, Peter (*b* Kincardine-O'Neil, Aberdeenshire, 30 Sept 1824; *d* Aberdeen, 11 March 1908). Scottish composer and violinist. His early education was scanty and his first job that of a farm labourer; it is not known how he came to learn music and acquire a violin. He led the orchestra at the Theatre Royal, Aberdeen, and went on, after some years, to similar appointments in Edinburgh. He drifted from one job to another, however, until finally he earned his living by playing on the ferries and pleasure-boats of the River Forth, at Edinburgh, Queensferry, Granton and Burntisland. He returned in his later years to Tarland, Aberdeenshire, later moving to Aberdeen, where he taught intermittently. He died in the Aberdeen poorhouse of Oldmill.

Milne composed numerous fine dance tunes, some of which (*Aboyne Brig*, *The Brig o' Teuch*) are still warmly alive to Scottish fiddlers. They were published, with those of other players, and edited by him in a collection entitled *Selections of Strathspeys, Reels, etc.* (Keith, Banffshire, 1870), which reached five editions. A monument in his honour was placed in the wall above his grave in Tarland churchyard near Aberdeen.

JEAN MARY ALLAN

Milner, Anthony (Francis Dominic) (*b* Bristol, 13 May 1925). English composer and teacher. He was educated at Douai School, Woolhampton, and at the RCM, where he studied piano with Herbert Fryer and composition with R.O. Morris. He also studied privately with Seiber. He joined the teaching staff of Morley College in 1947 and became a London University extension lecturer in 1954. In 1965 he was appointed lecturer in music at King's College, London, and in 1971 senior lecturer in music at Goldsmith's College, London. He was a professor of composition at the RCM, and has often visited America as lecturer or as visiting composer at summer schools or music workshops.

Milner has written much choral music, mostly to religious texts. His dramatic oratorio *The Water and the Fire* was first performed at the Three Choirs Festival at Hereford in 1964; most of his later music has been written to commission. His instrumental works include the Variations for Orchestra (first performed at the Cheltenham Festival in 1959) and three symphonies, the first begun in 1964 in response to a commission from the LSO, but brought to performance only in January 1973, after the BBC had taken over the commission. He has written a textbook on the teaching of harmony, and has contributed chapters on 16th-century and Baroque music to symposia on music history.

Milner, a practising Roman Catholic, has been strongly motivated in his work by his religious beliefs. He is deeply involved with the words he chooses to set, seeing music as 'part of the great act of praise we should all be giving'. Even his Variations for Orchestra have symbolic meaning, being based on the Rosary: the 15 movements, in three groups of five, represent the Joyful, the Sorrowful and the Glorious Mysteries.

He has always been careful not to allow the meaning of texts to be obscured, often allowing music to follow the rhythms and inflections of speech, and setting words generally syllabically. He makes use of such familiar symbolizations as falling semitones for grief, or clear diatonic harmony and rising 4th or 5ths for affirmation and belief. Melodically, his music shows considerable subtlety and a traditional restraint; tunes tend to proceed by step, avoiding leaps that could be considered awkward, and to be compact rather than straggling. The same type of restrained melodic line, vocal in derivation, appears in much of his instrumental writing.

Milner is an outstandingly resourceful contrapuntist. His intimate acquaintance with medieval music is reflected in melodic figurations reminiscent of plainchant, and in occasional uses of isorhythm and hocket. Textures remain clear even when processes of great complexity are at work; the fugal finale of the Variations for Orchestra is a most remarkable example of unlaboured contrapuntal ingenuity. But the vocal works tend to be more freely and personally expressive, and it is in these that the most striking and imaginative uses of instruments are to be found.

In two articles written in 1956, Milner criticized the computational approach of 12-note composers and the 'anti-melodic' vocal writing of Webern and Stravinsky. Yet there is some similarity between his own uses of medieval methods of note manipulation and the methods of serial composers. *Roman Spring* uses 12-note themes melodically, but not in the organization of harmony, and individual notes may undergo octave transposition, as in serial music. Though Milner has upheld traditional values, in words and in music, he has rarely repeated old formulae, and almost every new work shows signs of change and progress. While he remains always a conscientious and skilled craftsman, in full control of his material, there is often, in his best works, a suggestion of spiritual and emotional forces operating at deeper levels of consciousness. Of his later works, the Concerto for Symphonic wind band (1979), the Third Symphony (1986) and the *Oboe Concerto* (1993, commissioned by the Philharmonia Orchestra for John Anderson and given its première by him with the BBC SO), demonstrate typically Milner's orderly but impassioned approach, his sustained lyrical gifts, and his fluent, masterly command of subtle inversion and transformation of his symphonic material.

WORKS

VOCAL

Vocal-orch: Salutatio angelica (cant., Angelus, Regina coeli, Ps cxxx), op.1, A, chorus, orch, 1948; Improperia (Liber usualis for Good Friday), op.2, double chorus, org, str, 1949; The Song of Akhenaten (Milner, after ancient Egyptian), op.5, S, chbr orch, 1954; The City of Desolation (Bible), op.7, S, chorus, orch, 1955; St Francis (J.A. Cudden), op.8, T, chorus, orch, 1958; The Water and the Fire (dramatic orat, Bible, St John of the Cross), op.16, S, T, Bar, chorus, boy's choir, orch, 1960–61; Break to be built, O stone (ceremonial ode, U. Vaughan Williams), op.20, chorus, orch, 1962; Festival Te Deum, SATB, orch/org, 1967; Roman Spring (Horace, Lucretius, Catullus, anon.), op.27, S, T, chorus, orch, 1969; Motet for Peace (Bible, St Francis), op.29, TTBB, 9 brass, 1973; Midway (cant., Sappho, J. Donne, P. Sidney, R. Bridges, A. Meynell, W. de la Mare), op.31, Mez, chbr orch, 1974; Emmanuel (Christmas cant.) (Bible, Julian of Norwich), op.32, Ct, SATB, org, str, 1975; Sym. no.2 (G.M. Hopkins, St Francis, Bible), op.35, S, T, chorus, orch, 1977–8; Send forth thy spirit, O Lord (Ps civ), op.39, SATB, org, 8 brass, timp, congregation, 1982; The Gates of Summer (ode, medieval, trans. H. Waddell), op.46, S, T, SATB, orch, 1988

Choral with org: I have surely built thee an house (anthem, Bible: *Kings*, *Pss*), op.13/1, SATB, org, 1958; Festival Anthem 'Before time, beyond' (Cudden), op.13/2, SATB, org, 1958; Praise the Lord of Heaven (Pss cxlviii, cl), op.13/3, SATB, org, 1959; Out of your sleep arise and wake (carol, 14th century), (SATB, org)/(SA, pf), 1959; Blessed art Thou, O God of our fathers (anthem, Bible: *Pss*, *Chronicles*, *John*), op.23, SATB, org, 1971; I looked, and behold!, op.26/1, SATB, org, 1968; Most Glorious Lord of Life (Easter anthem, E. Spenser), op.26/2, SATB, org, 1968; O give thanks to the Lord (festival anthem, Ps lxxxiii), op.34, SATB, congregation, org, 1976; Hearken My Son (festival chant), op.37, SATB, org, congregation, opt. 3 tpt ad lib, opt. timp ad lib, 1980; O Lord our God, how great is your name (Ps viii), op.44, SATB, org, 1985

Choral unacc.: Mass, op.3, SATB, 1951; Blessed are They (Ps cxxviii), op.6/2, SATB, 1955; The Harrowing of Hell (cant., Cudden), op.9, T, B, double chorus, 1956; Benedic, anima mea, Dominum (Ps cii), op.10/1, double chorus, 1959; Christus factus est (Bible: *Philippians*), op.10/2, SSAATTBB, 1959; Cast Wide the Folding Doorways of the East (F. Thompson), op.12, SATB, 1957; Turbae for the Passion according to St John, SATB, 1958; Turbae for the Passion according to St Matthew, SATB, 1962; The Leaden Echo and the Golden Echo (partsong, Hopkins), op.33, SSAATTBB, 1974

Other vocal: Our Lady's Hours (15th century, Hopkins, H. Belloc), song cycle, op.11, S, pf, 1957; When all the angels (S. Bullough), unison vv, pf, 1957; Peacock Pie (de la Mare), op.15, SSA, pf, 1959; Ashmansworth (W. Shakespeare), 4 equal vv, 1963; Give thanks unto the Lord (Ps cxxxvi, E. Bullough), congregation, org, 1963; Chants for the Ordinary of the Mass, op.41, congregation, org, 1976

INSTRUMENTAL

Orch: Variations on 'Es ist ein Ros' entsprungen', op.14, 1958; April Prologue, ov., op.17, 1961; Divertimento, op.18, str, 1961; Sinfonia pasquale, op.21, str, wind ad lib, 1963; Chbr Sym., op.25, chbr orch, 1968; Sym. no.1, op.28, 1972; Conc. for Str Orch, op.40, 1982; Sym. no.3, op.45, 1986; Ob Conc., 1993

Chbr and solo inst: Ob Qt, op.4, 1953; Rondo saltato, op.6/1, org, 1955; Corfu, tr rec, a rec, 1957; Fugue for Advent, org, 1958; Str Qt no.1, op.33, 1975; Conc. for Sym. Wind Band, op.36, 1979; Org Sym. 'Canticle of Joy', op.38, 1981; Sonata quasi una fantasia, op.43, pf, 1987

Incid music: Bells, Books and Croziers, 1958; The Book of Philip Sparrow, 1958; The Egyptian Book of the Dead, 1960; Mary of Nimmegen, 1966

Hymns, psalms, congregational chants, Vespers

HUGO COLE/RODERIC DUNNETT

Mil′ner, Moisey Arnol′dovich (Yudkovich) (*b* Rakitno, Kiev province, 17/29 Dec 1886; *d* Leningrad, 25 Oct 1953). Russian composer. He came from a poor Jewish background and was orphaned at the age of 12. From his childhood he sang in synagogue choirs. In 1915 he graduated from the Petrograd Conservatory where he studied composition with Lyadov, Steinberg and Nikolay Tcherepnin. From 1911 he took an active part in the Society for Jewish Folk Music in St Petersburg, directing the choir. After the Revolution he was involved in music and teaching; he was later chorusmaster of Prolekul′t (1921–4) and of the opera theatre of the People's House in Petrograd. He headed the music section of the State Jewish Theatre in Moscow (1924–5) and in Kharkiv (1929–31); he later directed the Jewish folk ensemble Evokans in Leningrad (1931–41). In the war years he remained in Leningrad during the blockade and was engaged in creative work.

Along with Mikhail Gnesin, Aleksandr Krein and Aleksandr Veprik, Mil′ner was one of the leading Russian experts on and exponents of Jewish music of the early-mid 20th century. His work helped establish a professional Jewish school of composition, the foundations of which had been laid by the above-mentioned society. From the writing of small vocal and instrumental works based on folk material, Mil′ner gained artistic insight into Jewish melodies; he finally arrived at the creation of a national opera that was Jewish both in its language and its music – *Di Himlen brenen* ('The Heavens are Blazing'). After three performances, the opera was banned by the censor. Mil′ner helped mount more than 50 productions for the Jewish theatres in Moscow, Kharkiv, Minsk and Birobidzhan, including *Son yakova* ('Jacob's Dream') at the Gabim studio in Moscow in 1921. As with his colleagues Gnesin and Krein, anti-semitism prevalent in the 1930s and beyond effectively prevented Mil′ner from openly using Jewish subject matter in his compositions from that time onwards, as is evident from the titles alone.

WORKS
(*selective list*)

Ops: Di Himlen brenen [The Heavens are Blazing] (4, M.S. Rivesman, after Mil′ner), 1923; Noviy put′ [The New Path] (3, M. Galitsky), 1932

Inst: Bejm Rebun zu Mlave Malke [Visiting Rebe at the Sabbath Feast Table], pf, 1914; Sonata, vn, pf, 1922; Sym., b, orch, 1927; Wariationen über ein Thema von Fr. Schubert, orch, 1928; Agada [Fairy Tale], Folkstimmung, Variationen und Fugue, opf, 1929; Chewro leizim [Pranksters], pf, 1930; Farn Obscheid [Before Parting], rhapsody, pf, 1930; Yudif, sym. poem, orch, 1935; Front i tïl [The Front and the Home Front], pf, 1942; Partizanï [The Partisans], orch, 1942; U Dnepra [By the Dnieper], orch, 1943; Sonata, vc, pf, 1947

Vocal: In Chejder [At the Heder], 1v, pf, 1914; Über di Hejfen [Wandering Musicians], Bar, T, pf, 1914; Unssane Tojkef [We Shall Tell about Sanctity], 1v, SATB, 1914; Mutter und Kind (I.

Perez), suite, Mez, pf, 1916, rev. 1935; Sulamit (Nach dem Hoheliede) (D. Buturlin), 1v, pf, 1929; Musikale Silueten von Vergangenheit, 1v, pf, 1930
MSS in *RUS-SPsc*; *RUS-SPit*

G.V. KOPÏTOVA

Milnes, Rodney [Blumer, Rodney (Milnes)] (*b* Stafford, 26 July 1936). English music critic. Educated at Rugby and Oxford, he worked initially in publishing, before becoming music critic for *Queen* magazine (later *Harpers and Queen*) (1968–87) and opera critic for the *Spectator* (1979–90). He was opera critic of the London *Evening Standard* (1990–92) and became chief opera critic of *The Times* in 1992. He began writing for *Opera* in 1971, becoming associate editor (1976) and editor in succession to Harold Rosenthal (1986–99); he himself contributed discerning articles and profiles. In editorials he was forthright in his views on all aspects of opera house management and politics. A trenchant and entertaining writer, with a strong background in literature and theatre, and wide musical sympathies, he brought to his notices a fresh, sometimes controversial view on dramatic presentation. For many years he offered witty discourse and lively reviews on many BBC Radio 3 programmes. An accomplished linguist, he has prepared translations, under his original name, of a large number of operas, among them Dvořák's *Rusalka* and *The Jacobin*, Janáček's *Osud*, *Giovanna d'Arco*, the Riccis' *Crispino e la comare*, Almeida's *Spinalba*, Grétry's *Zémire et Azor*, *Tannhäuser* and Lortzing's *Undine*.

ALAN BLYTH

Milnes, Sherrill (Eustace) (*b* Hinsdale, IL, 10 Jan 1935). American baritone. After studies at Drake and Northwestern universities, and with Rosa Ponselle, he became an apprentice at Santa Fe, then made his début with the touring Opera Company of Boston as Masetto (1960). In 1961 he sang Gérard (*Andrea Chénier*) with the Baltimore Civic Opera, and in 1964 Rossini's Figaro at the Teatro Nuovo, Milan. With New York City Opera (1964–6) he sang Valentin, Ruprecht in the American première of *The Fiery Angel*, John Sorel (*The Consul*) and, in 1982, Thomas' Hamlet, a role he recorded with flair. He made his Metropolitan début in 1965 as Valentin, remaining with the company for more than 25 years; in 1967 he created Adam Brant in Levy's *Mourning Becomes Electra*. His repertory included Escamillo, Tonio, Don Giovanni, Barnaba, Jack Rance, Scarpia, Athanaël (*Thaïs*), Alphonse (*La favorite*), Sir Riccardo Forth (*I puritani*) and the leading Verdi baritone roles, in particular Amonasro, Carlo (*Ernani* and *La forza del destino*), Boccanegra, Rigoletto, Iago and Montfort. In 1971 he made his Chicago début as Posa and first sang at Covent Garden as Renato, returning in 1983 as Macbeth. He sang Falstaff for the first time in 1991. Milnes's brilliant top voice, general fervour and command of legato was in the line of succession to Tibbett, Warren and Robert Merrill. Among his many recordings his Macbeth (Muti) and Carlo in *La forza del destino* (Levine) catch most tellingly the dramatic thrust of his style.

MARTIN BERNHEIMER, ELIZABETH FORBES

Milojević, Miloje (*b* Belgrade, 15/27 Oct 1884; *d* Belgrade,16 June 1946). Serbian composer, musicologist and conductor. He studied at the Serbian School of Music, Belgrade, with Mokranjac and then at the Munich Academy (1910) with Klose (composition), Mayer G'schray (piano) and Mottl (conducting). In addition he studied musicology at the University of Munich with Sandberger and Kroyer, and with Nejedlý at Prague University (DMus 1925). Milojević engaged himself actively in Belgrade musical life as the conductor of the Collegium Musicum, the university chamber orchestra (1925–41) and as a respected music critic for the review *Književni glasnik* (1908–14, 1920–41) and for the daily paper *Politika* (1919–41); he was also editor of *Muzika* (1928–9). Within the Collegium Musicum organization he gave a series of lecture-recitals, and he held teaching positions successively at the school of music, at the university as professor of music history and at the Academy of Music as professor of composition (1939–46). While in France during World War I he published in Paris a series of Oeuvres des Compositeurs Serbes.

In his own composition he passed through several stylistic phases. This ranged from the Serbian nationalism of *Muha i komarac* ('The Fly and the Mosquito') to late Romanticism (e.g. *Smrt majke Jugovića* and *Intima*) and works containing impressionistic elements (e.g. *Pred veličanstvom prirode* and *Kameje*) to almost expressionist compositions (e.g. *Sobarova metla* and *Pir iluzija*). In *Melodije i ritmovi sa Balkana*, *Kosovska svita* and *Povardarska svita* he was inspired by Balkan folklore.

WORKS
(*selective list*)

Stage: Sobarova metla [The Servant's Besom] (op-ballet), 1923
Orch: Smrt majke Jugovića [The Death of Jugović's Mother], sym. poem, 1921; Intima, suite, str, 1939
Chbr: Str Qt, G, 1905; Str Qt, c, 1906; Sonata, b, vn, pf; Sonata, d, vn, pf; Sonata, f♯, fl, pf; La légende de Yéphimia, vc, pf; other works
Pf: 4 morceaux, 1917; Ritmičke grimase [Rhythmic Grimaces], 1935; Kameje [Cameos], 1937–42; Kosovska svita [Kosovo Suite], 1942; Melodije i ritmovi sa Balkana [Melodies and Rhythms from the Balkans], 2 sets, 1942; Povardarska svita [The Suite of the Vardar Region], 1942; Sonata ritmica in modo balcanico, 1942; other pieces
Choral: Slutnja [Presentiment], 1912; Pir iluzija [The Feast of Illusions], 1924; Muha i komarac [The Fly and the Mosquito], 1930; many works for male, female, children's and mixed chorus
Songs: Pred veličanstvom prirode [Before Nature's Majesty], cycle, 1908–20; Mélodies populaires serbes; La chanson du vent de mer, cycle; Haikai, 1973; other pieces

STANA DURIC-KLAJN

Milonga. A song genre of Uruguay and Argentina. It is the vehicle of expression in *payas* or *payadas* (vocal duels). Lighthearted in mood, the texts are in *corrido*, *romance*, *décima* or *verso* structures, and can be in a question-and-answer format. Melodies tend to descend scalewise and are in duple metre, contrasting with the guitar accompaniment in 6/8 metre. When *estribillos* (refrains) are added they are commonly harmonized in parallel 3rds.

WILLIAM GRADANTE

Milos, André. Pseudonym of WILHELM GROSZ.

Milošević, Predrag (*b* Knjaževac, 4 Feb 1904; *d* Belgrade, 4 Jan 1988). Serbian conductor, composer and pianist. He studied at the Belgrade School of Music, at the Munich Academy (1922–4) with E. Bach (piano), and then at the Prague Conservatory (1926–8) with Křička (composition) and Procházka (piano); he also attended the masterclasses of Suk (composition), Metod Doležil and Pavel Dědeček (conducting). After returning to teach at the Belgrade School of Music, he was made professor of composition and conducting at the academy (1939); he was dean there from 1960 to 1967. He began his conducting career with the Union and Hlahol choirs in Prague; in Yugoslavia he conducted the Belgrade Choral Society (1933–41), the Belgrade Opera (1932–9, 1945–55) and the Novi Sad Opera (1955–60), which he also directed for the first two years of his appointment. In addition, he was active as an orchestral conductor, broadcaster and writer on music and was president of the Serbian Composers Union (1958–60).

Most of his output has been of incidental music for the theatre, which reveals a talent for illustration and for the grotesque. His concert pieces are neo-classical and bear a striking resemblance to the music of Hindemith. His Sonatina for piano – the première of which was given by the composer himself in Prague – borrows from Impressionist and folk traditions. Other works include an elaborate and virtuoso String Quartet and a Sinfonietta (1930) that is highly contrapuntal. Scores have been published by Collegium Musicum and Prosveta.

STANA DURIC-KLAJN/ROKSANDA PEJOVIČ

Milošević, Vlado (*b* Banja Luka, 10 April 1901; *d* Banja Luka, 6 Feb 1991). Bosnian-Herzegovinian composer and ethnomusicologist. He read history and geography and then studied in Zagreb to become a music teacher specializing in solo singing. He graduated in 1929, having been a pupil of Franjo Dugan, Lhotka and others. His working life was spent in Banja Luka, where he was a teacher at the school of music and a research fellow in the department of ethnomusicology at the museum of Bosnian Krajina. In 1967 he became a member of the Bosnian Academy of Arts and Sciences. A self-taught composer, Milošević was a leading representative of the nationalist school: all his 543 works draw on Bosnian folklore, and in *Jazavac pred sudom* ('The Exploiter before the Court') he created the first Bosnian opera. His numerous writings encompass fieldwork from all parts of Bosnia.

WORKS

Stage: Jazavac pred sudom [The Exploiter before the Court] op, P. Kočić and R. Risojević, 1978.
Orch: Db Conc., 1950; Vn Conc., (1950); Sa planine [From the Mountain] (1957); Dramatična simfonija, 1967; Vizije [Visions], 1969; Mrguda [The Sulker], 1972; Hilandar, 1972; Vn Conc. no.2, 1983
Choral: Pjesme sa Zmijanja [Songs from Zmijanje], 1940; Opijelo [Requiem], 1943; Krvava bajka [Bloody Fairy Tale] (D. Maksimović, 1951–4; Ne daj selo Stojanu na vojsku [Don't leave Stojan's Village to the Army], 1967
Songs: Song Cycle (S. Raičković), 1962; Iz Hercegovačkih pejsaža [From the Landscapes of Herzegovina] (H. Humo), 1964–6
Chbr and solo inst: Bosanska svita [Bosnian Suite], str, 1950; Str Qt, F, 1964; Kameni spavač [The Stone Sleeper], spkr, str qt, 1968

Mil'shteyn, Yakov Isaakovich (*b* Voronezh, 22 Jan/4 Feb 1911; *d* Moscow, 4 Dec 1981). Russian musicologist. In 1932 he graduated from Igumnov's piano class at the Moscow Conservatory and in 1942 was awarded the doctorate for his dissertation on Liszt. In 1935 he joined the teaching staff of the Conservatory as Igumnov's

assistant; he was appointed senior lecturer in 1948 and professor in 1963. Mil'shteyn's writings were concerned mainly with the history of piano music, in particular the music of Liszt. He edited the collected piano works of Liszt, Skryabin, Chopin, Brahms, Schubert and Tchaikovsky, and wrote a number of articles on piano music and the history of instrumental teaching and performance.

LEV GINZBURG, L. KORABEL'SIKOVA

Milstein, Nathan (Mironovich) (*b* Odessa, 31 Dec 1904; *d* London, 21 Dec 1992). American violinist of Ukrainian birth. At the age of seven he began to study with Pyotr Stolyarsky and remained with him until 1914. (At the final student concert that year, he shared the stage with the five-year-old David Oistrakh.) He later studied with Auer at the St Petersburg Conservatory. Milstein made his official début in Odessa in 1920; that same year he played Glazunov's Concerto under the composer. For the next five years he enjoyed growing success in Russia. He often appeared in joint recitals with Vladimir Horowitz, when his accompanist was Vladimir's sister, Regina. In 1925 Milstein and Vladimir Horowitz left Russia on a concert tour and decided to remain abroad. Occasionally they were joined for trio concerts by Piatigorsky, also a recent émigré. In 1926 Milstein went to Brussels, where he received artistic advice from Ysaÿe. He made his début with the New York PO in 1929 and settled in the USA, becoming an American citizen in 1942. After World War II, Milstein re-established his European reputation. Among his honours is that of Officier of the Légion d'Honneur (1968).

Milstein was, perhaps, the least 'Russian' among Russian violinists because his violinistic instincts were so controlled by intellect. He began his career as a virtuoso and matured into a most individual interpreter. His fiery temperament was firmly disciplined, his line classically pure. His tone, though not large, had great carrying power: he changed his bowing frequently to produce power through sweep rather than by pressure. His intonation was incomparably true because his vibrato never became too wide or cloying. His interpretations of the great concertos were full of nobility and revealed a stimulating mind. It is clear that he could be a dazzling technician when he played his own *Paganiniana* (New York, 1954), or his cadenza to Beethoven's Violin Concerto. He ranked among the foremost violinists of his generation. With S. Volkov he wrote *From Russia to the West: the Musical Memoirs and Reminiscences of Nathan Milstein* (New York, 1990).

BORIS SCHWARZ/R

Milton, John (*b* ?Stanton St John, nr Oxford, *c*1563; *d* London, bur. 15 March 1647). English amateur composer, father of the poet. It is almost certain that he was a boy chorister at Christ Church, Oxford, before becoming an undergraduate. He left Oxford for London in 1585, apparently having been disinherited for Protestant beliefs by his father, Richard Milton, a (perhaps recently converted) Catholic. In 1600 he was admitted to the freedom of the Scriveners' Company, shortly afterwards marrying Sarah Jeffrey and settling in Bread Street, off Cheapside, where his elder son John was born in 1608. In 1632 he was able to retire comfortably to Horton, Buckinghamshire. Evidence of continuing status and reputation lies in his election to the Mastership of the Scriveners' Company in 1634 (although he did not serve in that office). His wife died on 3 April 1637, after which he lived successively with his sons Christopher and John. He was buried in the chancel of St Giles, Cripplegate.

Milton has attracted attention in recent times principally because he was the father of a famous son, upon whom he exercised a powerful influence (as acknowledged in the poem *Ad patrem*). However, his music was highly regarded by his own generation, having been included in Thomas Morley's *The Triumphes of Oriana* (1601), Sir William Leighton's *Teares or Lamentacions* (1614), Thomas Myriell's *Tristitiae Remedium* (1616) and Thomas Ravenscroft's *The Whole Booke of Psalmes* (1621). Milton's first harmonization of the psalm tune 'York' remained in use for many years, being mentioned by Sir John Hawkins in his *General History* (1776). Milton sometimes worked on a vast scale, if two 17th-century accounts are reliable: John Aubrey referred in his *Brief Lives* to an 80-part 'Song', and Edward Phillips (Milton's grandson) wrote of a 40-part In Nomine presented to 'a

Polish prince' (perhaps Albertus Alasco who visited Oxford in 1583).

Milton's anthems, the largest part of his output, are of the 'full' (rather than 'verse') type. Their sources suggest that, like the Latin piece *Precamur sancte Domine*, they were written for domestic rather than liturgical performance. The music is generally serious in character, and competent rather than compelling, but *When David heard* 'captures much of the spirit of the great settings by Weelkes and Tomkins' (le Huray), with some fine imitation of descending figures and some effective suspensions. In *O woe is me for thee* (David's lament for Jonathan) Milton exploits textural contrasts effectively (notably with extended four-voice sections, one with bass resting, the other immediately afterwards with treble silent). He treats the opening words at some length, and quite powerfully, although perhaps it was strange to answer the striking upward minor 6th in the tenor by significantly smaller intervals (sometimes falling) in the first entries of the other voices. The five-part fantasia for viols available in modern edition (*MB*, ix, 1955, 2/1962) shows a confident handling of the medium, with some strong melodic ideas.

Miltou. *See* DANIEL, JEAN.

Milveden, (Jan) Ingmar (Georg) (*b* Göteborg, 15 Feb 1920). Swedish musicologist and composer. He was taught music first by his father Werther Carlson and then at Uppsala University, where he studied counterpoint and composition with S.E. Svensson and musicology with Moberg (graduated 1945, Fil. lic. 1951); he took the doctorate there in 1972 with a dissertation on the music of the liturgical *historia* in Sweden. As well as lecturing in musicology at the universities of Stockholm (1970–73) and Uppsala (assistant professor 1972–85), he was organist of St Per, Uppsala (1967–77). His predominating scholarly interest is Gregorian chant and he continues the distinguished tradition of research in Swedish medieval liturgical music begun by Moberg; of particular importance are the studies from his doctoral thesis and his contributions to the *Kulturhistoriskt lexikon för nordisk medeltid*.

As a composer Milveden has written vocal and instrumental music in a variety of forms, including a Sonatina for piano (1943), Serenade for string orchestra (1944), Duo for violin and piano (1947), *Pezzo concertante* (1970), *Concerto al Fresco* for clarinet and orchestra (1971), *Nu* (1974), *Gaudeat Upsalia*, a cantata for the 500th anniversary of the University of Uppsala (1976–7) and a solo cello sonata (1998); his main interest, however, as in his musicological work, is in church music (e.g. *Mässa i skördetid*, 1969; a church opera *Vid en korsväg*, 1971; *Fem orgelkoraler*, 1973; *Magnificat*, 1973; *Tre motetter*, 1973; *Musica in honorem Sanctae Eugeniae*, 1982; *15 kammarpsalmer* for mezzo-soprano and piano, 1991; *Pentatyk* for mixed chorus and soloists, 1993). He is a member of the Royal Academy of Arts and Sciences, Uppsala (1974) and the Swedish Royal Academy of Music (1975), and was chairman of the Musikaliska Konstföreningen (1975–99) and the Upplands Musikstiftelse (1976–9).

JOHN BERGSAGEL/HENRIK KARLSSON

Milwaukee. City in Wisconsin, USA. Even before incorporation as a city in 1846, the community had a Beethoven Society (established 1843) performing choral and orchestral concerts of music by Haydn, Rossini and others. The Milwaukee Musical Society was founded in 1850 with Hans Balatka as its first conductor; the following year they gave the first complete oratorio in the city, Haydn's *Creation*, and later they mounted opera productions.

During the next half century the city developed into the musical centre of the northern part of the American Midwest, due to the presence of a large German immigrant population who fostered appreciation of the arts. Milwaukee saw the American premières of Lortzing's *Zar und Zimmermann* and *Waffenschmied* (1853) and the world première of *Mohega, die Blume des Waldes* (1859) by the local composer Eduard Sobolewski (a pupil of Weber), and many early performances and American premières of music by Beethoven, Mozart, Brahms, Mendelssohn and Wagner. During the 1899 tour by the Metropolitan Opera Company, Milwaukee was one of only five cities to hear a complete Wagner *Ring* cycle. The only Polish opera company in the country was located in Milwaukee and presented the American première of Moniuszko's *Halka* in Polish in 1924.

By 1870 there were 14 music publishers, over a dozen private music teachers, and acoustically excellent halls where international performers were heard, including Vieuxtemps, Thalberg, Jenny Lind and Ole Bull. Concert halls include the Pabst Theater (cap. 1820), the Fine Arts Recital Hall at the University of Wisconsin-Milwaukee (cap. 334), Alverno College Auditorium and the hall at Wisconsin Lutheran College. Choral music was represented by 49 separate groups by the end of the century, of which several, notably the Arion Musical Club (founded

1876) and the Milwaukee Liederkranz (1878), are still active. John Singenberger, who emigrated from Regensburg, introduced Renaissance polyphony to the local Roman Catholic population through his involvement in the Cecilian movement. Christopher Bach (1835–1927) composed more than 350 works and had considerable musical influence for over 30 years, during which time he introduced a wide assortment of operatic and symphonic music through concerts in the city parks.

Although efforts to form a Milwaukee Symphony Orchestra date back to 1892, the Milwaukee SO as a full-time professional group was officially established in 1958. It plays a 44-week season and has become one of the leading orchestras in the USA, with Uihlein Hall (cap. 2331) at the Marcus Center for the Performing Arts, constructed in 1969, as its home..Conductors have been Harry John Brown, Kenneth Schermerhorn, Lukas Foss, Zdeněk Mácal and Andreas Delfs; there is an affiliated symphony chorus. Other local orchestral groups are the Festival City SO, founded in 1922 as the Milwaukee Civic Orchestra, and the Milwaukee Chamber Orchestra (founded 1974). Early Music Now and the Historical Keyboard Society present historically informed performances of music from before 1800. The Florentine Opera Company (founded 1933 by John Anello sr) and Skylight Opera (started 1960), both professional companies, give excellent presentations of both traditional and modern repertory, the former group using the Milwaukee SO.

The first school for music instruction was established in 1874, and by the end of the 19th century six such schools had been founded, the most prominent of which was the Luening Conservatory (founded 1888 by Eugene Luening, father of Otto Luening), which merged with Wisconsin College of Music in 1899 and later became the Wisconsin Conservatory of Music (a conservatory with this name had already existed, 1878–91). The School of Fine Arts of the University of Wisconsin-Milwaukee was founded in 1962 and offers undergraduate and postgraduate music degrees. In 1963 the Fine Arts Quartet of Chicago was appointed quartet-in-residence, and in 1983 the Institute of Chamber Music was founded. Undergraduate music instruction is also offered at Alverno College and Cardinal Stritch College.

The folksingers Mailton Lobell (*b* 1854) and Dan Tanner (*b* 1865) are frequently mentioned in contemporary accounts, and around the turn of the century the city became an important centre for the mandolin orchestra movement. Christopher Bach wrote many polkas, marches, quicksteps and galops in a popular style, and Charles K. Harris, the composer of hundreds of popular parlour songs, moved to the city around 1883 as a banjo teacher and songwriter.

FRANKLIN S. MILLER

Milwid [Milewicz], **Antoni** (*b* c1755; *d* 24 Dec 1837). Polish composer and organist. He worked at the abbey in Czerwińsk, near Warsaw. A national element is pronounced in his compositions, especially his sacred music: it appears principally in the use of Polish dance melody (mainly in polonaise and mazurka rhythms), traditional church songs and carols in his compositions. His sacred music shows both Baroque and Classical features; the cantata *Semper mi Jesu* employs techniques appropriate to the Baroque style, but in the cycle of 12 cantatas *Sub tuum praesidium* residual features of the concertato style are combined with early Classical elements, influenced by sonata form, and in his masses these last elements are combined with the *galant* style. His music is unusually lyrical in character.

ZYGMUNT M. SZWEYKOWSKI

Milyutin, Yury Sergeyevich (*b* Moscow, 5/18 April 1903; *d* Moscow, 10 June 1968). Russian composer. He studied with Vasilenko and Aleksandrov at the Moscow Municipal Technical School. An actor in his youth, he composed principally for the theatre; he went on to become a leading exponent of operetta in the USSR. His operettas were staged in many theatres in and outside the Soviet Union; most are concerned with the lives of ordinary people, and their musical language is direct and derived from folksong. Milyutin was equally well-known for his songs, particularly those to texts by Viktor Mikhaylovich Gusev and Vasily Ivanovich Lebedev-Kumach. He awarded the State Prize and the title Honoured Art Worker of the RSFSR.

WORKS

(selective list)

Operettas: Zhizn' aktyora [An Actor's Life], 1940; Devichiy perepolokh [Alarm Among the Girls], 1944; Bespokoynoye schast'ye [Uneasy Happiness], 1947; Trembita, 1949; Pervaya lyubov' [First Love], 1950; Lyubushka, 1952; Potseluy Chanitï [Chanita's Kiss], 1956; Fonari-fonariki [Lanterns, Lamps], 1958; Tsirk zazhigayet ogni [The Circus Lights Go On], 1960; Anyutinï glazki [Anyutina's Eyes], 1964; Obruchal'nïye kol'tsa [The Engagement Rings], 1968; Tikhaya semeyka [A Quiet Little Family], 1968

Songs, 1930s: Nas ne trogay [Do not Touch us], Mï – vesyolïye rebyata [We are Happy Lads], Chayka [The Seagull], Na vostok mï zavtra uletayem [We will Fly Off to the East Tomorrow]

Songs, 1940s–50s: Morskaya gvardiya [Sea Guard], Vozle goroda Kronshtadta [Around the Town of Kronstadt], Siren′-cheremukha [Lilac-Bird Cherry], Leninskiye gorï [The Lenin Hills], Provozhayut garmonista [They Accompany the Accordion Player], Sineglazaya [Blue-Eyed]

GALINA GRIGOR′YEVA

Mimesis (Gk. *mimēsis*: 'imitation', 'representation'). A term found in Greek literature from the final years of the 5th century BCE referring to an aesthetic ideal underlying music and art (see Aristophanes, *Thesmophoriazusae*, 156; *Frogs*, 109). From the beginning it was used primarily in relation to art and dramatic poetry, but it came to be employed also in discussions of music and particularly of musical ETHOS, with reference to *harmoniai* and rhythms.

DAMON and PLATO show particular interest in such questions. Plato's discussion of mimesis in the *Laws* (ii, 667e–673d), for example, rejects the virtuosity that forms an inescapable part of solo instrumental music; but his real concern is the absence of text in this type of music. For Plato, text was essential if music was to be capable of mimesis. He makes it clear that when he speaks of musical mimesis, he means music's capacity to affect ethos, not the mere imitation of sounds (*Laws*, ii, 669e–670a; cf the Aristotelian *Problems*, xix.15) – a common feature of compositions for solo instruments. The best music is that which has the greatest similarity (*homoiotēs*) to mimesis of the good and the beautiful (*Laws*, ii, 668b; cf *Republic*, iii, 401b–403c). On the other hand, the treatment of the term by ARISTOTLE in the *Poetics* is more generally encompassing: epic, tragedy, comedy, the dithyramb and most types of music for the aulos or the kithara are mimetic, but they differ in respect to medium, object and manner and in their combinations of rhythm, language and *harmonia* (1447a–1448b). For Aristotle, the concentration of mimesis must be human life – character, passions, deeds. Later writers, especially Neoplatonists such as ARISTIDES QUINTILIANUS, expanded on the concepts of *harmonia*, similarity, mimesis and metaphysics to develop an elaborate musical metaphysics in which rhythmic and metric patterns, *tonoi*, individual musical pitches, scales and so on might draw the human soul into a more concordant relationship with the order of the cosmos.

Varying translations of the term illustrate the difficulties of interpretation associated with it. 'Imitation' stresses the concept of copying; the preference for 'representation' emphasizes instead that of creative involvement. Neither translation conveys the full sense of the concept of mimesis.

In the Middle Ages, the term *imitatio* adopted some of the Neoplatonic conceptions of mimesis, and in the theory of Pseudo-Dionysius the Areopagite and St Augustine, the proper focus of *imitatio* became not earthly 'reality' but rather the more perfect invisible world or at least traces of eternal beauty in the visible world. Debates about the proper use of *imitatio* were at the heart of iconoclasm, and they also appear in scholastic theory, in 12th-century humanism, and in the writings of St Thomas Aquinas. Aesthetic theories of imitation multiplied rapidly from the 15th century onwards, drawing on Greek and Roman sources but fundamentally distinct from the earlier conception of mimesis.

THOMAS J. MATHIESEN

Minagawa, Tatsuo (*b* Tokyo, 25 April 1927). Japanese musicologist. After graduating in European history at Tokyo University in 1951, he took a two-year postgraduate course in aesthetics. In 1955 he went to New York, where he studied with Sachs and Reese, and in 1958 he spent several months in Europe studying musical sources. He returned to Europe four years later to study musicology with Osthoff in Frankfurt and Schrade in Basle (1962–4). He began teaching musicology at St Paul's University, Tokyo, in 1958, becoming a professor in 1964; he also lectures regularly at Tokyo University and Tokyo Geijutsu Daigaku (Tokyo National University of Fine Arts and Music). His work centres on medieval and Renaissance music, with special emphasis on the history of music theory, notation, the history of the cyclic mass and the 16th-century chanson. (He is the director of an amateur choral group which specializes in the performance of choral music up to 1600.) His other research interests include the introduction of Christian music to Japan in the late 16th century and its influence. He has investigated the early printing of Gregorian chants in Nagasaki in 1605 and *kakure-kirishitan*, the 'hidden Christian' music, which survived long years of suppression in Japan. He is also an accomplished performer of nō plays and has written articles on the subject.

MASAKATA KANAZAWA

Minas Gerais. Region in Brazil. A mining region for gold and precious stones, it was discovered in the late 17th century and exploited throughout the next century, during which an important musical life developed. Its population at first included Amerindians (pure blood or mestizos), Portuguese and Brazilian colonizers and African slaves. By the mid-18th century mulattos and Brazilians of African descent formed the majority of the population in spite of intensive migration from Portugal and other areas of the colony itself. Soon a large number of free mulattos held important positions among the clergy and became craftsmen and artists, and the splendid development of local Baroque architecture, sculpture and music was due largely to them. The musicologist Francisco Curt Lange, who first uncovered the musical history of this area, referred to this phenomenon as *mulatismo musical*. From the mid-1940s Lange found substantial documentary evidence of a unique musical development which reached its peak during the last two decades of the 18th century, and he and others edited some manuscripts of a large corpus dating from this period.

Musical life in Minas Gerais was organized after the Portuguese example in and around the various brotherhoods (*irmandades*) and not the church; all practising musicians belonged to a music brotherhood. Such corporations included the Irmandade de S Cecilia, Irmandade do SS Sacramento, Irmandade da Ordem Terceira do Carmo, Irmandade da Ordem Terceira de S Francisco etc. These brotherhoods supplied music for the Church or the municipality, which generally commissioned specific works, or simply performances for religious festivities.

The most active music centres in colonial Minas Gerais were the capital Vila Rica (now Ouro Preto), Sabará, Mariana, Arraial do Tejuco (now Diamantina), São João del Rei and São José del Rei (now Tiradentes). In spite of the relative isolation of these centres, there is evidence of local organ builders (e.g. Manuel de Almeida Silva), and the use of the harpsichord in church, and extant manuscript copies and prints of contemporary European music (Haydn, Boccherini, Mozart, Pleyel, Beethoven) indicate acquaintance with current European styles. Almost all *mineiro* composers cultivated a particular homophonic style which drew on characteristics of pre-Classical styles. Compositions of the 'Minas School' are in general liturgical works for four-part mixed chorus with orchestral accompaniment. The most important composers were José Joaquim Emerico Lobo de Mesquita (1746–1805), Marcos Coelho Netto (1746–1806), Francisco Gomes da Rocha (*d* 1808), Ignacio Parreiras Neves (*c*1730–*c*1793), Antonio dos Santos Cunha, Manoel Dias de Oliveira (*c*1735–1813) and João de Deus de Castro Lobo (1794–1832), followed in the 19th century by José Maria Xavier (1819–87), Luís Batista Lopes (1854–1907), João Francisco da Mata (*d* 1909) and Martiniano Ribeiro Bastos (1835–1912). The latter, from São João del Rei, was so influential in maintaining the tradition of sacred music performance among local amateur musicians that the Orquestra Ribeiro Bastos has continued uninterrupted since that time. The major archives of Minas Gerais, belonging to the church, orchestra or choral associations, are found in Ouro Preto, Mariana, Sabará, São João del Rei, Diamantina and Tiradentes. The oldest known manuscripts date from the 1770s, but the repertory was constantly copied as late as the 1880s for use in Minas Gerais and the neighbouring captaincies. Theatre life is well documented but no work produced in Vila Rica is extant.

GERARD BÉHAGUE

Minato, Count **Nicolò** (*b* Bergamo, *c*1630; *d* Vienna, 1698). Italian librettist, impresario and poet, later active in Austria. His prodigious career as a librettist, attested by an extant output of over 200 works, began in 1650 with *Orimonte*, set to music by Cavalli, and continued until the year of his death. His activity fell into two distinct periods: the Venetian years, from 1650 to 1669, and the longer Viennese period, from then until his death. His first publication was a translation of *Eruditioni per il cortigiano* (Venice, 1645) by an anonymous Flemish author. In Venice, where he received legal training during the 1640s, he was a member of the Accademia degli Imperfetti, formed in 1649 and dedicated to the study of jurisprudence, history and the classics (the librettists Giacomo dall'Angelo, Aurelio Aureli and G.F. Busenello also belonged to the group). Minato was also a member

of the older Accademia dei Discordanti; poems by him were printed in publications of these institutions (1651 and 1655). The prefaces to his earliest librettos indicate that he considered himself a lawyer by profession and that he initially viewed his writing as an avocation. By the mid-1660s, however, he was fully committed to the theatre as both librettist and impresario, a combination characteristic of the careers of several other Venetian librettists, including Giovanni Faustini and Aureli. By 1665 he was involved in the management of the Teatro S Salvador, an involvement reaffirmed by a three-year contract in 1667. His move to Vienna in 1669 to become court poet provoked a lawsuit for breach of contract by the Vendramin family, owners of the theatre. In the dedication of *Il ratto delle sabine* (1674) Minato mentioned nine librettos that he had written for Venice, but he actually wrote at least 11. His chief musical collaborator there was Cavalli, though Antonio Sartorio provided the music for his last three Venetian librettos.

Minato's duties in Vienna included the provision of texts for a wide range of (sacred and secular) theatrical events for weddings, royal visits, royal birthdays and name-days, carnival and the important Lenten celebrations. During his 29-year period at the Viennese court he wrote more than 170 secular librettos (variously labelled *dramma per musica*, *festa teatrale*, 'invenzione', 'introduzione ad un balletto' or 'serenata') and approximately 40 sacred texts (labelled 'rappresentazione sacra' or 'oratorio'). He averaged about five texts a year and occasionally – in 1678, for example – produced as many as ten. Most of his Viennese works were collaborations with the court composer Antonio Draghi and the court designer Ludovico Ottavio Burnacini. His election to the exclusive Academy of the Emperor and the posthumous republication in 1700 of two volumes of his sacred texts indicate the high esteem in which Minato was held. Revived throughout Italy, as well as in France and Germany, his works were set by many composers, among them Leopold I himself (who wrote the music, among other things, for the oratorio *Il transito di S Giuseppe*, first performed in 1675), Pederzuoli, Sances, Pistocchi, Legrenzi, Giovanni Bononcini, M.A. Ziani, Albinoni, J.A. Hasse and Telemann.

Most of Minato's texts, like those of such contemporaries as Aureli and Noris – but unlike the pseudo-historical and mythological librettos of Giovanni Faustini, his chief predecessor in Venice – exploit and embroider events of ancient history, with particular emphasis on the military and moral stature of the hero. Although these subjects suggested parallels between the virtues of ancient Rome and those of the Venetian republic, political symbolism became more overt in the Viennese librettos, many of which contain detailed allegorical elucidations identifying the hero with the Emperor Leopold I. In many years until 1685, in deference to the patronage of the dowager Empress, Eleanora Gonzaga, Minato chose as his subject matter for her birthday, the exploits and triumphs of a female heroine, either fictional or historical. Unlike those of his contemporaries, Minato's multi-act librettos contain an equal number of scenes in each act, 20 in the Venetian texts, usually fewer in those written for Vienna. The growing public demand for arias in Venice after about 1650 is reflected in the increased formal and functional distinction he made between recitative and aria as well as in his manipulation of situations and characters to create plausible opportunities for arias, including the very ingenious introduction of professional singers into his *dramatis personae*. Although they afforded a means of integrating both arias and scenic display within the drama, his elaborate secondary plots and mixture of comic and serious elements earned him the scorn of late 17th-century opera reformers.

ELLEN ROSAND/HERBERT SEIFERT

Minchejmer [Münchheimer], **Adam** (*b* Warsaw, 23 Dec 1830; *d* Warsaw, 27 Jan 1904). Polish conductor, teacher and composer. He studied music in Warsaw under S.C. Niedzielski and Jan Hornziel (violin), Aloys Tausig (piano), August Freyer (composition) and also, briefly, in Berlin (composition with A.B. Marx). At the Wielki Theatre, Warsaw, he was first violin (1850–64), music director and manager of the ballet (1858–72), conductor (1872–82), director of the opera (1882–90) and librarian (1890–1902). He taught at the Warsaw Music Institute (1861–4), the Aleksandryjski Institute (1864–72) and the music and drama school of the Warsaw Music Society (1895–1902); he also performed with the society (1876–1902) and conducted many other choral and instrumental ensembles. Warsaw's musical life was much enriched through his efforts: for instance, he organized symphony concerts, and performed a number of major works by Polish and foreign composers. His own compositions include four operas, in the manner of Meyerbeerian grand opera. He also composed many solo songs, piano pieces, orchestral works and incidental music; and he reorchestrated Chopin's E minor Piano Concerto (MS in *PL-Wtm*).

WORKS

STAGE

Otton łucznik [Otto the Archer] (op, 5, J. Chęciński, after A. Dumas *père*), Warsaw, 8 Dec 1864, *Pl-Wtm*; vs (Warsaw, 1870)

KATARZYNA MORAWSKA

Minchev, Georgi (*b* Sofia, 29 Jan 1939). Bulgarian composer. He completed a degree in composition under Goleminov at the Bulgarian State Music Academy in 1964, and continued his studies with Shchedrin in Moscow until 1970. In 1972 Minchev was awarded a UNESCO music fellowship to continue his composition studies in the USA, Great Britain and France. While still a student in Sofia, he was appointed editor-in-chief of Bulgarian National Radio in 1963. He was appointed director of the recording company Balkanton in 1986, deputy chairman and secretary of the Union of Bulgarian Composers in 1987 and artistic director of Bulgarian National Radio in 1990.

In his quest for a personal style, he eschewed the use of folk elements, unlike his contemporaries Kazandzhiev and Ivan Spasov. He absorbed the broad musical vocabulary of Modernist Europe, including aleatory and collage techniques, graphic notation, and electronic transformation of sounds. He also made use of elements of instrumental theatre. His musical material is organized on a virtuoso level, which is characterized by opposing aggression with deep introspection, all within traditional classical structures. These features are most evident in one of his most celebrated compositions, the Piano Concerto, which was selected by the International Record Critics' Award in the United States in 1979 and was commended by the International Composers' Rostrum in Paris. He has received commissions from France, the Netherlands, and former Czechoslovakia as well as from such celebrated individuals as Penderecki, and the Bulgarian Ministry of Culture, and has been a jury member of a number of international music competitions.

WORKS

ANNA LEVY/GREGORY MYERS

Minghino dal violoncello. Nickname of DOMENICO GABRIELLI.

Mingotti, Pietro (*b* Venice, *c*1702; *d* Copenhagen, 28 April 1759). Italian opera impresario active in Austria, Germany and Denmark. His brother Angelo Mingotti (*b* *c*1700; *d* after 1767) formed an Italian opera company in Prague around 1732, consisting of three male and five female singers, a typical configuration. The troupe performed frequently at Brno, inaugurating a new opera house, the Theater in der Tafern, in 1734, and joined Pietro's company at Graz (the holders of a ten-year concession to perform there) from 1736 to 1740. During the following decade both troupes performed in various German and Austrian centres, occasionally together, presenting some *opere buffe* along with the mainstay of *opere serie*. Pietro's company, the more distinguished of the two, performed for the coronation of Franz I, Maria Theresa's husband, at Frankfurt in 1745 and for a royal wedding at Dresden in 1747, where they had received a concession in 1746. On the latter occasion Gluck apparently conducted his own *festa teatrale Le nozze d'Ercole e d'Ebe*, replacing the company's music director, Paolo Scalabrini. Pietro's wife Regina was recruited by

the Dresden court opera at this time at an annual salary of 2000 thalers.

In December 1747 the troupe performed by royal invitation in Copenhagen, their first of many seasons. Gluck was still with the company there and in Hamburg in 1748. Most of the serious operas that made up its repertory were by Scalabrini, who was appointed Kapellmeister by the Danish court in 1748. In December 1752 Giuseppe Sarti joined Pietro's troupe as music director, by which time its repertory consisted of both serious operas and ballets. Financial reverses led Pietro to seek dissolution of his contract with the Danish court in 1755. His property was seized and sold to cover his considerable debts, and he died penniless in Copenhagen. Little is known of Angelo's later career, although he performed at Bonn in 1764 and 1767.

THOMAS BAUMAN

Mingotti [née Valentini], **Regina** [?Caterina] (*b* Naples, 16 Feb 1722; *d* Neuburg an der Donau, 1 Oct 1808). Italo-German singer. Her early life is known almost wholly from her account to Burney in 1772, which is inaccurate in at least one important respect. According to this, she was the daughter of a German officer in the Austrian service at Naples and was educated in a convent at Grätz in Silesia (not Graz, as sometimes stated). She attributed her firm intonation to the abbess, who made her practise scales without keyboard accompaniment. According to Prota-Giurleo she was the sister of the composer Michelangelo Valentini, hence presumably Italian, and may have had an early, undocumented Italian career. She was at all events trilingual in German, Italian and French. Her first recorded appearances were in Hamburg from 1743 to 1747, as a leading member of a notable company run by the impresario Pietro Mingotti, whom she married but soon parted from. She scored an immediate success in Dresden (1747), where she was kept on by the Saxon court and studied with Porpora. She sang in Naples, Prague, Madrid (1751–3), Paris and London (1754–5); in the 1756–7 and 1763–4 London seasons she took over the management of the King's Theatre together with the leader of the orchestra, Felice Giardini, and incurred much obloquy. Her retirement was spent at Dresden, then Munich, and finally Neuburg, where her son Samuel von Buckingham was inspector of forests; he was apparently born (in London) of a liaison with a Piedmontese nobleman. Burney called her 'perfect mistress of her art', 'always grand' in her style though lacking in grace and softness; her practical musical intelligence, he wrote, was equal to that of any composer he had known. She was admired as an actress, particularly in the breeches roles she often sang.

JOHN ROSSELLI

Mingozzi, Bernardo. *See* MENGOZZI, BERNARDO.

Minguet y Yrol, Pablo (*fl* Madrid, 1733–66). Spanish writer, engraver and publisher. He was active in Madrid for over 30 years, publishing popular manuals on a variety of subjects from religion to magic tricks; among them are two series of self-instruction books on music, one on instruments and theory (the most important in 18th-century Spain; see illustration) and the other on dancing. Their bibliographical aspect is exceptionally complex; they were available in separate parts, some of which were published in several editions, various additions were incorporated through the years, and no two copies seem identical. The series on instruments devotes most space to the guitar, but covers a total of 13 instruments, including the psaltery and the bandurria. The dance series surveys both French and Spanish styles and the art of choreography. The author claims to be first in the field in Spain, having allegedly brought out the earliest dance manual in 1733. The texts consist of series of elementary rules; of greater interest are the engravings, charts and musical examples. The books contain illustrations of musical instruments, various dancing positions and movements, diagrams of tablatures, keys and chords, and examples of popular tunes – the minuet, passepied, fandango, jota and others, with instrumental tablatures or diagrammed dance steps. The dance treatises contain extensive borrowing from other authors, especially Bartolomé Ferriol y Boxeráus and Raoul-Auger Feuillet, while much material in the *Reglas y advertencias* is taken from Gaspar Sanz's *Instrucción de música sobre la guitarra española* (Zaragoza, 1674, 8/1697) and Santiago de Murcia's *Resumen de acompañar la parte con la guitarra* (Madrid, 1717). One of the finest examples of ornamentation from 18th-century Spain appears in Minguet's single sheet *El amable variado* in which he provides a highly adorned version of Campra's 'L'amable vainqueur' from *Hésione*.

Mingus, Charles (Jr) (*b* Nogales, AZ, 22 April 1922; *d* Cuernavaca, Mexico, 5 Jan 1979). American jazz double bass player, pianist, composer and bandleader.

1. Life. Mingus grew up in the Watts area of Los Angeles. He took up the double bass in high school, and studied with Red Callender and a former bass player with the New York PO, Herman Rheinschagen. He played with Kid Ory in Barney Bigard's ensemble (1942) and toured as bass player in the big bands of Louis Armstrong (*c*1943) and Lionel Hampton (1947–8), then in 1950–51 gained national attention as a member of Red Norvo's trio (with Tal Farlow). Thereafter he settled in New York, where in the early 1950s he worked with Billy Taylor, Duke Ellington, Stan Getz, Art Tatum and Bud Powell. Some of his performances during this period, including the famous concert at Massey Hall in Toronto with Charlie Parker and Dizzy Gillespie (issued as the album *Quintet of the Year*, 1953), and several of his early Jazz Workshop sessions, are preserved on recordings issued by Mingus's own company, Debut Records (1952–5).

Mingus contributed written works to a Jazz Composers' Workshop from 1953 to 1955. Realizing that musical notation was inadequate for his approach to composition, he founded a new workshop in 1955 in which he transmitted the details of his works by dictating lines to each player.

The early 1960s saw the birth of Mingus's most complex musical creations – his compositions *The Black Saint and the Sinner Lady* and *Meditations on Integration*, and his many performances with Eric Dolphy. But by 1964 he was in dire financial straits and suffering from deep-seated psychological problems. Rarely performing, he essentially withdrew from public life from 1966 to 1969; Thomas Reichman's film *Mingus* (1968) documented his sad eviction from a New York apartment.

Financial pressures forced Mingus to resume his career in June 1969; his enthusiasm was rekindled in 1971 by

the granting of a Guggenheim fellowship in composition and the publication of his autobiography, *Beneath the Underdog*. During his remaining years he wrote big-band music and two suites for films and collaborated on an album with the pop singer Joni Mitchell. He travelled extensively with his workshop until 1977, when he fell seriously ill; he supervised his last recording session (January 1978) from a wheelchair. His music has continued to be played in the group Mingus Dynasty, and his unfinished orchestral jazz piece *Epitaph* was reconstructed, completed and performed in 1989 under the direction of Gunther Schuller.

2. Music. As a double bass player Mingus commanded an awesome technique and was thoroughly conversant with all styles of jazz extant during his lifetime. He developed a new 'conversational' approach to his instrument in his dialogues with Dolphy (*What Love*, 1960, Cand.; *Epitaph*, on the album *Town Hall Concert*, 1962, UA), and also a 'pianistic' approach that simultaneously combined the bass line, inner harmonies and improvised countermelodies (*Stormy Weather* from *Mingus!*, 1960, Cand.).

Mingus's bop works are a coherent blend of New Orleans jazz, blues and black gospel music; he also made use of material from pieces by Duke Ellington. In almost every composition he modified conventional blues and popular-song forms by adding rhythmic contrasts: double-, half- or stop-time passages, shifting tempos or metres, and walking, shuffle, two-beat or Latin patterns. He frequently changed textures, and had a particular preference for dense sonorities generated by low-pitched instruments (double bass, trombone, baritone saxophone, tuba), striking dissonances, collective improvisation and overlapping riffs. These traits are all present in the 12-bar blues *Hora decubitus* (1963, Imp.), the first four bars of which are given in ex.1. The numbers to the left of the example refer to the entries of instruments in successive choruses (2–7), reading from bottom to top; the walking patterns on the double bass are varied, but the other parts remain constant. Mingus's rhythmic and textural devices often prefigured features associated with free jazz, just as his use of pedal points and oscillating chords prefigured Miles Davis's influential compositions of the late 1950s. The theatrical side of his art emerged in humorous or biting vocal pieces such as *Eat that chicken* (on *Oh Yeah*, 1961, Atl.) and *Freedom* (on *Town Hall Concert*, 1962, UA).

Charles Mingus

Ex.1 Bars 1–4 of *Hora decubitus*, on *Mingus, Mingus, Mingus, Mingus, Mingus* (1963, Imp.); transcr. B. Kernfeld

In the Jazz Workshop Mingus experimented, continually revising a central core of compositions. The results were chains of related pieces. Among these evolving works the two series *Fables* and *Meditations* (the latter initially entitled *Praying with Eric* because of Dolphy's death in 1964) demonstrate Mingus's greatest achievement; he obliterated the standard distinctions between improvisation and composition and brought the spontaneity of improvised jazz to complex structures. The progress of *Fables* can be heard on *Mingus Ah Um* (1959, Col.), *Charles Mingus Presents Charles Mingus* (1960, Cand.), *The Great Concert of Charles Mingus* (1964, Amer.) and *Right Now* (1964, Fan.), that of *Meditations* on *Town Hall Concert* (1964, Charles Mingus), *Right Now, Mingus at Monterey* (1964, Charles Mingus) and *Charles Mingus* (1965, Charles Mingus).

BARRY KERNFELD

Min Huifen (*b* Yixing, Jiangsu province, 23 Dec 1945). Chinese *erhu* player. Min Huifen began lessons on the *erhu* with her father, himself a musician. She studied at the Shanghai Conservatory of Music, graduating in 1968, and has since then held the post of *erhu* soloist with the Shanghai National Instruments Orchestra (Shanghai minzu yuetuan). Min initially rose to public prominence in 1964 when, as a teenager, she won first prize in the Shanghai Spring national *erhu* contest. Following this, she again rose to prominence as a model 'revolutionary musician' in the latter years of the Cultural Revolution. In more recent years, Min's struggles against cancer and her continuing activities in the political sphere have brought her further public attention.

Widely recorded and in much demand as a teacher, Min has also been active in the arrangement and commissioning of new repertory for her instrument. Perhaps the best example of this is her work with composer Liu Wenjin on the *erhu* concerto *Changcheng suixiang* ('Great Wall Fantasia') (1978). Min's performance style combines virtuosic technical control with considerable expressive flair.

JONATHAN P.J. STOCK

Mini, Alessandro (*b* Padua, *c*1756; *d* Padua, 27 June 1825). Italian organist and composer. He studied the organ and composition with Ferdinando Turrini and Gaetano Valeri; he replaced Valeri as organist of Padua Cathedral on 29 January 1803. He enjoyed a local reputation as an outstanding organist, theorist and composer. Although he is said to have composed several masses, only manuscript copies of mass movements for three voices and organ survive, in the cathedral library, Padua. In 1825 Mini was succeeded by his most famous student, Melchiorre Balbi.

SVEN HANSELL

Miniature score. *See* SCORE, §1.

Minim (Lat. *minima*: 'shortest' [note]; Fr. *blanche*; Ger. *Halbe-Note*; It. *bianca*; Sp. *blanca*). In Western notation the note that is half the value of a semibreve and twice the value of a crotchet. In American usage it is called a half-note. It was the shortest of the five notes of early medieval music, hence its Latin name. It is first found in early 14th-century music. Before about 1600 its value was a half or a third of a semibreve. The minim was shown as a semibreve with a stem upward until about 1500; thereafter in either direction. The minim is still in regular use, although in common with other notes it now has a round note head. Its various forms and the minim rest are shown in ex.1*a–d*.

JOHN MOREHEN/RICHARD RASTALL

Minimalism. A term borrowed from the visual arts to describe a style of composition characterized by an intentionally simplified rhythmic, melodic and harmonic vocabulary.

Although in the 1960s and 70s minimalist music was closely associated with minimalist art, itself in certain respects crucially modernist, it subsequently came to be widely seen as the major antidote to Modernism, as represented by both the total serialism of Boulez and Stockhausen and the indeterminacy of Cage. Such minimalism owes more to non-Western music, jazz and rock than to 20th-century Modernism or any other Western art music, at least that since the Baroque period. Openly seeking greater accessibility, it is tonal or modal where Modernism is atonal, rhythmically regular and continuous where Modernism is aperiodic and fragmented, structurally and texturally simple where Modernism is complex. First flourishing to popular acclaim in the USA, it was typified in the 1980s and 90s by the music of Philip Glass (*b* 1937), probably the most commercially successful composer of the later 20th century to work predominantly within the concert halls and opera houses of the 'cultivated' tradition. In the 90s European composers such as Henryk Górecki, Arvo Pärt and John Tavener made international reputations with a more overtly spiritual approach dismayingly dubbed 'holy minimalism'.

'Minimalist' art of the 1960s and 70s shared two crucial characteristics with minimalist music: the reduction of artistic materials to their essentials and a regularity of formal design that could in some ways be said to parallel the regular pulsing upon which much, though not all, of the most popular musical minimalism is based. Both minimalist art and music reacted against other recent modernist tendencies. But whereas in music those tendencies (serialism and indeterminacy) were generally noted for their intellectual abstraction, the work of Abstract Expressionist painters such as Willem De Kooning and Jackson Pollock had essentially metaphorical and indeed expressive aspects. The watchwords of 1960s minimalist art – 'the thing . . . is not supposed to be suggestive of anything other than itself' (Barbara Rose); 'what you see is what you see' (Frank Stella) – thus challenge the observer to respond to art which is resistant to conventional notions of interpretation.

Minimalist sculpture, in particular, uses slender and simple means – the right angle, the square and the cube – in symmetrical and serial sequences, contrasting with Abstract Expressionist painting's emphasis on a prolixity of gestural curves in statements of a fulsome, sometimes even riotous immediacy. Both minimalist sculpture and

painting use prefabricated materials and industrial colours to create a deadpan flatness, while the Abstract Expressionists cultivated painterly excess. Such minimalism is also structurally and texturally simple: it seeks, as the art critic Kenneth Baker put it, 'to clarify the terms in which art takes a place in the world' by eliminating metaphor, where Abstract Expressionism (and much other modernist art) sought complexity as a necessary passage to truth. Abstract Expressionism is 'hot', minimalism is 'cool'. Dominated by New York–based artists, minimalism was espoused by such painters as Stella and such sculptors as Donald Judd, Robert Morris, Richard Serra and Carl Andre.

The strategies of early minimalist composers had more in common with the still basically modernist idea of minimalist art than with the post-modernist aesthetic of their musical progeny. The Americans La Monte Young, Terry Riley, Steve Reich and Glass, all born within 18 months of each other in 1935–7, are widely considered pioneers in the evolution of musical minimalism. Two environments provided a sympathetic context for their rejection of the academy: the California counterculture of the 1960s, to which Riley belonged, and the 'downtown' Manhattan scene of the 60s and 70s, which formed the main base for the activities of Young, Reich and Glass, and of which Riley was also part for a time. Both environments emphasized the breaking down of barriers, not only between different kinds of music but also between different art forms.

Reduction is applied in a highly individual manner in the work of Young, whose concern with sustained sounds rather than pulsing repetition marks him out from the other three. Nonetheless, he influenced not only Riley, Reich and Glass, but also such groups as Velvet Underground and, much later, Spiritualized. From at least as early as the Trio for Strings of 1958, Young's static harmonies, articulated with unchanging dynamics over long periods of time, set the agenda for a musical minimalism built on exploring the innards of sound; the investigation of just intonation and improvisation have also played crucial roles in his output. With *In C* (1964), Riley revised this agenda to focus on the alluring combination of modal material in constantly repeating patterns and unvarying fast pulses, features his music shared with contemporary jazz and, especially, rock (where Riley has had a more obvious influence than Young). While Riley has arguably compromised Young's radical stance, the fundamentally spiritual purpose of their improvised art justifies comparison of the two composers.

Though influenced by Riley, Reich's interest in modality and pulse has more in common with that of his erstwhile colleague Glass. In channelling their energies into composing rather than improvising, both were initially concerned to establish a formal rigour for the unfolding of individual works. Both brought the sharp focus of processes, clearly and deliberately audible to the listener, to bear on musical materials thoroughly scrutinized to offer new perspectives on interpretation: what you gain is, in their early outputs, no more, and no less, than what you hear. Reich's exploration of the gradually shifting relationships that result when modal musical material is deployed against itself contrapuntally – what came to be known as 'phasing' – is the central technical feature of almost all his compositions of 1965–71, culminating in *Drumming*. Glass's investigation of systematically organized additive and subtractive rhythmic processes plays a similar role in his music of 1967–74, culminating in *Music in Twelve Parts*. The sculptor Richard Serra and the filmmaker Michael Snow were personal friends of the two composers and influenced their music. 'Paragraphs on Conceptual Art', written in 1967 by the artist Sol Le Witt, inspired Reich's 1968 essay 'Music as a Gradual Process', a classic statement of the minimalist aesthetic in music. The early work of both Reich and Glass has qualities comparable to the readily observable and metaphor-free symmetries and sequences of minimalist art.

Reich and Glass have had an important effect on a wide range of concert musics, rock and the panoply of post-modernist, hybrid forms which became a major feature of late 20th-century music. In their more recent work, they and other composers, while continuing to activate their music with the crucial ingredient of repetition – or sustained sound, in the case of Young and other Americans such as Pauline Oliveros (*b* 1932) and Phill Niblock (*b* 1933) – have given greater prominence to melodic profile, timbral variety and sheer sonic allure. These new dimensions have made their music richer and deeper, at least from a conventional Western perspective, while rendering less audible the processes controlling its note-to-note details. The referentiality central to the music of John Adams (*b* 1947) subverts earlier notions of minimalism in the reintroduction of metaphor. Perhaps most significant, however, in what must logically be called 'post-minimalist' music is the reappearance of a kind of harmonic motion. The result of all these tendencies has been to emphasize the importance of harmonic progression and, in some cases, a more encompassing narrative development across broader spans of time.

The minimalist diaspora of the 1970s and 80s thus distanced itself from the original meaning of the term. Indeed, few so-called minimalist composers, even those who have established meaningful relationships with minimalist artists, are at all happy with the label. Some, such as the American Charlemagne Palestine (*b* 1945), the Frenchman Jean Catoire (*b* 1923) and the Belgian Karel Goeyvaerts (1923–93), have pursued their own versions of radical reductive repetition. Others, including the Americans Philip Corner (*b* 1933) and Frederic Rzewski (*b* 1938), and composers associated with the so-called English Experimental Music school such as Gavin Bryars (*b* 1943) and Howard Skempton (*b* 1947), have developed more hybrid approaches in which minimalist traits may still be detected. Still others have incorporated the timbres and gestures as well as the insistent pulse of rock into their music. Into this category fall the Americans Glenn Branca (*b* 1948), Rhys Chatham (*b* 1951) and Michael Gordon (*b* 1957), who have carried on the tradition of sound investigations pioneered by Young, as well as the English composers Michael Nyman (*b* 1944), Steve Martland (*b* 1959) and Graham Fitkin (*b* 1963), who have emphasized the more immediately accessible aspects of rock.

For many composers of the generation after Young, the musical minimalism of the 1960s and 70s can best be defined in political as much as in aesthetic terms. The American David Lang (*b* 1957), for example, viewed minimalism as a weapon with which to challenge the hegemony of postwar serialism. Minimalism's greatest

contribution to music is perhaps to have pointed the way towards the erosion of cultural as well as purely musical barriers, enabling composers to explore a pluralism freed from the shackles of earlier certainties. While this is a curious situation in view of the supposed purity of the movement's original manifestations, it does begin to explain both how and why the broadbrush – and, to some, dismayingly value-free – notion of musical minimalism became one of the most notable developments in late 20th-century musical culture.

KEITH POTTER

Miniscalchi, Guglielmo (*b* Venice; *fl* 1616–30). Italian composer. He was an Augustinian monk active at S Stefano, Venice, and in 1616 he published *Coelum armonicum seu concentus a 1–2–3v* (now lost). By 1622 he was *maestro di cappella* of S Stefano and published *Il salmo 'Miserere mei Deus' concertato a tre voci con sinfonie . . . et in fine doi motetti a duo voci*. Miniscalchi was most popular for his secular solo songs contained principally in three books of *Arie* (Venice, 1625, 2/1627; 1627; 1630/*R* 1986 in ISS, vi; one from each of the first two in G. Benvenuti, ed.: *35 arie di vari autori del secolo XVII*, Milan, 1922). The publisher and collector of the second volume, Alessandro Vincenti, described them as being in a style 'sought after and embraced by all'. Two further songs appeared in Carlo Milanuzzi's *Quarto scherzo delle ariose vaghezze* (Venice, 2/1624/*R* 1986 in ISS, vi). Miniscalchi's most distinctive songs are in his first book of arias, in which he developed a relatively fluid, declamatory melodic style for setting simple canzonetta texts. In virtually all of these songs Miniscalchi employed duple metre and carefully replicated word accents in musical rhythms. He usually avoided melodic sequencing, tending instead to supply new music for each poetic verse; he inserted rests frequently in order to demarcate verses (see *O come superbetta*). In his subsequent books, however, his music more closely approaches the styles of his Venetian colleagues G.P. Berti and Milanuzzi. A greater proportion of these songs contain changes of metre, and in one (*Gia che per hor intenerir*, 1630) Miniscalchi followed Berti's lead in contrasting recitative and triple-time aria styles. In addition, many of these songs are in triple time throughout, and both small- and large-scale sequential repetitions are much more prominent. Even songs written in duple metre display a reduction in rhythmic flexibility; the first half of *Tutto pronto al piacere* (1630), for example, incessantly repeats a short rhythmic motif of two *semifusae* preceding a *semiminima*. The combination of triple metre and repetitive, sequential musical constructs (see *O bocca vezzosa*, 1630) increased the tunefulness of Miniscalchi's later songs at the expense of his earlier, declamatory style of songwriting.

NIGEL FORTUNE, ROARK MILLER

Minkowski, Marc (*b* Paris, 4 Oct 1962). French conductor. He studied the bassoon in France and conducting with Charles Bruck at the Pierre Monteux Memorial School in Maine. For several years he played the Baroque bassoon with the Chapelle Royale, Les Arts Florissants and the Clemencic Consort. In 1984 he won a first prize at the Bruges International Early Music Competition and in the same year founded his Baroque ensemble, LES MUSICIENS DU LOUVRE. Since then he has been invited to many festivals in France and abroad, and has won widespread praise for his vigorously characterized performances. He is artistic director of the Amsterdam Bach Soloists and of the Studio Opéra of the Centre de Musique Baroque de Versailles, and director of the department of early music at Toulouse Conservatoire. His recordings include Lully's *Phaëton* and *Acis et Galatée*, Handel's *La Resurrezione*, *Amadigi di Gaula* and *Teseo*, Rameau's *Platée* and *Hippolyte et Aricie*, Mondonville's *Titon et l'Aurore*, Gluck's *Armide* and Boieldieu's *La dame blanche*.

NICHOLAS ANDERSON

Minkus, (Aloysius) Ludwig [Léon (Fyodorovich)] (*b* Vienna, 23 March 1826; *d* Vienna, 7 Dec 1917). Czech composer and violinist of Austrian birth. He probably studied in Vienna, but worked for most of his life in Russia. The earliest important ballet to which he made a small musical contribution was Delvedez's *Paquita*, performed in Paris first in 1846. In the early 1850s he went to Russia, where he directed Prince N.B. Yusupov's

serf orchestra in St Petersburg (1853–6). He had some success as a concert soloist, and also gave private violin lessons. He was appointed as leader/conductor at the Bol'shoy Theatre Orchestra in Moscow in 1862, later becoming inspector of the orchestras of the Moscow Imperial Theatres and, from 1866 (when Tchaikovsky also joined the staff), a professor of violin at the new Moscow Conservatory. At the same time he maintained a connection with Paris, collaborating with Delibes in the ballet *La source*, first performed at the Opéra in 1866. Although his St Petersburg début had been made with the tuneful short ballet *Fiametta* in 1864 (choreography by Arthur Saint-Léon), his first overwhelming success as a ballet composer in Russia was with *Don Quixote* (Bol'shoy Theatre, 1869). In 1870 Minkus was appointed official composer of ballet music to the Imperial Theatres in St Petersburg by the director, Stepan Gedeonov; it was he who commissioned the ballet *Mlada*, with ballet music by Minkus and pictorial scenes from Borodin, Cui, Musorgsky and Rimsky-Korsakov. Although Minkus completed his part, the project was not realized.

Of the ballets written in collaboration with the ballet-master and choreographer Marius Petipa, which included *Don Quixote*, one of the most successful was *La bayadère*, first produced at the Bol'shoy, St Petersburg, in January 1877 to enormous acclaim, while Tchaikovsky's *Swan Lake*, produced two months later at the Bol'shoy, Moscow, was a failure. Although to some extent Tchaikovsky was influenced by the kind of ballet music written by composers such as Minkus, the ballet public were not prepared for the novel harmonies, less obvious rhythmic pulse and more extended structures employed by Tchaikovsky. *La bayadère* has remained in the Russian/Soviet ballet repertory, and was the most lastingly successful pre-Tchaikovsky ballet in Russia. Moreover, it was popular with the dancers themselves: the prima ballerina who created the title role wrote in her memoirs of Minkus's superb management of 'melody and its coordination with the character of the scenes and dances' (Wiley, 286). The music for Minkus's next ballet, *Roxana*, also became immediately popular; a march from it was a favourite with Tsar Aleksandr II, and a version for military band was said to have been played in the course of the 143-day siege by Russian troops of Plevna (Pleven) during the Russo-Turkish war of 1877–8.

By the mid-1880s changes were taking place; the director of the theatres, Ivan Vsevolozhsky, was keen to persuade such composers as Tchaikovsky and Glazunov to write ballet music for the Mariinsky Theatre. He took the opportunity afforded by Minkus's 60th birthday to pension him off, and no permanent successor was appointed. At the request of Tsar Nicholas II, Minkus's ballet *Mlada*, in which he re-used his material from the earlier collective effort and composed new music as necessary, was performed with huge success in the 1896–7 season, much to the dismay of Rimsky-Korsakov, whose extraordinary, hybrid opera-ballet *Mlada* (1892), which contained some of his most advanced music and was to influence the young Stravinsky in *The Firebird* and *The Rite of Spring*, had been a spectacular failure. The enormous gulf between the competent, serviceable music of Minkus and the early ballets of Stravinsky is the more remarkable in that the space of time between them is so relatively short. But it is a credit to Minkus's professionalism that his music, in its proper context of ballet performances, has not entirely disappeared from the repertory.

WORKS

ballets first performed in St Petersburg unless otherwise stated

c20 ballets, incl. Paquita, collab. Delvedez, Paris, 1846; Néméa, collab. Saint-Léon, Paris, 1864; Fiametta, collab. Saint-Léon, 1864; La source, collab. Delibes, Paris, 1866, arr. pf (Paris, 1866); Le poisson d'or, collab. Saint-Léon, Paris, 1867; Le lys, collab. Saint-Léon, Paris, 1869; Don Quixote, 1869; Camargo, 1872; Les brigands, 1875; Les aventures de Pelée, 1876; La bayadère, 1877; Roxana, 1878; Mlada, 1879; Nuit et jour, 1882; Les pillules magiques, 1886; L'offrande à l'Amour, 1886

Vn works, incl. concs., études and teaching pieces; pf music; songs

EDWARD GARDEN

Minneapolis and St Paul. Cities in Minnesota, USA, identified as the Twin Cities. They are located on the Upper Mississippi River. A spirit of rivalry and enterprise, along with the shared conviction that communities in harsh northern climates require tempering by the arts, has triggered an abundance of music, theatre and museums in these hub cities of Minnesota. In the 1980s and 90s a vigorous popular music scene developed, notably in Minneapolis.

1. Art music. 2. Popular music.

1. ART MUSIC. In the westward expansion of the 1850s, Minneapolis and St Paul attracted immigrants to the fertile lands of the Upper Midwest. They came in large numbers from Scandinavia and the German-speaking countries, bringing with them both a folk-based culture, rooted in such activities as hardanger fiddle-playing and choral singing, as well as an understanding that a civilized place will have an orchestra. Apart from appearances by the Hutchinson family in 1855 and by Ole Bull with the 13-year-old Adelina Patti the following year, home entertainment and singing schools – the start of a robust local choral tradition – marked the decade in which the state was founded. By 1863 the St Paul Symphony Society had played the first symphony heard in the state, and three years later the capital city of St Paul built an opera house to accommodate burgeoning local events and the stream of European artists drawn westward while making lucrative American tours.

Spurred by the example of St Paul, Minneapolis inaugurated in 1867 the Pence Opera House, boasting the only grand piano in the city. With the founding of instrumental and choral groups the building soon proved inadequate, and a new Academy of Music was opened in 1871; at its opening concert the St Paul Symphony Society played the first symphonic music heard in Minneapolis. This exchange between the cities' instrumental ensembles gradually expanded, especially in the second half of the 20th century, as the Minneapolis-based Minnesota Orchestra (known as the Minneapolis SO until 1968) and the St Paul Chamber Orchestra regularly performed concerts, even entire series, in each other's cities.

With expanded facilities and the growing population (particularly German and Austrian musicians eager to teach and perform), the range of musical activities grew more diversified after 1870, partly through the pioneering

work of the Hamburg musician Ludwig Harmsen. The first conductor and full-time professional musician in Minneapolis, Harmsen conducted the Minneapolis Musical Society and its successor, the Orchestral Union. In the 1880s, when both St Paul and Minneapolis had become major commercial cities, opera, choral societies and festivals flourished in the competitive atmosphere. In 1881 Minneapolis engaged Franz Danz, a German immigrant musician, to form an instrumental ensemble to match the Great Western Band and Orchestra in St Paul. Two years later Danz's son, Frank Danz jr, came from the Theodore Thomas Orchestra to become Director of Professor Danz's Orchestra, which formed the nucleus of the Minneapolis SO on its foundation in 1903. Emil Oberhoffer was appointed musical director, with Frank Danz becoming leader. The inaugural concert was given on 5 November 1903, and two years later the orchestra moved into a new auditorium, the site of which was used in 1974 for its new hall.

In its fifth season (1907) the orchestra embarked on the first of several tours that soon took it to both coasts, and later to Canada, Mexico, Cuba and the Middle East. As early as 1914 a St Paul series was added, but it was abandoned during most of the orchestra's 43 years (1931–74) at the University of Minnesota's Northrop Auditorium (cap. 4832). The St Paul series was reinstated in 1970 on the opening of the I.A. O'Shaughnessy Auditorium (cap. 1800) at the College of St Catherine, and continued in the Ordway Centre for the Performing Arts (opened as the Ordway Music Theatre, cap. 1800, 1985).

After a season of guest conductors, including Walter Damrosch and Bruno Walter, in 1922–3, Henri Verbrugghen (1922–31) succeeded Oberhoffer and added to the repertory works by Bach as well as introducing Delius, Elgar and Vaughan Williams. The long history of the orchestra's recordings began in 1923. With the recordings issued during the conductorship of Eugene Ormandy (1931–6), the orchestra acquired an international reputation that Dimitri Mitropoulos (1937–49) brought to fruition; he risked his popularity by championing the works of Schoenberg, Berg, Krenek (resident in St Paul 1942–7) and Shostakovich, and by giving the premières of such works as Hindemith's Symphony in E♭ (1941). Mitropoulos created a climate for new music that was expanded by his successors: Antal Dorati (1949–60), who introduced works by Bartók, and the Polish-born Stanisław Skrowaczewski, whose extended tenure (1960–79) witnessed not only the growth of the orchestra season to year round but featured several USA premières, including Penderecki's *St Luke Passion* (1967), and saw the opening of Orchestra Hall (cap. 2460). In 1968 the Minneapolis SO changed its name to the Minnesota Orchestra as a sign of its expanded activities, and for the next three decades struggled with the problem of name recognition.

Under Neville Marriner (1979–86) the orchestra expanded its conducting roster to include principal guest conductors Klaus Tennstedt and Charles Dutoit, and fostered the concept of festivals. Principal guest conductor Leonard Slatkin became the founding director of the annual Viennese Sommerfest in 1980; he was succeeded by Michael Steinberg (1990), David Zinman (1993) and Jeffrey Tate (1996). Under Edo de Waart (1986–95) the Minnesota Orchestra advanced artistically and stablized at 95 members. The Japanese Eiji Oue, a Bernstein protégé, was named music director in 1995 and in 1998 led the orchestra on its first tours of Europe and Japan. In 1997 Pulitzer Prize winner (1975) Dominick Argento was named the orchestra's Composer Laureate, and the following year the 1998 Pulitzer winner Aaron Jay Kernis was appointed New Music Advisor.

Since the founding of the St Paul Chamber Orchestra in 1959, which soon developed into a full-time professional group, the Twin Cities have supported two world-class orchestras along with numerous civic and student ensembles. The St Paul Chamber Orchestra's founding director, Leopold Sipe, was succeeded by Dennis Russell Davies (1972–80), who programmed much 20th-century music and cultivated younger audiences. As the only full-time professional chamber orchestra in the USA from 1968 to 1978, the St Paul Chamber Orchestra undertook extensive touring, which continued under Davies's successors, Pinchas Zukerman (1980–87), Skrowaczewski (1987) and a tripartite artistic commission initially consisting of Hugh Wolff (named principal conductor in 1988, music director in 1992), Christopher Hogwood and composer John Adams (1988–90), the latter followed by composers John Harbison and Aaron Jay Kernis. Reflecting the 'crossover' current of the 1990s, composer/vocalist/conductor Bobby McFerrin was named Creative Chair in 1994.

Opera in the Twin Cities is dominated by the Minnesota Opera, which mounts its productions at the Ordway Center for the Performing Arts in St Paul. The company was founded in 1963 as the Center Opera at the Walker Art Center in Minneapolis; its first production was *The Masque of Angels*, commissioned from the noted Minneapolis composer Dominick Argento. In the following years the company produced more American and world premières than any other company in the US, winning accolades for its adventurous spirit in design as well as in musical programming. In 1969 it severed its ties with the museum, and in 1971 it changed its name to the Minnesota Opera. It continued to complement the Metropolitan Opera on tour, which had been performing annually at Northrop Auditorium since 1945. But with the end of the Metropolitan's national touring in 1986 Minnesota Opera focussed increasingly on traditional repertory performed in the original language. In contrast with its early years, commissioning became a low priority, though the company occasionally produces unusual works such as George Antheil's *Transatlantic*, given its American première in 1998.

The venerable Schubert Club of St Paul, founded in 1882, sponsors some 70 musical events a year, including the Twin Cities' most prestigious recital series, commissions new musical works (including several by Argento), organizes master classes, educational projects and an annual scholarship competition, and maintains a distinguished Museum of Musical Instruments.

Other recital and chamber music events are presented at venues throughout the Twin Cities, especially the University of Minnesota School of Music's Ted Mann Music Theater. That new works appear frequently on these programmes is partly due to the influence of the American Composers Forum, founded in 1973 as the Minnesota Composers Forum by Libby Larsen and Stephen Paulus. By the late 1990s its membership numbered more than 1000 composers, performers and music presenters, who participate in an expanding network of activities that includes a visiting composers

programme, the Sonic Circuits Electronic Music Festival, recordings and several new music series.

The choral tradition established by the earliest settlers continues to flourish in the Twin Cities, which support several outstanding organizations. Chief among them are the Dale Warland Singers and Symphonic Chorus (founded 1972), which consists of a renowned *a cappella* choir that regularly commissions new works and a large chorus that participates in performances of major choral works; the Minnesota Chorale, also founded in 1972, which was the official chorus of the St Paul Chamber Orchestra under Joel Revzen from 1983 to 1992, and continues to perform and record under Kathy Saltzman Romey; and the Plymouth Music Series of Minnesota, which was founded in 1969 by Philip Brunelle and has subsequently given the premières of over 60 new works. Based at Plymouth Congregational Church in Minneapolis, the Plymouth Singers have given the Midwest premières of nearly all the Handel oratorios, collaborated with Copland in a concert at which he conducted his own choral works, and commissioned numerous large-scale pieces, including Argento's *Te Deum* and oratorio *Jonah and the Whale*.

The University of Minnesota, Minneapolis (founded 1851), has been an important centre of musical activity since 1919. In addition to events at the Ted Mann Music Theater, the School of Music (founded 1903) and its opera workshop offer a variety of undergraduate and graduate degree programmes in music. Music degrees are also offered at Augsburg College in Minneapolis, Hamline University and Bethel College in St Paul, and other local schools. The music library of the Minneapolis Public Library is one of the largest collections in the country.

2. Popular music. To followers of popular music, the so-called Minneapolis sound evokes two disparate notions: the synthesized funk of Prince and producers Jimmy Jam and Terry Lewis, and the post-punk rock of the influential and critically acclaimed Replacements and Husker Du.

Those 1980s sounds may be the ones identified with Minneapolis but the city's popular music traditions are more diverse, from the long-lived polka of Six Fat Dutchmen through the 1960s folk-blues of Koerner, Ray and Glover to three decades of the fancy finger-picking of guitarist Leo Kottke and the contemporary gospel of the choir Sounds of Blackness. Since Minnesota-born Bob Dylan left for New York City in 1960, more than 100 songs either recorded in Minneapolis or made by artists based there have reached the Top 40 on Billboard's pop chart.

Prince emerged in 1979 as a one-man band who composed, arranged and produced his recordings on which he played all the instruments. Combining rock, funk and soul, Prince became the most prolific recording artist of his generation and one of the most widely respected musicians, songwriters and producers. The rock underground also flourished in Minneapolis in the 1980s. The chaotic Replacements became the link between the Beatles and the Rolling Stones and the 1990s grunge explosion. Husker Du, a Minneapolis power trio, merged punk and pop into a post-punk noise pop that also laid the groundwork for much of the alternative rock of the 1990s. In the 1980s and 90s more than 75 venues regularly presented live music in Minneapolis. At the same time, the city became a major centre for recording, both at Prince's Paisley Park Studios and at Pachyderm Studio, 45 miles away in Cannon Falls.

MARY ANN FELDMAN (1), JON BREAM (2)

Minnelli, Liza (May) (*b* Los Angeles, 12 Mar 1946). American actress, singer and dancer, the daughter of Judy Garland and Vincente Minelli. She made her film début while still a toddler in the Judy Garland vehicle *In the Good Old Summertime* (1949). In her late teens she began to establish herself as a singer and dancer in nightclubs and on stage, and her New York début was as Ethel Hofflinger in the off-Broadway *Best Foot Forward* (1963). She toured as Lili in *Carnival!* (1964) before playing her Tony-winning title role in *Flora, the Red Menace* (1965). She also starred in a one-woman show *Liza* (1974) and substituted for Gwen Verdon in *Chicago* (1975). With her Academy Award-winning film role as Sally Bowles in *Cabaret* (1972), she solidified her reputation as an interpreter of the work of Kander and Ebb, whose stage musical *The Act* (1977) won her a further Tony award. Her film career has not been as impressive as her stage career, due largely to the type of vehicle in which she has been cast. More recently, she has made numerous cameo appearances, including *The Muppets Take Manhattan* (1984), and has hosted entertainment documentaries such as *That's Entertainment!* (1974) and *That's Dancing!* (1985). She has also made several pop recordings, including a collaboration with the Pet Shop Boys.

Minnelli, with her outstanding Broadway theatrical voice, can move almost indistinguishably between speech and song. There are many qualities of her mother's voice in her presentation, but she has developed a style uniquely her own. She is an evocative actress, and uses the dramatic aspects of her voice to portray the full range of human emotion. Her riveting portrayals of character give her the ability to command the interest of the audience whenever she is on stage.

WILLIAM A. EVERETT, LEE SNOOK

Minnesang. The German tradition of courtly lyric and secular monophony that flourished particularly in the 12th, 13th and 14th centuries. Though it is in many ways merely the German branch of the genre represented by the troubadours and trouvères in France, it has substantial independent features. The musical history of Minnesang is a particularly controversial subject because the melodies survive largely in manuscripts from the 14th and 15th centuries (*see* Sources, ms, §III, 5).

1. Introduction. 2. Origins and 'courtly love'. 3. Genres, prototypes, forms. 4. Historical development. 5. The melodies and their sources. 6. Evidence for performing practice. 7. Transcription problems.

1. Introduction. The name 'minnesinger' appears for the first time in the work of Hartmann von Aue (*Minnesangs Frühling*, 218.21; *c*1189); the word 'minnesanc' is substantially later, being first found in Walther

von der Vogelweide (W 66.31; *c*1230); and 'minneliet' is used by Neidhart von Reuental (85.33; after 1230). Reaching its peak in the years of the Hohenstaufen emperors, the tradition grew alongside early Gothic architecture, the great religious movements of the time (particularly the Albigensians) which culminated in the crusades, and the brilliant rise of scholasticism. Just as in France, German Minnesang was cultivated by the travelling musicians but particularly by the nobility; and the intensity of the tradition shows the central role it must have played in the cultural and social life at court. This could happen only with the rise of a separate, carefully cultivated life style and new social obligations among the nobility coming together with the ethical duty to provide guidelines for their secular existence.

The *Minnedienst* – servitude to love – is the central motif of this aristocratic poetry and must be understood in terms of the feudal system. Alongside the inevitable components, the inferior social position in court of the professional singers as well as of the noble *ministeriales* among whose ranks most Minnesinger were found, there is the knight's courteous striving for the grace and favour of a lady, one who is a respected (and unreachable) member of the courtly society to whom the singer fully yields himself – at least in the fiction created by the ideology and poetic conventions of *Minne*. Within this concept of an inferior position is mirrored the idea of feudal dependence to which even the nobility were subject. *Ministeriales*, the vassals of the king and the great landlords, were bound to faithfulness, to service and to military duty; the fief they held in return for this was hereditary from the time of Konrad II. And it is perhaps from that context that many of the fundamental motifs of Minnesang – *dienen*, *triuwe*, *zuht* and *staete* – take their full meaning. Equally, the repertory contains many concepts taken from religious contexts – *hulde*, *genade* – thus emphasizing also the musical connection of Minnesang with the church.

Music and dancing were important components of courtly life, and the performance of epics and songs played a major role. The performer had normally created both the poetry and the music that he sang to the assembled company with instrumental accompaniment. But although this is one of the earliest repertories in which the poet is regularly named, the poetry is well separated from biographical detail: it takes place largely in the imagination, in a generalized fiction, and it is only after the factually documentable political songs of Walther von der Vogelweide that it becomes possible, in the more derivative later Minnesang, to begin to read biographical or historical fact in the poetry. Therefore many historical questions such as chronology, particularly of Walther's or Reinmar's poetry, and the mutual influences of single poets or groups of poets must remain unresolved. Further questions are made difficult by the nature of the sources: the earlier manuscripts tend to contain poetry alone; and it is therefore possible to overestimate the value of the few scattered early musical fragments as well as the much later large manuscripts with music.

2. ORIGINS AND 'COURTLY LOVE'. Although the German Minnesang tradition contains indigenous features and characteristic forms, its dependence on other western European song is predominant. The search for its origin is no longer limited to Provence and northern France since *jarchas* have been found in Cairo, at the extreme edge of the Romanic area (see Stern, F1953); but even so Provençal lyric poetry is still unquestionably the oldest vernacular tradition of its kind in Europe. It had an exceptionally strong effect over the whole West, and much in the German Minnesang is nothing more than a direct imitation of this art. From the beginning of the 12th century there was a fully formed tradition; for discussion of its origins and contexts *see* TROUBADOURS, TROUVÈRES, §I, 4.

Central to the German tradition is the idea of *Minne*, a word coming from the Old High German *minna* and including the concepts of 'mindfulness' and 'remembrance' but best translated in English with the much contested but useful phrase 'courtly love'. It corresponds also to the late classical Latin *amor*. The verb *minnen* (Old High German *minnôn*) means 'to love' or 'to be complaisant' in both religious and secular senses. *Minne* therefore has both spiritual and sensual qualities, and it is possible to see within Middle High German literature a development from the earlier primarily spiritual and emotional use to a more sensual one in the later Middle Ages.

During the peak era of Minnesang *Minne* represented an ideal spiritual relationship between the man (*ritter*, *man*) and the lady (*frouwe*, *wîp*), also called *hôhiu minne* (high *Minne*), first by Friedrich von Hûsen (before 1190) and later also by Walther von der Vogelweide; it was a sensual force determined by the nature of courtly society and culture. By contrast, *nideriu minne* (low *Minne*) was the more outright demand by a man for physical possession of a woman. But the spiritual nature of earlier Minnesang makes it impossible to inflict the widely accepted characterization of 'low *Minne*' on, for example, Walther von der Vogelweide's *Mädchenlieder* (girls' songs).

Liebe ('love') represents fulfilment, acceptance, but normally includes the spiritual as well as the physical relationship of man and woman, though it can stand for the spiritual alone; it is, however, a less common word. A constantly repeated fundamental motif in Minnesang is the knight's longing for an unreachable woman, the lament over this unbridgeable chasm, and at the same time the spiritual optimism (*vröide*) which results in the sensual character-developing force of *Minne*, service of a woman without any reward.

3. GENRES, PROTOTYPES, FORMS. Of the three main categories of Minnesang, the *Lied*, the *Spruch* and the *Leich*, only the *Leich* is clearly identifiable in formal terms: it is not strophic but a through-composed form with a highly developed and complex metrical structure, containing repetition either in pairs of lines (*AABBCC* ...) or in groups of lines (*AABBCC* ... *AABBCC* ...), often framed by individual opening and closing lines (*ABBCCDDEE* ... *X*). The earliest known example in German seems to be the *Kreuzleich* of Heinrich von Rugge (*c*1190), but the form remained in use throughout the Minnesang era and beyond (*see* LAI). In the 13th century it reached full flowering with such poets as Ulrich von Winterstetten (five), Der Tannhäuser (six), Konrad von Würzburg (two) etc., while later figures representing the transition to Meistergesang, such as Hadlaub (three) and Frauenlob (three), also fully exploited the form.

Lied and *Spruch* are closer to one another, however: modern scholarship largely accepts but continues to discuss the received distinction according to content and

form (*see* SPRUCH). A social division whereby the travelling musician sang *Spruch* whereas the nobleman sang *Minnelied* is valid for the early period but ceases to hold towards the end of the 12th century with Walther von der Vogelweide, who was a master of both genres. On the other hand the most useful division of Walther's extensive lyric output seems to be between the single stanzas in *Spruch* form with elements of the travelling musician and the more noble multi-stanza *Minnelieder*. Hugo Kuhn has been followed by many modern scholars in considering a series of *Spruch* stanzas to the same melody (the so-called *Spruchlied*) as having been written a stanza at a time over a period of years. Several later poets wrote both *Minnelied* and *Spruch*, among them Neidhart von Reuental, Frauenlob and Wizlâv, while Reinmar von Brennenberg even wrote examples of both to a single melody.

For this stanzaic poetry a method of construction was employed that is particular to the Germanic repertory. Each stanza had a metrical and poetic scheme, known as a *Ton*; this also incorporated the melody, which was inseparable from the metrical-rhyme scheme. For *Minnelied* and related categories it is assumed that a new *Ton* was generally created for each song, but for *Spruch* poetry many stanzas were written in the same *Ton*, not just by the creator of the *Ton* but also, later on, by authors who employed older *Töne*, citing the name of the *Ton* at the beginning of their derivative poems (*see also* TON (i)).

Compact four-line stanzas or stanzas with four long lines more in the manner of epic poetry (Kürnberger) are characteristic of early Minnesang; in the subsequent era of classic Minnesang canzone form (otherwise called bar form) was preferred for both *Lied* and *Spruch*, though other types of stanza existed; finally, in the course of the 13th century there was an astonishing expansion of forms and formal techniques with refrains, internal rhyme, linking rhyme and other features to which the melody could add a further structural dimension. In particular the canzone form was developed in many varied ways (*see* BAR FORM); it should however be emphasized that the presence of canzone form in the poetry did not necessarily imply music in the same form (see Paul and Glier, F1961, esp. p.88) so it is important to qualify all formal descriptions as being musical or poetic. In this, as in so much else, the lack of melodies in many cases and the lack of metre for the melodies that do survive have tended to focus metrical research onto the text and many of the received formal categories were devised by modern scholarship on the basis of textual form alone; and while a fuller knowledge of Minnesang music together with its context within early European secular monophony in general has brought some perspective to the subject, it remains true that questions concerning upbeats to lines, line ends, rests and so on remain unresolved.

In terms of their content the songs can be classified as follows. *Spruch* poetry divides into two main groups, the religious and the political; further there is a group of social criticism, often commenting on the generosity of a patron; and others may be classified as ethical and philosophical.

Minnesang proper is normally categorized according to content: (1) the strict *Minnelied* is normally the song of a man, describing his own happiness, sadness or longing in love, and is often introduced by a description of nature and the time of year; (2) the *Frauenstrophe* or *Frauenlied*, the song of a woman, belongs particularly to the early years of Minnesang but is otherwise found in many parts of the world (*cantigas de amigo*) portraying the woman's longing; in the (3) *Wechsel* ('exchange') stanzas from the man and the woman alternate, not in dialogue, but rather explaining to the listener their respective views of a situation; (4) the *Tagelied*, closely related to the Provençal ALBA and many similar types across the world describing the parting of lovers at dawn, awoken by the watchman's warning, is the only genre within Minnesang that enabled an apparently objective description of sensual love; (5) the pastourelle of Latin and French medieval poetry is relatively rare in its purest form in Minnesang, but appears in Walther von der Vogelweide's *Under der linden*; (6) the *Tanzlied* (dance-song, round-dance) is most clearly represented in songs of Neidhart von Reuental but appears in songs of different content; finally (7) the *Kreuzlied* (crusade song), found particularly in the work of Hartmann von Aue, Friedrich von Hûsen, Walther von der Vogelweide and others, describes the experience of renunciation of the world on a crusade but contains rich overtones of other genres.

4. HISTORICAL DEVELOPMENT. The development of Minnesang may perhaps be followed in terms of five very approximate chronological periods.

(1) According to the earliest evidence of Minnesang (*c*1150–80) the tradition began with simple straightforward love songs in a folksong-like manner. Based on dance-songs and other types of folksong with unconventional and directly experienced content, this earlier phase from the area round the Danube remains quite different from the Provençal model later adopted and is therefore independent of the strict stylization of high Minnesang. *Frauenstrophe*, *Tagelied* and *Wechsel* are common in these years. Long poetic lines after the manner of the epic and rhyming lines with four main accents are common, often with freer metre and assonance. The poems are for the most part single stanzas and are anonymous: the most famous names are Kürnberger and Dietmar von Aist – yet the latter has only two poems from this early date and they are quite different from the rest of his work in both style and content.

(2) Romanic influence characterizes the next generation (*c*1165–1290): the impact of the growing troubadour and trouvère traditions is first clearly recognizable in the dactylic verses surviving under the name of 'Heinrich' (VI) (fig.1), but is more traditionally associated with the wedding of Heinrich's father, Emperor Friedrich Barbarossa, to Beatrice of Burgundy (9 June 1156), who had the trouvère GUIOT DE PROVINS in her retinue. An important symptom of the change is the position of the man (rather than the woman) as the longing, yearning partner; and the love becomes less overtly sensual, more contemplative. Bar form seems also to grow at this point and to have been borrowed from the troubadours with a carefully differentiated rhyme scheme and form in the Abgesang. This new artistic, rhetorical and musical impulse from the west evidently created stylistic ideas of a hitherto unimagined range. Earlier representatives of this generation, whose music must largely be reconstructed from contrafacta, are RUDOLF VON FENIS-NEUENBURG from Switzerland (then the kingdom of Arelat), FRIEDRICH VON HÛSEN from the lower Rhineland and HENDRIK VAN VELDEKE.

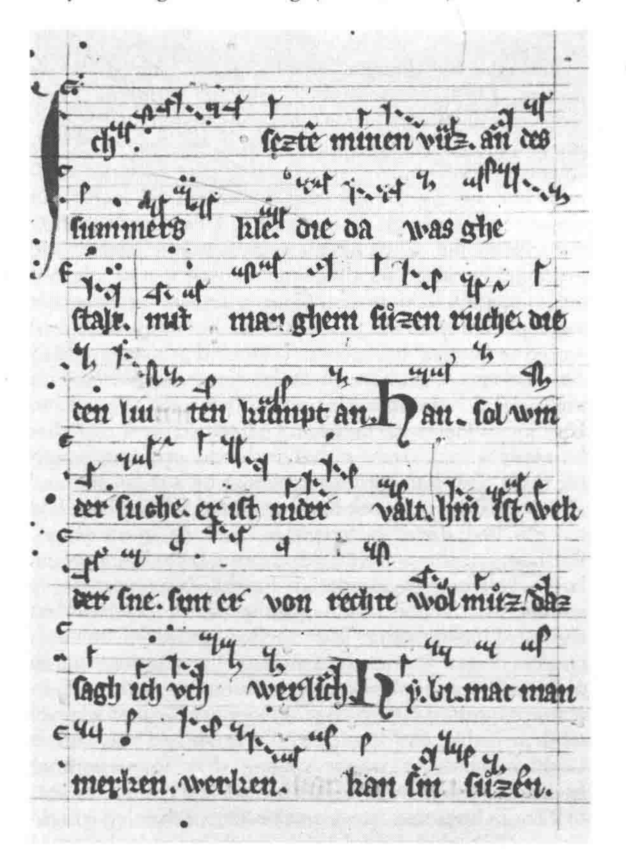
1. Keiser Heinrich: miniature from the Manessische Liederhandschrift, c1320 (D-HEu pal.germ.848, f.6r)

(3) The golden age of German Minnesang is generally agreed to belong to those years (*c*1180–1230) when the influence of the new Romance poetries was united with the indigenous tradition in a courtly art – a development sometimes related to Friedrich Barbarossa's international festival in 1184 at Mainz. Bar form and dactylic rhythm became the most common technical features; but the whole form was now more varied and complex. Pure (exact) rhyme was now required, and the anacrusis was no longer added sporadically but became a regulated part of the metre; syllabic lines became predominant. The content, motifs and metaphors were now largely romanic; and knightly *Minne* was the central theme. REINMAR VON HAGENAU, HEINRICH VON MORUNGEN and HARTMANN VON AUE were the most important poets; in addition Albrecht von Johannsdorf from Bavaria, Heinrich von Rugge from Swabia, Ulrich von Gutenburg from Rhenish Franconia, BERNGER VON HORHEIM and Bligger von Steinach should also be mentioned. But WALTHER VON DER VOGELWEIDE represents the very peak of Minnesang, his all-embracing, superbly independent invention being conceptually, stylistically and formally beyond any classification and standing as a model for subsequent generations.

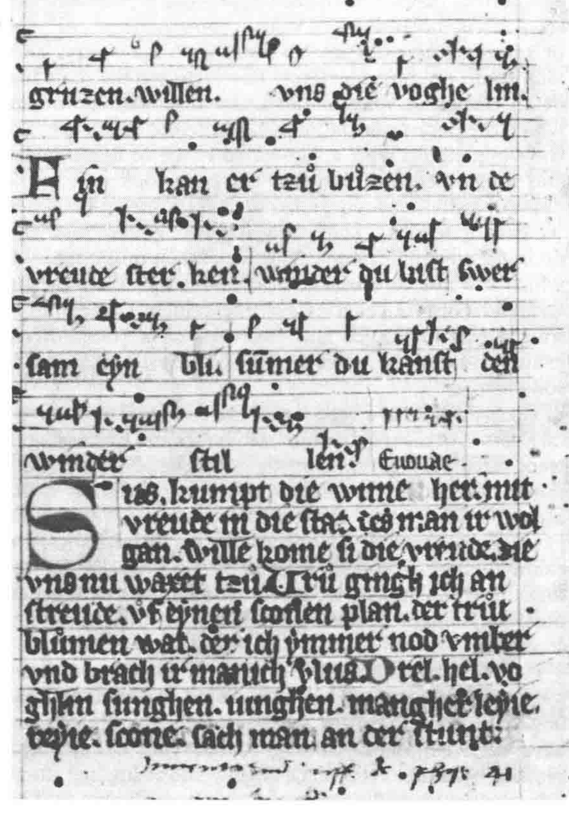
(4) The following years (*c*1230–1300) show an extraordinary expansion of Minnesang with the *Spruch* also being cultivated more systematically. Two main traditions may be identified: many poets continued the courtly tradition, albeit in a more mannerized style, following Walther von der Vogelweide. These included ULRICH VON LIECHTENSTEIN, REINMAR VON BRENNENBERG, REINMAR VON ZWETER, FRIEDRICH VON SUNNENBURG and MEISTER ALEXANDER. On the other hand NEIDHART VON REUENTAL (*d c*1250), though a contemporary of Walther, led towards a new realism with his pointed style, often using rustic wit with positively coarse undertones and ironic parody. The use of a highly idealized fiction based on the courtly classical Minnesang is characteristic of this generation; it need on no account be considered derivative for it was a thoroughly creative transitional era also characterized by a return to realism and to parody as well as a retreat from the Romance influences of the preceding generation and a stronger alliance with indigenous traditions. DER TANNHÄUSER, Geltar and Der von Scharfenberg are the prime representatives of this second group. Poets who occupy a position between the two extremes include Burkhard von Hohenfels, Gottfried von Neifen, Ulrich von Winterstetten and WIZLÂV III VON RÜGEN. This generation closes impressively with the comprehensive and productive FRAUENLOB (fig.2).

(5) With the 14th century, in a changed political and social ambience with growing national consciousness and the rise of the towns and of the bourgeoisie, Minnesang finally retreated from its courtly idealism while still retaining much of its traditional sense. So the learned but not particularly gifted HUGO VON MONTFORT (*d* 1423), whose poems were set to music by BÜRK MANGOLT, sang no more of unattainable women but of his own wife. Spiritual and didactic material came to the forefront, as did the *geblümte Stil* (florid style) that had already been cultivated by Burkhard von Hohenfels and Wizlâv von Rügen and was further developed by Heinrich von Mügeln (*d* after 1371): the transition to MEISTERGESANG was

2. Frauenlob (Heinrich von Meissen) and musicians with (from left to right) tabor, straight cornett, shawm, fiddles and bagpipe: miniature from the Manessische Liederhandschrift, c1320 (D-HEu pal.germ.848, f.399)



inevitable. The musically important songs of the MONK OF SALZBURG (late 14th century) owe only a small part of their range to Minnesang. A century after the end of Minnesang OSWALD VON WOLKENSTEIN (*d* 1445), the 'last courtly singer', continued the tradition, but he must be considered the herald of a new epoch in musical and literary history.



5. THE MELODIES AND THEIR SOURCES. No certain information survives as to the earlier scribal stages that led to the relatively late manuscripts for the texts and the music of Minnesang. Presumably the poets themselves or other singers and musicians collected repertory on single leaves or in volumes that were circulated and copied. Yet oral transmission must also have been extremely important. Only about 1300 did the literary era begin owing to the initiative of collectors, amateurs and patrons, such as the Zurich town councillor Rüedeger Manesse. But even then texts were copied much more than music, as in the three major manuscripts, *A* (Kleine Heidelberger Liederhandschrift, *D-HEu* pal.germ.357, late 13th century), *Bsb* (Weingartner Liederhandschrift, *D-Sl* HB XIII, 1, early 14th century with 25 illustrations) and *C* (Grosse Heidelberger Liederhandschrift, or Manessische Handschrift, *D-HEu* pal.germ.848, *c*1320, with 138 magnificent illustrations) as well as *E* (Würzburger Handschrift, *D-Mu* 2° cod.ms.731, mid-14th century); in addition there is a large number of smaller manuscripts, equally without music.

By contrast with the text transmission and with the rich legacy of trouvère melodies, the musical transmission of early and high Minnesang (*c*1150–1300) is extremely slender except for the songs of Neidhart von Reuental; only with the latest representatives of Minnesang such as Hugo von Montfort, the Monk of Salzburg and Oswald von Wolkenstein, who were conscious of standing at the end of a vanishing tradition and concerned to preserve their art, were melodies regularly written down, often in manuscripts prepared by the poets themselves. Subsequently, in the Meistersinger guilds it became a regular practice to write down songs.

Apart from the non-diastematic neumes for a few Middle High German poems in the *Carmina burana* manuscript (*D-Mbs* Clm 4660/4660*a*), for a single song of Walther von der Vogelweide in *A-KR* 127 (VII.18) and for the anonymous *Rôsen ûf der heide* in *D-ERu* B5 (1655) – all of which are only subjectively transcribable – there are essentially three groups of musical sources for Minnesang:

(1) The musical manuscripts of Minnesang, mostly from the 14th and 15th centuries. Music from the earlier generation (before *c*1230) appears only in the Münster fragment (*D-MÜsa* VII.51), with one complete melody for Walther von der Vogelweide, and in the Neidhart sources, particularly *D-Bsb* Mgf 779, *A-Wn* suppl.3344, *D-F* germ.oct.18 and Sterzing manuscript (*I-STE*); but even among these the 56 Neidhart and pseudo-Neidhart songs represent a new departure from the courtly Minnesang in both poetic and musical respects for they have a dancing, folksong-like style. The four major manuscripts, the Jenaer Liederhandschrift (*D-Ju* E l.f.101), the Wiener Leichhandschrift (*A-Wn* 2701), the Colmar manuscript (*D-Mbs* Cgm 4997) and its sister

3. Anonymous spring song 'Ich sezte minen vuz', 14th century (D-Bsb Mgq 981, f.1r–1v)

manuscript formerly at Donaueschingen (*D-KA* Donaueschingen 120), are largely taken up with Meistergesang and in any case do not always seem entirely reliable. Further manuscripts include fragments related to the Jenaer Liederhandschrift at Basle (*CH-Bu* N.I.3, 145), a fragment with the anonymous spring song *Ich sezte minen vuz* (*D-Bsb* Mgq 981; fig.3) and perhaps also some of the 12 anonymous folksong-like melodies in *D-Bsb* Mgq 922. (For a table summarizing the sources and their notation, see Kippenberg, G1962, p.46; *see also* SOURCES, MS, §III, 5.)

(2) A substantial body of indirect musical transmission appears among the 'inferred melodies' (*erschlossene Melodien*): a number of texts are related to troubadour or trouvère songs in their form and content and seem to be contrafacta, so it is possible to take the original melody which the poet perhaps also used and to give it to the German poem. As a result of the energetic and thorough work of Spanke, Frank, Gennrich and Aarburg among others, over 30 cases of such contrafacta have been produced with greater or lesser degrees of certainty.

(3) Of questionable value for the study of this early period are manuscripts of Meistergesang from the 16th and 17th centuries which often contain melodies ascribed to earlier poets, among them Walther von der Vogelweide, Wolfram von Eschenbach, Tannhäuser, Marner, Reinmar von Zweter and Konrad von Würzburg. But the melodies are apparently changed and provided with new texts. Minnesang scholarship can use them only with the utmost caution.

6. EVIDENCE FOR PERFORMING PRACTICE. Any attempt to imagine the performance of Minnesang must begin by considering the rich instrumental practice of minstrelsy as recorded in a profusion of visual representations, in legal or administrative documents and within the poetry. This vital tradition must inevitably have affected the daily life of all classes in spite of the social disadvantage under which the performers laboured. Minstrels, jongleurs and travelling clerics with a variegated range of instruments and sometimes with extreme virtuosity took part in all kinds of festivities at court, in the countryside and at other secular occasions. The rondeau, the virelai and the *estampie* all contain some evidence of their music-making which did not care much for theories and rules or for written records but exerted a strong influence over courtly song forms in France and Germany as a result of its example and of the active and varied part it took in those song forms.

Textual evidence suggests that the vocal and instrumental abilities of the troubadours, trouvères and Minnesinger were often very good, sometimes excellent. Often additional musicians were employed to sing the song or to accompany it on instruments (seefig.2; *see also* FLUTE,fig.8); and it is recorded that Rumzlant, for example, had his songs performed by a *singerlîn*. Sometimes instrumentalists were sent to other courts in order that they might spread knowledge of their patron's creations.

For the accompaniment all kinds of instruments seem to have been used. Here virtuosity was presumably important and the most varied performing styles may have been exploited. Thus GOTFRID VON STRASSBURG praising Walther von der Vogelweide's singing drew attention to his skill in diminution (*wandelieren*) and in instrumental accompaniment (*organieren*). Equally he made the mythical figure Tristan accompany his *schanzune* (chanson) on the harp, showing how at that time a singer who was also a practised musician would master various styles:

er sanc diu leichnotelin
britunsche und galoise,
latinsche und franzoise
so suoze mit dem munde,
daz nieman wizzen kunde,
wederez süezer waere
oder bas lobebaere
sin harpfen oder sin singen

('He sang the *Leich* melodies in Breton and Gaelic, Latin and French [styles] so sweetly with his voice that nobody could tell which of the two was sweeter or more praiseworthy: his harp playing or his singing.' *Tristan*, ll.3626–33.) And Isolde had mastered the playing of bowed instruments in the French fashion:

si videlt ir stampenie,
leiche und so vremediu notelin,
diu niemer vremeder kunden sin,
in franzoiser wise
von Sanze und San Dinise

('She fiddled her *estampies*, *Leichs* and melodies so strange that they could never be stranger; and she followed the French manner of Saintes and St Denis'. *Tristan*, ll.8058–62.) Normally the melody covered a 10th or an 11th, only rarely reaching two octaves. But the notation is sometimes in a relatively high tessitura: Ulrich von Liehtenstein even wrote that many fiddlers would thank him for choosing such high pitches (*Frauendienst*, l.1373).

Eustache Deschamps, writing much later (*L'art de dictier*, 1392), distinguished *musique naturelle* ('leiz, sirventois de Nostre Dame, chançons royaulx, pastourelles, ballades, virelais, rondeaux') from *musique artificielle* (mensural polyphony), emphasizing that *musique naturelle* had no fixed rules and could not be learnt but depended entirely on natural talent. This seems to reflect the commonly made distinction between *cantor* and *musicus*, between *ars* (music according to the schools) and *usus* (practical music). Courtly singers on the whole were probably more practitioners, but may have had varied theoretical backgrounds: Gotfrid praised Tristan's *hantspil* (playing ability with his hands) as well as his ability as a *schuollist* (theoretician); on the other hand Ulrich von Liehtenstein, when he had been sent melodies by a lady with the request that he should write new poems for them, first had them sung to him by a musician, and afterwards the songs he had composed for the lady had to be written down, both text and melody, by an expert. But many of the surviving Minnesang melodies, particularly the through-composed *Leichs*, bear witness to considerable technical skill. The representatives of the less regulated Minnesang had various attitudes towards church music: Rumzlant and Gervelin, representing an older and less sophisticated tradition in northern Germany, expressed disapproval of the south German Marner who probably had church training and of the middle German Meissner whose singing they found strange because of its reliance on solmization and church modes.

Various notational problems present both palaeographical and historical difficulties. Not only individual copying errors, but also frequent changes of tonality (major to

minor, leading note to *finalis* or *confinalis*) and suggestions and changes of mode, imply that all the manuscripts were copied partly by ear. Yet the parallel existence of several versions of melodies (rather more in the French repertory than in the German) cannot always be explained in terms of errors or limitations in the notation; they can also be seen as a normal and perhaps thoroughly legitimate symptom of largely oral transmission in which a song was performed by several singers and variants could arise in performance, or even be added by the individual artist. Repeatedly these questions make it important to bear in mind that the relationship of notation to musical reality was then rather different from what it is today. In the same way, a variable instrumental accompaniment could have caused this, because it was doubtless natural for the instrumentalist to show his skill with devices and embellishments that were quite independent of any musical notation.

So it is impossible to say how far the occasional appearance of melismas, for example in Wizlâv or Meister Alexander, and the later increase of melismatic melodies with Hugo von Montfort and the early Meistersinger are really a new development of the 'florid' style or whether they are rather – at least in part – a different, more detailed approach to notation (and to notational technique). It seems likely that the earliest Minnesang notation, before the big collective manuscripts, used extremely varied techniques, some of them considerably simplifying the music. There was probably a certain degree of freedom not visible in the notation inasmuch as the close interchange of vocal practice and instrumental sound has always been one of the determining factors in the development of stylistic tendencies. In this context one may note the anonymous spring song in the fragment *D-Bsb* Mgq 981 (fig.3), remarkable because of its rich melismas but perhaps only a special case of more fully written-out notation which, copied by an experienced copyist, could well give a more reliable record of the musical reality of Minnesang.

7. Transcription problems. The surviving notation for Minnesang is extremely varied and sometimes changes even within a single manuscript. Yet there is another reason why no uniform transcription technique can be established: the question of rhythm is still unsolved and will probably remain so.

The earliest sources in non-diastematic neumes (*D-Mbs* Clm 4660, *A-KR* 127) do not even give clear information as to pitch, so no transcription can reasonably hope to be more than approximate. In the remaining sources the melodic shape is usually unambiguous; but there are variant readings in different manuscripts. This results partly from the chronological distance between the composition of the original and its copying, partly from the inherent variability within a primarily oral tradition, and partly from the incompatibility of that notation and ours. The principle of 'musical textual criticism' (*musikalische Textkritik*, Gennrich) that reconstructs an 'original form' from the various surviving versions of a melody (as has been done successfully with literary texts) must be considered highly questionable for this branch of medieval monody.

One must, for instance, consider conscious changes made by the scribes who mostly belonged to a later generation, were instructed in musical theory and may therefore themselves have produced a 'critical' edition. More recent scholarship sees only a limited relationship between text and melody, with a certain freedom to vary or even exchange the melodies (Räkel).

Embellishment, particularly as concerns the *plica*, is still little understood. Riemann's idea of replacing *plicae* and melismas with embellishment signs from the Baroque is now considered historically misleading; but his error led Runge to transcribe all the *puncta* as *plicae* in his edition of the Colmar manuscript, which is notated entirely in *virgae* and *puncta*.

The rhythm is not specified in the notation of Minnesang. This has caused considerable polemic and controversy among scholars. For primarily syllabic melodies editors have tended to adopt the principle that speech rhythm (of the verse metre) should provide the basis for an interpretation of the musical rhythm. But for poetry with alternating accented and unaccented syllables this amounts basically to the possibility of either duple or triple time (spondee, trochee or iamb). Even dactylic verses allow of a duple interpretation, although by analogy with certain mensural pieces in the trouvère repertory one could perhaps accept a dotted triple rhythm in some cases. But a particular problem lies in finding an appropriate rhythm for line ends and melodic cadences.

In discussions of rhythm it is obvious that one must consider not only the structure of the text but the shape of the melody, particularly its melismatic sections. Beginning with a consideration of both, musicologists and literary historians have been striving since the 1950s to join forces in reaching an understanding of Minnesang that is free from the dogmas of earlier years. So scholars have agreed, for instance, that the categories of line and line ends put forth in Andreas Heusler's *Deutsche Versgeschichte* (1925–9) cannot simply be applied to the rhythmic interpretation of the melodies as well.

Modern scholarship is inclined to give the melismas a much stronger melodic importance and even to give them a structural function, which can be seen in their regular appearance on accented syllables at particular places in the line. This discovery supports other arguments against a strictly uniform rhythmic structure in the music. And in these melismatic outgrowths, which represent independent elements in the strict structure of the line, some scholars have seen the influence of Gregorian chant, particularly where it consisted of a festive elaboration of a cadence. Direct evidence for some connection between Minnesang and the liturgy may be found in the addition 'EVOVAE' at the end of the melody of the anonymous song *Ich sezte minen vuz* (fig.3) and in *Leichs* of Frauenlob.

It is often difficult to decide whether such melismas are vocal or instrumental preludes and interludes; and the problem is not always solved for the editor by the appearance of a continued text syllable beneath such apparently instrumental sections (e.g. in *D-Bsb* Mgq 922 or in Hugo von Montfort's manuscript at Heidelberg). Further difficulties arise in text underlay when the melody is written down apart from the text (e.g. in the Neidhart manuscript *D-Bsb* Mgf 799).

Reviewing the history of Minnesang scholarship from the viewpoint of the constantly controversial question of its rhythm, one can see that it is clearly characterized by a change in evaluation of the sources: the first editors (von der Hagen, 1838; K.K. Müller, 1896; Mayer and Rietsch, 1896) were concerned primarily to produce an accurate reproduction of the written signs (facsimile). After early

unsuccessful attempts to interpret the rhythms (Burney, Forkel, Fétis, Coussemaker) scholars began from 1900 to see the transcription of medieval monody into modern notation as their main aim, tacitly transferring contemporary notation and barring into the Middle Ages and attempting to close the 'information gap' in the sources with rhythmic theories. One of these theories attempted a free chant-like 'rhetorical' rhythm (Molitor, 1910–11). Another followed the metre of the text: Runge first publicized this theory (*Die Sangesweisen der Colmarer Handschrift*, 1896), and was followed by Saran (*Die Jenaer Liederhandschrift*, 1901), who expanded the idea with his exclusively metrical scheme and stated that his transcriptions were intended primarily to reproduce the metrical scheme of the poetry but not necessarily the musical results. Riemann also attempted to work from the poetic metre, but in his attempts to subject the melodies to his theories of *Vierhebigkeit* often overruled the facts of literary scansion; yet his exaggerated theories were limited to theoretical publications, not included in actual editions. Then the theories of 'modal rhythm' arose, transcribing the melodies according to the medieval teaching of the six rhythmic modes, following the lead set by Aubry and Beck with troubadour and trouvère melodies; for Minnesang this theory influenced practically all publications from about 1925 to 1960. Yet more recently (and following a lead already clear in Schmieder's edition of Neidhart in 1930) scholarship has largely discarded the schematic use of modern notation with barring, time signatures and modern note values, seeing the unqualified use of modal theory with more and more scepticism (Reichert, Anglès, Kippenberg, Jammers etc).

Rejection of the earlier and sometimes rather dogmatically held theories admittedly brings with it a realization that very little is known about the rhythm of Minnesang: so the transcriber must limit himself carefully to a notation that is fundamentally neutral in rhythm (either simple note heads or a series of crotchets or quavers without precise values), adding signs to mark the poetic accents, the cadences, the ligatures and so on (Jammers).

BURKHARD KIPPENBERG/R

Minoja, Ambrogio (*b* Ospitaletto Lodigiano, nr Piacenza, 22 Oct 1752; *d* Milan, 3 Aug 1825). Italian composer and teacher. According to Choron and Fayolle, he began musical studies at 14, but did not make music his profession until much later. He studied with Secondo Anselmi in Lodi and with Nicola Sala in Naples, and was *maestro al cembalo* at La Scala and the Teatro della Cannobiana in Milan from 1784 until 1802. While at La Scala, he represented his colleagues in negotiations with impresarios and was secretary-general of a musicians' union, the Pio Istituto de' Professori di Musica, that sponsored Lenten concerts there. According to Choron and Fayolle, in 1789 Minoja was appointed *maestro da cappella* for the priests of S Maria della Scala; however, this probably refers to S Fedele, where the priests had been transferred by Maria Theresa. A Signora Minoja, whom Gerber described as a musical dilettante and harpist of Milan, has not been identified.

Although Minoja's two operas for Milan and Rome (1786–7) brought no commissions from other cities, he was called upon to compose for state occasions in Milan. During the French occupation of the city, he wrote a *Sinfonia funebre* (1798) on the death of the French general Lazare Hoche, and a hymn (1799) to commemorate the decapitation of Louis XVI. However, barely a month after the Austrians retook Milan (27 April 1799), Minoja directed a performance of a cantata praising the defeat of the French forces by General Suvorov. In 1805, when Napoleon was crowned King of Italy in Milan Cathedral, Minoja again provided special music, conducting 250 musicians in a *Te Deum* and *Veni Creator Spiritus*. When Napoleon named Eugène Beauharnais Viceroy of Italy, Minoja composed a cantata to celebrate his marriage to Augusta Amalia of Bavaria and their arrival in Milan (1806).

In 1814, when Milan passed into the hands of Emperor Francis I of Austria, Minoja replaced Bonifazio Asioli as censor of the Milan Conservatory. Although he could not match Asioli as composer or administrator, he tried to equal him as a teacher; his treatise on singing, *Lettera sopra il canto* (Milan, 1812; Ger. trans., 1815) gained recognition and was favourably reviewed in the *Allgemeine musikalische Zeitung* (xv, 1813, cols. 448–9). He held the post of censor, the highest teaching position at the conservatory, until his death.

WORKS

VOCAL

Operas: Tito nelle Gallie (after P. Giovannini: *Giulio Sabino*), Milan, Scala, 26 Dec 1786, *F-Pn*, *P-La* [Act l]; Olimpiade (P. Metastasio), Rome, Argentina, 26 Dec 1787

SVEN HANSELL

Minor (i). (1) The name given to a diatonic SCALE whose octave, in its natural form, is built of the following ascending sequence, in which T stands for a tone and S for a semitone: T–S–T–T–S–T–T). The note chosen to begin the sequence, called the key note, also becomes part of the name of the scale; a D minor scale, for instance, consists of the notes D–E–F–G–A–B♭–C–D. In practice, however, some notes of the scale are altered chromatically to help impart a sense of direction to the melody. The harmonic minor scale has a raised seventh, in accordance with the need for a major triad on the fifth step (the DOMINANT chord). The melodic minor scale has a raised sixth and a raised seventh when it is ascending, borrowing the leading-note function of the seventh step from the major scale; in descending, though, it is the same as the natural minor scale. *See* AEOLIAN.

(2) Any INTERVAL that is a semitone smaller than a major interval (*see* MAJOR (i), (2)) but contains the same number of diatonic scale steps: minor 2nd (S), minor 3rd (S + T), minor 6th (2S + 3T), minor 7th (2S + 4T), minor 9th (octave + S); and so on.

(3) A minor TRIAD is a three-note chord which, reckoned from the lowest note, is built of a minor 3rd and a perfect 5th; a D minor triad, for instance, consists of the notes D–F–A.

(4) The name of the mode of a piece, or a section thereof, having as its melodic basis a minor scale, and as its harmonic basis the minor triad built on the key note of

that scale; if the key note is D, the piece is said to be in D minor. A piece described in print as 'in d' (that is, with lower-case d) is normally taken to be in D minor, not in D major. *See also* TONALITY.

WILLIAM DRABKIN

Minor (ii). A term used to denote the size (rather than function) of an ORGAN STOP.

Minor canon. A member of the Anglican Church clergy. *See* CATHEDRAL MUSIC AND MUSICIANS, ANGLICAN, §2.

Minore (It.: 'minor'). A term used, as was its French equivalent, *mineur*, to denote a change to the minor tonality – generally the tonic minor – in a work or movement written predominantly in the major key, no doubt serving as a warning to the performer in addition to that usually already provided by the change of the key signature. It makes an early appearance in the first of François Couperin's *Leçons de tenébres* (1713–17) where, following the setting of 'Beth' in the major key, the section 'Plorans ploravit in nocte' bears the rubric *Mineur et mesuré lent*. From the mid-18th century to the early 19th it was most frequently used to mark a change of mode in three contexts: in the central episode of a rondeau (e.g. the finale of J.C. Bach's Simphonie concertante in A for violin, cello and orchestra, *c*1775, and Mozart's Rondo in F for piano K494); in sets of variations – one or more of the variations were usually in the minor key at this period (e.g. the finale of Mozart's Clarinet Quintet and Beethoven's Variations on a Russian Dance Wo071, where no fewer than three variations are marked *minore*); and in ternary movements such as the minuet and trio or its equivalent (examples in Haydn's B minor Piano Sonata HXVI:32, Beethoven's Sonata in E♭ op.7). In a few cases, such as the trio of the second minuet of Beethoven's String Trio in E♭ op.3, the change is to the relative rather than to the tonic minor. After Beethoven the term was little used; two of its few later occurrences are in Schumann's *Arabesk* op.18 (1838–9), with its contrasting *minore* sections in the mediant and relative minor keys respectively. The resumption of the major key was usually indicated by the word MAGGIORE.

MICHAEL TILMOUTH

Minoret, Guillaume (*b* ?Paris, *c*1650; *d* Paris, 1717). French composer and ecclesiastic. According to Rouxel, Minoret received his early training in Paris at one of the choir schools. At some date before 1679 he was appointed *maître de musique* at Orléans Cathedral, and on 5 September that year he accepted a similar position at St Germain-l'Auxerrois, Paris. In 1683 he was one of four winners of the competition held to nominate *sous-maîtres* to the royal chapel. There is evidence that he was a protégé of Maurice Le Tellier, Archbishop of Reims and *maître* of the chapel. Minoret's position at the court was undoubtedly much less influential than that of his more famous colleague Lalande: in 1693, when Goupillet was dismissed, Lalande was assigned his quarter of chapel duties, while Minoret was to take complete charge of the choirboys, a duty he had hitherto shared with Goupillet. He retired from the chapel in September 1714.

Minoret composed more than 50 motets, most of which are lost. Six that survive, copied by Philidor in 1697, reflect a conservative, declamatory style of text-setting. Titon du Tillet, however, wrote appreciatively of Minoret: 'Some pieces have exceptional beauty and may be identified as masterpieces ... including the third verset of the psalm *Nisi Dominum*, for which Minoret composed a piece for four different voices with independent accompaniment for violins and basses resulting in a very beautiful composition that one might state is almost unique'.

WORKS

6 grands motets: Ad te Domine clamabo; Currite, populi; Deus docuistime; Prope es tu, Domine; Usquequo, Domine; Venite exultemus; soloists, 2 choirs (4vv, 5vv), str orch, bc, *F-Pc*, *Pn*, *T*

2 petits motets: Misericordia Domine; Sancti Spiritus; 2vv, bc; *LYm*

Missa pro tempore Nativitatis, 1694 (symphony added by Brossard), *Pn*

Lost works including the grands motets: Beati quorum, composed for competition, 1683; Te Deum, performed at St Victor Abbey, 1682; Lauda Jerusalem Dominum; Nisi Dominus; Quaemamodum desiderat (the last 3 mentioned in *FétisB*)

JOHN HAJDU HEYER

Minsk. City in Belarus. It was under Lithuanian, then Polish and (from 1793) Russian rule; since 1991 it has been the political and cultural capital of a number of states established on Belarusian soil: the Belarusian National Republic (1918), the Belarusian Soviet Socialist Republic (1919–91) and the Republic of Belarus. A cathedral and court choir school were first established in 1069. Singing flourished during the Middle Ages in more than a dozen Greek and two Latin-rite churches. Rare examples of Belarusian *znamenniy* chant and Gregorian plainchant survive. Portable organs were in use in 1499; the earliest known Belarusian organist was Sebastian of Minsk (*c*1550). Greek churches destroyed or abandoned during the Russian and Tatar invasions (1502–18) and at the time of the Reformation were replaced by Calvinist conventicles and later by Latin-rite cathedrals. Oratories and confraternity schools set up after 1592 taught unison chants and part-singing, while the organ music of the Bernardine (1628) and Dominican (1622) convents were much admired by foreign visitors. The Basilian monk Tarasy compiled an *Irmologion* of local church chants in 1750, and hymns composed in honour of the city's patron saints have survived. The city's Jesuit academy (1682) taught music and drama, as well as staging popular *batleyki* (Christmas plays).

A small *capella* flourished throughout the 18th century at the court of the Vayavods (Governors) of Minsk; the ensemble also accompanied services at the Maryinski church. As a garrison town Minsk had its own military band of horns, trumpets and woodwinds, specializing in janissary marches.

After the second partition of the Polish Commonwealth in 1793 the court *capella* was replaced by the Minsk City

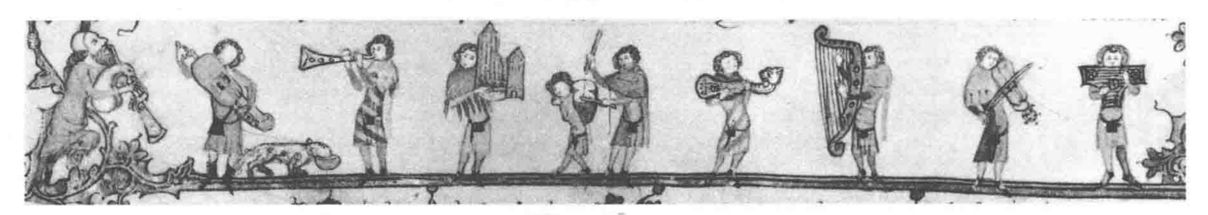
Orchestra (1803–1917), which rose to eminence in the 1840s under the brothers Dominik (1797–1870) and Wikenty Stefanowicz (*b* 1804). In addition to an international repertory they promoted local composers and attracted virtuoso soloists. Elements of Belarusian folksongs and dances appeared in the works of local composers: Stanisław Moniuszko produced his Belarusian folk opera *Sielanka* ('Idyll') in Minsk in 1852, and F.S. Miładowski's operetta *Konkurentsi* ('The Rivals') was first performed there in 1861. Concerts were held in churches, at the Merchants' Exchange, the City Theatre, the Pensione Montegrandi and in the Moniuszko, Vankovich and Hajdukiewicz mansions. In 1890 a spacious new Municipal Theatre was built (now the Yanka Kupala Memorial Theatre). A unique college of organists flourished at the Holy Trinity Church (1871–97). Visiting musicians under the liberal Russian governor Prince Nikolay Trubetskoy included Chaliapin (1896), Rachmaninoff (1895, 1913), Skryabin (1911) and Italian and Russian opera troupes (1899–1909).

Michał Jelski's collecting of folk dances from the Minsk region reflected a movement which gathered momentum during the last quarter of the 19th century with the founding of the Minsk Khorovaya Kapella folksong ensemble (1877–1904). The activities of music societies – the Minsk Musical and Literary Society (1880), the Society of Amateurs of the Fine Arts (1898–1906), the Friends of Music Society (1905) and the Minsk Literary and Artistic Association (1906) – were gazetted in such journals as *Minskiye Gubernskiye Vedomosti* (1838–1917) and *Minskiy Listok* (1886–1902), but were restricted after the 1905 Revolution because of their increasingly national orientation. Immediately before 1918 national and patriotic choral themes became popular with local composers such as Terawsky and Rogowski, while folkorists such as Churkin, Ravensky and Aladaw popularized the national folk operetta genre.

The establishment and consolidation of a Soviet Belarusian state (1918–48) led to the formation in Minsk of the National Conservatory (1918, 1932), National Theatre, Opera and Ballet (1930), Philharmonia group of specialist ensembles (1937), State Academic SO (1927), National Folk Orchestra (1930), State Radio and Television Choir (1931), Minsk RSO (*c*1937) and State Academic Choir (1939). Teachers came to Minsk from St Petersburg and Moscow. State-commissioned and monitored symphonies, operas and chamber music were produced in Minsk by a first generation of national composers; M. Aladaw, V. Bahatïrow, Tsikotsky, Mikalay Shchahlow, R. Pukst and Turankow. The war years left much of Minsk in ruins, and normal musical life only resumed after 1953. A Guild of Composers was formed in 1958. Postwar ensembles include the State Academic Shïrma Choir of Belarus, the State Academic Folk Tsitovich Choir (1952), the State Academic Opera and Ballet Orchestra and the State Theatre of Musical Comedy (1971). A number of popular song groups (e.g. Pesnyarï) have joined the Minsk Philharmonia.

Byalyawski opened a piano workshop in Minsk after 1861; in about 1890, A. Keller, K. Bohina, Mashkileyson and Katz had instrument-making studios. Violin makers in the 19th century included Z. Navitski and later A. Tsaykow and U. Krayko. The leading maker of folk instruments (woodwinds and bagpipes) is U. Puzïnya.

GUY DE PICARDA



Minstrel. A professional entertainer of any kind from the 12th century to the 17th, juggler, acrobat, story-teller etc.; more specifically, a professional secular musician, usually an instrumentalist. This article is concerned chiefly with the period between about 1250 and about 1500, the heyday of minstrelsy.

1. TERMINOLOGY. Etymologists agree that the Latin *ministerialis*, meaning office-holder or functionary, is the source of the Old French 'menestrel' and of the English 'minstrel'. By the 9th century the Latin word had also come to mean craftsman or handworker (cf the French *métier* from the Latin *ministerium*). Thus it is not known whether instrumentalists and other musicians came to be called minstrels because of their official or unofficial connections with noble courts or because of their virtuosity and technical specialization. At any rate both the Latin and the French terms were used in fiscal records and literary sources of the first half of the 13th century to designate either craftsmen or musicians, but this ambiguity disappeared by the end of the century. The former sense persisted in the 14th century in countries, such as Spain, that were slow in using the Latin word to indicate musical performers.

Slightly before 'menestrel' (later 'ménétrier') came into general use, the French term used to describe secular musicians was 'jogleor' ('jogleur', later 'jongleur', in English 'jogelour'). It may be that the change in nomenclature (in the early 14th century) reflected a change in function, from the jack-of-all-trades entertainer to the specialist in playing a single instrument. In other Romance languages the Latin *ministerialis* did not give way to a vernacular equivalent; the Spanish 'joglar' and Italian 'gioccolatore' remained in use into the 15th century.

The troubadour Guiraut Riquier (*c*1275) claimed, however, that, whereas in Provence 'joglars' covered a number of different types of musician, in Spain their functions were distinguished by different terms: instrumentalists (*juglares*), imitators of animal sounds etc. (*remedadores*), troubadours who travelled from court to court (*segrieres*) and street musicians (*cazurros*). In a reply no doubt written by Riquier but attributed to Alfonso X of Castile, his patron, it is suggested that street entertainers and the like should be called *bufones*; that he who could comport himself among the rich with *cortesia* and *ciencia* in playing instruments, reciting narratives and singing songs and verses made by others should be called *juglar*; that he who could make (*trovar*) words and melody should be called *trovador*; and that he who could do it with mastery and with an ethical or moral message should be called *don doctor de trobar*. Germanic languages generally used the word 'Spielmann', though forms of the French word (e.g. 'minstreel') are frequent in Flemish and Dutch records.

At all times and in all languages the naming of the player after his instrument was common, but there is some confusion over the nomenclature for secular singers. Although most references to minstrels appear to indicate instrumental performance only, there is no reason to suppose that the instrumentalists did not also sing; nor should the possibility be ruled out that, in some cases, 'minstrel' means 'singer'. In the second half of the 14th

1. Minstrels with (left to right) bagpipes, hurdy-gurdy (symphonia), shawm, portative organ, nakers, mandore, harp, fiddle and psaltery: marginal illustrations from the Romance of Alexander, believed to have been copied in Bruges, 1338–44 (GB-Ob Bodley 264, f.180v); the only major instrumental types of the period missing from this group are trumpet, bells and transverse flute

century the confusion is somewhat mitigated by the use of such terms as 'menestrel de bouche' or 'juglar de boca'.

Although even in the 14th century the word 'musician' (or its cognates) could, in addition to its traditional sense of judge and theorist of music, refer to performers, it was not until the 16th century that it began to offer serious competition to 'minstrel', by which time 'jongleur' seems virtually to have vanished. By the end of the 16th century 'minstrel' had come to designate wretched mendicants, capable only of croaking or scratching out old-fashioned songs. An analogous shift can be observed in French, in which 'ménétrier' had come to mean village and country musicians. With the Romantic reawakening of interest in the culture of the Middle Ages, 'minstrel' became frequent in the special sense of wandering poet-musician, and to this day the word evokes the image of the itinerant singer accompanying himself on a plucked string instrument before an audience of knights and their ladies – a real enough phenomenon but only one among many in the range of medieval secular music. (In English the terms 'minstrel' and 'minstrelsy' have a broader meaning than their equivalents in other languages, and their use in this article is merely a convenience.)

2. EARLY HISTORY. There is no reason to suppose that at any time during the Middle Ages secular musicians were absent from western Europe. One difficulty in interpreting the historical documents is that wherever records are kept in Latin the same terms, chiefly 'histrio' and 'mimus', serve to designate entertainers of all sorts, including musicians, from the 9th century to the end of the 14th. All were tarred with the same brush by the ecclesiastical authorities, who as a rule deplored their mode of life or even forbade it: the *Commemoratio brevis* (*c*900; *GerbertS*, i, 213) is unusual in its partly respectful attitude. Some modern scholars view the secular musician-entertainers of this early period as a continuation of the entertainer class of late Roman culture, but such an abstraction tells nothing of their specific functions, nor does it rule out the existence of other social or ethnic traditions.

One traditional role that has fascinated scholarship since the 18th century is that of the bard or epic poet-singer. He is usually supposed to have recited his lengthy tales to simple melodic formulae corresponding in their articulation and repetitions to the half-lines, lines and couplets of epic or narrative verse; he is also thought to have supported his song with an instrument such as the harp or fiddle. An image of this kind of verse- and music-making can be formed on the one hand from scattered documents of the Middle Ages up to about 1300 (*see* CHANSON DE GESTE) and on the other from still extant or only recently extinct practices in non-literate cultures. Questions of individual or so-called collective creation and composition, textual variation and improvisation, mnemonic schemes and oral transmission have been intensively studied in the last 60 years by historians of literature and folklore.

If such poet-singers can be thought with good reason to form a class distinct from entertainers with skills in non-verbal domains (instrumentalists, dancers, acrobats, prestidigitators, animal trainers and the like), the position of the 12th- and 13th-century creators and performers of lyric or didactic stanzaic poetry in the vernacular is not so clear. Whereas there is every reason to date the development of epic narrative poetry well before the beginning of written records and to see it as an essentially non-literate art, the various schools of Romance and Germanic poetry appear to be literary in every sense. But although there is a considerable corpus of French and Provençal poetry dating from before 1300, very little of it was transmitted with music, and such music as there is bears the signs of oral transmission. The nature of the relationship between poets and instrumentalists or singers, or the combination of these functions in one individual, has often been discussed in connection with the Provençal troubadours.

A number of 13th-century French poets are also known to have been musical performers or composers: Adenes (often called Adenes le roi), was a *menestrel* in the employ of the Count of Flanders from about 1270 to 1300; another, Adam de la Halle, belonged to the retinue of the Count of Artois. These poet-composers and their music are interesting in view of the special character of bourgeois society and culture in the Low Countries and the close relations between the feudal nobility and the bourgeoisie.

3. MINSTREL INSTRUMENTS AND ENSEMBLES. There are two major sources of facts and impressions concerning the varied roles and functions of medieval minstrels: literature, in which, especially in poetry, the symbolic element often outweighs the descriptive; and financial records, which only now are beginning to be explored systematically. While 13th-and 14th-century poetry mentions many instruments by name, financial records are less specific, and neither source gives much information as to what exactly the instruments were, how they were played (in terms enlightening to a modern musician) or how they sounded. How instruments were held and typical groupings of minstrels can sometimes be seen in manuscript and easel painting from the early 15th century on, but the pictorial record before that is thin and frequently ambiguous (fig.1). There is also very little evidence concerning regional differences or the development of performing practice.

The records are equally ambiguous concerning the size and composition of ensembles; it is possible that both polyphonic and monophonic works were performed by more than one musician to a part. Payments for solo minstrelsy on every sort of instrument were frequent, as

were those for two minstrels: a pair of fiddles or trumpets, or a plucked and a bowed string instrument, were apparently standard combinations. One can rarely be sure that simultaneous payment to several musicians meant that they played together, but in those accounts that permit such interpretation a variety of trio combinations is found, and occasionally quartets (three shawms and a trumpet were probably standard). Larger groups also appear, mostly in connection with urban processions. The division of instruments into *haut* and *bas* groups seems to have been common in the 15th century and relatively so in the 14th, though it is difficult to identify undesignated pipes and the 'ghiterne', which may be found in the company of both *haut* and *bas* instruments. The so-called *alta capella*, a trio or quartet of shawms and sackbuts (sometimes including the S-shaped slide trumpet), was also a 15th-century development. The chief percussion instrument was the nakers, usually found with trumpets and/or shawms, but the tabor was much used with softer instruments.

4. Minstrels' music. Little is known of the repertory performed by the minstrels. The various scraps that seem to be dance music (the *estampies* of *F-Pn* fr.844, the pieces of *GB-Lbl* Harl.978 or the *istanpitte* and saltarellos of *GB-Lbl* Add.29987) are so diverse in date, style and probable geographical origin that no coherent picture appears. Nor is it clear what place notated pieces occupied in a musical practice that was predominantly unwritten and to some extent extemporized. Certainly the Estampie must have been the leading kind of dance, and if it followed the pattern of many later dances it must have progressed by the mid-14th century some way beyond its beginnings as functional dance music; its characteristic structure – progressive repetition with *ouvert* and *clos* endings – seems specially well adapted to duet playing, particularly by similar instruments. The existence of this practice is corroborated by Raimbaut de Vaqeiras, who composed the poem *Kalenda maya* to an *estampie* that he first heard played by two fiddlers from France. From the end of the 14th century the basse danse also entered the minstrels' repertory, though its structure, and the ensemble of two shawms and slide trumpet or trombone frequently associated with it, sharply contrast with what is known of the *estampie*. As well as accomplished dance music, minstrels seem to have played the tenor and contratenor parts of the standard three-voice polyphonic chanson of the 14th century; Johannes de Grocheio (*c*1300) singled out fiddle players as particularly skilled in this practice. In the generations after Machaut, and perhaps during his lifetime, minstrels are even supposed to have composed such works.

5. The minstrel in society. The chief difficulties in comprehending the social functions of the minstrels stem from the absence of a comprehensive repertory of written music and the failure of medieval writers on music to devote any attention to them. Salmen (1960) singled out four factors contributing to this lack of critical attention: vagueness in systematic sociological foundations; lack of a complete view of European historical sources; failure to look to surviving traditions for parallels with extinct practices; and a lack of comparative studies of non-European cultures in which travelling musicians lived in similar circumstances. The role of the minstrels is deeply involved with the sociology of medieval musical life, which can only be fully understood from a systematic analysis of non-musical sources and an understanding of the musical characteristics and artistic possibilities of largely illiterate musical cultures. Granted such general considerations, knowledge of minstrelsy is also very uneven according to country or geographical area. In France and Burgundy, noble and royal minstrels held the centre of the stage; in the Low Countries, urban or bourgeois instrumentalists; and in Spain, poet-musicians. Of the position in some countries (e.g. Italy) virtually nothing is known. Although this diverse picture is partly due to real regional differences, it is also the result of unevenness in the historical records and of the varying interests – often motivated by patriotism – of the few modern scholars who have worked on the subject.

While the organization of musical life and therefore the social status of the minstrel differed from one region to another, it is clear that some secular musicians of the later Middle Ages were completely outside the predominant social structure; along with entertainers generally and others (e.g. wandering clerks) they had no fixed abode and owed allegiance to no civil or ecclesiastical authority. In the absence of historical records it is impossible to describe the musical life of the vast rural majority (85–95%) of the medieval population of Europe; it is not known whether musicians providing music for rural populations were called minstrels, what proportion of instrumental to vocal music there was or how it was performed. Moreover, the music of the medieval church has no demonstrable direct relationship to minstrels or minstrelsy, although bishops who were also temporal lords supported minstrels, and minstrels were often essential in urban religious processions and sometimes participated in church services. Necessarily, then, the two main divisions of inquiry are the courts and cities of medieval Europe. In both cases, accounts and other records providing names and numbers of musicians, dates and places are virtually non-existent before about 1200, rare until about 1300, sporadic but significant until 1350 and increasingly common thereafter. Although the pattern of documentary evidence is partly due to the loss of older records, it also reflects social changes in which book- and record-keeping went hand in hand with increasingly regulated and normalized forms of feudal and municipal government; this development had a direct bearing on the social context of music-making.

6. Court minstrels. The chief sources of information concerning court minstrels are household accounts of the monarchs and noblemen of medieval Europe; these are sometimes quite full, as in the case of the Household and Wardrobe Accounts of Edward I of England (see Rastall, 1964, 1968), sometimes vexingly skimpy, as in the case of the French Valois kings (largely because the archives of the Chambre des Comptes at Paris were destroyed in 1737). In addition there sometimes exist ordinances specifying the size of the household and its administrative subdivisions, along with the duties and perquisites of the retinue. The accounts often furnish names, dates, places and precise sums of money given as regular wages, gifts, liveries or extraordinary expenses, and they sometimes specify the instruments played by a minstrel – though it is doubtful whether such designations needed, or were intended, to be precise – but they do not usually provide direct evidence for the size or composition of ensembles or the nature of the repertory.

2. Urban procession accompanied by minstrels playing harps, lutes, shawms and trumpet: miniature by Loyset Liédet from the 'Faits et gestes d'Alexandre', 1470 (F-Pn fr.22547, f.245v)

In the earlier part of the period under consideration, a noble household – though it might range from 30 or 40 to several hundred – did not always include minstrels on the payroll. For example, while Robert, Count of Artois (1250–1302), appears to have had up to half a dozen minstrels in his regular employ, none are found in the accounts of his daughter and successor, Mahaut (1302–29). Philip VI of France (1328–50), in a household of at least 140, had only two minstrels, according to an ordinance of 1355; but 13 years later his son John, Duke of Normandy, employed at least 12 instrumentalists. In particular it is not at all clear that there was a general increase through the 14th century in the numbers of minstrels employed. To find no minstrels on regular wages in a sizable household is unusual, but the number employed seems to have borne little relationship to the size of the household as a whole. The development of French secular polyphony during the 14th century may well have been influenced by the assiduous patronage of minstrels by John the Good of France (1350–64) and his sons, Charles V (1364–80) and the Dukes of Berry, Burgundy and Anjou.

It is not certain that only minstrels designated as such could provide court music on a regular basis. A number of court posts are frequently cited in close proximity to that of minstrel in the records, for example fools, heralds, waits, ushers, bodyguards, justicers or waferers, who were variously responsible for entertainment, protocol, procurement of prostitutes and guarding the gates and doors and who on occasion may also have provided music. The records also testify to a constant traffic of minstrels from other courts, as well as common minstrels with no designated status. Normally, court minstrels did not receive wages significantly higher than those of other lesser personnel of the household, nor did they enjoy social privileges; they were not badly paid and they received many occasional and extraordinary gifts. Players of the *trompe* or *trompette* were distinguished from other minstrels and were paid higher wages at some courts.

It has often been stated that minstrels frequently achieved a relationship of special intimacy and trust with their noble employers. This undoubtedly happened at times, particularly with harpers and other chamber musicians, but the fact that minstrels were often entrusted with messages and more devious political missions such as espionage may only reflect their mobility as an occupational group. In the 14th century particularly, minstrels often moved from court to court, were sometimes lent by their employers and seem often to have travelled independently of their masters. Two sorts of occasion – noble weddings, and ceremonies of knighthood which frequently took place at Pentecost – attracted vast assemblies of minstrels; in a few instances several hundred gathered, and the payroll of one such ceremony, at Westminster in 1306, lists over 150 names (see Bullock-Davies, 1978).

Minstrels sometimes remained associated with a court for many years, often surviving their original employer to serve his successor. There are no women on the rosters of court musicians, though they were sometimes remunerated as the wives of regularly employed minstrels. Minstrels were ranked as household servants, with appropriate daily wages, but little is known about any hierarchic or career structure. The style 'magister' was occasionally used, probably for a minstrel in charge of apprentices (in this context it does not denote a university degree). In the late 15th century the chief minstrel was known as the 'marshal' in some households. From the 1270s onwards we hear of minstrel-kings, who apparently exercised control over minstrelsy in particular regions. Although they were royal servants there is no evidence that minstrel-kings were household officers. Until the mid-15th century minstrel-kings were the same as herald-kings, but thereafter the heralds specialized and minstrelsy was controlled through civic and national legislation.

7. MINSTREL SCHOOLS. During the 14th century and the early 15th, annual assemblies of minstrels took place, chiefly in the Low Countries and at Beauvais, in the week before Laetare Sunday in Lent. They seem to have involved both city and court minstrels, some of whom came from as far away as Aragon and Navarre. The earliest known gathering of this sort was in 1318 at Bruges (though there may have been one at Ypres in 1313) and the last was in 1447 at Damme. They were usually called 'escoles' or 'scoelen' – i.e. schools in the sense of a large group – but there is evidence from the second half of the 14th century that there were also schools in the more usual modern sense, in which musical instruction was offered (for example at Paris). Little is known of the duration of the *escoles*, the numbers of musicians present or the purposes for which they met, though a few records state that they learnt new songs and purchased instruments. There may have been several concurrent regional meetings in a single year. Such gatherings can be regarded as contributing to a supra-regional musical culture and to the musical predominance of the Low Countries as early as the 14th century.

8. CONCLUSION. There is no distinct line of demarcation between an era of minstrels and minstrelsy and a subsequent one: indeed, in many rural areas minstrelsy never quite died out, and the village musicians in parts of eastern Europe and elsewhere appear to represent a tradition descended directly from medieval minstrelsy. In urban and court life minstrelsy gradually gave way to a different form of musical culture, mainly during the period 1500–1650. There are many interrelated factors in this change: the growth of musical literacy among the better minstrels; the appearance of an extensive body of written polyphony based on vocal styles (including important printed collections from 1501 onwards); the development of specifically instrumental styles; and the changes in social expectation that made the better minstrels aspire to the status of 'musician' and 'gentleman'.

Minstrelsy, American. A type of popular entertainment, principally of the 19th century, which consisted of the theatrical presentation of ostensible elements of black life in song, dance and speech; at first performed by whites impersonating blacks, minstrelsy only later was participated in by blacks. Minstrelsy took the theatrical productions of the Englishman Charles Mathews as one point of departure. Black music and dialect greatly attracted Mathews during his visit to the USA in 1822 and he incorporated the latter element in his skits, sketches, stump speeches and songs. Before Mathews, Charles Dibdin had used black material in his musical extravaganzas, which began in 1768 and were still popular well into the first decade of the 19th century. Southern plantation and frontier songs, black tunes patterned on English musical models, banjo tunes and playing styles, English plays and operas with black subjects and plots, British dance types and tunes and direct observation of blacks constituted other sources and models for early minstrelsy.

1. The Virginia Minstrels, Dan Emmett (centre, fiddle), Dick Pelham (tambourine), Billy Whitlock (banjo) and Frank Brower (bones): lithograph from the title-page of a song collection (Boston: Reed, 1843)

By the end of the 1820s there had evolved an indigenous and novel American, or blackface, minstrelsy. The performances of George Washington Dixon and of DADDY RICE represented the incipient stages of the form. The performer blackened his face with burnt cork and wore costumes that represented, to the white audience, the 'typical black' person: the uncouth, naive, devil-may-care southern plantation slave (Jim Crow) in his tattered clothing, or the urban dandy (Zip Coon or Dandy Jim). These two stereotypes persisted in minstrelsy for several decades. Rice developed the minstrel show, or 'Ethiopian opera', expanding the use of black dialect plantation songs, virtuoso dancing, banjo and fiddle music and crude humour, and providing the whole with a greater degree of organization. Nevertheless, its function continued to be primarily that of an entr'acte in the theatre or in the circus ring.

The classic age of blackface minstrelsy (*c*1840–70) was heralded in the late 1830s, when a modicum of dramatic continuity was introduced and performers began to join together to form duos (most frequently a banjoist and a dancer), trios and finally quartets. The instruments they used were the banjo, tambourine, violin, bones and sometimes accordion, all except the last associated with the southern plantation slave. At least one musician in the group doubled as a dancer. The Virginia Minstrels presented the first entire show of this new type at the Bowery Amphitheatre in New York on 6 February 1843; this performance was given as part of a circus but the group was soon appearing alone (fig.1). The Virginia Minstrels consisted of DAN EMMETT, who played the

fiddle, Billy Whitlock (banjo), Frank Brower (bones) and Dick Pelham (tambourine). Emmett had established his reputation as a banjo player and singer in the circus ring and was a versatile, practical musician who enjoyed a long and productive life on the minstrel stage, first as a performer, then as both performer and composer of a large number of the finest examples of classic minstrel music. Emmett's most popular contribution to minstrelsy was *I wish I was in Dixie's land* (copyright 1860), better known as *Dixie*, the melody and text of which eventually transcended boundaries of region, nation and genre. The Virginia Minstrels met with spectacular success in cities of the eastern USA in the spring of 1843 and in concerts during a brief tour of the British Isles that summer. Although the original group disbanded in July 1843, Emmett re-established it on his return to the USA, replacing Pelham and Whitlock, who had chosen to remain permanently in England.

The Virginia Minstrels provided the prototype for the instrumentation and stage action of the many troupes that were formed in the 1840s, such as the Ethiopian Serenaders, the Virginia Serenaders, Christy's Minstrels, Buckley's New Orleans Serenaders, the Kentucky Minstrels, White's Minstrels and the Kitchen Minstrels. The members of the troupe arranged themselves in a semicircle with bones and tambourine players at either end as focusses of attention. One of these players would serve as master of ceremonies, a role later assumed by an interlocutor at the centre of the band.

While minstrelsy frequently retained its connections with the theatre and circus as an entr'acte, these associations became increasingly attenuated as the minstrel show grew in scope and changed in content; more and more it stood by itself as a fully developed form of entertainment. The form and contents of the early minstrel show were flexible and versatile and could be adapted to the audience, but a general structure for the performance was developed. During the 1840s the show was divided into two parts: the first concentrated largely upon the urban black dandy, the second on the southern plantation slave. By the 1850s, however, black elements had been gradually reduced and moved to the concluding section of a tripartite structure. Music of the 'genteel' tradition now prevailed in the first section, where popular and sentimental ballads of the day and polished minstrel songs by such composers as Stephen Foster supplanted the older and cruder dialect tunes. The middle part consisted of the 'olio', a potpourri of dancing and musical virtuosity, with parodies of Italian operas, stage plays and visiting European singing groups such as the Rainer Family. In the third section the walk-around, at once the conclusion and high point of the show, took on primary importance. This was an ensemble finale in which members of the troupe in various combinations participated in song, instrumental and choral music and dance. Although examples of the walk-around performed by a solo dancer exist from the late 1840s, the ensemble finale dates from only around 1858. *Dixie* is the best-known example of this genre, although it soon lost its original function. Emmett, whose walk-arounds enjoyed an enormous popularity, described them as an attempt to imitate 'the habits and crude ideas of the slaves of the South' whose 'knowledge of the world at large was very limited'. While Emmett probably composed more walk-arounds than any other individual (including *I ain't got time to tarry*, 1858; *Jonny Roach*, 1859; *Wide Awake*, 1860; *Ober in Jarsey*, 1863; and *Old Times Rocks*, 1865), other important contributions to the genre were made by Sam Lucas (*Hannah boil dat cabbage down*, 1878) and Ned Straight (*Old Times Roxy*, 1880).

Shows from this classic age of blackface minstrelsy were immensely popular, especially in the Northeast. Bryant's Minstrels and Christy's Minstrels were the outstanding examples of successful troupes, though other companies that remained popular throughout the 1850s were the Harmoneon Troupe, White's Minstrels, the Buckeye Minstrels, the Ethiopian Serenaders, Wood's Minstrels, Buckley's New Orleans Serenaders, Campbell's Minstrels, the Sable Harmonists, Ordway's Aeolians and Sanford's Opera Troupe.

The inclusion of music from the 'genteel' tradition and the varied fare of the olio began a movement away from the primitive quality of early minstrelsy towards a more sophisticated and standardized variety show. However, from 1857 to 1866 Bryant's Minstrels, led by Dan Bryant, temporarily slowed this trend with their productions of a rejuvenated minstrel show; full of the vitality characteristic of the 1840s, their performances were unqualified financial successes even during the Civil War. But their classic type of minstrelsy gradually fell from fashion, to be replaced by a show with a wider variety of styles. By 1870 many of the smaller troupes had been driven out of business by such companies as Leavitt's Gigantean Minstrels and Cleveland's Colossals (gigantism in any field greatly impressed many Americans at the time). While men had always played 'wench' roles in the classic minstrel show and continued as female impersonators, women minstrels now began to appear; some minstrel troupes, in fact, consisted only of women. Some troupes abandoned the burnt cork make-up. There was also a change in the contents of the show. With the issue of slavery more or less resolved, and in an attempt to appeal to a wider audience than before, black subjects were supplanted by such topics as satirization of other targets of hostility and ridicule: suffragists and ethnic stereotypes reflecting new patterns of immigration and Amerindians. Minstrels began to rail against the decline in morality and warn against the evils of city life; a yearning for a return to the simpler, 'good old days' was a common theme.

An important change was the development of minstrel troupes consisting of black performers. Whereas the few that had existed in the early days had not been considered important, black companies attained true significance after the Civil War. Often under the management of whites, but occasionally led by blacks, these troupes provided a showcase for the talents of black musicians (fig.2). Black troupes often concentrated on plantation scenes and incorporated African American religious music in their shows. Those that were successful in achieving extended runs included Brooker and Clayton's Georgia Minstrels, the Original Georgia Minstrels, Callender's Original Georgia Minstrels, Haverly's Colored Minstrels, Sprague's Georgia Minstrels, Richard's and Pringle's Georgia Minstrels, the Kersands Minstrels and W.S. Cleveland's Colored Minstrels. Billy Kersands, Thomas Dilward ('Japanese Tommy'), Bob Height, Charles Hicks, Horace Weston, Sam Lucas, Tom Mackintosh, Jim Grace and James Bland led the way for the participation of blacks in minstrelsy, and by 1890 African Americans were firmly established in American show business. By

the turn of the century most professional troupes had turned from classic minstrelsy to burlesque, the development of the Broadway musical and musical productions connected only tenuously with the minstrel show. Nevertheless, among amateur performers and producers, minstrelsy continued as a popular form of American entertainment until the early 1950s.

Many of the tunes in the early minstrel show derived from British dance types; others seem to share a common African American heritage, with an insistence on irregular rhythmic accentuations achieved through phrasing, rests, textures, ornamentation and metrical shifts. The main emphasis in much minstrel music is a rhythmic, rather than a melodic or harmonic, one. While the rhythmic element is often highly complicated, the melodies tend to be based on brief motifs that are varied only slightly upon repetition. Melodies constructed on pentatonic or anhemitonic figures and triadic formulas, and lying within a relatively narrow compass, are commonly found. Many give no hint of any sort of harmonic progression. Diatonicism prevails in the accompaniments of later tunes, interrupted briefly on occasion by a diminished seventh or secondary dominant chord preceding a cadence. Common to many of the songs is a verse-and-refrain design. Initially a soloist sang the verse, and was joined in unison by the entire troupe for the refrain; before long, however, it became more common for the troupe to sing the refrain in four-part harmony – a particular characteristic of the minstrel songs.

Many striking similarities exist between the traditional oral music of the southern Appalachians and early minstrel songs, but it has not yet been determined which (if either) provided the original inspiration for the other. It is certain, however, that the animated rhythmic element of the banjo tunes composed for minstrel shows between 1840 and 1890 greatly influenced American popular music.

Important collections of documents concerning minstrelsy are in the Harvard Theater Collection, the New York Public Library at Lincoln Center, Brown University (Harris Collection), and the State Library of Ohio in Columbus.

CLAYTON W. HENDERSON

Minter, Drew (*b* Washington DC, 11 Nov 1955). American countertenor. He attended Indiana University and studied privately with Marcy Lindheimer, Myron McPherson, Rita Streich and Erik Werba. Early in his career he was a member of early music ensembles, including the Waverly Consort in New York. His stage début was in the title role of Handel's *Orlando* at the St Louis Baroque Festival in 1983. He has since appeared in Boston, Brussels, Los Angeles, Milwaukee and Omaha, where his clear, ringing voice has won praise, particularly in operas by Handel, Landi and Monteverdi. In 1989 he made his Santa Fe Opera début as the Military Governor in the American première of Weir's *A Night at the Chinese Opera* and also sang Endymion (*Calisto*). He sang the title role in Handel's *Ottone* at Göttingen in 1992 and subsequently recorded the part. Among his other Handel recordings are *Agrippina*, *Berenice*, *Esther*, *Floridante*, *Giustino*, *Messiah*, *Sosarme*, *Susanna* and *Theodora*.

CORI ELLISON/R

Minton, Yvonne (Fay) (*b* Sydney, 4 Dec 1938). Australian mezzo-soprano. She studied at the Conservatorium in Sydney and in 1960 moved to London, where she began a concert career before making her operatic début in 1964 as Britten's Lucretia in a City Literary Institute production; the same year she created Maggie Dempster in Maw's *One Man Show*. She then joined the Covent Garden company and over the next 12 years sang more than 30 major roles, creating (and later recording) Thea in *The Knot Garden* (1970) and having notable success as Octavian, the role of her débuts at Chicago (1970), the Metropolitan Opera (1973) and the Paris Opéra (1976); she also recorded the part under Solti. Her appearance as Brangäne at Bayreuth in 1974 was followed by Fricka and Waltraute in the centenary *Ring*, and she sang Kundry at Covent Garden in 1979. Also in 1979 she sang Countess Geschwitz in the first three-act *Lulu* in Paris, which she also filmed and recorded. Minton's other recordings include Dorabella under Klemperer (1971), Mozart's Sextus (1976) under Colin Davis, Geneviève (*Pelléas*) under Boulez (1970) and Fricka under Janowski (1981–4). Her warm fullness of tone and striking stage personality were combined with interpretative skill and imagination. She was made a CBE in 1980. After a short period of retirement she sang Leokadja Begbick (*Mahagonny*) at Florence in 1990, Clytemnestra at Adelaide in 1991 and returned to Covent Garden as Countess Helfensteen in *Mathis der Maler* (1995).

NOËL GOODWIN

Mintz, Shlomo (*b* Moscow, 30 Oct 1957). Israeli violinist, viola player and conductor of Russian birth. He studied in Israel with Ilona Feher from 1964 to 1973, and made his début with the Israel PO under Zubin Mehta in 1968. In 1973 he went to the USA for his Carnegie Hall début and to study with Dorothy DeLay at the Juilliard School. In 1977 he made a major European tour, appearing with leading orchestras and conductors, and he has subsequently followed an international career as a soloist and chamber music player. He has given recitals with the pianists Itamar Golan and Georges Pludermacher, and as a member of the Golan-Mintz-Haimovitz Trio. He was music director of the Israel Chamber Orchestra from 1989 to 1993, and has also conducted the Israel PO and the Rotterdam PO; in 1994 he was appointed music director of the Limburg SO in Maastricht. Mintz has recorded both violin and viola repertory, and has been awarded the Grand Prix du Disque on several occasions. In 1984 he received the Premio Accademia Musicale Chigiana. He plays a Guarneri del Gesù violin of 1700 and a viola by Carlo Giuseppe Testore of 1696.

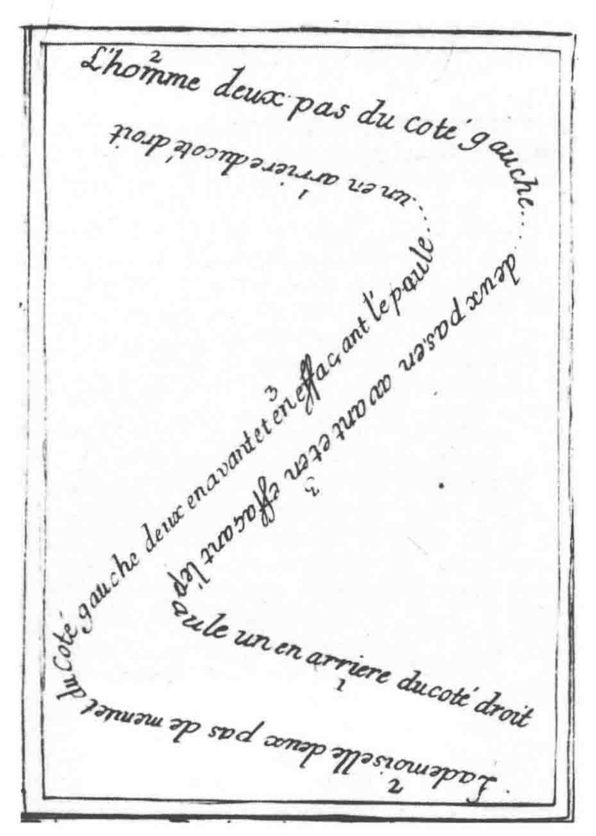
MARGARET CAMPBELL

Minuet (Fr. *menuet*; Ger. *Menuett*; It. *minuetto*; Sp. *minuete, minué*). A French dance. In a moderate or slow triple metre, it was one of the most popular social dances in aristocratic society from the mid-17th century to the late 18th. It was used as an optional movement in Baroque suites, and frequently appeared in movements of late 18th-century multi-movement forms such as the sonata, the string quartet, and the symphony, where it was usually paired with a TRIO (*see also* SCHERZO).

1. The dance. 2. Minuets in Baroque instrumental music. 3. Classical and neo-classical minuets.

1. THE DANCE. Though the origin of the minuet is unknown, it was danced in the court of Louis XIV at least by the 1660s. Praetorius (*Terpsichore*, 1612) is now thought to have erred in claiming it to be a descendant of the *branle de Poitou*, a claim that was nonetheless repeated over a century later by Pierre Rameau (*Le maître à danser*, 1725), with the addition of the plausible detail that Pierre Beauchamp, Louis XIV's dancing-master, had effected the transformation. There is virtually no point of resemblance between the two dances; some of the minuets included in the Philidor Collection consist of the three-bar phrases characteristic of the BRANLE, however, so the theory cannot be entirely discounted. The name 'menuet' may have derived from the French 'menu' (slender, small), referring to the extremely small steps of the dance, or from the *branle à mener* or *amener*, which, like the *branle de Poitou*, were popular group dances in early 17th-century France.

As an aristocratic social dance the minuet was dignified, graceful, relaxed and unaffected, unlike some modern re-creations in which exaggerated postures are used. The attention of both dancers and spectators was directed to the elegant and seemingly effortless performance of minuet step-units, each consisting of four tiny steps in 6/4 time set in counter rhythm to two bars of music in 3/4, and, secondarily, to the movement of the dancers in prescribed floor patterns. The earliest extant choreographies using minuet steps are from the 1680s. André Lorin presented a manuscript collection of longways country dances to Louis XIV in about 1685, with indications of minuet steps. Recent research has pieced together the performance of *Le mariage de la grosse Cathos* in which a choreographed minuet and other social dances form parts of a comic *Mascarade* presented at Versailles in 1688 (Harris-Warrick and Marsch, 1994). Specific information on the actual steps and movements began to be available in 1700, when the publication of the Beaucham-Feuillet system of dance notation (*see* BEAUCHAMPS, PIERRE, and FEUILLET, RAOUL-AUGER) made it possible to record dance



1. Minuet at a formal court ball: engraving from Pierre Rameau's 'Le maître à danser' (Paris, 1725)

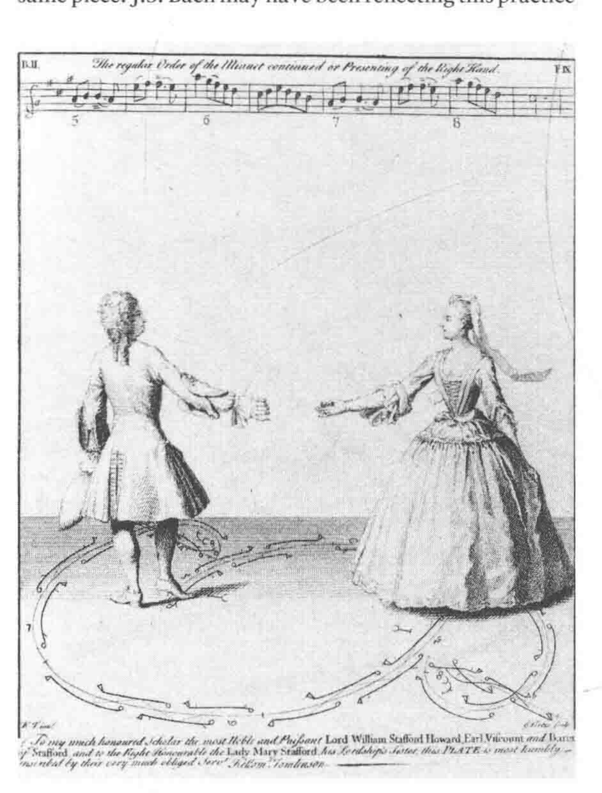
steps in their proper relationship to the accompanying music. At least 45 early 18th-century choreographies or sections of choreographies survive (listed in Little and Marsh, 1992). These are primarily social dances by French and English choreographers (e.g. Isaac's 'The Britannia', 1706, and Pécour's 'Le menuet d'Alcide', 1709), though a few dances are designated for theatrical performance (e.g. Pécour's 'Menuet à deux pour un homme et une femme, dancé par Mr. du Moulin l'Ainé et Mlle. Victoire au ballet des fragments de Mr. de Lully', 1704, and Anthony L'abbé's 'Menuet performed by Mrs. Santlow', *c*1725).

Two treatises by Pierre Rameau (Paris, 1725) supply additional information on social dance practices at the French court. According to Rameau, each formal ball conformed to a pre-arranged ritual establishing the seating arrangement in the salon and indicating when, how and by whom each dance would be performed. Ordinarily the minuet was danced by one couple at a time while the rest of the company watched and appraised their accomplishments (fig.1; *see also* DANCE, §4(ii), fig.12). After making honours to the Présence (the king or someone else designated to preside for the evening) and to each other, the dancers moved through a series of prescribed step patterns to diagonally opposite sides of a rectangular area. From there they moved, again in the typical minuet step patterns, along an imaginary letter Z (fig.2) so that they passed each other in the middle and finished the figure in opposite positions (before 1700 the figure of the floor pattern was a letter S, the sign for the Sun King, Louis XIV). After several Z figurations, the dancers presented their right hands to each other in the middle of the rectangle and turned a full circle before retreating to diagonally opposite corners. Then they advanced again for a similar presentation of left hands, followed by more letter Z figurations. The climax of the dance was the presentation of both hands, during which the dancers turned several circles before retreating together to make honours to each other and to the Présence (fig.3).

The four small steps of a minuet step-unit always began on the right foot. A number of different step-units were used, all but a few ornamental ones made up of combinations of *demi-coupés* (rises from previous bends during the transfer of weight from foot to foot), *demi-jettés* (small leaps from one foot to the other) and *pas marchés* (plain steps on to the ball of the foot), all steps that end with the dancer's weight on the ball of the foot. Most step patterns can be taken in any direction, and all four-step complexes are tiny, covering a distance of about a metre. Two of the most popular patterns were the *pas de menuet à deux mouvements*, consisting of two *demi-coupés* and two *pas marchés* with the steps falling on the first, third, fourth and fifth crotchets of a two-bar unit (Table 1) and the *pas de menuet à trois mouvements*. The latter, more difficult to execute, consists of two *demi-coupés*, a *pas marché* and either another *demi-coupé* or a *demi-jetté*, with steps falling on the first, third, fourth and sixth crotchets of a unit. Gentle accents in the music accompanying the dance are always implied by the *demi-coupé* and the *demi-jetté*, but the music and dance often form counter-rhythms to each other. Thus, musicians accompanying dancers or playing stylized minuets should realize that the basic unit of the dance is two bars long (not one or four), and that while the dancers' movements always imply an accent on the first beat of a unit, strong secondary accents would not necessarily fall on the second

2. 'Z' pattern in the minuet, showing the path travelled by the dancers, with the verbal instructions for the steps to use, from Pierre Rameau's 'Le maître à danser' (1725)

downbeat. Further, the letter Z floor design ordinarily took six step patterns to execute, thus best fitting a musical strain 12 bars long. Although many of the minuets in Lully's ballets, for example, have such strains, most minuets are made of strains eight or 16 bars long, suggesting that a frequent lack of coincidence between music and dance was enjoyed. The tension was presumably resolved by the end of the 100 to 200 bars usually required for a complete minuet performance.



One reason for the minuet's remarkable longevity as a social dance may have been the considerable variety of steps it could absorb into the basic pattern. The 'minuet hop' or *contretemps*, the *balancé*, the *tems de courante* and the *fleuret* were among the most common interpolated steps in France (see treatises by Rameau and Feuillet). GOTTFRIED TAUBERT, writing in 1717, described four step patterns for the minuet, in different relationships to music and in eight different rhythmic-metrical configurations. Dufort, writing in Italian in 1728, mentioned three possible step patterns with other relationships to the accompanying music. In 1767 C.J. von Felsenstein described a pattern with accents on the first, fourth, fifth and sixth beats (see Table 1). The French minuet apparently formed a point of departure for varied practices in different countries and social settings. Minuet steps were adopted into the CONTREDANSE, for example, creating a set of dances for two or four couples using repetitive step patterns and a variety of floor designs. Later in the 18th century steps from other triple-metre dances such as the waltz, ländler and polonaise were introduced into the minuet or juxtaposed with it in the same piece. J.S. Bach may have been reflecting this practice in his Brandenburg Concerto no.1, in which the rondeau-form minuet movement has a polonaise section. In Spain and Portugal, where the minuet was a popular court dance, native dance styles infiltrated, as in the 'minuet afandangado' (see Minguet e Yrol, 1758, and Hatchette, 1971).

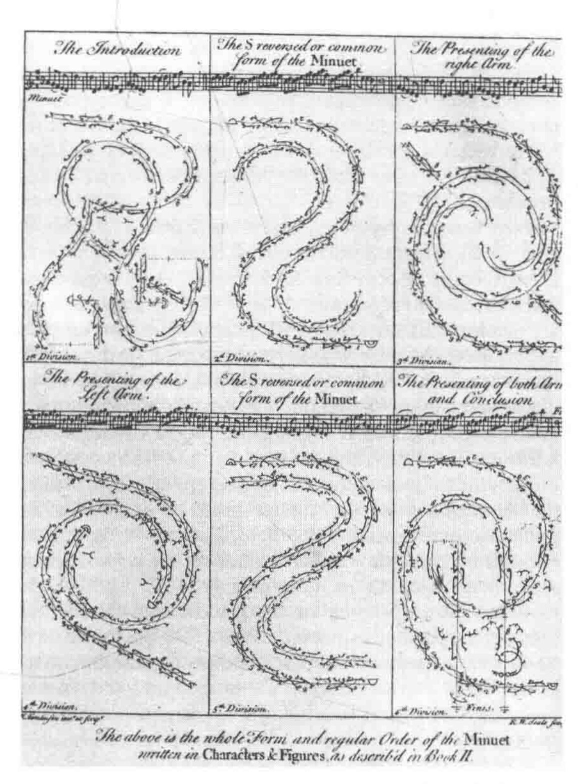


TABLE 1: Two common minuet patterns

	3/4	1 ♩	2 ♩	3 ♩	4 ♩	5 ♩	6 ♩
pas de minuet à deux mouvements	∨	∧	∨	∧	I	I	
		R		L	R	L	
pas de minuet à trois mouvements	∨	∧	∨	∧	I	∨	j
		R		L	R		L

∨ = plié [bent knee(s)]; R = right foot L = left foot
j = demi-jetté [small leap on to ball of foot];
∧ = élevé [rise to straightened knee(s) on ball of foot];
∨∧ = demi-coupé [bend and rise];
I = pas marché [step on ball of foot]

2. MINUETS IN BAROQUE INSTRUMENTAL MUSIC. Early examples of minuets apparently intended to accompany dancing survive in the Kassel Manuscript (*c*1660, ed. J. Ecorcheville, *Vingt suites d'orchestre*, Paris, 1906/*R*) and in the Philidor Collection. The two minuets in the Kassel

3. Presentation of the right hand and the 'whole form and regular order of the minuet': engravings by (a) George Vertue and (b) R.W. Seale from Kellom Tomlinson's 'The Art of Dancing' (London, 1735)

Manuscript both consist of two unrelated strains, each eight bars long; those in the Philidor Collection consist of phrases three bars long, resembling the characteristic phrases of the *branle à mener* and suggesting an elegant cross-rhythm of music and dance resolved at the end of the strain. Many printed and manuscript collections of music to accompany dancing remain unedited (particularly rich holdings exist in France and England), and study of these sources may shed light on the early development of the minuet as a musical form. The earliest significant corpus of minuets comes from the theatrical works of Lully: 92 titled minuets appear in his ballets and operas from 1664 to 1687, and several of his overtures include minuet movements (e.g. *Armide*), presumably not intended to accompany the dance. The 'Menuet pour les faunes et les dryades' from *Les amants magnifiques* (*Oeuvres complètes*, ix/3, p.200) is cast in two strains, each 12 bars long and, therefore, each perfectly tailored to accompany the execution of one Z floor pattern. Not all Lully's minuets conform so strictly to the phrases of the dance, however: the fifth entrée of his *Ballet des nations* (*Oeuvres complètes*, ix/3, p.142, 'Les français'), including two instrumental minuets separated by a vocal reprise of the first, consists of two-, four- and ten-bar phrases, thus creating some tension between music and dance. Significantly, the entire entrée is 124 bars long when the indicated repeats are taken, almost exactly the prescribed length for a complete minuet performance. Ex.1, from the 'Menuet des Thébains' (*Entr'actes d'Oedipe*, 1664), shows a five-bar minuet strain, which, though unorthodox, would not necessarily preclude social dancing, since with the repeat an even number of bars would result. It should be remembered that theatrical dancing in general was more elaborate and virtuoso than contemporary social dancing, permitting and even encouraging considerable freedom in the accompanying musical structures.

Ex.1 Lully: *Entr'acte d'Oedipe* (1664), Menuet des Thébains

Like most 17th-century dances, the minuet was included in French keyboard and ensemble suites, usually (along with other still-popular dances like the bourrée and gavotte) appearing after the sarabande, and many composers included minuets among their independent keyboard pieces (e.g. Chambonnières, Lebègue, Louis Marchand and Bach in the minuets in the *Clavierbüchlein* for Anna Magdalena). In addition, many minuets were included in manuscript collections of music for guitar and lute, and minuet-like movements (usually without the dance title), occurred in collections of organ music (e.g. by G.G. Nivers, Gilles Jullien and Nicolas de Grigny) and were incorporated into songs (*see* BRUNETTE). Usually, the minuet received a rather straightforward treatment, with its characteristic clarity of rhythm and phrase preserved. Even the occasional *double* (*see* DOUBLE (i)) of a minuet was likely to be free from the complex texture and rhythmic ambiguities that otherwise fascinated instrumental composers of the French Baroque period, probably because the minuet was still a familiar social dance. Some composers experimented with irregular phrase structure: Louis Marchand's second minuet in the collection *Pièces de clavecin* (1702) consists of a ten-bar strain divided into five-bar phrases: at least one of Louis Couperin's minuets retains the three-bar phrase structure of the minuets in the Philidor Collection.

The minuet was a popular social dance in 17th-century England, where it also appeared in stylized forms (see the keyboard pieces in *The Second Part of Musick's Hand-Maid*, published by Playford, 1689) and in music for the theatre. Purcell set minuets more often than any other dance in his stage works and incidental music, including movements marked 'minuet' or 'tempo di minuetto' in the overtures to *The Old Bachelor* (1693) and *Bonduca, or The British Heroine* (1695); his minuets, like those of his French contemporaries, are in binary form, usually consisting of no more than two eight-bar strains. German composers of the Louis XIV era, such as Georg Muffat, Pachelbel and J.C.F. Fischer, also wrote minuets in the French style, adding more contrapuntal and motivic interest than the French while retaining the clear phrasing and unambiguous rhythms of the original dance. J.S. Bach's 28 titled minuets occur in his keyboard partitas and suites, in chamber music for solo and accompanied violin, cello or flute, in three of the four orchestral suites, and in the Brandenburg Concerto no.1 (Little and Jenne, 1991). Bach also liberally used minuet dance rhythms in his vocal works (e.g. in the cantatas BWV1, 'Unser Mund und Ton der Saiten', BWV93, 'Man halte nur ein wenig stille', BWV6, 'Hochgelobter Gottessohn'; and in the *Magnificat* in D BWV243, 'Et exultavit spiritus meus'). Though the time signature in these pieces is 3/8 not 3/4, the overall form is that of da capo aria and frequent virtuosity appears, the essential minuet characteristics are still present: triple metre in moderate tempo; moderate affect which is intimate and nonchalant or that of simple joy or peace; balanced four-plus-four-bar phrase structure with extensions; and uncomplicated harmonies.

As with other Baroque dance forms such as the allemande, courante and gigue, Italian minuet style differed from the mainstream of European taste in a preference for faster tempos, implied by the prevalent use of 3/8 or 6/8 as the ordinary time signature. Melodic movement in the Italian minuet was carried over a longer phrase than in the French dance (usually eight bars rather than two or four), and more use was made of both melodic and harmonic sequence to sustain a clear sense of direction. Examples of the Italian-style minuet may be found in the chamber works of Corelli, in some of the opera overtures of Alessandro Scarlatti and Handel (ex.2), in some of Handel's keyboard suites, in the music of some of Handel's contemporaries, notably William Boyce, in French composers such as François Couperin, Rameau, Boismortier, Hotteterre and J.-M. Leclair *l'aîné*, and in works by Telemann and J.S. Bach. Michel L'Affilard, in his valuable treatise *Principes très-faciles pour bien*

Ex.2 Handel: *Rodelinda* (1725), menuet from the overture

apprendre la musique (Paris, 1694), gave two examples of minuet songs, one with the mensuration 3, the other in 6/8 and a faster tempo, indicating that there was some variety in minuet tempos, even among French composers. Much has been written about the tempo of the minuet, both in the 18th century and in modern times. The large number of conflicting treatises and studies suggests that there was no fixed tempo for this dance over the centuries, but considerable variety in the different courts and cities in which the minuet was performed (see Malloch, 1993).

3. Classical and neo-classical minuets. Minuets in various styles remained among the most popular dance forms of aristocratic Europe throughout the 18th century, exerting a continuing influence on stylized dance music. The restrained yet complex elegance of the dance itself appealed to the requirements of the developing aesthetic of the Rococo period, and the relative simplicity of its phrases and harmonic movement made it an admirable vehicle for experiments with large structures based on contrasting harmonic and tonal plateaux, while permitting the introduction of other triple-metre styles and learned contrapuntal devices.

The minuet was probably first included in symphonies by Italian composers in the early 18th century, as movements labelled 'tempo di minuetto' often closed opera overtures which, like that to Domenico Scarlatti's *Narciso*, for example, were sometimes later published independently as 'sinfonias' (London, 1720). Scarlatti's minuet movement, typical of its time and in the binary form typical of late Baroque dance movements, consists of two eight-bar strains based on a single rhythmic motif; many of Sammartini's symphonies end with similar minuet movements, as do the symphonies of C.F. Abel, Johann Stamitz and M.G. Monn and some of the early keyboard sonatas of Haydn.

Rather different minuet finales became fairly frequent in the symphonies, concertos and sonatas of English-influenced composers during the third quarter of the 18th century. These movements, generally headed with the rubric 'tempo di minuetto' or the hybrid Italian-German word 'menuetto', often applied some of the principles of so-called Sonata form to a movement having the characteristic metre, tempo and phrasing of the minuet. The third movement of Thomas Arne's Symphony no.3 in E♭ (1767, ed. in MC, iii, London, 1973), for example, marked 'tempo di minuetto', has an opening section presenting two distinct themes in contrasting keys; after repetition of that section, a brief development combines motivic transformation of the opening theme with a series of rapid modulations, followed by a full recapitulation of the opening without the change of key. J.C. Bach's Sinfonia concertante in E♭ (*c*1775, ed. J.A. White, *The Concerted Symphonies*, Tallahassee, FL, 1963) includes a slightly more complex minuet finale: the sonata-like minuet section (the first modulation to the dominant occurs after the double bar, followed by intense motivic development of the first section's theme, a long dominant pedal, and a full recapitulation) is paired with a short trio in ternary form, and then repeated da capo. Later and perhaps clearer examples of sonata principles applied to minuet movements (other than finales) can be found in the works of both Mozart (e.g. K387, which lacks motivic development but has a sharply defined contrast of tonality and theme in the 'exposition', and K464) and Haydn (piano sonatas HXVI:25 in E♭, HXVI:35 in C). Minuet finales, whether or not they use formal procedures derived from the sonata, occur fairly often in Haydn's piano sonatas and piano trios and in several of Mozart's concertos (e.g. K271 and K482 for piano, K190/186*e* for two violins, K191/186*e* for bassoon and K313/285*c* for flute).

Other formal schemes used for such movements included the rondeau-like alternations of one minuet with several trios seen in the minuet movement of Bach's Brandenburg Concerto no.1, commonly used in divertimentos and serenades (e.g. Mozart's Serenade in D K185/167*a*, the second minuet, and Haydn's piano sonatas HXVI:22 in E and HXVI:29 in F), variations of a binary minuet theme (Haydn's piano sonatas HXVI:30 in A and HXVI:33 in D), and, most familiarly, the common stereotype of a minuet paired with a single trio contrasting in key, thematic material, scoring and general mood. The last form, appearing frequently as the third of four movements in symphonies and string quartets written after about 1770, typically consisted of a ternary minuet section (e.g. two 12-bar strains, each repeated) and a shorter ternary trio, the minuet being repeated da capo with repeats (*see* Ternary form). About mid-century the trio was normally in a closely related key, usually either the tonic minor or the relative minor of the minuet, but in many of Haydn's later string quartets the tonal contrast was made considerably more striking: in op.77 no.2, for example, the minuet is in F major, the trio in D♭. Sometimes the characteristically simple and elegant style of the minuet was infused with elements from more 'serious' kinds of music, often with quite dramatic effects. The minuet of Haydn's piano sonata HXVI:26 in A, for example, is cast in the typical minuet and trio form, but, as indicated by its heading 'menuet al rovescio', the second half of each section is an exact retrograde of the first. Haydn's Symphony no.44 ('Trauer') and String Quartet op.76 no.2 both include minuet and trio movements that employ strict canon and irregular phrases to lend an unaccustomed seriousness to the form, as does the use of both canon and double counterpoint in the minuet of Mozart's Symphony no.40 (K550).

All the forms applied to minuet movements in Classical symphonies and chamber works probably derived from the actual practice of dance accompaniment. Most surviving functional minuets are quite short, often no more than 16 or 32 bars, and indeed the instructions for composing minuets given by such theorists as Brossard (1703), J.-J. Rousseau (1768) and Honoré Compan (1787) specified that the individual strains of a minuet ought to be only eight or 16 bars long, divided into phrases of two or four bars. Contemporary descriptions of the dance, however, indicate that a complete performance would have taken well over 100 bars. To accompany the long social dance, the musicians would have had to perform several minuets in succession, with repeats, and may also have used improvised embellishments to the successive repetitions of strains, thus creating variation or rondeau forms (see Little, 1987). The minuet and trio stereotype seems to have been the most common such practice to be transferred to stylized music by composers who, for the most part, had contributed many minuets for ballroom use at various times in their careers. As an aristocratic dance, the minuet continued throughout the 18th century to hold its place in opera and ballet as well as in the ballroom and concert hall, especially in France, and

several theatrical minuet choreographies have survived. Grétry included a minuet in his *Céphale et Procris* (1773), as did Gluck in the Paris version of his *Orphée* (1774), Sacchini in his opera *Chimène* (1783) and Salieri in his *Tarare* (1787). Probably the most famous appearance of the minuet on stage, however, was in Mozart's *Don Giovanni* (1787), where, in the finale of Act 1, Don Ottavio and Donna Anna dance a noble minuet, while Leporello and Masetto perform the comparatively plebeian German dance and Don Giovanni and Zerlina the middle-class contredanse, a scene in which the simultaneously performed dances portray the juxtaposed cultural values and social standing of the dancers (see Allanbrook, 1983, pp.277–87).

18th-century theorists such as J.P. Kirnberger (*Der allezeit fertige Polonoisen- und Menuettencomponist*, 1757) used the minuet as an elementary composition exercise, and the process was even reduced to methods used in games of chance such as the throwing of dice: the clear implication is that the melodic and harmonic patterns of the standard eight-bar minuet were so standardized that arbitrary arrangements of them could be made without incongruity (see Ratner, 1970), despite the sophistication that had been brought to the form by some composers. Interestingly enough, minuet movements seldom appeared in Italian symphonies and concertos after the mid-18th century, and, in fact, the standard minuet and trio movement was increasingly often replaced by a similarly structured movement called 'scherzo' (It.: 'joke'). Haydn was apparently the first to substitute movements with this heading for the minuets in his string quartets op.33 (the set is sometimes called 'Gli scherzi'). It is not clear exactly why Haydn labelled the triple-metre movements thus in op.33, however, for while at least one such movement, the scherzo of no.5, does include several humorous elements such as unpredictable phrasing, some of the other movements are quite serious. Beethoven seems to have preferred the title 'scherzo' to 'minuet' in most of his works, using it to indicate a more vigorous, robust movement than that implied by the minuet's associations with elegant court pastimes. He used the minuet, however, in a number of his piano sonatas, including op.2 no.1, op.10 no.3 and op.49 no.2, in the String Quartets op.18 nos.4 and 5, in the Septet op.20, and in Symphonies nos.1 and 8. Twice, in the Violin Sonata in G op.30 no.3 and the Piano Sonata op.31 no.3, a movement entitled 'tempo di minuetto' actually takes the place of the slow movement.

19th-century composers were less interested in the minuet, an attitude which may have been influenced by political as well as musical considerations; nonetheless, Schubert (some of his piano works) and Brahms (Serenade op.11, 1857–8) included minuets in a number of their works, and Bizet used the form in his music for *L'arlésienne* (1872) and in the Symphony in C (1860–68). The courtly minuet was one of the programmatic associations in the symphonic poems of Liszt (see Johns, 1990). Late 19th- and early 20th-century neo-classicism led to a revival of interest in the minuet, evidenced by its appearance in Fauré's *Masques et bergamasques* (1919), Chabrier's 'Menuet poupeux' from *Pièces pittoresques* (1881), Debussy's *Suite bergamasque* (1890), Jean Françaix' *Musique de cour* (1937), Bartók's Nine Little Pieces (1926) and the second book of *Mikrokosmos*, Schoenberg's Serenade op.24 (1920–23) and Suite for piano op.25 (1921–3) and Ravel's *Sonatine* (1903–5), his independent *Menuet antique* (1895) and *Menuet* (on 'Haydn', 1909).

MEREDITH ELLIS LITTLE

Minuetto, tempo di (It.). *See* TEMPO DI MINUETTO and MINUET.

Mioduszewski, Michał Marcin (*b* Warsaw, 16 Sept 1787; *d* Kraków, 30 May 1868). Polish priest and editor of religious songs. He was educated at the seminary of the church of the Holy Cross in Warsaw (1804–10), and then worked as a teacher in similar establishments in Warsaw (1810–14), Włocławek (1814–20) and Kraków (1820–68). He collected and edited several volumes of Polish religious songs, and also left extensive manuscript collections; until 1939 these were in the Biblioteka XX Misjonarzy in Kraków, but their whereabouts are now unknown.

KATARZYNA MORAWSKA

Miolan, Marie. *See* CARVALHO, CAROLINE.

Mion, Charles-Louis (*b* 1698; *d* Versailles, 12 Sept 1775). French composer and teacher. He was a great-nephew of Michel-Richard de Lalande, and his professional life focussed on the court. He was named as a singer in the royal chapel in 1727, and taught singing to Mme de Pompadour whose protection he enjoyed. With his *opéra-ballet L'année galante* (1747), Mion received an annual royal pension of 2000 livres and by 1750 was named *compositeur du ballets du roi*. On 24 January 1755 he became music master to the children of the royal family, but by 1765 he was unable to write owing to paralysis. From then onwards his name is absent from the pension lists, though he was still described as a royal pensioner at his death. He is buried in Notre Dame de Versailles.

Mion had three motets performed at the Concert Spirituel, but the stage works, which dominate his output, were almost all intended for the court circle where he spent his working life. Notably, the ballet *Julie et Ovide* was written for the marriage celebrations of the Prince of Condé in 1753. The exception is his only *tragédie lyrique*, *Nitétis*, which was performed at the Paris Opéra in 1741.

The mistaken forenames Jean-Jacques-Henri and the year of birth 1702 seem to have originated with Fétis.

WORKS

music lost unless otherwise stated

SECULAR VOCAL

Bouquets de Mlle de G*** à sa mere (idylle, 3, P. de Morand), Versailles, 12 Dec 1735
Nitétis (tragédie lyrique, prol., 5, J.-L.-I. de La Serre), Paris, Opéra, 11 April 1741 (Paris, 1741)
Les quatre parties du monde (opéra-ballet, P.-C. Roy), Versailles, 1745
Bouquet (romance, L. Fuzelier), pubd in *Mercure de France* (1746), July
L'année galante (opéra-ballet, prol, 4, Roy), Versailles, 13 Feb 1747 (Paris, 1747)
Julie et Ovide (ballet héroïque, after L. Fuzelier: *Les amours déguisés*), Paris, 11 June 1753

SACRED VOCAL

Motets, all perf. Paris, Concert Spirituel: Magnus Dominus, 7 Feb 1728; Beatus vir, 30 March 1735; De profundis, 13 April 1753
Te Deum, chorus, orch, *F-Pc*

BARBARA COEYMAN

Mira, Leandro (*b* probably in Sicily; *fl* northern Italy, 1566–92). Italian composer. His first published compositions, two madrigals and a motet, appeared in two Venetian collections edited by Giulio Bonagionta (RISM 1566^{23}, 1567^{3}). Four more madrigals for four and six voices were published in madrigal books by Maddalena Casulana and Pietro Vinci (RISM 1570^{24}, 1571^{13}); one motet and a further five madrigals for three, five and six voices, composed in a style resembling Vinci's, are scattered through four vocal collections (RISM 1567^{3}, 1583^{10}, 1586^{12}, 1591^{23}, 1592^{15}), and one lute tablature (RISM 1600^{5a}). A motet survives intabulated for organ (*I-Tn* xii, 75, 92–93*v*). Mira published, at his own expense, Monte's *Terzo libro di madrigali a cinque* (Venice, 1570).

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Miramontes, Arnulfo (*b* Tala, 18 July 1882; *d* Aguascalientes, 13 March 1960). Mexican composer. He studied in

Guadalajara, Mexico City and Berlin, where he was a pupil of Martin Krause (piano) and Alexander von Fielitz (conducting). After giving piano recitals in Europe, in which he included his own works, Miramontes returned to Mexico where he established himself as a piano teacher. In 1921 he toured the USA (at his recital at Columbia University the Chilean poet Gabriela Mistral addressed the audience), and in 1922 he founded the State SO in Aguascalientes, of which he remained conductor until the late 1930s. After suffering the first effects of blindness he retired from public life but continued to compose until his death.

His style is conservative and mostly features a complex linear counterpoint. He wrote three operas, the first two referring to pre-Hispanic Mexico: *Anáhuac*, from which he extracted the material for his symphonic poem *La leyenda de los volcanes*, and *Cíhuatl*, which tells the story of the Aztec goddess of the same name. The third opera, *Juana de Asbaje*, is based on the life of the 18th-century poet Sor Juana Inés de la Cruz.

RICARDO MIRANDA-PÉREZ

Miranda, Carmen [Miranda da Cunha, Maria do Carmo] (*b* Marco de Canaveses, nr Lisbon, Portugal, 9 Feb 1909; *d* Beverly Hills, CA, 5 Aug 1955). American singer and actress. She grew up in Rio de Janeiro and had established herself as a popular entertainer with a reputation throughout South America by the time she appeared on Broadway in 1939. Known as 'the Brazilian Bombshell', she captivated American audiences with her extravagant presentation of South American novelty songs and Tin Pan Alley imitations. Her samba-related dance movements, syncopated and staccato singing style and outlandishly theatrical mode of dress were highly distinctive. From her initial successes in the revue *The Streets of Paris* (1939) and the film *Down Argentine Way* (1940) until her death, Miranda performed extensively in night clubs, theatres, on television and in motion-picture musicals, making altogether 19 films and 154 recordings. Her film appearances were typically secondary roles capitalizing on her exotic qualities and were usually played with a sense of self-parody. The height of her popularity, the 1940s, coincided with a great craze in the USA for Latin-American culture.

MICHAEL J. BUDDS

Miranda, Ronaldo (*b* Rio de Janeiro, 26 April 1948). Brazilian composer. He studied the piano and composition at the Federal University of Rio de Janeiro (UFRJ). He began his musical career as a critic for the *Jornal do Brasil* (1974–81) and intensified his work as a composer after 1977, the year he won the first prize at the Second Biennial of Brazilian Contemporary Music. In the early 1980s he received several composition prizes, expecially the prestigious Trofeu Golfinho de Ouro (1981) from the state government of Rio de Janeiro. His Symphonic Variations, commissioned by the São Paulo SO, earned him the distinction of 'best composer of the year' (1982), bestowed by the São Paulo Association of Art Critics. In 1984 the French Ministry of Culture made him Chevalier of the Ordre des Arts et des Lettres. A grant from the Vitae Foundation allowed him to write his opera *Dom Casmurro*, first produced in May 1992 at the Teatro Municipal, São Paulo. His works have been performed in many contemporary music festivals in Brazil, the USA, Spain, Austria, Germany and Hungary. In addition to teaching composition at UFRJ, he also worked for FUNARTE (the National Foundation for the Arts) and became director of the Sala Cecília Meireles in Rio in 1995.

GERARD BÉHAGUE

Mirate, Raffaele (*b* Naples, 3 Sept 1815; *d* Sorrento, Nov 1895). Italian tenor. He studied with Crescentini and made his début in 1837 at the Teatro Nuovo, Naples, in Donizetti's *Torquato Tasso*. He went on singing the Rossini-Bellini-Donizetti repertory – at the Théâtre Italien, Paris, La Scala (Amenophis in Rossini's *Mosè in Egitto*, 1840), and elsewhere – but in 1845 appeared in Rome in Verdi roles (Jacopo in *I due Foscari* and Charles VII in *Giovanna d'Arco*). Verdi's librettist F.M. Piave compared him to the the previously supreme lyric tenor, Moriani. As the highest paid singer at La Fenice, Venice, in 1850 and 1851 he created, in the latter year, the Duke in Verdi's *Rigoletto*. A more forceful Duke than some later tenors, he was said to have a brilliant and intense timbre and incisive phrasing; Verdi approved of his singing the heavier part of Manrico in *Il trovatore* (1853–4, Venice; 1855, Milan). He sang in Boston and New York in 1855, in Buenos Aires in 1857 and 1860, retired in 1861, but appeared again at the S Carlo, Naples, in 1863–6; by then he was in serious decline.

JOHN ROSSELLI

Mirecki, Franciszek (Wincenty) (*b* Kraków, bap. 31 March 1791; *d* Kraków, 29 May 1862). Polish composer, conductor and teacher. When he was a child, he studied the piano with his father, who was an organist. In 1810 he began studies at the University of Kraków, specializing in Greek, and in 1814 went to Vienna, where he studied the piano with Hummel while acting as secretary and librarian to Count Joseph Maximilian Ossoliński. His first works (polonaises and marches for piano) were published in Vienna and he met Beethoven, who showed interest in Mirecki's work and in Polish folk melodies. From 1816 to 1817 he was in Italy. He then moved to Paris, where he studied composition with Cherubini. The latter awoke in Mirecki an interest in the works of earlier Italian masters and set him the task of arranging 50 psalms by Benedetto Marcello. (This arrangement became well known throughout Europe.) In 1822 he went to Italy again and during 1825–6 he was conductor of the Italian opera company in Lisbon. He and the company visited France and England. From 1826 to 1838 he was based in Genoa, where he gave singing lessons as well as working as artistic director and conductor of the opera company. In 1838 he returned to Kraków, where he opened a singing school, which was later reorganized (1841) as the first public music school in Kraków. Mirecki became the school's director and professor of singing, and was thus responsible for the education of generations of singers for the Kraków Opera. From 1844 to 1850 he was also artistic director and conductor of the Kraków Opera.

Mirecki was a passionate advocate of Italian opera and of the Classical style. His musical outlook was formulated in the treatise *Pogląd na muzykę* ('Approach to Music') (Prague, 1860), in which the Classical style is presented as the peak of musical development. He declared himself to be against 'national music' based on folk melodies, which he considered unsuitable for the development of musical forms, although in his earlier pieces (sonatas and variations) he had used Polish folk melodies. Mirecki's later works correspond more closely to the principles outlined in his treatise. His operas are cast in the style of Rossini and his instrumental works show his adoption of the Haydn–Beethoven Viennese style. His symphony (1855), composed for Mannheim, follows Beethoven's monumental approach to form and is one of the most substantial and richly scored Polish Symphonies of the period. Mirecki also wrote one of the earliest European treatises on orchestration, *Trattato intorno agli instrumenti ed all'instrumentazione* (Milan, 1825).

WORKS

OPERAS

Puławski, before 1822, lost

Cyganie [The Gypsies] (Spl, 3, after F.D. Kniaźnin), Warsaw, National, 23 May 1822, ov. and vs (Warsaw, n.d.)

ZOFIA CHECHLIŃSKA

Miremont, Claude-Augustin (*b* Mirecourt, 1827; *d* Pontorson, 1887). French violin maker. He was a pupil of his father Sebastien, a little-known and unexceptional craftsman who worked at Mirecourt all his life. After working

for Claude Collin he moved to Paris in 1844 and was employed by Lafleur and Bernardel *père*. In 1852 he moved to New York, where he worked for nine years before returning to Paris to establish his own shop at 20 rue Faubourg-Poissonnière. There his intimate contact with the work of Stradivari and Guarneri 'del Gesù' inspired him to make instruments that at times rival those of his great competitor J.-B. Vuillaume. The workmanship is refined and delicate, the varnish often of good substance and attractive appearance. The tone of his instruments is remarkably fine, his best-known advocate being the cellist Pierre Fournier, who used his Miremont in preference to Italian instruments for most of his career. (*VannesE*)

CHARLES BEARE

Mirgorodsky, Aleksandr Sergeyevich (*b* Skopin, Ryazan region, 12 Sept 1944; *d* 23 Nov 1994). Russian composer. After studying the piano and conducting, he entered the Kazan' Conservatory at the age of 25 and studied composition with Al'bert Leman and Almaz Monasïpov. He taught at this institute from 1973, became a member of the Composers' Union a year later and from 1983 was on the board of the Tatarstan Composers' Union. He was an adjudicator of the 'Winter Variety Art' competition and led the jury on the Nizhnekamsk political song competition.

The author of over 120 works, Mirgorodsky preferred instrumental forms, ranging from symphonies to solo sonatas (his degree works included compositions in both of these formats). His vivid and individual style, while being clearly modern and incorporating an individually thematic approach to serial technique, also encompasses neo-classicism (Symphony no.2) and Russian folk sources (in works of the 1990s). The *Symphonic Variations on a Theme of Paganini* (1975) represented a landmark in his career and the subtle orchestration and clear figuration which aroused interest in this work are features of many of his subsequent compositions. The Third Symphony reflects the composer's concerns with themes of war and human suffering; the acutely expressive language of the work is intensified by the recitation of material from a letter – discovered in the ruins of a house – to a man from his daughter who was later murdered by Fascists.

MARGARITA PAVLOVNA FAYZULAYEVNA

Miricioiu, Nelly (*b* Adjud, 31 March 1952). Romanian soprano, naturalized British. She studied in Iaşi and Milan, making her début in Iaşi as the Queen of Night, and was then engaged at Braşov Opera (1975–8). With Scottish Opera (1981–3) she sang Violetta, Tosca and Manon Lescaut. In 1982 she sang the three heroines in *Les contes d'Hoffmann* at the Opéra-Comique and made her Covent Garden début as Nedda, returning as Musetta, Marguerite, Antonia and Valentine (*Les Huguenots*). She sang Violetta with great success for the ENO (1984), and has subsequently performed the role throughout Europe and in the USA. Her repertory also includes Lucia, Gilda, Mimì (which she sang for her Metropolitan début in 1989), Butterfly, Magda (*La Rondine*) and Yaroslavna (*Prince Igor*). As Miricioiu's beautiful, vibrant voice has become more flexible she has taken on a number of bel canto roles, singing Rossini's Armida, Donizetti's Maria Stuarda and Anna Bolena in Amsterdam (1989–92), Amenaide (*Tancredi*) in Salzburg (1992), Norma in Washington and Rossini's Ermione in Brussels (1995), and Semiramide in Geneva (1998). Her recordings include a much admired Tosca, Mercadante's *Orazi e Curiazi*, Rossini's *Ricciardo e Zoraide* and *mélodies* by Duparc.

ELIZABETH FORBES

Mīrisṭus. *See* MURISTUS.

Mirliton. A generic term for MEMBRANOPHONES played by a performer speaking or singing into them, and which alter the sound of the voice by means of a vibrating membrane. The word appeared in France during the 18th century as a fashionable term for a wide assortment of items; it first clearly indicated a membranophone in the *Dictionnaire de Trévoux* of 1752. The term KAZOO is also sometimes used in English. Mirlitons are classified as 'singing membranes' by Hornbostel and Sachs.

Three kinds of mirlitons may be distinguished. Representative of the simplest type, the 'free mirliton', is the

Mirliton: comb ('pettine') player from F. Bonanni's 'Descrizione degl' instromenti armonici d'ogni genere', no.XLII (Rome, 2/1722)

device of a comb covered by paper, mentioned in 1511 in Arnolt Schlick's *Spiegel der Orgelmacher* and depicted as 'pettine' by Filippo Bonanni in 1722. The 'trombetta di canna', also described by Bonanni, is a tube of cane on which the wall is scraped thin to form the membrane.

Of more musical importance are the 'vessel mirlitons', in which the membrane is combined with a resonating body that intensifies the sound. Among these are the EUNUCH-FLUTE, described by Mersenne (1636–7), and the 'bigophone' (saxophone shaped), 'cantophone' (brass-instrument shaped) and kazoo developed at the end of the 19th century. The Danse des Mirlitons in Tchaikovsky's *The Nutcracker* (1892) refers chiefly to such mirlitons used as children's toys, but they were also played in vaudeville music and early jazz. The same principle is found in the *nyâstaranga* of India and Bangladesh, a small brass trumpet closed by a membrane, a pair of which is applied to the larynx as the performer hums and sings.

The third group comprises instruments which produce their own real sound but employ the distorting effect of a membrane. Mersenne suggested that organ stops could be equipped with a membrane. The 'Flauto di voce' or 'Patent Voice Flute' made from 1810 by the London flute makers Wigley & McGregor was a transverse flute in G with an additional membrane-covered hole; some music was written for it by James Hook. Adolphe Sax, in his third patent for the SAXOPHONE (1880–81), described a membrane for special sound effects on the crook. The same principle, of a distorting sound effect which could be switched on and off in valved brass instruments, was patented by François Sudre in 1892 for his SUDROPHONE. Many African xylophones and harps, for example the *chopimbila* of Mozambique and the *madimba* of Zaïre (now the DEMOCRATIC REPUBLIC OF THE CONGO), have membranes glued over openings in the gourd resonators. The Chinese DI flute is also a mirliton.

MARTIN KIRNBAUER

Miroglio, Francis (*b* Marseilles, 12 Dec 1924). French composer. He attended the conservatories of Marseilles and Paris, studying with Milhaud at the latter. From 1959 to 1961 he worked in the electronic music studios of the ORTF and in 1965 founded the annual summer arts festival Nuits de la Fondation Maeght in St Paul de Vence, which he also directed. Many of his compositions are mobile in form and variable in instrumentation. He has also composed multimedia works which incorporate such elements as mobiles (inspired by Calder) and the projection of paintings. His opera *'Il faut rêver' dit Lénine* is based on a quotation from Lenin; it tells of a choral society whose members, inspired by the song of a lark, transform a dark inhospitable place into one of light and joy. His orchestral textures are dense and imaginative, and make considerable use of percussion. Among French composers of his generation he stands out as one of the most versatile and wide-ranging.

PAUL GRIFFITHS, RICHARD LANGHAM SMITH

Miroglio, Jean-Baptiste (*b* Piedmont, ?*c*1725; *d* Paris, *c*1785). Italian composer, violin and viola teacher and music publisher, active in France. He called himself 'le cadet' or 'le jeune' until 1763–4, when his elder brother probably died. Three of his first four published works were dedicated to Parisians who apparently were his patrons or pupils. In 1765 he began an enterprise which was to be much more important than his compositions or teaching: he and the German painter Johann Anton de Peters (1725–95) founded the first Parisian musical subscription and lending establishment, the Bureau d'Abonnement de Musique. For two years La Chevardière and other publishers fought the new Bureau in court, involving hundreds of musicians on either side; the decision in 1767 was in favour of the Bureau, which continued to operate until at least 1789. Miroglio was listed in periodicals as a composer and teacher up to 1785. His compositions are competent but unremarkable; their style is a mixture of the Italian, French and Mannheim characteristics typical of Paris in that period.

Miroglio had two brothers, Joseph-Antoine, of whom nothing musical is known, and Pierre (*b* Piedmont, *c*1715; *d* Paris, *c*1763–4). Pierre was in Paris by 1738, when he was mentioned in the *Mercure de France* as an Italian violinist of distinction; he was in the retinue of Prince Carignan and later that of La Pouplinière. Pierre and his famous compatriot in Carignan's orchestra, Guignon, had been violin pupils of Miroglio's uncle, G.B. Somis. His only known works are six *Sonate a violino e basso* op.1, published in Paris in 1741 and dedicated to Geminiani. They are Italian in style and require considerable technical facility.

PEGGY DAUB

Miroglio, Pierre. Brother of JEAN-BAPTISTE MIROGLIO.

Mirror canon, mirror fugue. *See* MIRROR FORMS.

Mirror forms. If an angled mirror is held to the right of a written musical passage, what appears in the glass is a RETROGRADE form of the music. A piece or passage that presents both the original and the retrograde, normally in immediate succession, is called a PALINDROME.

If the mirror is held above or below the musical passage, the form that appears in the glass both inverts the counterpoint of the original, so that the topmost strand of the music becomes the lowest, and so on (clearly this mirror form only makes musical sense if the original embodied INVERTIBLE COUNTERPOINT), and inverts the melodic lines of the original, so that a linear ascent becomes a linear descent, and so on (this procedure is known as melodic inversion; *see* INVERSION, §(3)).

Examples of this second kind of mirror treatment are rare. A notable instance is found in the Gigue of Bach's English Suite no.6 in D minor, where the second section is a mirror image of the first. What makes this a particular tour de force is the chromatic complexity of the counterpoint, and the fact that Bach was working within the circumscribed confines of binary form, with its non-symmetric tonal imperatives. In fact, he had to insert eight bars of free writing shortly before the end of the piece to make the device fit the context at all.

Perhaps Bach knew two chorale movements written by Buxtehude on the death of his father (1674). Contrapunctus I and II are each followed by an Evolutio. In Evolutio I the four strands of Contrapunctus I change places (we might call this quadruple counterpoint, except that only two of the four strands can serve convincingly as bass, and those are the two possibilities Buxtehude exploits). Evolutio II, however, recycles the counterpoint of Contrapunctus II in mirror form, with no modification until the penultimate bar. In both cases, the chorale melody, topmost in the Contrapunctus, migrates to the 'infernal' bass (aptly enough for funeral music) in the Evolutio, while the original bass 'ascends into Heaven' (that is, becomes the soprano).

A later example occurs in Schubert's 'Wanderer' Fantasy. Ex.1 shows the two-bar 'model' (a), the image produced by a mirror (b) and Schubert's actual 'refined' mirror form (c). The intervallic exactitude at the beginning of the second bar is noteworthy.

Ex.1

Hindemith went a step further in *Ludus tonalis* (1942) by applying mirrors (as it were) both above and to the right of his 'model'. The expansive Praeludium, falling into several sections differing in time, tempo and texture, returns in its mirror form – but in retrograde too – as the Postludium, the 25th movement of the 'Studies in Counterpoint, Tonal Organization and Piano Playing'. This could be termed a 'mirror palindrome'.

In a mirror-form work, the clefs, key signatures and other accessories of a passage are transmogrified, as well as the notes. In practice, composers reject these mirrored outcomes and choose their own clefs, normally retaining the original key signature, in order to preserve the mirror image in the notes themselves and make musical sense of it. Freedom is also observed in the placing of accidentals in the course of the passage, so as to make interval relationships in the melodic inversion more precise (see ex.1).

While the ear is theoretically capable of recognizing a mirror form, whether it does so depends on the complexity of the passage, the listener's familiarity with it, and to some extent, his musical acumen. The fact that the rhythms of the original are usually replicated in the mirror version is a potential aid to recognition. Whether or not the listener perceives that a metaphorical mirror is in use, the result may still have its effect, which is to use existing material in such a way as to secure the benefit of (tight) unification while allowing the simultaneous advantages of diversification. It also provides a challenge some composers evidently relish.

See also CANON (i) and FUGUE.

BRIAN NEWBOULD

Mirshakar, Zarrina (*b* Dushanbe, 19 March 1947). Tajik composer. Born into the family of the national poet of Tajikistan, she received her first professional training at the Dushanbe Music College under Ter-Osipov (1963–7) before studying at the Moscow Conservatory with Balasanian (1967–74), who had participated in the foundation of a Tadjik school of composition. Her style is associated with the musical dialect of the mountainous

Pamir region and the fact that she is drawn towards instrumental miniature forms is symptomatic not only of her own artistic character but also of the nature of the traditional music of her native area. Initially influenced by 18th- and 19th-century structures, she has evolved a language notable for its clear textures and uncomplicated means of expression. She subsequently broadened her interest in international contemporary music, partly as a result of her acquaintance with Moscow-based composer Khagagortian, while her approach to folklore shares a kinship with those of Bartók and Stravinsky. From 1974 she worked in the Mirzo Tursun-zade Institute of Art in Tajikistan, and in 1994 was appointed senior lecturer in the faculty of composition and orchestration.

LARISA ALEKSANDROVNA NAZAROVA

Miry, Karel (*b* Ghent, 14 Aug 1823; *d* Ghent, 3 Oct 1889). Belgian composer. He studied the violin with Jean Andries and harmony and composition with Martin Joseph Mengal at the Ghent Conservatory; subsequently he studied at the Brussels Conservatory, where he was a fellow pupil of Gevaert. In 1845 he composed *De vlaamse leeuw* to words by his uncle, H. van Peene; the song became popular immediately, and remains today the national hymn of the Flemish people. In 1857 Miry succeeded Andries as professor of harmony and counterpoint at the Ghent Conservatory, where he also conducted the orchestra. In 1871 he became its assistant director, under Adolphe Samuel. From 1875 he was inspector of music at the municipal schools of Ghent, and six years later he became the inspector of state-aided schools of music; his influence greatly helped to raise the musical standards of these institutions.

Miry was one of the first Belgian composers to set Flemish texts. Of his 18 operas and operettas, most of them based on librettos by van Peene, *Bouchard d'Avesnes* was a great success when it was first produced in Ghent in 1864. From 1853 to 1863 Miry composed four symphonies, which reveal more his professional skill than any marked originality. He also composed ballets, sacred music, chamber music and works for wind instruments. But his most important works are his choral music and songs, especially children's songs.

ANNE-MARIE RIESSAUW

Miryam Khan (*b* a Kurdish village in the Cizre region [now Turkey], 1904; *d* Baghdad, 1949). Kurdish singer. She was one of the few female singers in the male-dominated environment of Kurdish music. Born to a poor family, she moved to the newly created state of Syria, where she married a member of the aristocratic Bedir Khan family. Her husband restrained her from singing, and she separated from him and resettled in Iraqi Kurdistan in 1924. In the late 1930s she returned to Baghdad where European phonograph companies had created a thriving recording business. She stayed with Sit Almas Mihammad, another female singer whose home was frequented by singers, and became the second female Kurdish singer to perform on phonograph records produced in Baghdad (the first being Bahija Ibrahim Ya'qoub). Although her voice was stigmatized by some male listeners as 'shrill', Miryam was the first woman singer on Radio Baghdad's Kurdish section, which began broadcasting in 1939. Her songs, all of which she learnt from rural performers, number about 30, divided almost equally between *strân* and *lawik*. The songs are in Kurmanji dialect and some are sung as duets with the singers Hasan-e Jiziri, Mihammad 'Arif-e Jiziri and Sit Almas.

AMIR HASSANPOUR, STEPHEN BLUM

Mir y Llussá, José (*d* Madrid, 1765). Catalan composer. About 1755 he succeeded Pedro Rodrigo as *maestro de capilla* of the Real Convento de la Encarnación at Madrid. He was one of the three chief Catalan composers at Madrid invited to contribute introductions to Antonio Soler's *Llave de la modulación* (1762) and the only one to show his wide learning with a quotation from Augustine's *Epistola 104*. Soler responded by soliciting many of Mir's works for El Escorial, the earliest of which is dated 1757. These are mostly Latin double-choir compositions with either two obligatory organs or orchestral accompaniment; they were still being recopied in 1803. He is also heavily represented by double-choir Latin music at Montserrat, and was widely performed in the Americas; a mass written in 1754, surviving at Lima, was still performed as late as 1810, when the Peruvian organist Melchor Tapia added flute and horn parts to it.

WORKS

Mass; 8 vesper psalms; Magnificat quarti toni; 2 Litanies of Our Lady: all 8vv, 2 org, all in *E-E*

Compline, vv, vns, hns, bc, 1758; 6 villancicos, 4–8vv, vns, hns/obs, bc: all in *E*

3 masses; Salve regina; 6 vesper psalms; Christmas responsories; responsories for the Office of the Dead; numerous motets: most 8vv, all in *MO*; villancicos, *MO*

Mass (Ky, Gl, Cr), 4vv, orch, Archivo Arzobispal, Lima, Peru; Mass, F [without Ag], 4–8vv, orch, Mexico City Cathedral; Envozado Dios mio reduces (villancico), 4vv, vns, hns, bc, Colegio de S Rosa, Morelia, Mexico

ROBERT STEVENSON

Mirzayev, Shavkat (*b* Tashkent, 10 Feb 1942). Uzbek *rubāb* player, teacher and composer. He came from a family of musicians and began to study the *rubāb* at the age of six with his father, the composer and instrumental performer Muhammadjan Mirzayev. At the age of 14 Shavkat was invited to work with the Uzbek Philharmonic Society, and in 1960 he began to compose songs in the traditional Uzbek classical style. Between 1958 and 1972 he took part in tours of several countries including Kazakhstan, Kyrgyzstan, Turkmenistan and Russia, and from 1960 to 1970 he worked for the Uzbek State Philharmonia. He studied Uzbek classical music with Fakhriddin Sadyqov at the Tashkent State Conservatory from 1972 to 1977, at the same time teaching singing and the Uzbek *rubāb*; he continued to teach at the Conservatory until 1982. From 1980 to 1982 he directed the *makom* ensemble at Uzbek State Radio, and in 1982 he returned to work for the Uzbek State Philharmonia. He is known internationally for his work with the singer MUNADJAT YULCHIYEVA; as the musical director of Ensemble Munadjat Yulchiyeva he toured several European, Asian, American and African countries. He also conducts his own ensemble, which has performed widely in Uzbekistan and has also toured abroad; members have included Ahmadjan Dadayev (*ghidjak*), Shuhrat Razzaqov (*dutār*, *ṭanbūr*), Malika Zieyeva (*dutār*), Ikram Matanov (*qoshnay*), Timur Mahmudov (*chang*), Asrar Aslanov (*ṭanbūr*), Hodjimurad Safarov (*doira*) and Erkin Hudjaberdev (*nay*). Mirzayev has dedicated himself to the revival of songs from the Sufi tradition, the performance of which was forbidden during the Soviet period. In 1991 he was awarded the title Honoured Artist of Uzbekistan.

RAZIA SULTANOVA

Mirzoian, Edvard Mik'aeli (*b* Gori, Georgia, 12 May 1921). Armenian composer and teacher; son of the composer M. Mirzayan (1888–1958). His family settled in Yerevan in 1924. He studied at Yerevan Conservatory with Vardkes Tal'ian (1936–41) and then at the music school attached to the House of Armenian Culture in Moscow with Litinsky and Peyko (1946–8). He began to teach composition at Yerevan Conservatory in 1948 and was later made head of department (1972–86). His students include Ter-T'at'evosian, Chaushyan and Terteryan. He was chairman of the Union of Armenian Composers (1957–91) and in 1977 became president of the Peace Foundation of Armenia.

Mirzoian has received numerous honours in Armenia, and was made People's Artist of the USSR in 1981. In 1997 he became a member of the International Academy of Sciences, Education, Industry and Arts, California.

Armenian national traditions and the work of Prokofiev, Shostakovich and Bartók were the formative influences on the dramatic style of Mirzoian's music, which combines inner intensity with the lyricism of Armenian folksong. These characteristics are prominent in the neoclassically tinged Symphony for string orchestra and timpani (1962), the first movement of which is a double fugue employing a folksong theme; the dynamic pulse of the second and fourth movements is linked to Armenian dance rhythms. International recognition of the Symphony has been paralleled by its influence on contemporary Armenian composers.

Mirzoian's characteristic balance between psychological and rational principles is seen both in the early *Theme and Variations* for string quartet (1947) and in the Cello Sonata written 20 years later, in which the strict modal harmony of the piano part sets off the monologic function of the cello. His film music has acquired wide currency; the waltz and the lyrical *Shushanik* episode from the film version of A. Shirvanzade's play *Chaos* are the best known excerpts.

WORKS

Misa (Sp.). *See* MASS.

Misch, Ludwig (*b* Berlin, 13 June 1887; *d* New York, 22 April 1967). American musicologist, conductor and critic, of German birth. He studied musicology with Friedlaender at the University of Berlin and law at the University of Heidelberg, where he received the doctorate in 1911. From 1913 to 1921 he worked as an operetta conductor in Osnabrück, Essen, Strasbourg, Bremen and elsewhere; later (1921–3) he was music director of the Berlin Kammeroper. In the 1920s and 30s he was a critic for the *Lokalanzeiger* and other newspapers (including a few Jewish ones) and a writer of programme notes for the Berlin Philharmonic Orchestra. He taught music theory and history at the Stern Conservatory and conducted several madrigal choirs. The Nazis identified him as an important Jewish music critic, but on account of his non-Jewish wife Anni he was spared the concentration camps. He did, however, have to endure forced labour as a porter in the Jüdische Bibliothek des Sicherheitshauptamtes.

After the war he was able to resume teaching and was even invited to form an orchestra by the mayor of Schöneberg, but he was abruptly arrested by a Soviet patrol for obscure reasons. After his release he emigrated to the USA in 1947. In New York he was a synagogue organist and music director as well as a teacher. As a musicologist, Misch became known for his analyses of form and melody in Beethoven's works.

Mischa, František Antonín. *See* MÍČA, FRANTIŠEK ANTONÍN.

Mischiati, Oscar (*b* Bologna, 11 July 1936). Italian musicologist. For his degree in philosophy at the University of Bologna he wrote a thesis on Baroque musical aesthetics (1960). He then became a lecturer in poetry and drama at the Conservatory of Bolzano (1960–63) and assistant in music history at the University of Bologna (1961–3); in 1964 he was appointed librarian at the conservatory in Bologna. His main interests are the history of organ building, organ music, sacred music and music bibliography. At the beginning of his career he wrote articles on some 80 Italian composers for *MGG*. He has made the Bologna library into one of the few comprehensive centres of secondary sources in Italy. He is honorary inspector for the preservation and restoration of organs in Emilia and Lombardy, and he has organized research all over the country towards the preparation of a list of all early organs, with a view to saving the instruments and publishing the catalogue. With Tagliavini he edits *L'organo*, the journal founded by Lunelli and Tagliavini to investigate the history and literature of the organ; Mischiati was co-editor of Monumenti di Musica Italiana and a member of the editorial board for the Catalogus Musicus series of the IAML. He was also a council member of the Società Italiana di Musicologia (1964–7). In 1961 he was awarded the A.T. Davison Memorial Medal for Musicology by the Harriet Cohen International Music Award Foundation.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Miserere (Lat.: 'have mercy'). The first word of Psalms l, lv and lvi, as well as of a number of liturgical texts. Of the former, Psalm l (li in the Hebrew numbering followed in the Authorized Version and Prayer Book translations) is the most important in the history of polyphonic composition. In the Roman rite it is sung at Lauds in the Office for the Dead and at TENEBRAE, and it is also one of the seven penitential psalms. Its first verse and *Gloria Patri* are also sung with the antiphon *Asperges me* at the principal Mass on Sundays, except during Eastertide: four anonymous polyphonic settings occur in an English source of the mid-16th century (*GB-Lbl* 17802–5). Polyphonic settings of the complete psalm for use at Tenebrae (when the *Gloria Patri* is not sung) are usually in simple *falsobordone* style, alternating with the plainchant, a tradition that may have been initiated under Pope Leo X in 1514. A pair of manuscripts in the Vatican (*I-Rvat* C.S.205–6) includes a set of 12 such works for alternating choirs of four and five voices (the choirs themselves alternating with the plainchant) by Fabrizio Dentice, Palestrina, Gagari, G.F. Anerio and his brother Felice, Domenico Nanino, Giovannelli and anonymous composers, ending with the celebrated work by Gregorio Allegri. (The attribution by some modern authors of the first work in this set to Costanzo Festa, with the date 1517, appears to be unjustified.) Palestrina's work in this source is compounded of a four-part setting, published with his Lamentations (1588) and also included as the first of a set of three in Guidetti's *Cantus ecclesiasticus officii maioris hebdomadae* (1587), and a five-part work printed as the second of Guidetti's set. Nine-part settings were evidently popular: one by Lassus and numerous examples by minor composers are in the library of the Cappella Sistina. Other noteworthy settings in a simple style are those of Victoria (1581) and Gesualdo (1611), printed in their collections of Holy Week music. There are more elaborate and very beautiful works by Lassus (*Psalmi Davidis poenitentiales*, 1584) and Giovanni Gabrieli (a setting of the first four verses in *Sacrae symphoniae*, 1597). Tye's *Miserere* is a setting of Psalm lv. Josquin's extended setting of Psalm l (425 bars) is particularly noteworthy. The refrain 'Miserere mei Deus', heard after each verse, is based on a short phrase in the second tenor sung on successive degrees of the scale in turn: from *e′* to *e* in part i, from *e* to *e′* in part ii and from *e′* to *a* in part iii. The tonality of the work thus strongly suggests the E-modes, though it comes to rest on a chord of A minor.

Several texts from the Roman psalter or other old Latin versions begin with the words 'Miserere mihi Domine'; these are taken not only from the psalms mentioned above, but from verses of Psalms iv, vi, xxx and lxxxv. In the English tradition the most important is the short compline antiphon which continues and concludes with the words 'et exaudi orationem meam' (from Psalm iv, second part of v.2, in the Roman psalter). The plainchant is a simple two-phrase melody in the 8th mode. This gave rise to vocal settings (e.g. anonymous liturgical settings in *GB-Cmc* Pepys 1236, a liturgical setting by John Norman in *GB-Lbl* Add.5665 and an elaborate non-liturgical canon by Byrd in his *Cantiones*, 1575, perhaps written in rivalry to Tallis's canonic *Miserere nostri* in the same publication) as well as to a whole repertory of instrumental works. 18 liturgical settings of the plainchant for the organ survive by Kyrton, John Redford, Philip ap Rhys, William Shelbye, E. Strowger and 'Wodson' (possibly Thomas Woodson). After the Reformation the genre attracted such composers as Bull, Byrd, Benjamin Cosyn, John Lugge, Tomkins and Thomas Woodson. In these compositions liturgical conventions are subordinated to increasing virtuosity, the possibility of stating the cantus firmus more than once (resulting in a miniature set of variations) and canonic treatment. The 20 surviving settings, out of a supposed 40, by Thomas Woodson, illustrate canonic technique; and Tomkins's eight works, all probably dating from the late 1640s and early 1650s, are a remarkable testimony to the resilience of the form in the hands of a master of the traditional style.

There are a few settings of the plainchant for lute by such composers as Alfonso Ferrabosco (ii), and ensemble settings by Tye, Byrd and others. According to Morley, Byrd and Alfonso Ferrabosco (i) each wrote 40 canonic settings in friendly rivalry. They were apparently printed in 1603 under the title *Medulla Musicke* (i.e. *musicae*), of which no copy survives; but the 19 canonic works of Byrd which survive in manuscript may represent part of his contribution. Morley also mentioned that George Waterhouse had composed 1000 or more settings, and R.A. Harman (in his edition of Morley's *Plaine and Easie Introduction*) referred to '1163 strict canons on the "Miserere" plainsong in the manuscripts at Oxford and Cambridge'. Some of the six-part canons that follow keyboard works by Bull and others in *A-Wn* 17771 are based on the 'Miserere' plainsong, but the printed collections of canons by John Farmer (i) (1591) and Elway Bevin (1631) are based on other plainchants.

JOHN CALDWELL

Miskiewicz [Miśkiewicz], **Maciej Arnulf** (*d* between 1682 and 1685). Polish musician and composer. From 1651 he was a substitute in the Capella Rorantistarum of Wawel Cathedral in Kraków. In 1653 or 1654 he became a full member and shortly afterwards its director, a position that he held until 1682. In this capacity he produced for the chapel a number of copies of vocal works by Polish composers of the time (particularly Pękiel) and also adapted some 16th-century partbooks. These copies (*PL-Kk*), which bear the signature MMPR ('Mathias Miskiewicz Praepositus Rorantistarum'), are very important for the documentation of Polish music in the 17th century. Only one composition certainly by Miskiewicz is known, the four-part *Jesu, dulcis memoria* (*Kk*, dated 3 June 1668), which is in the traditional contrapuntal style

typical of sacred music. Another work among the manuscripts from the Capella Rorantistarum is a *Missa 4 vocum pro nativitate D.N. Jesu Christi* bearing the initials M.M.; it is more likely to be by him than by the other possible candidate, Marcin Mielczewski.

MIROSŁAW PERZ

Misliweczek [Mysliveček], **Josef.** *See* MYSLIVEČEK, JOSEF.

Misón [Missón], **Luis** (bap. Mataró, Barcelona, 26 Aug 1727; *d* Madrid, 13 Feb 1776). Spanish composer. He became a flautist and oboist in the Madrid royal chapel in 1748. In 1757 he provided music for the Spanish translation of Metastasio's *Le cinese*. The Christmas play of 1761 presented at the Coliseo de la Cruz included two of his *tonadillas*. The published libretto of the first *Juego de la tonadilla* calls him the 'delicado orpheo de este siglo'. His reputation rests on his *tonadillas*, nearly all to his own texts. Subirá catalogued approximately 100 in the Biblioteca Municipal at Madrid and transcribed two. In addition, Misón composed about a dozen *entremeses* and a similar number of *sainetes*, also in the Madrid Biblioteca Municipal. His flute playing was praised by the poet Samaniego in his *El tordo flautista*. 12 sonatas for flute, viola and bass, written for the Duke of Alba, were in the Alba archives (lacking the viola part) prior to the Spanish civil war.

ROBERT STEVENSON

Misonne [Myssonne, Missonne, Mizonne], **Vincent** (*b* diocese of Cambrai, *c*1490; *d* Cambrai, 7 April 1550). Franco-Flemish singer and composer. He probably began his career at Cambrai Cathedral, but the first notice we have of him is a bull by Pope Leo X dated 7 August 1515 naming him as a singer in the papal chapel. On 3 March 1516, he was given a canonry at the cathedral of Cambrai, and also served as the procurator in Rome for the cathedral chapter. On Leo's death in 1521, Misonne returned to Cambrai (he arrived in May) and was appointed *magister parvorum vicariorum*. In 1524, he was recalled to Rome by Pope Clement VII with the commission of recruiting four singers for the papal choir. The canons of Cambrai granted him a leave of absence in October 1524, and Misonne was in Rome by April 1525, rejoining the papal chapel. He is listed in a census of the city taken shortly before the Sack of Rome in May 1527; in that year, he returned to Cambrai and resumed his position as master of the *petits vicaires*. He appears to have remained in Cambrai for the rest of his life, although he did not relinquish his connection to the papal choir; in 1531 he received permission to keep the privileges of a papal singer *in absentia*.

Misonne wrote a small number of sacred works, contained mostly in the manuscripts of the Cappella Sistina. All but the *Missa de Beata Virgine* were copied before he left Rome in 1521. His style is typical for the beginning of the 16th century. He wrote primarily for four voices, used imitative polyphony as a structural device, occasionally broke up the texture into short duets and homophonic passages (seen particularly in Glorias and Credos) and used canon and strict cantus firmus procedure to produce five-voice polyphony. His music sometimes contains internal repeats reminiscent of French chanson style.

RICHARD SHERR

Missa. The Latin term for the principal service of the Roman Catholic Church and the music used for it. *See* MASS.

Missa, Edmond (*b* Reims, 12 June 1861; *d* Paris, 29 Jan 1910). French composer. Born into a family of organists, he learned the rudiments of music from his mother. He studied at the Ecole Niedermeyer, then at the Paris Conservatoire, where he attended Massenet's class. As a candidate for the Prix de Rome of 1881 he received an honourable mention for his cantata *Geneviève*. His first opera, *Juge et partie*, which won the Prix Cressent in 1886, was produced the same year at the Salle Favart and well received. It was followed by some 20 other operatic works, none of which found a permanent place in the repertory. Only *Muguette* was fairly successful, being staged in Geneva, Hamburg, Moscow and London. Missa's music, in which the influence of Massenet is clearly perceptible, shows genuine dramatic and melodic

qualities, also found in his *mélodies* and his lively orchestral suites. As organist of the churches of St Thomas-d'Aquin and St Honoré-d'Eylau in Paris, he left several collections of liturgical pieces for organ or harmonium.

WORKS
(*selective list*)

Stage: Juge et partie (opéra-comique, 2, J. Adenis), Paris, 1886; Le chevalier timide (opéra-comique, 1, W. Busnach), Paris, 1887; La belle Sophie (opéra-bouffe, 3, P. Burani and Eugène Adenis), Paris, 1888; Mariage galant (opéra-comique, 3, F. Oswald and M. Boucheron), Paris, 1892; Dinah (comédie lyrique, 4, M. Carré and P. de Choudens, after W. Shakespeare), Paris, 1894; Ninon de Lenclos (épisode lyrique, 4, A. Leneka and A. Bernède), Paris, 1894; L'hôte (pièce lyrique, 3, Carré), Lyons, 1897; La demoiselle aux camélias (opérette, 3, Edmond and Eugène Adenis), Paris, 1899; Les grandes courtisanes (ballet, 1, F. Cohen and Mariquita), Paris, 1899; Muguette (opéra-comique, 4, Carré and G. Hartmann after Ouida), Paris, 1903; Maguelonne (drame lyrique, 1, Carré), London, 1903; La peur (mimodrame, 1, Carré), Berlin, 1904; La demoiselle du Tabarin (opérette, 3, M. Ordonneau and A. Alexandre), Paris, 1910; Cyprienne (pièce lyrique, 3, J. Jullien and Alexandre), unperf. (1910)

Orch: Scènes mexicaines (1888); Les bains de mer (1895); Scènes villageoises (1903); Fête alsacienne (1904); Scènes hindoues (1904); Ballet des saisons (1905); Aquarelles musicales (1908)

Vocal: Recueil de mélodies (C. Soubise) (1889); Scènes champêtres, chorus, pf; many choruses and songs

Solo inst: Les voix du ciel, org/hmn (1891); Le service religieux, org/hmn (1902); Heures celestes, org/hmn; several salon pieces for pf

Principal publishers: Costallat, Grus

JACQUES TCHAMKERTEN

Missa brevis (Lat.: 'short mass'). (1) In the 15th and 16th centuries this term denotes a complete setting of the Ordinary of the Mass in which all movements are short. The term was in use by about 1490 in Italy, as is shown by four masses by Gaffurius so designated in the Milanese manuscript *I-Mcap* 2268. These settings are typified by brevity, absence or near absence of mensural contrast and, in the Gloria and Credo, considerable omission of text and syllabic setting with many repeated notes. Following Ambrosian practice, all lack settings of the Agnus Dei and most also lack the Kyrie and Benedictus. These masses were clearly part of an older tradition, which may have been concentrated in Milan or have been more widespread: a setting of the Gloria, Credo and Sanctus minus Benedictus embedded in a composite cycle copied in *I-TRmp* 91 apparently in the mid-1470s shows exactly the same stylistic traits (see A. Peck Leverett: 'An Early *Missa brevis* in Trent Codex 91', *Music in the German Renaissance: Sources, Styles and Contexts*, ed. J. Kmetz, Cambridge, 1994, 152–73). Similar characteristics also typify such masses as Josquin's *'D'ung aultre amer'* and Martini's *'In Feuers Hitz'*, although the term seems to have been reserved in contemporary parlance for cycles free of borrowed scaffolding. The term was used more widely after 1560, for example by Palestrina, at a time when a demand for shorter mass settings prompted greater recognition of the *missa brevis* as a distinct type of mass. A number of works that actually fit the category were not designated in this way, however, since the term was reserved for short masses that had no antecedent from which they could be named: thus Josquin's *Missa 'D'ung aultre amer'*, based on a chanson by Ockeghem, is in its proportions a *missa brevis*.

(2) In the 17th and 18th centuries the term came to mean principally a setting of the Kyrie and Gloria only, usually intended for use in the Lutheran service (*missa* alone sometimes signified the same). Less commonly *missa brevis* refers to a four- or five-movement setting of the Ordinary that was highly abbreviated. Abbreviation was sometimes achieved by the exclusion of portions of the text or by the simultaneous presentation of successive clauses. In the 20th century the term was used for masses of modest proportions, very often with accompaniment for organ only (Kodály, Britten).

See also MASS, §§II and III.

LEWIS LOCKWOOD/ANDREW KIRKMAN

Missa dominicalis (Lat.: 'Lord's Day mass'). The term normally designates a 'mass for Sunday use', that is, in the traditions of Catholic plainchant, a mass using the plainchants brought together in the Roman Gradual as Mass XI ('In dominicis infra annum') and using one of several Credo melodies. Such masses, for use when there was no higher feast day, were needed especially in the summer, for the Sundays after Pentecost. In the polyphonic tradition the *missa dominicalis* was a setting of the Ordinary that paraphrased several or all of these plainchants and normally alternated sections of text sung in plainchant with sections sung in polyphony. An early example using chants from Mass XI is the *Missa dominicalis* by Johannes Martini (*d* 1497), while the first one to be published seems to be that of Marbrianus de Orto (1505). German composers of the period especially favoured this type of mass, and important settings were made by Heinrich Finck and Senfl, among others. Palestrina wrote a setting on Mantuan plainchants that was published in 1592 together with other masses of the same kind by Italian contemporaries. A *Missa dominicalis* by Viadana for solo voice and basso continuo alternating with plainchant is printed in Wagner (p.534ff).

LEWIS LOCKWOOD/ANDREW KIRKMAN

Missal (from Lat. *missale*, *liber cantus missae*). A liturgical book of the Western Church containing all the material necessary for the celebration of Mass.

1. GENERAL. The missal is composite, a collection of material from various liturgical books in which all the pieces necessary for the solemn celebration of Mass are brought together: the prayers and Preface chanted by the priest; lessons read by the deacon and sub-deacon; and the chants of the Proper and Ordinary performed by the choir or soloists. The missal unites in a single book elements formerly dispersed in several books: the sacramentary (for the priest); the lectionary or the epistolary and the evangeliary (for the deacon and sub-deacon); the

gradual and troper-proser (for the singers); and the ordinal, which gave directory rubrics for the manner of performance of the liturgical rites.

Surviving documents indicate that the various attempts to bring together the different books that resulted in the missal were usually carried out on the basis of the sacramentary, more rarely the lectionary, and followed very different courses. This survey of the evolution of the books leading to the noted missal will be pursued through groupings which illustrate the progressive inclusion of sung pieces with the other elements of the Mass.

2. EVOLUTION.

(i) Sacramentaries with marginal chant text incipits. The sacramentary, which usually began with the feast of Christmas (25 December), contained only prayers, the Preface and the *Canon missae*, the chanted recitation of which is the task of the celebrant, bishop or priest. In several ancient sacramentaries, chant incipits for each feast, taken from the gradual, were added opposite the first collect of the corresponding Mass, in minuscule script. The incipits were generally given without music, as would be expected bearing in mind the antiquity of the books. Manuscripts with such chant indications in the margin are: *F-AN* 102 (94) (end of 10th century, from Angers); *BS* 37 (end of 12th century, from St Bertin; introits only); *B-Br* 2034–5 (12th century, Saxon sacramentary passed into use at Stavelot; see F. Masai, *Scriptorium*, xiii, 1959, pp.22–6, pl.5); *D-DÜl* D1 (10th century, from Corvey); *DÜl* D2 (10th century, from Corvey); *GB-Ob* Bodley 579 ('The Leofric Missal', 10th century, a Cambrai missal passed into England; ed. Warren, D1883); *Ob* Rawl.lit.C1 (12th century, from St Albans; introits only); *F-Pn* lat.821 (11th century, from Limoges); *Pn* lat.9430 and *TOm* 184 (end of 11th century, from Tours); *Pn* lat.9432 (second half of 11th century, from Amiens); *Pn* lat.11589 (11th century, from Brittany); *Pn* n.a.lat.1589 (end of 11th century, from Tours); *RSc* 213 (second half of 11th century, from Noyon); *RSc* 214 (10th century, from St Thierry, Reims); *I-Rvat* Ottob.313 (11th century, from Paris; chant text incipits included in edn. by H.A. Wilson, *The Gregorian Sacramentary under Charles the Great*, London, 1915); and *VEcap* LXXXVI (81) (11th century, from Verona).

(ii) Sacramentaries with gradual chants in full (text and music). The sacramentary was here transformed into a sacramentary-gradual: for each Mass, first the five chants from the Proper (sometimes simply a cue), then the three prayers and Preface were given. Manuscripts arranged thus are: *F-AN* 91 (83) (10th century, possibly from St Pierre, Angers); *A* 220 (12th century, from St Pierre, Apt); *Pan*, AB XIX 1742–3 (10th–11th century; fragments with transitional notation, perhaps of Poitevin origin); *Pn* lat.9439 (11th–12th century, from St Etienne, Limoges); *TOm* 184 (11th century, from Tours); *I-TRmd* 43 (10th–11th century, from Austria).

The insertion of prayers in the middle of the pieces of chant (i.e. a missal without readings) is much rarer. This arrangement is found in two Paris missals: *F-Pn* lat.12054 (11th century) and *Pn* lat.9441 (13th century). In the latter, the readings are indicated by a cue, the full text being written out further on, as in the sacramentary-gradual. A conflict was inherent in such 'half-missals' between the different calendars of each component part: the sacramentaries began from the Vigil of Christmas, whereas the graduals started with the first Sunday in Advent (introit *Ad te levavi*). In order to align the two books it was therefore necessary for the calendar of one to give way to that of the other: in the missal, it was the gradual order that usually prevailed. Furthermore, the separation of the Proper of the Time from that of the Saints was achieved very early, and led to the creation of a Common of Saints, which did not exist in the ancient graduals (the singer was simply directed back to a previous feast of the same class).

(iii) Missals created by the juxtaposition of component books. The gradual, containing the chants for Mass, did not always remain isolated: it might be coupled to a sacramentary, a lectionary or both.

Gradual-sacramentary: the gradual, containing the chants for the Proper of the Mass, preceded the sacramentary of the Gregorian type; the same copyist transcribed both books and the same artist drew the initials. This juxtaposition occurs in very ancient books. From the 8th century: *CH-Zz* Rheinau 30 (from Nivelles; see Hesbert, A1935/*R*, pp.xii ff, and A. Hänggi and A. Schönherr: *Sacramentarium rhenaugiense*, Fribourg, 1971). From the 11th century: *F-Pn* lat.2291 (from St Amand; gradual ff.9–15, with some added Palaeo-Frankish neumes, ed. in Netzer, A1910/*R*, pp.283–355); *Pn* lat.12050 (gradual, slightly later than sacramentary, ed. Hesbert, 1935/*R*, pp.xxi ff, cxxiii; for the tonal indications in the margin see M. Huglo: *Les tonaires*, Paris, 1971, pp.91–101); *Psg* 111 (9th–10th century, from St Denis); *GB-Ob* Can.lit.319 (*c*997, from Reichenau; see D.H. Turner, *Revue bénédictine*, lxxxv, 1965, pp.255–75); *CH-SGv* 295 (10th–11th century, from St Gallen). This arrangement, which explains why the gradual also benefited from the attribution of the sacramentary to GREGORY THE GREAT, enjoyed wide popularity in the German-speaking regions of eastern Europe at the same time as the other, three-book arrangement (see below). Of the 57 manuscripts of the 11th century or later that use the two-book juxtaposition, only three are from Romance-language countries (*F-AM* 155, from Corbie; *Pn* lat.2293, from Figeac or Moissac; *Pn* lat.9434, from Tours).

Gradual-lectionary: this juxtaposition is very rare. It is found in only three manuscripts (*F-SOM* 252, 10th–11th century, from St Bertin; *I-Rvat* Borg.lat.359, 11th century, from St Etienne, Besançon; *CH-SGs* 374, 11th century from St Gallen).

Gradual-sacramentary-lectionary: this arrangement does not seem to be as old as the two-book juxtaposition. It appears in the 11th century in a manuscript written at Gembloux for Stavelot (*B-Br* 2031–2; see *Scriptorium*, xiv, 1960, p.86), but it is found most frequently in manuscripts of the Lake Constance region: from Zwiefalten (*D-Sl* HB I 236), St Gallen (*CH-SGs* 342–3), Rheinau (*Zz* 14, 71, 75), although also in a Cologne manuscript (*D-DÜl* D3). The juxtaposition of three liturgical books in a single volume has serious practical disadvantages: it results in a very thick 'missal by juxtaposition' that is not easy to handle. It survived, nevertheless, until the 14th–15th century in the east (13 manuscripts), which was more conservative than the west (two manuscripts).

(iv) Full missals created by the amalgamation of component books. The collection of the diverse component elements of the Mass (prayers, chants and readings) into a single book sufficient for the complete celebration of Mass seems to have been achieved first in Italy, possibly

northern Italy. The oldest complete missals that include musical notation over the chant texts originate in Italy and belong to the 10th century: *US-BAw* M.6 (votive and festal masses, from St Michael, Monte Gargano), a manuscript very rich in liturgical texts see for instance the ancient offertory for Pentecost *Factus est repente*, ed. in *Organicae voces: Festschrift J. Smits van Waesberghe*, Amsterdam, 1963, pp.62–3; see also A. Doherty: *A Romano-Beneventan Missale plenum in the Walters Art Gallery*, diss., Princeton U., 1974); *I-BV* VI 33 ('Missale antiquum' of Benevento, with Beneventan neumatic notation; see PalMus, 1st ser., xiv, 1931/*R*, pls.i–vii), a manuscript with several archaisms, some liturgical (see K. Gamber, *Ephemerides liturgicae*, lxxiv, 1960, pp.428–9), and some scriptural (see M. Huglo, *Vigiliae christianae*, viii, 1954, pp.83–6); *Bu* 2217, ff.158–61 (10th–11th century) and *Bu* 2679 (11th century; fragments of missals with neumatic notation); *CH-LAac* (fragments of missals from the Bari region, second half of 10th century, other leaves of which are at Lucerne, Peterlingen and Zürich; see bibliography in *Le graduel romain*, ii, 1957, p.57); *I-Ma* L 77 sup. (10th century; missal with neumes from north Italy); *D-Mbs* lat.3005 (11th century, taken in 11th century to Wessobrunn, then to Andechs where it was noted and modified; see *Le graduel romain*, ii, 1957, p.77); *D-Mhsa* (fragment of a missal from St Christina, near Olonna, second half of 11th century, later taken to Wessobrunn; see *Le graduel romain*, ii, 1957, p.83); *F-Pa* 610 (10th century, from Worms; votive missal); *I-PAVs* (fragments of a 10th-century missal, from ?Pavia).

3. 11TH–20TH CENTURIES. In the 11th and 12th centuries complete missals with neumatic notation proliferated: about 50 from the 11th century and about 40 from the 12th are known, almost all of west European origin. In the 13th century missals with neumes decreased in favour of missals with music on lines, which flourished until the end of the 14th century. The actual use to which these noted missals were put is not always clear, but many were no doubt used in small parishes or small monasteries with limited financial resources; a single book thus served the celebrant and his ministers, who would, respectively, intone the collect and read the lessons of the Fore-Mass (Mass of the Catechumens) from one and the same missal, while the singer also used the book, before the service, for *recordatio*, that is, to remind himself of the melodies to be performed.

Thus, from the 11th century, although sacramentaries sometimes remained in use at the same time as the other Mass books, a 'missal' was formed in each church and was passed on with all its local peculiarities from one copy to another. Particularly in the 13th century efforts were made in many churches to codify their liturgies in up-to-date, comprehensive missals and breviaries. At Salisbury, for example, Richard Poore, even before being elected head of the diocese in 1217, began the restoration of the liturgy with the help of Edmund Rich, the treasurer, thus establishing the Use of Salisbury (Sarum) for Mass and Office; it spread through most of the kingdom, displacing nearly all secular local uses (except those of York and Hereford). At Rome at about the same time, a reorganization of liturgical books was undertaken by Pope Innocent III (1198–1216), and a complete missal 'secundum consuetudinem romanae curiae' was established (see Van Dijk, E1956). The new Roman missal spread to several churches in central Italy from the 13th century, for example, to Todi (*GB-Lbl* 14793) and to Assisi. The new Franciscan order adopted the missal from the Curia, inserting their own festivals (12 August, 17 September, 4 October) which were introduced into the universal Roman missal by Franciscan popes such as Nicholas IV (1288–92), or Sixtus IV (1471–84) under whose pontificate the first Roman missal was printed (1474). In 1570 Pius V, a Dominican, made a new version of the missal which remained the basis of the *Missale romanum* until the Second Vatican Council. (For the missal since the Second Vatican Council *see* ORDO CANTUS MISSAE.)

In 15th-century missals very little music was noted: the liturgical recitatives belonging to the celebrant (Preface, *Pater noster*) and the intonations of the Ordinary (*Gloria in excelsis Deo*, *Credo in unum Deum*); and sometimes also the *Ite missa est*, sung by the deacon. These pieces were reproduced from 1476 onwards in the first printed missals with music (see *The Printed Note*, Toledo, 1957/*R*, p.17; and Meyer-Baer, B1962, no.119).

Even when not noted, a missal is always of interest for the study of the ordering of chants in diverse local liturgies, at least before the Council of Trent (22nd session, September 1562) which resulted in the progressive 'Romanization' of the ancient local liturgies. Sometimes pieces peculiar to one church survive only in a printed 16th-century source, and certain sequences and rhythmic alleluias are known only from printed missals.

MICHEL HUGLO/DAVID HILEY

Missa solemnis (Lat.: 'solemn mass'). A MASS in which all sections except readings (i.e. Epistle and Gospel) are sung, whether in plainchant or polyphony. The term can also be applied to extended, ceremonious settings. (*See also* ROMAN CATHOLIC CHURCH MUSIC.)

□

Missau, Guilielmus (van). *See* MESSAUS, GUILIELMUS (VAN).

Missinai melodies. A category of medieval Ashkenazi Jewish chant. *See* JEWISH MUSIC, §III, 3(ii).

Missón, Luis. *See* MISÓN, LUIS.

Missonne, Vincent. *See* MISONNE, VINCENT.

Misticanza [mistichanza]. A term used by Praetorius (*Syntagma musicum*, iii, 2/1619) to refer to the Italian QUODLIBET; he also used the term 'messanza'. *Misticanza* is an archaic form of the modern Italian words 'misto' and 'mescolanza' ('mixture'), but the derivation of *messanza* is obscure. From Praetorius's definition it is clear that *misticanza* and *messanza* represented the Italian counterparts of the German quodlibet in the Renaissance, and thus belong to that genre of combinative composition that Italian scholars call the INCATENATURA. The two examples mentioned by Praetorius, *Mirami vita mia* and *Nasce la pena*, are both six-voice choral works combining fragments from famous Italian madrigals and a few German lieder; they were included in Paul Kauffmann's *Musikalischer Zeitvertreiber* (1609). The term 'misticanza' also appeared in *Misticanza di vigna alla bergamasca* (1627) by 'Il Fasolo', a collection of solo songs with guitar accompaniment; there it simply means potpourri or miscellany, although one song combines different languages and Italian dialects for comic, quodlibet-like effect. The term 'messanza' was also used by W.C. Printz (*Compendium musicae*, 1689) to describe a particular ornamental figure.

For bibliography *see* QUODLIBET.

MARIA RIKA MANIATES

Misura (It.: 'beat', 'measure', 'time', 'bar'). A word found in music primarily in the direction *senza misura*: 'without a regular beat' (in the case of recitative sections with only declamatory rhythm), or 'freely', 'without strict regard for the metre'. Where *misura* is used in this last sense (as particularly often by Liszt, for example) the return to strict time is marked by *a tempo*, or simply *giusto*. Within the Italian language *misura binaria* means 'duple time', *misura composta* 'compound time', etc.

Misura vuota. *See* VUOTA.

Mitantier. *See* MITTANTIER.

Mitchell, Donald (Charles Peter) (*b* London, 6 Feb 1925). English musicologist, publisher and administrator. He studied at Dulwich College (1939–42) and from 1945 taught in London. He is largely self-taught in music, although he spent one year at Durham University (1949–50), where he studied with Arthur Hutchings and A.E.F. Dickinson. In 1947 he founded *Music Survey* and edited it (from 1949 with Hans Keller) until it ceased publication in 1952 (it was reprinted in full in 1981). From 1953 to 1957 he wrote regularly for the *Musical Times*, and from 1958 to 1962 edited *Tempo* for Boosey & Hawkes, for which firm he was music adviser in 1963–4. He was on the music staff of the *Daily Telegraph* (1959–64), and in 1964 music critic for *The Listener*. In 1958 he was appointed head of the music department of Faber & Faber; following a suggestion from Benjamin Britten in 1964, he founded the subsidiary company Faber Music, becoming its managing director in 1965. In 1970 he became a visiting fellow at Sussex University, was professor of music there (1971–6) and visiting professor from 1976. He was later visiting professor at York University (1991) and at King's College London (1995). He joined the board of Faber & Faber in 1973 and became a publishing director of the Performing Rights Society, later chairman (1989–92), and director of the English Music Theatre (formerly the English Opera Group); he was also appointed chairman of the education committee of the Britten-Pears School for Advanced Musical Studies, later becoming director of academic studies (1977–90). He became vice-chairman of Faber Music in 1976, chairman in 1977 and was president from 1988 to 1995. He was made an honorary MA at Sussex in 1973 and took the doctorate with a dissertation on Mahler at Southampton University in 1977. He became a governor of the RAM in 1988 and an honorary member in 1992, and was vice-president of the International Confederation of Societies of Authors and Composers, 1992–4. He was awarded the Mahler-Medaille of the International Gustav Mahler Society, Vienna, in 1987 and a Royal Philharmonic Society award in 1992 for his book *Letters from a Life: the Selected Letters and Diaries of Benjamin Britten*.

Mitchell was Britten's publisher until the composer's death and in 1976 became an executor of Britten's estate. Thereafter he was largely responsible for the publication, first performances and recording of many of Britten's early works. He was a member of the council of the Aldeburgh Foundation (1977–94) and in 1986 was appointed chairman of the Britten estate and a director of the Britten-Pears Foundation. He was the guest artistic director of the Aldeburgh Festival in 1991, where his interest in the music of East Asia led to appearances by Japanese and Thai classical musicians. He also planned the programme of the 50th anniversary Peter Grimes Gala at Snape (1995) and organized annual Aldeburgh Britten October Festivals (1987–97). He has helped organize the *Mahler-Feest* (1995) at the Concertgebouw, Amsterdam, and a Concertgebouw Britten-Shostakovich series (1996–7).

Mitchell's writings have been almost exclusively concerned with 20th-century music, and he has written cogently and perceptively on a wide range of composers and styles. His more general essays, among which his short book *The Language of Modern Music* (1963) is important, are informed by a wide range of references from other disciplines, especially the visual arts. He has identified particularly with the music of Mahler and Britten, although the insights contained in his articles on Elgar show how acutely he can write on a major figure in a different tradition. His principal achievement, still in progress (a fourth volume is projected), is his large-scale work on Mahler, a highly detailed undertaking that involves the examination of all extant sketches and documents. This has been supplemented by further major Mahler studies.

DAVID SCOTT/RICHARD ALSTON

Mitchell, Joni [Anderson, Roberta Joan] (*b* Macleod [now Fort Macleod], AB, 7 Nov 1943). Canadian singer-songwriter. After a childhood in Canada and brief study at art college in Calgary in 1963, she moved via Toronto and Detroit to New York, where she recorded her first album at the age of 25. Largely using voice and acoustic guitar alone, her first two albums, *Joni Mitchell (Song to a Seagull)* (Reprise, 1968) and *Clouds* (Reprise, 1969), are characterized by the then-current folk style (modal harmony and mystic lyrics). Her own mature style was established by the early 1970s and demonstrates a visual imagination, a precise sense of place and landscape, and an ability to attain a deep and personal lyric. The album *Blue* (Reprise, 1971) illustrates her instrumental prowess, harmonic surety and profound lyric sense. Her voice, best heard on 'A Case of You', is especially notable for its variety, from a rich lower register to a remarkable upper range.

From *Court and Spark* (Asylum, 1974) to *Mingus* (Asylum, 1979) Mitchell combined a rhythmically liberating and freer use of voice with an exploration of jazz harmony, which reached its peak on *Hejira* (Asylum, 1976). By this point it was evident that Mitchell was under-represented in American rock journalism in relation to her output and critical rating. A change of label accompanied her into the 1980s, and her sound followed the 1980s shift into drum technology and a sense of production: her dialogues with Wayne Shorter on soprano saxophone provide the best examples from this period. She has continued to address urgent political themes, maintained lyrical depth and also taken on settings of Yeats, as in *Slouching Towards Bethlehem* (1991), and the Book of *Job* in *The Sire of Sorrow* (1994).

As a Canadian singer-songwriter emerging during the 1960s she introduced singular and important insistences: to the deep relation of lyric to landscape and the pictorial, to questions concerning personal freedom and responsibility from a female perspective. She has also taken an innovative approach, particularly in relating the potential for musical advance in song with the improvisatory basis of jazz. In range she is one of the few singer-songwriters to have matched Dylan; nevertheless her albums of the 1980s are marred by the intrusiveness of production, a problem for much popular music at the time. Her more recent album *Turbulent Indigo* (Reprise, 1994) returns to earlier points of reference with an older and darker voice.

DAI GRIFFITHS

Mitchell, Leona (*b* Enid, OK, 13 Oct 1949). American soprano. In 1971 she won first place in a study programme sponsored by the San Francisco Opera and in 1972 made her professional début as Micaëla at the San Francisco Spring Opera Theater. Her Metropolitan Opera début, also as Micaëla, took place in December 1975; that year she also sang Bess in Maazel's recording of Gershwin's opera. At the Metropolitan she has sung Pamina, the Prioress (*Dialogues des carmélites*), Butterfly, Musetta, Leonora (*La forza del destino*) and Elvira (*Ernani*). She made her European début at the Geneva Opera (1976) as

Liù, a role she repeated in 1980 at Covent Garden and the Paris Opéra. Her voice has been described as a cross between Price's husky chest tones and Freni's radiant upper register. Although Mitchell's early career was as a lyric soprano, in the early 1980s she started to move into the spinto repertory. She has recorded a number of roles, notably Liù and Micaëla.

MICHAEL WALSH

Mitchell, William J(ohn) (*b* New York, 21 Nov 1906; *d* Binghamton, NY, 17 Aug 1971). American musicologist. He studied in New York at the Institute for Musical Art (1925–9) and at Columbia University (BA 1930, MA 1938), where he was a Clarence Barker Fellow and won the Joseph H. Bearns Prize in composition. After spending two years in Vienna (1930–32) he returned to Columbia University, where he was successively an assistant (1932), lecturer (1933), instructor (1934), assistant professor (1941), associate professor (1947) and professor (1952), as well as chairman of the music department (1962–7). Concurrently he lectured at Mannes College, New York (1957–68), and subsequently at SUNY, Binghamton; he was also a visiting lecturer at the University of California (1950, 1957). In 1949 he became secretary of the AMS, of which he was later president (1965–6). His main area of interest was music theory; he devised the curriculum in this subject as an academic discipline at Columbia University, and wrote a wide variety of works on the theory and historical practice of harmony and structure. He was co-editor, with Felix Salzer, of the first three volumes of *Music Forum* (1967–73).

Mithou (i). *See* DANIEL, JEAN.

Mithou (ii). *See* CHAMPION family.

Mitjana y Gordon, Rafael (*b* Málaga, 6 Dec 1869; *d* Stockholm, 15 Aug 1921). Spanish musicologist. A diplomat by profession, he served in Spanish embassies in Russia, Turkey, Morocco and Sweden. Composition was his first musical interest, and he studied in Málaga with Eduardo Ocón, in Madrid with Felipe Pedrell and in Paris with Saint-Saëns. Although he composed various works, including an opera *La buena guarda*, he devoted himself most intensively to musicology and in particular to the study of Spanish music. His writings have dealt with many of the seminal figures of Spanish music, including Juan del Encina, Francisco Guerrero, Cristóbal de Morales and Fernando de las Infantas; he also compiled the catalogue of the printed music of the 16th and 17th centuries at Uppsala University, and discovered the important collection *Villancicos de diversos autores* (Venice, 1556), the music of which was later published by Jesús Bal y Gay as the *Cancionero de Upsala* (Mexico, 1944). Mitjana himself published an important study of the texts and musical forms of these pieces and made his own full transcription of the music, which was discovered after his death and published as *Cancionero de Uppsala*, ed. L.Q. Rosso (Madrid, 1980). His monograph 'La musique en Espagne', contributed to Lavignac and La Laurencie's encyclopedia (1920), is one of the most comprehensive surveys of Spanish music history. Mitjana is a transitional figure in Spanish musicology between the 19th-century school of Pedrell and Barbieri and the modern school of Anglès; his work is more thorough than that of the former two, but retains their elegant and personal style of writing.

JOSÉ LÓPEZ-CALO

Mitou. *See* DANIEL, JEAN.

Mitrea-Celarianu, Mihai (*b* Bucharest, 20 Jan 1935). Romanian composer, active in France. After encouragement at the age of six from Enescu, he started cello and piano studies with George Simonis in Craiova. At the Bucharest Conservatory he studied harmony with Negrea, the piano with Florica Musicescu and composition with Mendelsohn and Jora (1948–53). He taught music at the Scoala Populara de Artă in Bucharest (1954–60, 1962–8) and worked as an editor for Editura Muzicală (1960–62). At the 1968 Darmstadt summer course he studied with Stockhausen; he also worked with the Groupe de Recherches Musicales in Paris, participated in courses led

by Pierre Schaeffer and Henri Pousseur, and attended the semiotics seminars of A.-J. Greimas. From his early scholastic style, Mitrea-Celarianu passed through a period of experimentation with integral serialism and structuralist methods before arriving at his mature compositional aesthetic in *Cantata* (1959). Influenced by models derived from astronomy and quantum physics and by the philosophical concepts of Gilles Deleuze, his rigorously controlled music incorporates complex formal and aleatory elements within a postmodern framework. His greatest compositional achievement is *Les incantations de la nuit eclairée*, a series of 27 pieces written between 1979 and 1993.

OCTAVIAN COSMA

Mitropoulos, Dimitri (*b* Athens, 2 Feb 1896; *d* Milan, 2 Nov 1960). American conductor, pianist and composer of Greek birth. In his youth he was strongly attracted to a life of service in the Greek Orthodox Church, but turned to music when informed that the church allowed no instrumental music within its precincts. He displayed natural gifts as a pianist and was 'discovered' at the age of ten by Armand Marsick. He enrolled in the Athens Odeion Conservatory in 1910 and graduated with highest honours in 1919. One year later, his opera *Soeur Béatrice* attracted the praise of Saint-Saëns and his international career was launched. After studies in Brussels with Gilson (1920–21) and in Berlin with Busoni and Kleiber (1921–4) he returned to Athens to teach at the conservatory and to conduct its orchestra for the next 15 years. His breakthrough came with the Berlin PO in 1930, when he appeared at short notice in Prokofiev's Third Concerto, conducting from the keyboard. He toured widely with this piece in Europe and the USSR, eventually coming to the attention of Koussevitzky, who invited him to conduct in Boston in 1936. The Boston concerts were a sensation and a year later he succeeded Ormandy as conductor of the Minneapolis SO, a post he held for 12 years.

Often to the bewilderment of his audiences, Mitropoulos turned Minneapolis into an internationally recognized centre for contemporary music, programming major works by Berg, Krenek, Sessions and Shostakovich, and making the first recording of Mahler's First Symphony. During the 1940s he also conducted widely in America (he became an American citizen in 1946), most notably with the Philadelphia Orchestra, NBC SO and New York PO. He shared the directorship of the New York PO with Stokowski for a season (1949–50), then became sole musical director until his resignation in 1958, when he was replaced by his former protégé, Leonard Bernstein.

A simple, generous and ascetic man whose idealism took a constant pounding in the rough cultural climate of New York, Mitropoulos was an intensely physical conductor who directed with his entire body. He used no baton (until ill health forced him to adopt one in his final years), and directed every score, no matter how vast or complex, from near-perfect memory. He had a genius for mounting memorable performances of monumental works such as *Wozzeck* and *Elektra*; but in the central Classical and Romantic symphonic repertory he could be wildly erratic, conveying explosive excitement on one night, inexplicable wrong-headedness on another. His achievements in the opera pit were considerable, beginning with a legendary Metropolitan Opera *Salome* in 1954 and continuing for every subsequent season until his death; in 1958 he conducted the première of Barber's *Vanessa* at the Metropolitan. Throughout his life he retained an almost missionary zeal for music that other conductors deemed too difficult or too obscure. His continual advocacy of Mahler and other unfashionable composers alienated conservative listeners but were a revelation to more adventurous ears.

Though plagued by failing health, Mitropoulos scored triumphs in his final years with a number of European orchestras, especially with the Vienna PO and the Cologne SO. He died on the podium, of a heart attack, while rehearsing Mahler's Third Symphony with the La Scala Orchestra. In America his reputation went into rapid eclipse, but in recent years there has been a revival of interest in his work, stimulated by the reissue on CD of many of his recordings. Outstanding among these are Mahler's First Symphony (1940), a searing reading of Vaughan Williams's Fourth Symphony (1956), and a version of Shostakovich's Tenth Symphony, recorded shortly after he gave the work's American première in 1954, which captures as few subsequent recordings do the music's dark introspection and hard-won triumph.

Mitropoulos's compositions cover a period of 15 years; about 40 works survive, some of them written in a startlingly advanced and highly original idiom. They include a symphonic poem *La mise au tombeau de Christ* (1916), a Piano Sonata (1919), incidental music for plays and other piano and chamber music. Perhaps his finest works are the *Ten Inventions on Poems of Cavafy* for

soprano and piano (1927) and the Concerto grosso (1928).

Mitsukuri, Shūkichi (*b* Tokyo, 21 Oct 1895; *d* Chigasaki, 10 May 1971). Japanese composer. He studied chemistry at Tokyo University and, from 1921, in Berlin, where he also went to Georg Schumann for harmony lessons. In 1925 he returned to Tokyo and there became a pupil of Ikenouchi, König and Rosenstock. He made his début as a composer with the *Two Dances* for orchestra in 1926, and in 1930 he was a founder of the Shinkō Sakkyokuka Renmei. His *Shō-kōkyōkyoku* won a prize at the Japan Music Contest (1934) and the Weingartner Prize (1939). In 1939 Mitsukuri took a doctorate of science, but from 1945 he limited himself to musical activities. His style is strongly tonal and follows the German Romantic tradition, though in some works he made use of pentatonic scales and oriental harmonies. In *Ongaku no toki* ('Moment of Music', Tokyo, 1948) he discussed an original tonal system based on the 5th; he also published *Nihon no onkai to waseiteki shori* 'Japanese Scales and their Harmonic Treatment' (Tokyo, 1967).

MASAKATA KANAZAWA

Mittantier [Mitantier] (*fl* 1536–47). French composer. He wrote 22 chansons which were published in Paris by Pierre Attaingnant. Two bicinia printed by Georg Rhau at Wittenberg in 1545 are also (dubiously) ascribed to Mittantier. His works are typical of the Parisian polyphonic chanson of Sermisy's generation. The majority are settings of courtly *épigrammes*, each line of poetry corresponding with a musical sentence which may be repeated for another line with or without symmetrical correspondence with the rhyme scheme. The music is generally homophonic, but opening or intermediate phrases occasionally have brief points of imitation. Just one chanson, *Amours si m'ont cousté*, is of the salacious anecdotal type, set in rapid syllabic counterpoint.

WORKS

Edition: *Mittantier: Opera omnia*, ed. A. Seay, CMM, lxvi (1974)
for 4 voices unless otherwise indicated

Amours si m'ont cousté cent livres, 1538[10]; Celluy qui fust du bien et du tourment, 1540[14]; Ce n'est sans tort que me plains, 1547[12]; En esperant espoir me désespere (Marot), 1538[13]; Jamais amour ne peult si fermement, 1538[14]; J'ay tant chassé que la proye m'a pris, 1536[5]; Layssons amour qui nous faict tant souffrir, 1539[15-16]; Le rossignol plaisant et gracieulx, 1539[15-16]

Moins je la veulx plus m'en croist le désir, 1540[14]; O que je tiens celle la bien heureuse, 1539[15-16]; Par ton parler n'auras sur moy puissance, ed. in PÄMw, xxiii (1899); Pauvre et loyal trompé par l'espérance, 1540[14]; Plus je la voys moins y treuve à redire, 1539[15-16]; Puis que fortune a sur moy entrepris, 1542[14-15]; Si bon vouloir méritoit récompense, 1547[11]; Si j'eusse esté aussi prompte à donner, 1539[17]; Si l'amytié porte la suffisance, 1538[12]; Si tu voulois accorder la demande, 1538[13]

Tant est l'amour de vous en moy enprainсté (Marot), 1538[13]; Tant seullement ton amour je demande (Marot), 1543[7-8]; Tel en mesdit qui pour soy la désire, 1538[12]; Tel en mesdit qui pour soy la desire, 2vv, 1545[7] (parody of 4-voice version); Ung doulx baiser je prins subtilement, 1539[17]; Vous perdez temps de me dire mal d'elle, 2vv, 1545[7] (Marot; parody of 4-voice model by Sermisy, 1538[12])

FRANK DOBBINS

Mittelgrund (Ger.). *See* MIDDLEGROUND. *See also* LAYER.

Mitteltönige Temperatur (Ger.). MEAN-TONE temperament.

Mitterer, Wolfgang (*b* Lienz, Osttirol, 6 June 1958). Austrian composer. He studied the organ and composition in Vienna and later electronic music at Studio EMS in Stockholm. On his return to Vienna he became particularly interested in improvisation. With Viennese ensembles such as Pat Brothers and Call Boys Inc., and musicians including Wolfgang Reisinger, Tom Cora, Hozan Yamamotot and Roscoe Mitchell, he developed an expressive and energetic, yet fragmentary, improvisational style. He has performed as a keyboard soloist in such works as *Grand jeu* and *Reluctant Games*.

Mitterer's music links the unexpected, the challenging and the surprising with precise and intricate structures. Aiming to confront and oppose the everyday, industrial perfectionism of studio recordings, he has created gigantic performances in large spaces; these include *Waldmusik*, a composition centred on the Venetian sawmill in Innervillgraten, East Tyrol, and *Turmbau zu Babel*, scored for 4200 singers, 22 percussion instruments, over 40 brass players and others. He has also generated electronic multitrack productions (*Modemusik 1*) and composed works for solo instruments. Central to his compositional style is the exploration of contradictory forces such as necessity and doubt, the alien and the familiar, and permanence and instability.

CHRISTIAN SCHEIB

Mitzler de Kolof [Koloff], **Lorenz Christoph.** *See* MIZLER VON KOLOF, LORENZ CHRISTOPH.

Mix. A term used to denote the sequencing and mixing together of records by DJs to create a constant fluid stream of music. Until the 1970s, DJs in nightclubs linked consecutive records with chat and banter. However, the role of the DJ was revolutionized by Francis Grasso who invented slip-cueing. While one record is playing on one turntable, a second is cued up to its desired starting position on another turntable which is held stationary. When the second turntable is released its record starts immediately, producing an instant and synchronized switch from one recording to another. The DJ can also alter and match the speed of the two recordings, making a continuous seamless mix and the fading from one record to the other easier. By the late 1980s, as club culture grew in popularity with young people, many DJs had become more famous than the recording artists they played, and more still had moved into recording and remixing, both trends that continued well into the 1990s. During the early 1990s, record labels began to release mix albums, essentially 75-minute DJ sets released commercially on CD. Despite the ubiquity of the CD format in the late 1980s and 90s, new dance records were still released on vinyl for the benefit of DJs; despite other technological advances, the slip-cueing technique and the use of pitch control have remained integral to DJ mixing.

WILL FULFORD-JONES

Mix [Micks], **Silvio** (*b* Trieste, 31 Dec 1900; *d* Gallarate, Varese, 1 Feb 1927). Italian composer. Though born in a city under Habsburg rule and into a family of Hungarian origin, he was Italian in culture and sentiment. In Florence at the outbreak of World War I, it was there, at the end of the war, that he first appeared in public as a musician. He started to frequent futurist circles, performing piano improvisations at exhibitions by a number of Futurist painters. He was subsequently involved in the Italian tour (1924) of Rodolfo De Angelis's Nuovo Teatro Futurista. In the same year he took part in the First National Futurist Conference in Milan. He was later in Rome and, at the beginning of 1926, in Paris. Poor health obliged him to hurry back to Italy, but he died on the return journey.

Mix was an advocate of a new form of artistic synthesis, one that brought both concision and a fusion of miscellaneous elements. He was particularly interested in microtonality, rhythmic and polytonal superimposition and an idea of improvisation which transferred the 'parole in liberte' of Marinetti to sound. However, his enthusiasm for formulating theories was not matched by an equal directness in his compositional plans (a limitation already to be seen in previous attempts at defining a futurist musical aesthetic). Self-taught, Mix made his 'amateurism' an artistic banner, which was in tune with the anti-classical and anti-academic programme of the Italian futurists. While he lacked any polished skill as a composer, he was highly receptive to artistic trends outside Italy. Mix's writings, for the most part published in *L'impero*, and scores anticipated procedures which were only fully realized in *musique concrète* and electronic music in the second half of the 20th century.

STEFANO BIANCHI

Mixed cadence. A CADENCE whose final chord is prepared by subdominant and dominant harmonies.

Mixolydian. The common name for the seventh of the eight church modes, the authentic mode on G. In the Middle Ages and Renaissance the Mixolydian mode was described in two ways: as the diatonic octave species from *g* to *g′*, divided at *d′* and composed of a fourth species of 5th (tone–tone–semitone–tone) plus a first species of 4th (tone–semitone–tone), thus *g–a–b–c′–d′*+ *d′–e′–f′–g′*; and as a mode whose FINAL was *g* and whose AMBITUS was *f–g′*, with extensions 'by licence' up to *a′* and even down to *e*. In addition to the final, the note *d′* – the tenor of the corresponding seventh psalm tone – was regarded as having an important melodic function in the fifth church mode.

In the Renaissance the term 'Mixolydian' was sometimes applied to polyphony. In modally ordered collections, pieces ending on G in *cantus durus* are usually divided into two groups using different clefs. For example, in Palestrina's second book of *Madrigali spirituali* (1594), nos.24–7 use CHIAVETTE to represent the higher (authentic) Mixolydian mode, while nos.28–30 use normal

soprano, alto, tenor and bass clefs to represent the lower (plagal) Hypomixolydian.

For the early history of Greek-derived modal names, *see* DORIAN.

See also MODE.

HAROLD S. POWERS/FRANS WIERING

Mixture stop (Fr. *Fourniture*; Ger. *Mixtur*). An organ stop with two or more ranks of pipes comprising, most commonly, intervals at octaves and 5ths but also 3rds and (occasionally) 7ths and 9ths. As the pipes usually sound at higher pitches than the other individual stops, when the ranks of pipes in mixtures reach a certain pitch (the shortest length of pipe that has seemed practical has varied from country to country) the ranks must 'break' to a lower pitch even as they ascend through the keyboard's compass. Since the middle of the 19th century, 'Mixture' has meant in English organs the same as *Mixtur*, *mixtuur* or *mistura*: the chief compound stop of the Diapason chorus. However, before then (with very few exceptions) the term indicated a combination of stops rather than a specific stop; nor was it then used, as it is now, as the term for compound stops in general. The number of ranks of pipes in each Mixture stop is usually given in Roman numerals in brief stop-lists, e.g. 'Sesquialtera II' or 'Cornet V'.

No stops have better represented makers' and players' attitudes to organs and their music throughout the history of the instrument than the compound ones. The block-chests of the early monastic organs (*see* ORGAN, §II, 5) were probably large undivided mixtures whose intended effect is probably still to be discerned in the largest surviving monastic mixture in the organ at Weingarten Abbey (1737–50), whose 48 pipes sound simultaneously from the *C* pedal key, and whose name 'la Force' indicates the yearly explosion of natural vitality and power associated with spring and Easter. With the medieval invention of stop- and key-actions, the lower ranks were separated from the BLOCKWERK, so that the overall pitch of the compound ranks rose. As they were further separated during the Renaissance, a great variety of Mixtures were experimented with (e.g. Mistura, Locatio, Hintersatz, Zimbel and Fourniture), and makers of the Baroque period added a repertory of wider-scaled solo or colour mixtures, often with 3rd-sounding (Tierce) ranks (e.g. Cornet, Hörnli, Sesquialtera, Terzian and Carillon-Mixtur). As organs became more forceful with mechanical aids to playing and winding, and were more generally tuned in equal temperament (which is particularly ill-suited to Tierce mixtures), there was a Romantic reaction to the use of mixture stops, which were sometimes tolerated only as a means of 'compensating' for the perceived shrillness of extreme treble tessituras (Compensationsmixtur, Progressio Harmonica, etc.). Some mixtures, such as Rauschpfeife, were chorus stops at one period, solo at another. Too often, in extreme reaction, modern organs have loud and bright mixtures in no particular style; the planning, content, scaling and voicing of compound stops should distinguish between national organ 'schools' as well as testing the skill, aural discrimination and patience of makers.

See ORGAN STOP.

MARTIN RENSHAW

Miyagi [Wakabe; Suga], **Michio** [Nakasuga Kengyō] (*b* Kobe, 7 April 1894; *d* Kariya, 25 June 1956). Japanese player of the *zoku-sō* (the 13-string koto) and composer. A son of Kunijirō Wakabe, he was given the family name of Suga as an infant. By the age of seven he was totally blind. He became in 1902 a disciple of Nakajima Kengyō II, a koto master of the Ikuta School; in 1903 he made his début as a solo performer, and in 1905 he received a certificate of highest proficiency in koto playing, earning the professional name of Nakasuga. Two years later he went to Korea, where he taught the koto and *shakuhachi* in Jinsen (Inch'ŏn) and then in Keijō (Seoul). In 1909 he wrote his first composition, *Mizu no hentai*, a song with koto solo which won considerable fame. He received the professional title of Kengyō in 1912; and in 1913, when he married Nakako Kita, he assumed the surname Miyagi, after which he became best known as Michio Miyagi. In 1914 he met Seifū Yoshida, who became a lifelong friend and with whom he began in 1920 the Shin Nihon Ongaku (New Japanese Music Movement), aimed at adapting elements of European music to composition for Japanese instruments. Meanwhile he had returned to Japan in 1917 and settled in Tokyo. The first concert devoted to his music was given successfully on 16 May 1919 and was followed by more in 1920 and 1921.

Although Miyagi sometimes composed in a purely traditional style, as in *Yosamu no kyoku* ('Music on a cold night', 1920) or *Tsuki no kagami*, his works more often incorporate European features in harmony, form or instrumental combination (he occasionally used mixed ensembles of Western and Japanese instruments); the influence of French impressionism is particularly prominent. In 1921 he introduced the newly invented *jūshichi-gen* (a 17-string variant of the koto), used for the first time in his *Ochiba no odori*. His less important innovations include the *hachijūgen* (an 80-string koto) and the bass *kokyū* (a large bowed instrument), while he also experimented in other directions: *Kairo-chō* (1923) was written for a group of seven Japanese instruments in emulation of European chamber music; *Sakura hensōk-yoku* (1923) adapts a Western form to Japanese instruments; and *Etenraku hensōkyoku* (1928) is virtually a concerto for koto and Western orchestra.

In 1929 Miyagi composed his most celebrated work, *Haru no umi* for koto and *shakuhachi*; the piece was later arranged for koto and violin, and in this version became an extraordinary international success through performances by Stern and others. Miyagi took appointments as lecturer (1930) and professor (1937) at the Tokyo Music School. His activities were interrupted by the war, but in 1946 he resumed teaching and in 1950 was appointed lecturer at the National University of Fine Arts and Music. In 1948 he was made a member of the Japan Art Academy, in 1950 he received the Broadcasting Cultural Prize sponsored by Japanese radio, and in 1951 the Miyagi Kai, an association of his supporters, was formed. He visited Europe in 1953 to take part in the International Festival of Folk Music at Biarritz and Pamplona.

Miyagi was a prolific composer as well as a gifted essayist. His compositions are in the main for koto or for an ensemble including the koto, and most of them follow Japanese custom in having a text, even where the instrumental parts are primary. He also left solely instrumental pieces and made numerous arrangements of pieces from the traditional koto repertory. In 1978 the Miyagi Michio Memorial Hall was founded; it houses manuscripts, recordings, and documents about him and about koto music.

WORKS
(*selective list*)

STAGE AND CHORAL

Op: Kariteibo, 1924
Incid music: Takiguchi Nyūdō, 1946; Genji monogatari [Tale of Genji], 1951–4
Cant.: Nichiren, 1953; Matsu [Pine], 1955
Choral: Tennyo bukyoku [Heavenly Maiden's Dance], vv, wind, str, 1927; Aki no hibiki [Sounds of Autumn], vv, 5 Jap. insts, perc, 1931; Sakura ni yoseru iwai [Celebration with Cherry Blossom], vv, wind, str, 1940

SOLO VOCAL

Mizu no hentai [Metamorphosis of Water], 1v, koto, 1909; Haru no yo [Spring Night], 1v, 2 koto, 3 shakuhachi, 1913; Hatsu uguisu, 1v, 2 koto, 3 shakuhachi, 1914; Aki no shirabe [Autumn Music], 1v, koto, shakuhachi, 1919; Aki no yo [Autumn Night], 1v, koto, 1919; Benisōbi, 1v, koto, 1920; Cosmos, Tsuki no kagami [The Moon Mirror], Sekirei [Wagtail], 1v, koto, 1921; Hira, 1v, Jap. ens, 1923; Noki no shizuku [Raindrops on Eaves], 1v, Jap. ens, 1926; Hana momizi, 1v, Jap. ens, 1927
Tō-ginuta, 1v, Jap. ens, 1929; Mushi no Musashino [The Musashino with its Insects], 1932; Ochiba [Falling Leaves], 1v, koto, 1933; Shun'yōraku, 1v, wind, str, 1933; Miyo no iwai [Celebration of the Generation], 1v, koto, 1934; Uteya tsuzumi [Play the Hand Drum], 1v, koto, 1935; Dōkan, 1v, koto, wind, str, 1936
Yamato no haru [Spring in Yamato], 1v, koto, ens, 1940; Yumedono, 1v, ens, 1940; Shiki no yanagi [Willows in 4 Seasons], 1v, Jap. ens, 1954; Nara no shiki [4 Seasons in Nara], 1v, 2 koto, 1955; Hamayū, 1956

INSTRUMENTAL

For koto/zoku-sō, orch: Etenraku hensōkyoku [Variations on 'Etenraku'], 1928; Shinsen-chō kyōsōkyoku [Conc. in shinsen mode], 1933; Hyōjō kyōsōkyoku, 1936; Ichikotsu-chō kyōsōkyoku, 1937; Shukuten sō kyōsōkyoku [Festival conc.], 1940; Banshiki-chō kyōsōkyoku, 1953, collab. Y. Matsudaira
For ens: Kara-ginuta, 2 koto, 2 shamisen, 1914; Fubuki no hana [Flower Drift], 4 koto, 1919; Higurashi, koto, shakuhachi, kokyū, 1920; Hanamibune, ens, 1921; Ochiba no odori [Dance of Falling Leaves], koto, shamisen, jūshichigen, 1921; Kairo-chō, ens, 1923; Sakura hensōkyoku [Variations on 'Sakura'], 3 koto, 1923; Seoto, koto, jūshichigen, 1923;Tanima no suisha [Watermill in a Valley], koto, shakuhachi, 1923; Haru no otozure [Arrival of Spring], koto, shakuhachi, 1924; Kohen no yūbe [An Evening by a Lake], koto, shakuhachi, kokyū, 1925; Seisui-raku, koto, shakuhachi, 1925; Wafū-raku, ens, 1926; Kimigayo hensōkyoku [Variations on the Jap. National Anthem], 3 koto, 1927; Suzumushi, koto, shakuhachi, 1927; Kinuta, 2 koto, 1928; Kotori no uta [Song of Birds], koto, shakuhachi, 1928; Haru no umi [The Sea in Spring], koto, shakuhachi/vn, 1929; Kōrogi, koto, shakuhachi, 1930; Shin-en no asa [Morning in the Holy Ground], ens, 1937; Uguisu, koto, shakuhachi, 1939; Mura no haru [Spring in Villages], ens, 1941; Gyōshun [Arrival of Spring], koto, shakuhachi, 1950; Sarashi-fū tegoto, 2 koto, 1952; Izumi [Fountain], koto, shakuhachi, 1954; Kiku no sakae [Prosperity for Chrysanthemum], ens, 1956
For koto: Kazoe-uta hensōkyoku [Variations on 'Kazoe-uta'], 1934; Isuzu-gawa [Isuzu River], 1947; Rondon no yoru no ame [Evening Rain in London], 1953

Principal publisher: Hōgaku Sha

MASAKATA KANAZAWA

Miyake, Haruna [Shibata, Haruna] (*b* Tokyo, 20 Sept 1942). Japanese composer and pianist. She made her piano début with the Tokyo SO playing Mozart. At the Juilliard School, where she studied composition with Persichetti, she received the Edward Benjamin Prize for *Gengaku ōkesutora no shikyoku* (1964). After her return to Japan she produced an experimental concert series 'Contemporary Music as Myself' (1977–85) at Club Jean Jean in Tokyo which mixed Japanese *enka* (a nostalgic style of pop music) with European avant-garde idioms. She has collaborated in improvisatory work with artists from contemporary, jazz, pop and traditional Japanese backgrounds including Kazuo Ohno, Hideo Kanze, Frederic Rzewski, Wayne Shorter, Sergei Kuryokhin, Yuji Takahashi and John Zorn. She has received commissions from institutions including Lincoln Center (*Roku-gatsu no muttsu no koe*, for the opening of Alice Tully Hall, 1970), the Tokyo Summer Music Festival (*Yuki no koe*, 1996) and the Japan National Theatre (*Horobita sekai kara*, 1997), and her music has been performed worldwide. Miyake has sought to create music which differs from European forms but which Westerners do not perceive as Asian. Her works combine influences deriving from the complex cultural mix of modern Tokyo, ranging from *bunraku* and Japanese traditional music to Western classical and pop music. Her writings include a book on music history and criticism, *Ongaku mirai tsushin* (Tokyo, 1984).

J. MICHELE EDWARDS/R

Miyazawa. Japanese maker of flutes and piccolos. The firm was established in 1969 by Masashi Miyazawa and is located in Asaka. In the 1970s the flute design was modified, in consultation with P.L. West of West Music, Coralville, Iowa (the firm's distributor in the USA), to suit the American market. Among the firm's innovations are the development of new alloys, such as the PCM-Silver alloy (1979) and the Gold-Silver alloy (1986). Later, attention was focussed on traditional-style key-cup design

and new head joints. The company began making alto flutes in 1988.

NANCY TOFF

Miyoshi, Akira (*b* Tokyo, 10 Jan 1933). Japanese composer. After studying composition at the Paris Conservatoire (1955–7) and privately with Raymond Gallois-Montbrun, he graduated in French literature from Tokyo University (1960). The influence of Dutilleux on Miyoshi is evident in the transformation of motifs in early works including the Sonata for flute, cello and piano (1955). In such works as the Sinfonia concertante (1954), the Piano Concerto (1962) and the Concerto for Orchestra (1964), Miyoshi's individual technique of motif transformation, which at times evokes the incremental rhythms of Japanese traditional music, increasingly became a structural element. Many of his important works are for vocal forces. In *Kogen-dansho* (1955), *En blanc* (1962) and *Duel* (1964), atonal melodies follow the verbal intonation of Japanese. After the String Quartet no.2 (1967) his use of atonality has became more prominent, and he has experimented with graphic notation and unusual performance instructions. In his trilogy for chorus and orchestra, Requiem (1972), *Psaume* (1979) and *Kyomon* (1984), Miyoshi combines these elements with Japanese children's songs. Among his awards are four Otaka prizes for the Piano Concerto, the Concerto for Orchestra, the Cello Concerto (1974) and *Kyomon*.

YOKO NARAZAKI

Mizelle, Dary John (*b* Stillwater, OK, 14 June 1940). American composer. He studied at California State University, Sacramento (BA 1965), the University of California, Davis (MA 1967) and the University of California, San Diego (PhD 1977), where his teachers included Larry Austin, Robert Erickson, Gaburo, Oliveros, Roger Reynolds and Karlheinz Stockhausen. He has taught at the University of South Florida, Tampa (1973–5), the Oberlin College Conservatory (1975–9), the Sonavera Studio of Sonic Arts (1979–80) and SUNY, Purchase (from 1990). His over 300 works for a wide range of musical, electronic and mixed media configurations employ instruments such as the *shakuhachi* and the *tarogato*, extended vocal techniques and computer-generated electronics. His music embraces both Western and Eastern traditions, utilizes organic mathematical processes and elegant musical architecture, and communicates an earthy and timeless aesthetic through its lyrical exploration of timbral extremes. Many compositions incorporate improvisation. His works of the 1980s are dense, exhibiting layered textures and what he calls 'multi-dimensional' music, a polyphony of different musical ideas and their interaction.

JOHN KENNEDY

Mizler von Kolof [Mitzler de Kolof, Koloff], **Lorenz Christoph** (*b* Heidenheim, Franconia, 25 July 1711; *d* Warsaw, March 1778). German writer on music, physician and mathematician. He was the son of Johann Georg Mizler, court clerk to the Margrave of Ansbach at Heidenheim, and Barbara Stumpf of St Gallen. Most of his early life is chronicled in his autobiography (see *MatthesonGEP*). According to this, he first studied in Heidenheim with N. Müller, minister from Obersulzbach. At 13 he entered the Ansbach Gymnasium where for six years his teachers were Rector Oeder and Johann Matthias Gesner, subsequently director of the Leipzig Thomasschule, 1731–4. Gesner's move to Leipzig may have led Mizler to enter Leipzig University on 30 April 1731, where he studied theology. In Ansbach he had had music lessons with the music director Ehrmann and learnt the violin and the flute. Mizler stated that he had studied composition by reading the best books on the subject, hearing performances by good musicians, looking at the scores of the best masters, and through his association with J.S. Bach, whom he said he had the honour to call 'his good friend and patron'. The nature and duration of Mizler's association with Bach remains unknown. At Leipzig his teachers included such distinguished German intellectuals as Gesner, J.C. Gottsched and Christian Wolff. After an illness which required convalescence in Altdorf, Mizler returned to Leipzig to complete a bachelor's degree in December 1733 and a master's on 4 March 1734. His thesis, *Quod musica ars sit pars eruditionis philosophicae*, was later published, with a dedication to Mattheson.

After a journey through Germany 'to visit various men of learning' he settled in Wittenberg in 1735 to study law and also medicine 'so that he could better care for his own health'. He returned to Leipzig in 1736 and presented a disputation, *De usu atque praestantia philosophiae in theologia, jurisprudentia, medicina* (Leipzig, 1736, 2/1740). In May 1737 he began lecturing on Mattheson's *Neu-eröffnete Orchestre* and music history at the university; he was the first to lecture on music at a German university for 150 years. In the same year he established a monthly publication, *Neu eröffnete musikalische Bibliothek*, which became the official periodical of the Korrespondierenden Sozietät der Musicalischen Wissenschaften that he founded in 1738 with the support of Count Giacomo de Lucchesini and the Ansbach court Kapellmeister G.H. Bümler. At the same time Mizler began his own music publishing business. In 1743 he entered the service of the Polish Count Malachowski of Konskie as secretary, resident teacher, librarian and court mathematician, taking up with enthusiasm the learning of the Polish language, history and literature. In 1747 he returned to his earlier interest in medicine, taking the doctorate of medicine at Erfurt University. In the same year he moved to Warsaw, turning his attention largely to the natural sciences and becoming court physician in 1752. He established a publishing house in Warsaw in 1754, became a member of the Erfurt Academy of Sciences in 1757, and received Polish nobility in 1768.

Mizler was a major figure in the history of German music in the 18th century. Although never more than an amateur composer, he commanded an extraordinary range of knowledge about music, mathematics, philosophy, theology, law and the natural sciences. He advocated what he felt was still an unattained goal: the establishment of a musical science based on mathematics and philosophy. His philosophical outlook was based largely on the writings of Christian Wolff (see Birke) and Gottfried Leibnitz, and much of his aesthetic doctrine, including his advice to imitate nature in music, was the result of his intimate association with the ideas of Gottsched. Mizler's most significant contribution was the publishing of the *Musikalische Bibliothek* between 1736 and 1754, a rich document of contemporary musical life in Germany as well as a review of many important books on music, largely from the period 1650–1750. He contributed wide-ranging commentaries on and criticisms of works by such writers as Printz, Gottsched, Mattheson, Euler, Scheibe, Schröter and Spiess. The works of Gottsched and Mattheson are particularly prominent in the pages of the *Musikalische Bibliothek*. There are several large excerpts from Gottsched's *Critische Dichtkunst*, including the sections on opera and cantata. More than 200 pages are devoted to the *Vollkommene Capellmeister*; while often genuinely impressed by Mattheson's ideas, Mizler criticized him for failing to create a systematic ordering of musical materials and a methodical presentation of the basic principles of part-writing (see Federhofer, 1970). In his detailed and perceptive essays Mizler formulated an invaluable musical philosophy and a musicological resource for Baroque music history that has not as yet been digested by musical scholarship nor recognized in contemporary studies of music history. Equally important was Mizler's organization of a corresponding society of musical scholars. The society was established to enable members to circulate by mail theoretical papers on various aspects of musical science and to further musical understanding by encouraging discussions of these papers by correspondence. Many of these theoretical statements appear in the *Musikalische Bibliothek*. The membership, limited to 20, comprised: 1738: 1. G. de Lucchesini; 2. Mizler (permanent secretary); 3. G.H. Bümler. 1739: 4. C.G. Schröter; 5. H. Bokemeyer; 6. G.P. Telemann; 7. G.H. Stölzel. 1742: 8. G.F. Lingke. 1743: 9. M. Spiess; 10. G. Venzky. 1745: 11. G.F. Handel; 12. U. Weiss. 1746: 13. C.H. Graun. 1747: 14. J.S. Bach; 15. G.A. Sorge; 16. J.P. Kunzen. 1748: 17. C.F. Fischer. 1751: 18. J.C. Winter. 1752: 19. J.G. Kaltenbeck. 1755: 20. L. Mozart (invitation apparently declined). Another important contribution by Mizler was his translation into German of Fux's *Gradus ad Parnassum*; in Mizler's judgment 'this methodical guide to musical composition [is] among all such works the best book that we have for practical music and its composition'.

WORKS

Musikalisches Vergnügen, bestehend in einer Sammlung von verschiedenen Oden und einer moralischen Cantate, announced 1737, not pubd

Sammlung auserlesener moralischer Oden, zum Nutzen und Vergnügen der Liebhaber des Claviers, i (Leipzig, 1740), ii (Leipzig, 1741), iii (Leipzig, 1743), iv, announced, not pubd [facs. of i–iii (Leipzig, 1971); ode 24 from vol.i, *D-Bsb*]

4 Sonatinen, fl/ob/vn (Leipzig, 1754), lost

Corrections to G. Lucchesini's Fl Conc., 1741, *Dl*

GEORGE J. BUELOW

Mizmār [tazamar, zammāra, zamr, zumare, zumbara, zummāra]. Generic term from the Arab world for various kinds of wind instrument with single or double reed.

1. Terminology and history. 2. Shawms. 3. Double clarinets. 4. Other related instruments.

1. TERMINOLOGY AND HISTORY. In the past in Arab cultures the term *mizmār* applied to all wind instruments. Later any instrument meeting one of the following criteria could be called *mizmār*: a single-reed instrument with two tubes of different or equal lengths (double clarinet); an instrument with one tube and a single or double reed (simple clarinet and shawm); an instrument that uses circular breathing (simple and double clarinet, shawm and related bagpipe instruments).

Today the term *mizmār* is usually applied to specific types of reed instruments; the precise meaning varies according to region. In Egypt and parts of the Arabian Gulf *mizmār* is applied to the folk shawm; see illustration for an example from Bahrain. This shawm is of the type found throughout West and Central Asia, south-eastern Europe and parts of North Africa under various other names: SURNĀY, *sornā*, *zurna* and *ghaita*. In Yemen *mizmār* is a double clarinet, but nowadays *zamr*, *zammāra*, ARGHŪL and MIJWIZ are more common and widespread terms for double clarinet. *Zammāra* is derived from the same linguistic root (*zamr*) as *mizmār*. Other terms apply to related wind instruments (see §4 below).

Shawm (mizmār or surnāy) within the leiwa ensemble of Afro-Arab tradition, Bahrain, 1998

The Semitic linguistic root *zamr* has a long history predating the Islamic period by many centuries. The evidence suggests a prototype instrument constructed of two parallel tubes having a narrow compass of notes, probably without a drone. Instruments of this type were widely found on the Mediterranean coast, and must have spread long before the rise of Islam. A double-pipe instrument from Syria from the Roman period (locally known as *abuba*) is documented with a drum, played by prestigious women (possibly priestesses) mounted on a camel. Later, in the early Islamic period, the *mizmār* was much discussed and fiercely condemned by certain legists.

Historical evidence reveals that the *mizmār* used to be played with string instruments, a pairing that has fallen into disuse. In a bas-relief in the British Museum, a procession of Elamite musicians from the court of Ashurbanipal is shown with seven vertical harps and a psaltery which balance the presence of two wind instruments of the *mizmār* type. Later, in the 10th-century *Kitāb al-aghānī* ('Book of Songs'), al-Iṣfahānī mentions the legendary musician Zalzal playing his *'ūd* with a singer named Ibrāhīm and a *mizmār* player named Barsum. More recently the double clarinet and shawm have been played with a cylindrical drum (Arabic: *ṭabl*; Turkish: *davul*), having important roles within life-cycle ceremonies.

In early Islamic literature, *mizmār* could mean either a beautiful voice or a wind instrument; this relationship explains features that survive today. Sometimes a single or double flute is called *mizmār* when the player sings into it at the same time (e.g. the *tazamar* of the Algerian Sahara) or plays and exhales loudly. This occurs in some techniques of the *mijwiz* (double clarinet), where the player blows and makes a low growling sound. Similarly, the Afar shepherds of Djibouti punctuate their playing on the obliquely held flute (*fodhin*) with singing.

2. SHAWMS. In Egypt the *mizmār* is found in three different sizes, played with cylindrical drums (*ṭabl*). Corresponding to the *surnay* and *zurna*, these shawms have a detachable double reed, a pirouette and a flared body carved from apricot wood. In less than a century the shawms have discarded Turkish names probably derived from the Ottoman period. The most important of the group, the smallest, was called *goura* (from the

Turkish *cura*: 'small, shrill'), and is now called *sibs*; the second, *zamr*, has become *shalabiyya* or *mizmār sa'īdī*; and the third and largest, in Turkish *kaba* ('big'), has become *tult* ('third'). The *mizmār* ensemble has its own strictly instrumental repertory, alternating between free, improvised sections and rhythmically strict, melodic ones which are specific dances.

3. Double clarinets. In Egypt the double clarinet is called *zummāra*. It has two parallel tubes of the same length, 30 to 35 cm, each with a reed (*balūs*) which fits into the body. The tubes are bound together with string dipped in tar and wax. The melodic or principal tube (*rayyis*: 'master') has four to six holes. The adjacent tube (*nawti*), sometimes with no holes, serves as the drone. Some examples are bored similarly in both tubes and possess no drone. In practice, the compass is no more than a 4th. The instrument is played solo or, at public celebrations, with the *darbukka* (goblet drum).

In Iraq, the *zummāra* can be a simple clarinet with one tube and six holes (*zummāra mufrad*), a double clarinet with identical tubes similar to the *mijwiz*. It is played solo and favoured by shepherds. In popular celebrations, it is supplemented with a drum, often a goblet drum (*khashaba*), and required to lead the dances. Of limited compass (a 4th or a 5th), it does not have a drone.

In Yemen the double clarinet (*mizmār*) is fixed round the player's mouth by a muzzle, reminiscent of the early Phrygian or Greek aulos. In Tunisia and Morocco the double clarinet (*zamr*) has a bell-shaped single or double horn extension; in Morocco the pipes have six parallel holes. The Albanian *zumare* also has a horn bell; its pipes of cane, bird-bone or (more recently) metal are bound together with wool and wax and have five parallel finger-holes.

4. Other related instruments. In Morocco the *mizmār* or *zamr rīfī* is a large double hornpipe, over 1 metre long, terminating in two bulls' horns. It comprises three sections: two parallel pipes of reed about 35 cm long, with six finger-holes; these are fitted into two slightly divergent metal pipes, with no holes, about 40 cm in length; these in turn are inserted into two separate horns about 30 cm long. The pipes are held together by metal wire, and the instrument is highly decorated.

The *zumbara* is a long obliquely held flute found in Sudan. Played by nomads, it has two finger-holes and a perforated metal disc that partly closes the open end.

Mizonne, Vincent. *See* Misonne, Vincent.

Mizuno, Shūkō [Nobutaka] (*b* Tokushima, 24 Feb 1934). Japanese composer. He studied with Shibata and Hasegawa at the Tokyo National University of Fine Arts and Music (1958–63). Together with Takehisa Kosugi and Mieko Shiomi he organized in 1958 the Group Music for improvisation, and he used improvisatory playing in *Three Dimensions* (1961) for three brass groups, each with a separate conductor. During the 1960s he frequently used graphic notation, for instance in the *Autonomy* series, and in *Orchestra 1966*, which makes extensive use of clusters. Jazz became an increasingly strong influence in his compositions from *Jazzy Work* for chorus and orchestra (1967) to *Combo '77*. In 1968 he was appointed to teach at Chiba University, becoming a professor in 1979; in 1971 he began lecturing at the National University of Fine Arts and Music and other universities. From 1973 to 1974 he was in New York and San Francisco on a Rockefeller Foundation grant. His most popular work, *Tenshu monogatari*, the music for a TV drama later revised as an opera, is successful for its delicate treatment of the text and its synthesis of European and Japanese elements. In the 1990s he has composed mainly operatic and symphonic works, freely combining elements of jazz and the avant garde with European and traditional Japanese music. He won the government-sponsored Art Festival in 1975 with *Maboroshi* and in 1997 with his Symphony no.3. He has written *Onguntekі sahō eno shikō* ('The Theory of Composition dealing with the *Ongun*', *Ongaku geijutsu*, xxv/11, 1967, p.12; xxvi/11, 1968, p.50), and his works are catalogued in H. Kobayashi: *Mizuno Shūkō sakuhin mokuroku* (Tokyo, 1997).

MASAKATA KANAZAWA

Młynarski, Emil (*b* Kibarty, nr Suwałki, 18 July 1870; *d* Warsaw, 5 April 1935). Polish conductor, violinist and composer. He studied at the St Petersburg Conservatory with Auer (violin) and Lyadov (composition); while a student he led the Imperial Musical Society orchestra and was a member of Auer's quartet. From 1894 to 1897 he taught at a music school attached to the Imperial Musical Society in Odessa. There he discovered the violinist Kochański and also taught Luboszyc. He returned to Poland in 1898 and inaugurated regular orchestral concerts in the capital. He was director of the Warsaw Conservatory, 1904–7 and 1919–22. As a conductor, he held appointments with the Scottish Orchestra (1910–16) and at the Curtis Institute, Philadelphia (1929–31), and worked in London, Moscow (at the Bol′shoy Theatre between 1914 and 1917) and Paris, where he organized festivals of Polish music (1903, 1925). In Warsaw he was also director of the opera (1919–29) and was responsible for the premières of several important Polish stage works, among them Szymanowski's *Hagith* and *King Roger*. At the end of his appointment in Philadelphia he returned to Warsaw where he conducted the Philharmonic, opera and radio orchestras.

Although he was active in the promotion of new Polish music, Młynarski's own work follows the traditions of Moniuszko, Wieniawski and Paderewski, combining Romantic traits with folksong elements. The style is somewhat academic but the instrumentation is very colourful. Among his best works are the Symphony 'Polonia', the Second Violin Concerto and the violin miniatures.

Moberg, Carl-Allan (*b* Östersund, 5 June 1896; *d* Uppsala, 19 June 1978). Swedish musicologist. He began his musicological studies under Tobias Norlind (1917–24). From 1924 he studied counterpoint in Vienna with Berg, and musicology with Peter Wagner in Fribourg until 1927 and with Handschin in Basle (1934–5). He achieved an international reputation as a medievalist with his doctoral dissertation of 1927 on Swedish sequences; in 1928 he became reader at Uppsala University and was professor there, 1947–61.

With his research and teaching from the 1920s following on Norlind's pioneering work, Moberg must be considered the founder of Swedish musicology. Though his output as a scholar lies mainly in the history of Swedish music, he also did important ethnomusicological research. A distinctive feature of his work is his critical approach to source material and his keen interest in aspects of cultural and social history. Besides medieval church music, Moberg made a particular study of Swedish 17th-century music, the history of ideas in music and Swedish folk music, carrying out field work in different parts of Sweden. For some decades he was involved in popular education, especially in Uppsala and with the Swedish Broadcasting Corporation. He was a member of the board of the Swedish Musicological Society from 1943 and in 1945 was elected president and editor-in-chief of its periodical, *Svensk tidskrift för musikforskning*, positions which he held until 1961. He was also the editor of *Studia musicologica upsaliensia* (1952–61) and a member of the editorial staff of *Sohlmans musiklexikon* (1947–52). A member of the Swedish Royal Academy of Music from 1943, he was its president from 1960 to 1963.

Mocke, Antoine. *See* MOUQUÉ, ANTOINE.

Mockridge, Cyril (John) (*b* London, 6 Aug 1896; *d* Honolulu, 18 Jan 1979). American composer. He studied at the RAM before serving in the British Army for three years. After the war he played the piano in London orchestras and cinemas. In 1922 he moved to New York, where he worked on Broadway as a rehearsal pianist and vaudeville accompanist, making piano arrangements for musicals by Rodgers and Hart, among others. Invited to Hollywood by Richard A. Whiting, for whom he had produced piano arrangments for Broadway shows, he joined the music department of the Fox Film Corporation in 1932. His first studio work was as a rehearsal pianist and arranger, most notably on Shirley Temple films, but soon he was asked to compose and conduct.

Invited to 20th Century-Fox by Alfred Newman, Mockridge became one of the mainstays at that studio until he turned to freelance work in 1960. Altogether he contributed music to more than 200 films; many scores were composed in collaboration with David Buttolph, Hugo Friedhofer, Alfred Newman or David Raksin. Among his own most notable scores are those for *The Ox-bow Incident*, *Nightmare Alley* and John Ford's classic Western, *The Man Who Shot Liberty Valance*, in which he made exemplary use of American traditional and folk melodies. His music for the popular Katherine Hepburn/Spencer Tracy vehicle *Desk Set* revealed his capacity for writing sophisticated comedy scores. In addition, he wrote music for numerous television programmes, including the theme song for the television series 'Laramie'.

CHRISTOPHER PALMER/FRED STEINER

Mock trumpet. A term which seems to have been used about 1700 for an undeveloped CHALUMEAU. The mock trumpet has been confused with the trumpet marine, with which it has no connection. Dart (*GSJ*, vi, 1953, 35–40) described a book of instructions for playing the mock trumpet, as well as a volume of music, *A Variety of new Trumpet Tunes Aires Marches and Minuets* (1698) for the instrument. This was clearly the chalumeau before its improvement by Denner; it carried three finger-holes for each hand, one thumb-hole, and had no keys. Such an instrument (now lost) is illustrated as no.221 in the *Catalogue of the Royal Military Exhibition* (ed. C.R. Day, London, 1890), where its length is said to be 8¼ inches (*c*23 cm). Its range was *g′* to *g″* and its tone may be assumed to have been strident. The volume described by Dart seems to have been printed in about 1707, but he showed that an earlier edition was printed in 1698. No other music for the chalumeau before its improvement is known.

NICHOLAS SHACKLETON

Mocqué, Antoine. *See* MOUQUÉ, ANTOINE.

Mocquereau, André (*b* La Tessoualle, Maine-et-Loire, 6 June 1849; *d* Solesmes, 18 Jan 1930). French scholar of plainchant. He took his vows as a Benedictine monk at Solesmes on 9 April 1877, was ordained priest on 28 December 1879 and was prior at Solesmes from 1902 to 1908. He worked for 13 years as assistant to Dom Joseph Pothier and eventually succeeded him as choirmaster at Solesmes in 1889. From 1887, in order to defend Pothier's *Liber gradualis* (1883), which was attacked by the supporters of official editions of chants (Pustet, Regensburg), Mocquereau began to conceive the idea of a monumental series of facsimile reproductions of Gregorian manuscripts as well as commentaries on them; the first volume of Paléographie Musicale appeared in 1889. From 1888 to 1891 he made several journeys within and outside France, bringing back much information and numerous photographs of musical manuscripts. This was revised and expanded on several occasions by his associates until 1914, by which time a valuable collection had gradually been assembled in the palaeographic centre at Solesmes. Many synoptical tables of different readings of the manuscripts were prepared from this collection. Armed with such material Mocquereau was appointed a member of the commission formed in 1904 at the instigation of Pope Pius X to bring out a new official Vatican edition of chant and he was asked to draw up the musical text for discussion. This text, based on what was thought to be the oldest and most authentic tradition, did not always gain the approval of Pothier, who believed in the 'living tradition' and in its modern variants. The association of the two men soon came to an end. It was

only in 1913 that Solesmes was again given the task of preparing forthcoming official editions.

Mocquereau had the insight to realize that our comprehension of Gregorian chant is to be gained above all from the manuscripts. The objective method which he was the first to apply in this field has still to be fully developed, since Mocquereau himself had neither the time nor the opportunity to carry it through completely. His achievement and influence were nevertheless immense. In the first volumes of the Paléographie Musicale, of which he edited the first 13 volumes, he examined the relation between the Latin accent and Gregorian melody; this study is the basis of a true understanding of the aesthetics of Gregorian chant. In volume vii (1901) he discussed the connection between accent and rhythm, an argument which Mocquereau took much further than the simple study of Gregorian chant and its manuscripts and which he dealt with more fully in *Le nombre musical grégorien*. From the beginning of his analysis, by means of the binary and tertiary subdivisions marked by the *ictus* (as by the alternation of the *arsis* and *thesis*), Mocquereau wanted first of all to specify exactly the rhythm of Gregorian chant. This precision he was then able to modify in practice through a flexible understanding of dynamic and agogic values acquired during his early musical training.

Moda (Sp.: 'fashion', 'style'). A narrative song genre related to the Iberian ballad. *See* BRAZIL, §II, 1(ii, iv), 3(ii, iv), and MODINHA.

Modal jazz. A style of jazz, developed in the late 1950s, in which modal scales (or their general characteristics) dictate the melodic and harmonic content. The leading exponents were Miles Davis and John Coltrane. Modal jazz rarely adheres strictly to the classical modes (Dorian, Phrygian, etc.), but it creates their flavour, or in some cases that of other non-diatonic scales, such as those of Spanish or Indian music. The term 'modal jazz' has also been applied, somewhat misleadingly, to performances based on the major or minor modes. The style has attracted musicians partly because it is relatively undemanding by comparison with those based on chord progressions. Because it is free of frequent harmonic interruption it can more easily create an unhurried and meditative feeling. Many performances are based on a two-chord sequence or a drone. The absence of frequent chord changes alone is sometimes regarded as defining modal jazz.

Modal rhythm. *See* RHYTHMIC MODES.

Mode (from Lat. *modus*: 'measure', 'standard'; 'manner', 'way'). A term in Western music theory with three main applications, all connected with the above meanings of *modus*: the relationship between the note values *longa* and *brevis* in late medieval notation; interval, in early medieval theory; and, most significantly, a concept involving scale type and melody type. The term 'mode' has always been used to designate classes of melodies, and since the 20th century to designate certain kinds of norm or model for composition or improvisation as well. Certain phenomena in folksong and in non-Western music are related to this last meaning, and are discussed below in §§IV and V. The word is also used in acoustical parlance to denote a particular pattern of vibrations in which a system can oscillate in a stable way; *see* SOUND, §5(ii). For a discussion of mode in relation to ancient Greek theory *see* GREECE, §I, 6.

I. The term

1. MENSURAL NOTATION. In this context the term 'mode' has two applications. First, it refers in general to the proportional durational relationship between *brevis* and *longa*: the *modus* is *perfectus* (sometimes *major*) when the relationship is 3:1, *imperfectus* (sometimes *minor*) when it is 2:1. (The attributives *major* and *minor* are more properly used with *modus* to distinguish the relation of *longa* to *maxima* from the relation of *brevis* to *longa*, respectively.)

In the earliest stages of mensural notation, the so-called Franconian notation, *modus* designated one of five to seven fixed arrangements of longs and breves in particular rhythms, called by scholars rhythmic modes. In these stylized patterns both long and breve could have two possible durations: if the shortest breve is assigned the value 1, the breve could be 1 or 2, the long 2 or 3; for example: B L + B L (1–2 + 1–2), L + L (3 + 3), B B + L (1–2 + 3) and B B B + B B B (1–1–1 + 1–1–1).

See also NOTATION, §III, 2 and 3, and RHYTHMIC MODES.

2. INTERVAL. Hucbald of St Amand (*c*850–930) listed nine 'modes' in his *De harmonica*, ranging from semitone to major 6th by semitonal increments, giving examples from the chant repertory for each (*GerbertS*, i, 105; ed. Traub, 26ff). His discussion was transmitted verbatim through Berno of Reichenau (*d* 1048; *GerbertS*, ii, 64). In chapter 4 of his *Micrologus* (after 1026) Guido of Arezzo gave six 'modes' 'by which the scale degrees are linked' from the semitone to the 5th with the exception of the tritone. He then mentioned an expansion to eight, adding the major and minor 6ths, and to nine, including the

octave. Wilhelm of Hirsau (*d* 1091; CSM, xxiii, chap.21) reported both traditions – Guido's six 'modes' and Berno's nine – replacing the word 'modes' with 'intervals', and he added examples from plainchant for the minor 7th and the unison. (Further references to early traditions for *modus* meaning 'interval' may be found in Frutolfus of Michelsberg's *Breviarium*, ed. Vivell, p.64, n.11.) The designation of interval by *modus* was repeated in manuals and treatises of later times, especially in Germany. In book 1 of Ornithoparchus's *Musicae activae micrologus* (1517) chapter 7 is entitled 'De modis seu intervallis', which in Dowland's translation of 1609 became 'Of Moodes, or Intervals'. As late as 1716 J.H. Buttstett, objecting to calling the unison an interval, repeated an old tradition that 'The unison is not a *mode* but rather the first foundation of other *modes*, as [is] unity of the numbers' (*Ut, mi, sol, re, fa, la*, p.29).

3. Scale or melody type. It is essential to distinguish between 'mode' as a concept in the history and theory of European music and 'mode' as a modern musicological concept applied to non-Western music, though the latter naturally grew out of the former (see below, §V, 1). As an indigenous term in Western music theory the term is applicable in three separate successive historical stages: to Gregorian chant, to Renaissance polyphony, and to tonal harmonic music of the 17th century to the 19th. These three stages of modality in European music were historically continuous in the higher levels of a single musical culture.

The nucleus of the concept of mode in its basic Western form may be illustrated in two early 11th-century Italian formulations: 'A tone or mode is a rule which distinguishes every chant in its final [scale degree]' (Pseudo-Odo, *Dialogus de musica*, *GerbertS*, i, 257); and 'The first degree A and the fourth, D, are alike and are designated "of a single mode" because both have a tone beneath and [have] tone–semitone–tone–tone above. And this is the first "similarity in the scale degrees", that is, the first mode' (Guido: *Epistola de ignoto cantu*, *GerbertS*, ii, 47). The famous definition from the anonymous *Dialogus* emphasized both the classificatory function of mode and the primacy of the final scale degree; Guido here stressed the scalar–melodic environment of any given scale degree, thus providing a structural definition for mode. These and other elements of mode and modality had a considerable earlier and subsequent history in medieval theory and practice, but they epitomize the two most important features: classification, and tonal structure.

In the first part of the 16th century theorists began to use first the eight medieval modes of Gregorian chant and then also an extended system of 12 modes to account for such features of polyphonic music as the choice of cadential pitches and of pitches for the opening imitative entries, as well as to specify aspects of range and contour in individual melodic lines. How real these theories of polyphonic modality were for 15th-century musicians is moot; but from the mid-16th century until well into the 17th polyphonic modality was a central feature of many repertories as well as of many theories. Finally, during the 17th century various systems of polyphonic modes played complex roles in the development of theoretical systems made up of pairs of major and minor keys in what has come to be called tonal Harmony or harmonic Tonality.

All three stages of European modal theory emphasized the classificatory and scalar aspects of mode, though one can observe or infer important melodic and motivic features that may be called 'modal' in some phases of medieval and Renaissance theory and practice. But since the 20th century the use of the term 'mode' in English has been broadened to the extent that melodic type and motivic features are now given equal weight with scale type in musicological parlance. The broader concept came into the scholarly literature during the first quarter of the 20th century in studies of eastern Mediterranean musical styles and Eastern Christian liturgical music, from which it has become the basis of the common understanding of 'mode'. A new basic definition from Idelsohn's *Jewish Music in its Historical Development* (1929) was given wide currency in the English-speaking world when it was taken over by Reese for his *Music in the Middle Ages* (1940, p.10): 'A MODE ... is composed of a number of MOTIVES (i.e. short music figures or groups of tones) within a certain scale'. In Winnington-Ingram's *Mode in Ancient Greek Music* (1936) both the scalar and the melodic aspects of mode are summarized, in a broad geographical and cultural context that includes both the historical Western definition and the then new aspects proposed by Western scholars of Asian and Middle Eastern music:

> Mode is essentially a question of the internal relationships of notes within a scale, especially of the predominance of one of them over the others as a tonic, its predominance being established in any or all of a number of ways: e.g., frequent recurrence, its appearance in a prominent position as the first note or the last, the delaying of its expected occurrence by some kind of embellishment. [p.2]

> Mode may be defined as the epitome of stylized song, of song stylized in a particular district or people or occupation; and it draws its character partly from associations contracted in its native home, reinforced perhaps by the sanctions of mythology. This is true of the Chinese *tyao*, the Indian *rāg*, and the Arabian *maqam*; and probably of the [ancient] Greek [*harmonia*]. [p.3]

To the terms above, for which 'mode' is used as a translation, should be added *ēchos*, used in the music theory of the medieval Byzantine Church to describe the direct model for what became the mode of Gregorian chant theory. To the non-Western technical terms one might add Persian *dastgāh* or *āvāz*, *pathet* in Javanese gamelan music, and Japanese *chō* – with its usual enclitic, *chōshi* – a word cognate with Chinese *diao*, and written with the same ideograph.

Taking the term in the modern, twofold sense, mode can be defined as either a 'particularized scale' or a 'generalized tune', or both, depending on the particular musical and cultural context. If one thinks of scale and tune as representing the poles of a continuum of melodic predetermination, then most of the area between can be designated one way or another as being in the domain of mode. To attribute mode to a musical item implies some hierarchy of pitch relationships, or some restriction on pitch successions; it is more than merely a scale. At the same time, what can be called the mode of a musical item is never so restricted as what is implied by referring to its 'tune'; a mode is always at least a melody type or melody model, never just a fixed melody.

This polarity of scale and tune is an instance of the familiar opposition of general to specific, which in music is often thought of as a contrasting of theory with practice. When modes (or their equivalents) are construed as primarily scalar, they tend to be used for classifying, for

grouping musical entities into ideal categories. When the melodic aspects of modality are its predominant features, then modes are seen as guides and norms for composition or improvisation.

The opposition of mode as class and mode as musical function is reflected in contrasts of emphasis observed in other aspects of modality. Modal systems used for classification are closed and often symmetrical in some way as well; they are constructions used for ordering purposes, and may well have origins and associations that have nothing essentially to do with any musical properties of the repertory to which they are actually applied. Musically functional modal systems, on the other hand, have to be open-ended and capable of making room for new musical modes, which may come into the system through borrowing, variation, proliferation, inspiration, and in many other ways. In this same vein, a modal system may be a rational construction, devised or revised by the learned; or it may be a traditional assemblage of musical entities used and retained by the working musician. And further, the possession of modality may be construed as a natural musical property, inevitably inherent in all music of the culture; or modality may be regarded as a property of a particular repertory, not necessarily applicable to other kinds of music in the culture.

II. Medieval modal theory

Medieval plainchant of the Western Church is the oldest musical style from which theory and repertory survive in sufficient quantity for comparative examination over time. Gregorian chant is a body of monophonic music melodically characterized by general open-ended modality and theoretically classified into a closed symmetrical system – the eight church modes (the two other principal repertories of Western medieval chant, Ambrosian and Old Roman, do not conform to the eight church modes). For ripeness of age combined with richness of intelligible sources, both musical and theoretical, it is unmatched. For these reasons, as well as because they are the ultimate source of all later Western notations of mode, chant theory and Gregorian chant provide the best paradigm for study and illustration of most aspects of mode and modality, both historically and systematically.

1. The elements. Modal theories in the West originated in a confluence of the Western chant repertory that had already existed in oral tradition in pre-Carolingian times with two main strands of theory imported during the 8th and 9th centuries from outside the practical traditions of that time. The first strand and the fundamental component of Western modal theory was a system of eight modes borrowed from the Byzantine Church, as reported in the earliest Carolingian sources. The rest of the theory was erected on this foundation with the aid of a congeries of patterned schemes and abstract terms originating with the musical systematists of the Hellenistic era – Ptolemy of Alexandria (*d* 161 CE) and others – and transmitted to the medieval West by the Latin writings of Martianus Capella (*fl* early 5th century), Cassiodorus (*d* *c*580), Isidore of Seville (*d* 636) and especially Boethius (*d* *c*524). The essential contributions to modal theory of this second strand were: (*a*) a precise means of measuring and demonstrating intervals of the diatonic scale using the monochord, a one-string instrument of ancient repute with a movable bridge; (*b*) a system of names for the resulting pitches, based on the diatonic tetrachord, along with the notion of using letter designations of some sort for the pitches of the whole system; (*c*) the idea of scale types, the species of the octave, along with a set of Greek names for them; and (*d*) the species of the smaller perfect consonances, the 4th and 5th.

(i) The Hellenistic model: tonus, modus, tropus. Making distinctions between various aspects of the modal continuum in the sources of chant theory is complicated by the use of three different terms that came to cover more-or-less the same phenomena: *tonus*, *modus* and *tropus*. *Tonus* and *tropus* are latinized Greek, *modus* is pure Latin. These terms are often found in pairs or as a set, in contexts implying synonymity, as well as alone; and each of them has not only one or more significances in the realm of modality, depending on the source, but also at least one other, quite different meaning in medieval theory.

The Greek terms *tonos* and *tropos* occur latinized in the writings of Martianus Capella and Cassiodorus, respectively; the three terms appear together, and synonymously, in book 4 chapter 15 of Boethius's *De institutione musica* (early 6th century). For Boethius, as for his Hellenistic sources, tones or modes were simply devices for transposition; they had nothing whatsoever to do with the church modes:

> From the species of the consonance of the octave arise what are called 'modes'. They are also called 'tropes' or 'tones'. Tropes are 'constitutions' that differ according to highness or lowness throughout entire sequences of pitches. A constitution is, as it were, an entire collection of pitches [*plenum ... modulationis corpus*], brought together within the framework of a consonance such as the octave, the 11th or the double octave. ... If these entire constitutions were made higher or lower in accordance with the species of the consonance of the octave discussed above [bk 4, chap.14], this would bring about seven modes, which are named Hypodorian, Hypophrygian, Hypolydian, Dorian, Phrygian, Lydian and Mixolydian (trans. after Bower).

Ex.1 is a translation into modern staff notation of Boethius's instructions for deriving his *modi*, *tropi* or *toni*. The (diatonic) species of the octave to which he referred is the distribution of tones and semitones filling in an octave consonance by step. The (diatonic) 'constitution' – a translation of the Greek *systēma* – of the double octave can be thought of as transposed to seven different relative pitch levels in such a way as to generate the seven possible diatonic octave species at the same relative pitch level, here shown as the octave *e–e′* (see Bower, 1984). In terms of the staff notation, as the movable double octave shifts its position here and there against the stationary 'characteristic' octave span *e–e′*, some of the interstitial degrees of the scale between *e* and *e′*, though they can keep their letter names, have to be

Ex.1

tones (modes, tropes) — constitutions (systems) of the diatonic double octave

(6) Lydian
(7) Mixolydian

sharpened or flattened, shown here by a modern key signature. (In ex.1 round semibreves show the 'characteristic' octave containing the octave species with the same name and number as the key of transposition, square breves show the movable 'dynamic *mesē*', with which other note names also move, and the diamond-shaped semibreves on *a* and *a♯* show the fixed 'thetic *mesē*'.)

There was of course no implication in Boethius's description of any actual musical function. Neither *mesē* nor boundary notes nor any other note was deputed to a musical role such as tonic or final. There was on the other hand a necessary connection between the particular transposition of the movable double octave and the particular distribution of tones and semitones within the stationary characteristic octave; this was indeed the whole purpose of the scheme. In book 4 chapter 15 Boethius had already listed and numbered the seven diatonic octave species; transposition keys were modes that generated those octave species within the characteristic octave and were named for them.

See also GREECE, §I, 6.

(ii) The Byzantine model: oktōēchos. From the 6th century to the early 9th, when the repertory of Western plainchant achieved its basic forms, there is no record of descriptive or theoretical sources, and of course no notated music. Towards the end of this period a system of eight modal categories, for which there was no genuine precedent in Hellenistic theory, came to be associated with the rapidly stabilizing repertory of Gregorian chant. This system was proximately of medieval Byzantine origin, as indicated by the non-Hellenistic Greek names of the modes in the earliest Western sources from about 800.

The origins of the Eastern Christian system of eight modes – usually called OKTŌĒCHOS – are not entirely clear; but it seems more than probable that it was not delimited purely or even primarily by musical criteria. In any case, the octenary property of the modal system of Latin chant in the West was of non-Latin origin; the idea of an eightfold system of modes in a four-by-two matrix was adopted by Carolingian theorists to an existing body of traditional liturgical song with which it had not originally been associated. The eightfold system was of Eastern provenance, originating probably in Syria or even in Jerusalem (Jeffery, 1992, p.108), and was transmitted from Byzantine sources to the Carolingian clergy during the 8th century.

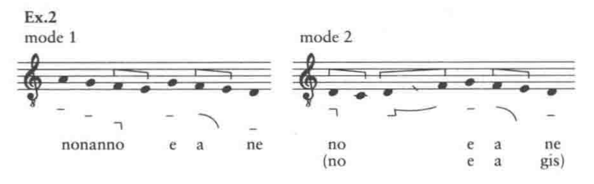
Looked at in this way, that which is musically consistent between the modal system and the repertory of medieval Gregorian chant is not to be explained as the natural reflection of an inherent homology (with minor inconsistencies) between a natural melodic modality in the chant and the closed and symmetrical system of the eight modes. The consistencies, rather, are the result of medieval classification, adaptation and adjustment, which took full advantage of existing modalities of the chant repertory, and brought the borrowed eightfold system into as much harmony as possible with existing melodies, melody types and psalmodic practices. The result was on the whole successful but there were numerous discrepancies; in most cases these were easily managed, but there were many instances in Gregorian chant where a satisfactory fit was never really achieved. Attempts by medieval theorists to deal with conflicts between chant practice and modal theory furnish essential insights into the processes of medieval musical thought; the dozens of discussions and

TABLE 1: The modal system of Latin chant

1	protus	{ authentic plagal
2	deuterus	{ authentic plagal
3	tritus	{ authentic plagal
4	tetradus	{ authentic plagal

analyses of individual items provided by the theorists embody useful paradigms for modal analysis in general.

The earliest known Western source for the system of the eight modes is the Tonary of St Riquier (*F-Pn* lat.13159 dated between about 795 and 800. Soon after this, in the early 9th century, the term 'tonus' was defined in t the first part of a brief text beginning 'De octo tonis', and incorporated in chapter 8 of the *Musica disciplina* of Aurelian of Réôme (*fl* 840s). Presumably the 8th-century or earlier Greek model for the Carolingian system was ordered like the Byzantine *oktōēchos*, that is, the four principal (authentic) modes first, then the four plagals. The Latin modes, however, from the outset were grouped the other way, with the authentics and plagals paired (Table 1).



See also PSALM, §II.

2. CAROLINGIAN SYNTHESIS, 9TH–10TH CENTURIES. The writings of later 9th-century theorists brought back Boethius's terms *tropus* and *modus*, but now (like *tonus*) to designate members of the system of church modes. First and foremost among these writings is the treatise *(De) Musica* (formerly *De harmonica institutione*) attributed to Hucbald (Weakland, 1956). This work brought together in a brilliant synthesis the three fundamental and, so far as the sources indicate, previously disparate strands of modal theory: the chant, the *oktōēchos* and Hellenistic theory (after Boethius).

(i) The Boethian double octave and the modes.

(a) The systems of tetrachords. The opening demonstrations in Hucbald's treatise – interval size, a diatonically filled octave, and even a diatonic aggregate that became the hexachord – refer solely to examples from plainchant. They were meant to appeal to his readers' experience, which would make theoretical distributions of tones and semitones immediate and perceptible. Drawing on experience in the same way, he introduced the diatonic two-octave scale transmitted by Boethius. First listing the tones and semitones of the Boethian double octave, Hucbald then followed Hellenistic theory a step further by describing his double octave in terms of the system of four descending tetrachords structured tone–tone–semitone. His example for this tetrachord as a familiar audible entity is the first four notes of the *Noeane* formula for the authentic protus (ex.2, from Aurelian, *Musica disciplina*, chap.9). He then gave a diagram of the tone–tone–semitone tetrachords of the descending double octave in terms of this familiar melodic figure, as shown in Table 2*a* (from Weakland, 1956, fig.iv – the Latin letter names are not Hucbald's): two pairs of conjunct tetrachords separated by a tone and with a tone added at the bottom.

Ex.2

Hucbald showed (*GerbertS*, i, 112; ed. Traub, 46–8) that the framework behind the double octave does not depend on the Boethian (i.e. Hellenistic) tetrachordal disposition for its aural construction:

> If on the other hand, completely apart from the first set of tetrachords [tone–tone–semitone descending or ascending], you should wish to build up [a double-octave system] on the place '*Venite*', taken from the invitatory *Christus natus est nobis*, then you deduce, by tone–semitone–tone [two tetrachords from '*A*'], up to the seventh [degree], where, with disjunction of a degree upwards, you arrange two [more] tetrachords on the path [already] set forth, adding one degree besides at the top, according to the subjoined diagram.

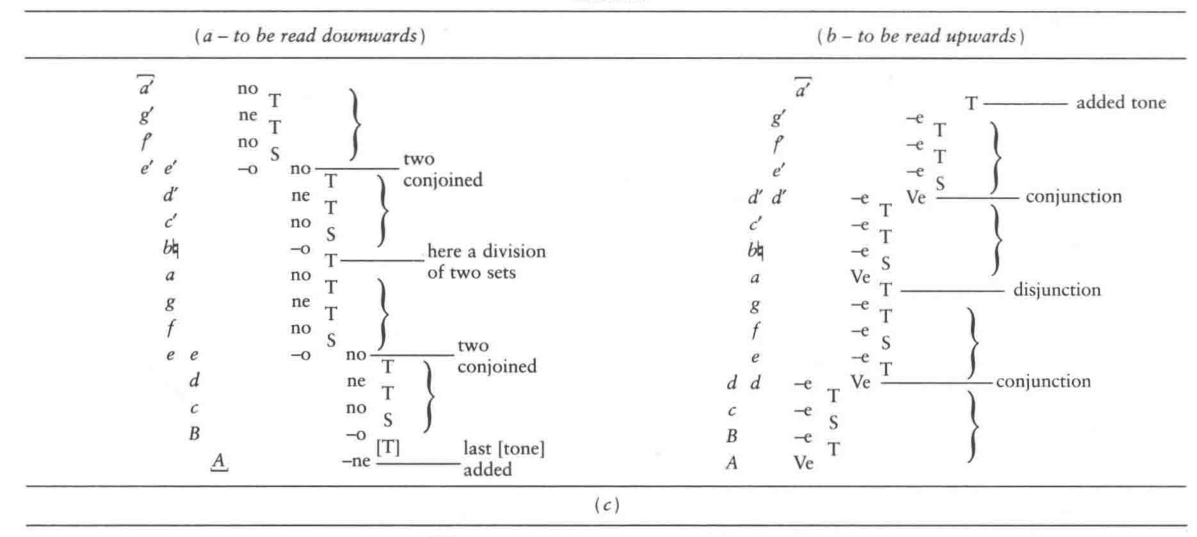


Table 2*b* is a reconstruction of his diagram (garbled in *GerbertS*, i, 112) according to Hucbald's instructions and following the model of table 2*a*.

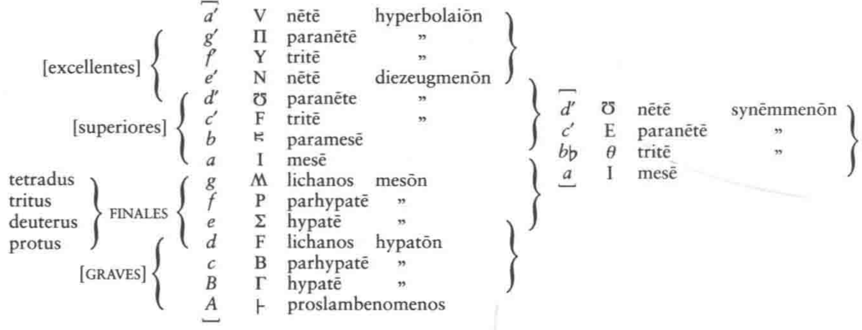
Hucbald drew special attention to the use of the contrasting tetrachords *diezeugmenōn* and *synēmmenōn* over the *mesē*. Changing from one to the other – modulation by system (*metabolē kata systēma*) in Greek theory – was used by early theorists of plainchant to allow a contrast of high versus low varieties in the degree of the scale above the *mesē*: *paramesē* versus *tritē synēmmenōn*, later designated by the contrast of *b*♮ versus *b*♭ above *a*. Theogerus of Metz (*d* 1120) summed up the usage as it was changing to the more familiar one: 'Some musicians however do not apply the tetrachord *synēmmenōn*, but only one degree, and call it soft [*unam chordem … mollem*]' (*GerbertS*, ii, 187). The particular and predominant use in the tritus modes of the tetrachord *synēmmenōn* to which Hucbald drew attention (*GerbertS*, i, 114; ed. Traub, 54) is a reference to what in later times was considered the particular and predominant importance of *b*♭ in the F modes 5 and 6. Hucbald's adaptation of the Boethian double octave and tetrachord is shown in table 2*c* (after *GerbertS*, i, 112, 115, 119, with Roman letters for degrees of the scale and Latin names for tetrachords added in square brackets, taken from later authors).



(b) Tetrachordal degrees and modal quality. The Boethian double octave plus the tetrachord *synēmmenōn* is now set forth as a descriptive foundation for modal theory (*GerbertS*, i, 119; ed. Traub, 66–8), and its systemic assumptions and properties endured for hundreds of years:

> The four [degrees] after the first three, that is *d*, *e*, *f*, *g* [after *A*, *B*, *c*] are appropriate for ending the four modes or tropes, which they now call 'tones' – that is, protus, deuterus, tritus and tetrardus – so that each of these four degrees may govern a pair of tropes subject to it: a principal, which is called authentic, and a collateral, called plagal:
>
> | | | |
> |---|---|---|
> | lichanos hypatōn [*d*]: | authentic/plagal protus: | [modes] 1 and 2 |
> | hypatē mesōn [*e*]: | authentic/plagal deuterus: | [modes] 3 and 4 |
> | parhypatē mesōn [*f*]: | authentic/plagal tritus: | [modes] 5 and 6 |
> | lichanos mesōn [*g*]: | authentic/plagal tetrardus: | [modes] 7 and 8 |
>
> – so that every song, whatever it may be, however it may be twisted this way and that, necessarily may be led back to one of these four. And thence they are denoted 'final', because all things which are sung may take an ending in [one or another of] them. We notate them briefly, put into the notation already at hand [Boethius's letters]: in descent [*g*, *f*, *e*, *d*]; in ascent [*d*, *e*, *f*, *g*].
>
> On their pattern [four] other tetrachords bring forth no less the intervals or quality of the sounds: of these [tetrachords] one comes out below [the finals] and three above. The addition of the examples above shows all these sufficiently [i.e. the tetrachord demonstrations, and especially the demonstration represented by table 2*b*].

Table 2*c* follows Hucbald's diagram in marking the 'tetrachord of the finals', and in labelling each final degree according to its assigned modal quality of protus, deuterus, tritus or tetrardus. The fifth tetrachord *synēmmenōn*, though it had a Latin translation 'coniunctarum', continued to bear its Greek name as a rule.

Hucbald drew attention (*GerbertS*, i, 119; ed. Traub, 68) to the parallel modal quality of equivalent degrees in the tetrachord of the *finales* and the one above it:

The fifth steps above [i.e. *a*, *b*♮, *c′*, *d′*, above *d*, *e*, *f*, *g*] are always linked to these four [finals] by a sort of connective bond, such that most melodies may be found leaving off in them quite as though by the rule [i.e. as well as in the 'regular' finals] – contravening neither reason nor perception on this account, and going on correctly under the same mode or trope. In this way, therefore, are associated together [*socialiter continentur*] *d* with *a*, *e* with *b*♮, *f* with *c′*, which are distant one from the other in the fifth place.

The relationship of modal equivalence between *d* and *a*, *e* and *b*♮, *f* and *c′* was described again in the 11th century in chapter 8 of Guido's *Micrologus*: '*d*, *e*, *f* take *a*, *b*♮, *c′*, which are of the same mode', and the notes *a*, *b*♮ and *c′* were designated 'affinals'; later still the term 'confinal' was used in the same way.

Having discussed how the three lower degrees of the *finales* and the *superiores* 'are associated together', Hucbald (*GerbertS*, i, 119; ed. Traub, 68) went on to the uppermost degrees in the central tetrachords of his system, whose mutual orientation is not the same as the others:

g and *d′* should be deputed as much as possible not to the end but to beginnings. They maintain a somewhat similar relationship also with the 4ths below, and certain 5ths, for in commencing they bend down towards them as a limit. These [lower 4ths] are *A* with respect to *d*; *B* with respect to *e*, but this rarely; *c* with respect to *f*; [and] *d* with respect to *g*, but in this latter it goes down sometimes to *c*, that is, to the [lower] fifth place; in the others this happens very rarely.

Hucbald here observed that while *d′* and *g*, like the three pairs *c′*–*f*, *b*♮–*e* and *a*–*d*, occupy parallel positions in their respective tetrachords, *d′* is not likely to serve as a secondary final (Guido's 'affinal') in place of *g*; on the contrary, *d′* and *g* have their affinity in downward-tending lines at beginnings.

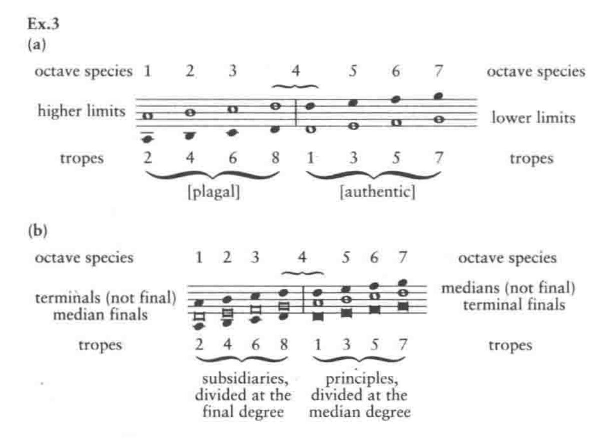
(ii) Octave species and the Hellenistic names. After Hucbald's *Musica* the most important surviving source for the introduction of Boethius's terms *modus*, *tonus* and *tropus* in connection with the eightfold system is the late 9th-century treatise that Gerbert called *Alia musica*. Chailley has reconstructed, edited, analysed and annotated it, and shown it to consist of three layers, all anonymous. The putative Model Treatise, like Aurelian's *Musica disciplina*, used only *tonus* to refer to a member of the eightfold system. The Principal Treatise, a reprise of and commentary on the Model Treatise, retained *tonus* in this sense and added *tropus* as well. The third layer of the *Alia musica*, a summary and correction of the Principal Treatise by means of a 'New Exposition', used only the word *tropus*.

The most lasting contribution of the *Alia musica* to modal theory was the integration of the seven species of the octave with the eight church modes. The octave species were given the Greek names not of Boethius's octave species but rather of his transposition keys –

Hypodorian, Hypophrygian etc. – which he had called *modi*. Thus the term *modus* came to mean not only the modal quality of protus, deuterus, tritus or tetrardus – the sound of a prominent pitch against its intervallic background – but also sometimes 'octave species', a distribution of tones and semitones within the extremes of an octave consonance. Modal qualities in turn were then attributed to either the lower terminus (in authentics) or to one of the medians of the octave species (in plagals), making the octave species into a modal octave.

The crucial passage in the Principal Treatise (ed. Chailley, 107) begins:

> The first mode therefore will be the lowest of all, namely the Hypodorian, from the first octave species, and it is terminated [at the top] by the middle degree [of the Boethian double octave], which is called *a* [*mesē*]. The second octave species produces the second, Hypophrygian mode, which is ended in *b♮* [*paramesē*].



The above passage was continued by order number, name and upper terminus of each octave species: 3, Hypolydian, *c′*; 4, Dorian, *d′*; 5, Phrygian, *e′*; 6, Lydian, *f′*; 7, Mixolydian, *g′*.

At this point the author of the Principal Treatise had run out of octave species, but had one church mode left, the eighth. In his individual treatment of the church modes he treated the eighth trope (church mode) as a mere appendage of the seventh (p.163), saying: 'it is of course called Hypermixolydian because it transcends the Mixolydian; according to Ptolemy it traverses an eighth octave species higher than all the rest', which is no new octave species at all but simply a replication of the first octave species *A–a* an octave higher, *a–a′*.

The difficulty was resolved by the third author of the *Alia musica* in his New Exposition (pp.198–9):

> All octave species can begin either above or below, e.g. first, *a–A* or *A–a*; second, *b♮–B* or *B–b♮*; third, *c′–c*or *c–c′*; fourth, *d′–d* or *d–d′* fifth, *e′–e* or *e–e′* sixth, *f′–f* or *f–f′* seventh, *g′–g* or *g–g′*. There are accordingly four higher [limits], that is, *a*, *b♮*, *c′*, *d′* and four lower, that is *d*, *e*, *f*, *g*. The four higher end [*finiunt*] the Hypodorian, Hypophrygian, Hypolydian, and Hypermixolydian in the higher section, while the four lower end [*finiunt*] the Dorian, Phrygian, Lydian, and Mixolydian in the lower section. Hence they are called 'finals'.

Ex.3*a* illustrates the above with a visual model based on Chailley's. The word 'finiunt' in the text of the New Exposition means 'end' in the sense of 'make a terminus' or 'limit', confused (perhaps intentionally) with Hucbald's sense of 'end' as 'make a termination' or 'conclude'.

Ex.3*b* illustrates the way in which the New Exposition later divides each octave species into species of the 4th and 5th by a single median (pp.200–01):

> let the Dorian either descend from *a* to *d* or ascend to *d′*, and let it have these [*d′*, *d*] above and below for its limits. Likewise from *b♮* let the Phrygian either descend to *e* or ascend to *e′*; in the same way the Lydian from *c′* descends to *f* or ascends to *f′*, [and] no less the Mixolydian from *d′* either descends to g or ascends to *g′*. And always any principal trope whatsoever has a 5th below the median degree and a 4th above it ... and in fact any subsidiary trope has a 5th above the final degree and a 4th below it.

The author of the New Exposition went on to apply a doctrine from the Principal Treatise allowing the addition of an auxiliary note to the smaller consonances, as well as to upper and lower termini of the octaves (p.201):

> And if a note is added on to some trope, above or below the species of the octave, it will not be out of place to include this as *emmelis* [*aptus melo*, i.e. 'included in the tune', after a Boethian term]; wherever it adjoins the aforesaid medians, here or there, it may be a 5th plus a tone, or a 4th plus a tone.

Later writers retained the concept of the added note but applied it largely to the modal octave, using terms like *subfinalis* or *subtonium* for a one-note extension at the lower end of an authentic modal octave, and terms like *licentia* for a one- or two-degree extension at either end of any modal octave.

The New Exposition further explained the numerical discrepancy between the seven species of the octave and the eight tropes by invoking the concept of modal quality (p.202): 'Finally, the eighth trope has the same octave species [*d–d′*] as the first, but differs in that it has *g* as the preserver of its quality [*sue qualitatis custodem*], while the other [has] *a* under the name of protus'. With this work the members of the eightfold system, and their modal qualities, are joined to Boethius's seven species of the octave, with the Greek names of his seven transposition keys; Hypermixolydian became Hypomixolydian, consistent with the new names of the other three plagal modes.

(iii) Melodic types and modal orientation.

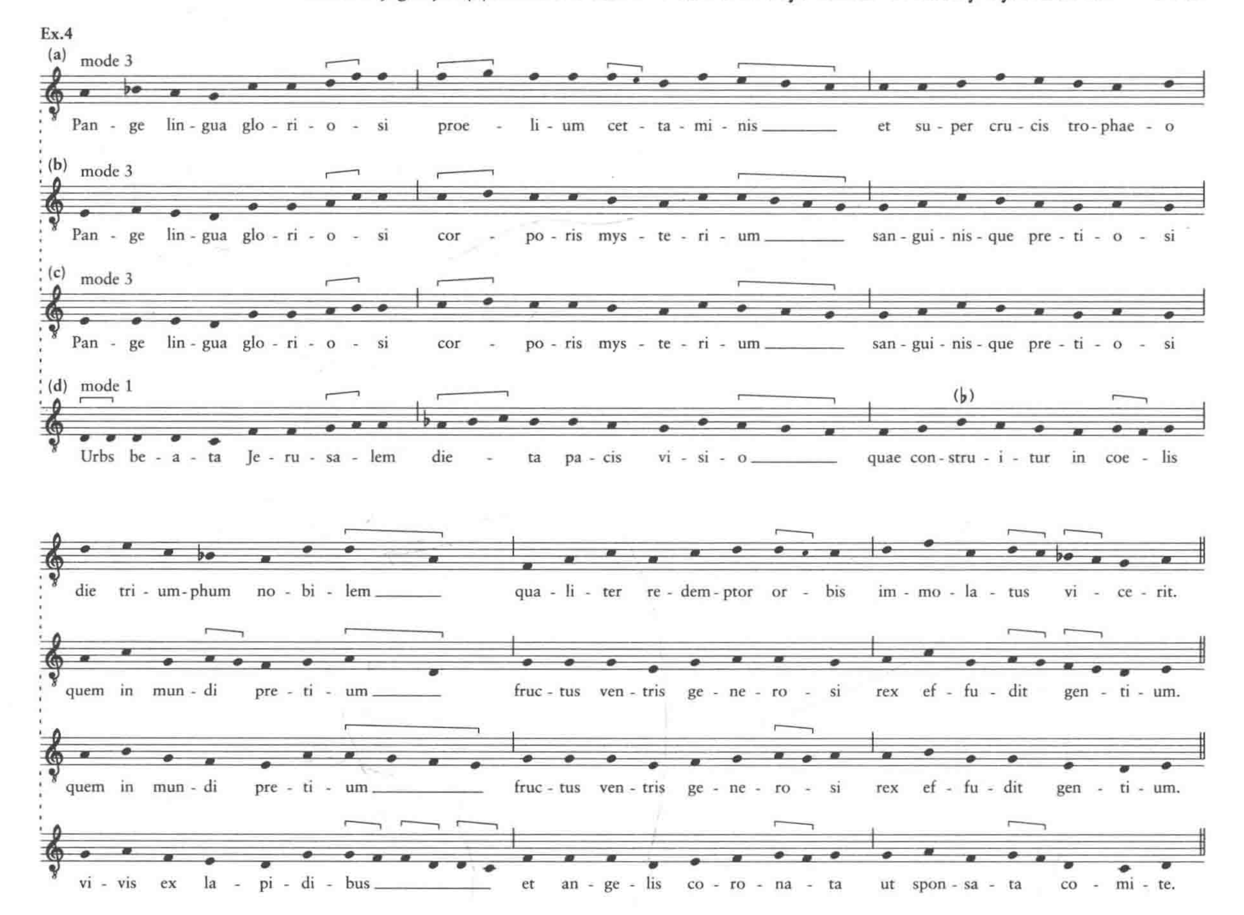
(a) Modal beginnings and modal endings. A clear distinction can be made between the practical and theoretical aspects of the church modes. For the sake of theoretical consistency virtually every item in the entire repertory of Gregorian plainchant was assigned to one of the eight modes in the closed system. But for certain kinds of items the modal system was made to serve a practical end as well. Antiphons of the Office and of the Mass (introits, communions, and probably originally offertories) were sung in what amounts to a special kind of refrain–verse pattern; a large number of independent songs serving as refrains were coupled with verses from the psalms sung to a relatively small number of musical recitation formulae. Making an immediate juncture of two separate melodic entities, such as psalm tone (i.e. music for the verse) and antiphon (music for the refrain), so as not to fall into ugly inconsistencies of pitch or pattern later on, is a formidable difficulty in a purely vocal, purely oral tradition. (*See* Psalm, §II.)

The Carolingian clergy regulated the relationship in the Franco-Roman Gregorian chant by using the borrowed system of the *oktōēchos*. In the compilations known as tonaries (practical and/or theoretical manuals useful in an era when chant was transmitted orally, *see* Tonary) every antiphon was assigned to one of the eight modes. Within each mode the antiphons were again divided into

subgroups, from one to as many as 13 per mode, depending on the mode and the usage at the time and place to which the tonary belonged. The rubric for each such subgroup of antiphons was a numbered *differentia* (also called *terminatio*, *varietas*, *divisio*, *distinctio* or *definitio*), which meant that the antiphons of each mode were subclassified according to variable endings for the psalm tone associated with the mode. This was done so that singers could learn to make the return from a psalm tone ending to the beginning of an antiphon in terms of some general feature of the antiphon beginning, rather than having to handle independently each link between psalm tone and antiphon (*see* PSALM, §II). Sometimes the general feature at the beginning of the antiphon was no more than the initial pitch, but often it was a typical opening gesture. At the same time the endings of the antiphons were deemed protus, deuterus, tritus or tetrardus; they were also classed as authentic or plagal according to tessitura, and thus assigned to one of the eight modes. This classification of antiphons first by mode and then by psalm-tone *differentia* can be construed as a kind of two-level scheme comprising closed systematic modes based on the endings of the antiphons, and open melody-type modes based largely on their beginnings.

A consequence of the identification at different levels of two areas of modality was that a number of antiphons seemed to belong to *differentia*-classes of one mode according to the opening of the melody and of another mode according to the end. Conflict of modal assignment between one source and another sometimes arose as a result of this. In Regino of Prüm's tonary (*CoussemakerS*, ii, 1–73) and chapter 2 of his *Epistola* (*GerbertS*, i, 231; ed. Bernhard, 1989, 40–42) ambiguities of beginning and end are noted for many specific antiphons; melodies with this ambiguity are called 'illegitimate chants' or 'hybrid songs' (*cantus nothi*). Some other writers before 1100 who commented on this are Berno of Reichenau, in chapters 9–11 of the prologue to his tonary (*GerbertS*, ii, 72–6); the anonymous author of the Reichenau Tonary (ed. Sowa, 81–154); and Johannes Cotto, chapters 14–16 of his *De musica* (CSM, i; *GerbertS*, ii).

Conflict of modal assignment from source to source may of course arise simply as a result of the melodies' being different; but often the same melody only slightly changed, or even unchanged, may quite legitimately be assigned to one mode or another. These variously ambiguous pieces and the theorists' attempts to deal with them indicate just what difficulties, both in theory and in practice, there must originally have been in fitting the vast body of plainchant to the closed eightfold system. At the same time, by focussing attention on the modality of musical sequences smaller than whole pieces, the multi-modal attributions provide the best approach to melodic modality itself in the plainchant repertory.



Lists of ambiguous pieces and discussions of particular cases are given by Lipphardt (1965, pt iii, esp. chap.6) and Huglo (1971, esp. chaps.1, 2 and 12). Gevaert's *La mélopée antique* (1895), based on a study of Regino's tonary, is the seminal analytical study, even though its historical premises have long been discredited. And although his tonary can no longer be thought of as reflecting the most ancient state of chant modality, Regino (*d* 915) was so generous with his annotations of ambiguities and his explicit recognition of modality in openings that Gevaert's analysis seems almost inevitably to follow. This analysis demonstrated for the antiphoner the existence of an open-ended modality behind the closed eightfold system; it is in fact paradigmatic for such analyses. Gevaert's two levels of classification – 47 melodic *thèmes* grouped into a much smaller number of fixed modes – embody a hierarchical contrast of free melody versus bound class, of flexible compositional (or improvisational) norms and models versus controlled aggregates of pitch relationships, which is characteristic of more than one musical culture of the past and present.

(b) An instance of modal ambiguity. The mode at the end of an antiphon is established by the final degree and the manner in which it is approached; at the beginning a mode is often strongly suggested by some characteristic opening gesture. Hence conflicting assignments and bimodal antiphons arise from a similarity in opening phrases between two melodies or melody types whose continuations or conclusions are dissimilar. Concomitant contradictions in scale type, or implied chromatic inflections, either of which may lead to the transposition of a melody to its affinal position a 5th higher in the double octave, or to its projection a 4th higher, are a frequent but secondary result; the primary phenomenon is the accidental confusion or deliberate admixture of phrases, motifs and configurations.

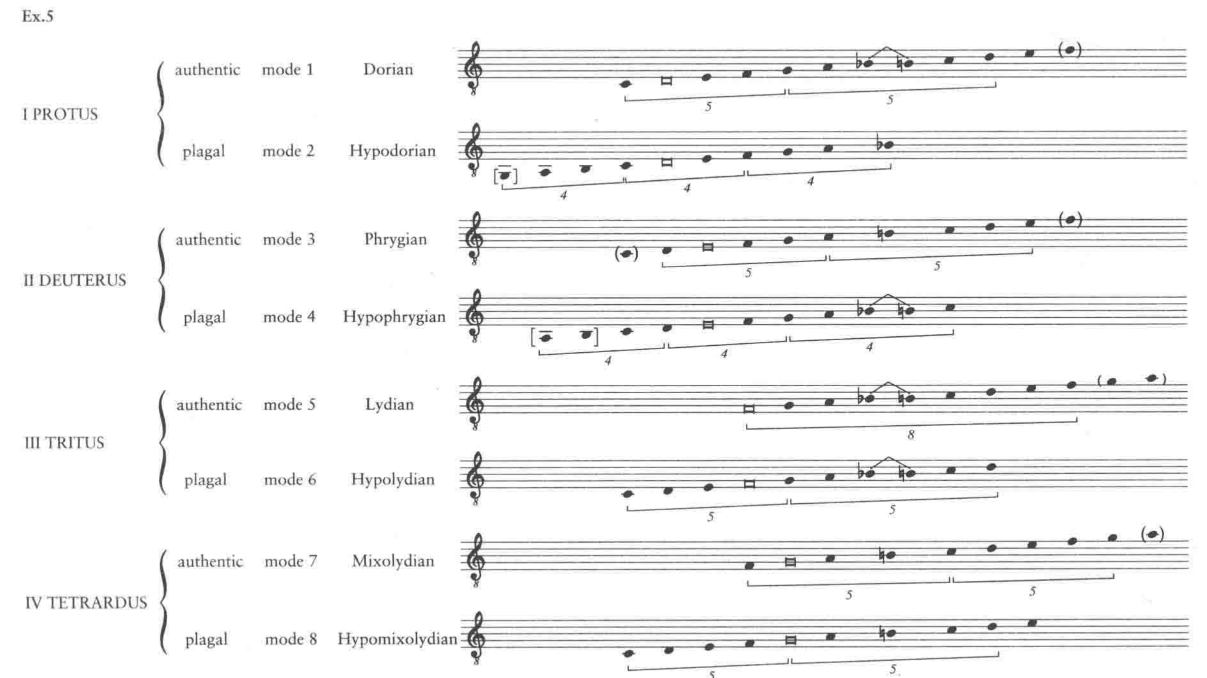
In Regino's tonary several antiphons assigned to mode 3, the authentic deuterus, are annotated 'can be in mode 1' (authentic protus). They are all tunes with a mode 3 opening (Gevaert's *thème* 35) which strongly resembles the most common of all mode 1 openings (Gevaert's *thème* 6). This particular ambiguity is also described by Johannes Cotto at the end of chapter 15 of his *De musica*. The antiphons in question are given in mode 1 in most readable medieval sources (see Lipphardt, 1965, p.262, for other mode 3 attributions); but sources of the hymn tune *Pange lingua* can be used to illustrate the relationship.

Ex.4*b* gives the tune of *Pange lingua* in its familiar mode 3 form (as used, for instance, in Josquin's paraphrase Mass); ex.4*d*, the hymn *Urbs beata*, begins like dozens of mode 1 antiphons. Ex.4*c* gives the *Pange lingua* text to the *Urbs beata* tune, projected one degree higher in the double octave, with final at *e* instead of *d*; this has the effect of replacing the tone *e–d*/*d–e* in the fourth and fifth phrases with a semitone *f–e*/*e–f*. In terms of scale type reckoned from a tonic final degree, this constitutes a change of mode; yet the tune, as represented in ex.4*c* and *d*, is effectively unchanged. (In ex.4, *a*, *c* and *d* are after Wagner, 1921, pp.477–8, and *b* from Glarean, *Dodecachordon*, chap.36.)

The standard version of ex.4*b* differs from 4*c* in two essential particulars: there is an upper semitone inflection of the first note in the opening gesture; and in the opening gesture and elsewhere *b*♮ is replaced by *c′* when approached by step from below (a feature of the so-called German chant dialect, but here modally significant as well). These differences, unlike the differences in interval structure in the fourth and fifth phrases, bring about a clear contrast in melodic features between 4*b* and 4*d*. The opening gesture now brings forward the minor 6th above the final instead of the 5th, and this degree, especially as it is handled in the second and third phrases, is characteristic not only of this tune but of mode 3 tunes in general. In mode 1 tunes, conversely, the minor 6th above the final is an upper auxiliary inflection incidental to the 5th, as often notated by *b*♮ or *c′* as by *b*♭. So melodically,

the second and third phrases of the *Urbs beata–Pange lingua* tune are not at all mode 1, no matter where they are projected on to the double octave.

Ex.4*a* is the *Pange lingua* tune projected a 4th higher, so as to end at *a* instead of *e*. The availability of both *b*♮ and *b*♭ above *a* makes possible the transformation of *a* protus at the affinal position with *b*♮ into *a* deuterus with *b*♭. For instance, the relationship between the mode 1 and mode 3 versions of the tune can be visualized most easily by supposing a transposition of ex.4*d* up a 5th to its affinal position; this would be an *a* protus version of the tune to contrast with the *a* deuterus version of ex.4*a*, and either could be considered a modal transformation of the other.



3. 11TH-CENTURY SYNTHESES.

(i) Italian theory of modal functions. The two works on plainchant theory that had both the widest circulation in manuscripts and the most frequent appearance in commentary and quotation were produced in Italy in the late 10th century or early 11th. They were the *Micrologus* by Guido of Arezzo (*c*1026) and the *Dialogus de musica*, formerly attributed to Odo of Cluny, now established by Huglo as the work of an anonymous Lombard monk in the years not long before the appearance of Guido's work. (The *Micrologus* and its commentaries have been extensively studied by Smits van Waesberghe, and a comparative study of the *Micrologus* and *Dialogus* appears in Oesch's biography of Guido; the *Dialogus* itself is almost completely translated in Strunk, 1950, pp.103–16 – only the portions dealing with the specific characteristics of each mode have been omitted.)

These two works, especially the *Dialogus*, are characterized by their practical approach to modal theory. Learned reference to Boethius and other ancient authors is eschewed, and the elegant Greek note names for the double octave are replaced by the simple and familiar Latin letters *A–G*, *a–g*, *aa*, with the Greek gamma (Γ) added at the bottom; the available musical space was soon extended upwards to *dd* and later *ee*. The aim was not so much to make or remake new theory as to preserve and clarify traditional practices. Modal theory, especially in the *Dialogus*, is presented as simple truth, needed to help resolve confusions in the practice, with minimal recomposition according to theory in the most extreme cases. The Italian theorists were dealing in synthesis and didactic theory, not in new theoretical discovery and analysis.

The discussion of chant modes and modality in the *Dialogus*, the *Micrologus* and their many followers is based on the definition of modal functions, which are segmental and suprasegmental; that is, they apply to single pitches in critical positions or to ranges and successions of pitches. The modal functions are basically three: final, initial and medial. In the 'classical' modal theory from the 11th century onwards final and initial functions are treated as segmental, applied to single pitches, though these functions were occasionally also thought of in terms of characteristic phrases. The medial functions are of both kinds, having to do with range and

Ex.5

register on the one hand, and individually important medial pitches on the other.

(a) Final. The classic definition of the final as modal function in the *Dialogus* (quoted in §I, 3, above), is: 'A tone or mode is a rule which distinguishes every chant in its final'. This famous dictum recurs in dozens of theoretical works, both about plainchant and about polyphony, over the next six or seven centuries; it is indeed part of the ultimate origin of the conventional notion of the 'tonic', current since the 18th century, which is almost inseparable in textbooks from the notion of 'finishing'.

After the *Dialogus* few objections were ever entered against the idea that the modal quality of the last note of a song should override all other considerations in melodic classification and orientation in the modal system. The doctrine had the virtues of simplicity and clarity, and it was soon buttressed by powerful logical arguments. Guido gave five in chapter 11 of his *Micrologus*, which are elaborated in Vivell's Anonymous, pp.36ff (*Commentarius ... in Micrologum*; ed. Smits, 132ff) and thence in book 6 chapter 39 of the 14th-century *Speculum musice* of Jacobus of Liège (*CoussemakerS*, ii, 246–8; CSM, iii). Two versions of Guido's third argument may be seen in translation in Apel, 1958, p.175; but the second argument (a restatement of *Dialogus*, chap.8, see Strunk, 1950, pp.113–14) is the most important. It provides a two-stage rule whereby notes within a phrase are restricted to certain intervallic relationships with the note ending the phrase; the phrase-final notes in turn are restricted to the same set of intervallic relationships with the final (*Micrologus*, chap.11):

With the degree which terminates a phrase [*neuma*], the rest of the degrees [in the phrase] ought certainly to agree, through the aforesaid six consonances [semitone, tone, minor 3rd, major 3rd, 4th, 5th]. To the degree which terminates a song, its beginning and the ends and also the beginnings of all its medial sections [*distinctionum*] have the duty to adhere. Degrees rightly 'are suited to the final', so that they are 'coloured' by it ... for they concord to a medial cadence [*distinctioni*] by the aforesaid consonances, and the medial cadence [*distinctio*] to the final through the same consonances.

(b) Ambitus. With the modal quality of a song residing only in the final, to which all other degrees were made directly or indirectly subordinate, the course of a liturgical song from incipit to final was necessarily governed in its internal pitch relationships by that final. The main independent function that was still to be determined in the domain of pitch was the registral area, the boundaries between which those relationships could exist. These boundaries were located in the double-octave system with respect to the final. Guido summarized (*Micrologus*, chap.13):

as is sustained by the evidence of liturgical songs [*usualium cantuum attestatione*], authentics hardly ever descend more than one degree from their final; [and] of these the authentic tritus seems to do so very rarely, on account of the imperfection beneath of the semitone. The authentics rise, however, to the eighth and ninth [degrees above the final], and even the tenth. Plagals, to be sure, fall and rise to the fifth [degree on either side of the final], but the sixth or seventh [degree] is authoritatively granted in the ascent, like the ninth and tenth in the authentics. The plagals of the protus, deuterus and tritus sometimes necessarily finish in the upper *a*, *b*♭♮, *c′* [respective affinals, by the process of transposition].

Ex.5 summarizes the classical doctrine of the ambitus of the eight church modes. The doctrine began with the *Dialogus* (*GerbertS*, i, 259–63), but was repeated in many later works. Ex.5 is based ultimately on the *Dialogus*, but in the light of later commentary, particularly the *Questiones in musica* (ed. Steglich, 45ff), which was the principal source in turn for book 6 chapters 43–50 of *Speculum musice* (CSM, iii, 6). The several ambituses are abstractly measured by systems of perfect consonances – an octave in mode 5, three conjunct 4ths in modes 2 and 4, and two conjunct 5ths elsewhere. (In modes 1 and 8 the note *e′* is regarded as extra, though legitimate, because the span *c–e′* cannot be contained within a system of three

perfect 4ths or two perfect 5ths.) These systems are merely measuring devices: they are part of the doctrine and have nothing to do with the internal structure of the modal scales. They are not to be confused with the species of consonances adumbrated in the *Alia musica* (see §2(ii) above) which were developed by the Reichenau theorists (Berno and Hermannus Contractus) and later by Marchetto da Padova (*fl* 1305–19) and his followers up to Tinctoris (see §4(ii–iii) below), and on into the 16th century. (In ex.5 square notes indicate modal finals, parentheses enclose notes that are 'incorrect' according to the texts, and square brackets enclose notes theoretically available but rarely found; although the note *b*♭ is not mentioned in the standard theoretical summary for modes 3, 7 and 8, it appears often in graduals and in a few anomalous tetrardus antiphons.)

(c) Initials and medials. After the 11th century ambitus and final were normally considered necessary and sufficient to determine the mode of a piece. To go beyond the mere determination of a mode, however, and to deal with melodic relationships in more analytical detail, other modal functions besides final and ambitus were required. The older and more abstract suprasegmental functions dealing with aggregates of pitches and intervals, such as modal quality and the modal species of the consonances, were to be developed as tools for analysis of chant by the 11th-century Reichenau theorists; more concrete and practical single-pitch segmental functions were developed largely as a consequence of the doctrines of the *Dialogus* and *Micrologus*. For each mode certain specific degrees could take on important secondary functions that were derived from the practice of liturgical music itself, and were determined in two ways: from the initial notes of songs in the several modes, particularly of Office chants with verse formulae, namely antiphons and responsories; and from the verse formulae themselves, particularly the psalm tones for the antiphons.

In Guidonian theory initial notes were taken as important guides to modal structure in connection with the doctrine of the supremacy of the final, and strictly as single pitches. Beginnings were obviously likely to be in the forefront of consciousness (Hucbald used them wherever possible in his practical demonstrations of the intervals). Furthermore, none of the modes had chants beginning on all seven degrees of the scale (given octave equivalence), and the number of possibilities in any one mode ranged from one (mode 6 in some descriptions) to seven pitches at the most (mode 8 in some descriptions, with octave duplication of *c* and *c'*). Since they were easily identified, and yet were restricted to fewer than all the possibilities, those degrees in any mode that had chants beginning on them were believed to be a sure guide to the degrees allowable at the beginnings and endings of the medial phrases in that mode.

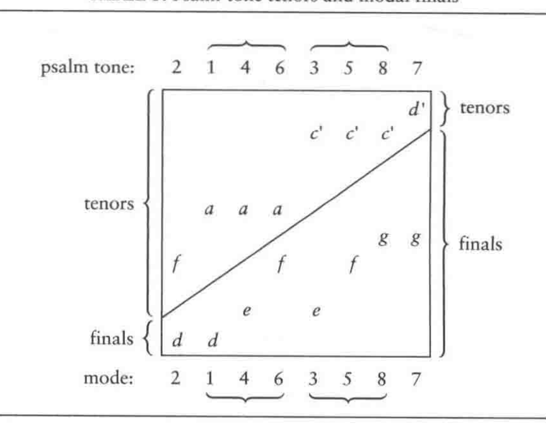
The tradition linking initials with the beginnings and ends of medial phrases – *distinctiones* – antedates the Guidonian school; but the author of the *Dialogus* was the first to link the theory and the practice by citing an example for each modal initial. Many of his citations, particularly of course for the less frequently used initials, were repeated down to Jacobus's *Speculum musice* in the 14th century, and beyond.

Characteristic expressions of the connection between initial and medial functions in each mode may be found in the anonymous *Musica* (*GerbertS*, i, 337–8), ascribed to Berno by Smits van Waesberghe, and Berno (*GerbertS*, ii, 70–71), whence they were taken over by Frutolfus of Michelsberg as part of the descriptive headings for each mode in his tonary. His heading for mode 1 reads, in part: 'Its singing begins in six degrees, *c d e f g a*, in which are comprised also the "colons" and "commas", that is, parts and sections [*membra et incisiones*], which we call the "distinctions" of the song' (*Breviarum*, ed. Vivell, 113). The equivalence of song initials with medial initials and medial cadences ('distinctions') is perhaps not always as close in practice as it is in theory, at least in terms of frequency of distribution. Rare beginnings may make fairly frequent medial cadences, such as *g* in mode 1, while some beginnings are never used as medial cadence points, such as *e* in mode 1. But on the whole the lists of modal initials so often provided by chant theorists can be used as a rough guide to the important secondary melodic nodes in each chant mode, as the theorists intended them. More than that, the very idea of secondary strong points in each mode played a central role in some of the later elaborations of the eightfold system as a theory for the structuring of polyphonic music between the 15th and 17th centuries.

(d) Tenor. The other main source for secondary modal functions was the psalmody of the Office. The most important borrowing was the designation of the tenor of the psalm tone associated with a given mode as a modal degree second in importance only to the final of its antiphons. For it is indeed the case that the reciting pitch of each psalm tone, the tenor, is among the pivotal degrees of many melodies in each mode. The incorporation of psalm tones and especially psalm-tone tenors as aids in the understanding of chant modality was a natural consequence of both liturgical association and musical similarities.

In chapter 13 of the *Micrologus* Guido suggested that the upper pitch limit for the beginning of a liturgical song coincides with and thus in a sense is set by the psalm-tone tenors. Part of the passage is quoted below with the commentary of Vivell's Anonymous (p.46); Guido's own words are in quotation marks:

> 'For there', that is, in these formulae like *seculorum amen*, 'we see in which degrees of the individual modes a song may be begun more often or more rarely, and in which it' – that is, the beginning – 'may never occur'. For every song, plagal as well as authentic, can begin – or any medial phrase [*distinctio*] can begin or end – as high above the final as the place where the *seculorum amen* and the tenor of the whole psalm appropriate to any authentic or plagal mode rises.



Here the tenor is merely set as a guide to the upper limit for initials and for medial cadences. But by the end of the 11th century, in a passage at the beginning of chapter 11 of the *De musica* of Johannes Cotto, the practical distinction of mode and psalm tone is obliterated with respect to the tenor. Even the chapter title itself – 'On the tenors of the modes and their finals' – attributes the psalm-tone element to the mode. The chapter begins:

> As there are eight tones, moreover, so there are eight tenors. ... And in music we say tenor just where the first syllable of the *seculorum amen* of any tone begins, for it is as though they hold the keys of the melody [*claves modulationis tenent*] and give us access to an understanding of the chant [*ad cantum cognoscendum*]. ... Moreover it is to be noted that, as the ends [*fines*] of the eight tones are disposed on four notes, which on that account are called finals, so also four notes are attributed, but in a different way, to the eight tenors. ... the tenor of the second tone is on *f*; of the first, fourth and sixth on *a*; of the third, fifth and eighth on *c'*; of the seventh on *d'* [see below, table 3]. Nor is it unsuitable that the tenor of the second and seventh claim

solitary places for themselves, because the second descends the furthest, to the 4th [below *d*], and the seventh rises above all the others.

Johannes specifically pointed to the tenor as a guide to something outside the psalm tone, in the song itself, for while 'modulatio' frequently refers to a psalm-tone configuration, 'cantus' never does. His observations mingle aspects of psalm tone and mode as concepts. He compared and contrasted psalm-tone tenors and modal finals in the same context; and his accounting for the singularity of the psalm-tone tenors *f* and *d'* is on the grounds of the ranges of their correlated modes, for it is not the second psalm tone that 'descends ... to the 4th'. The psalm tones here are not merely indicators of the mode of their associated antiphons; rather, they have in themselves properties that can be attributed to the mode of the refrains, the liturgical songs, to which they pertain. Table 3 shows the relation of psalm-tone tenors and modal finals, as described by Johannes.

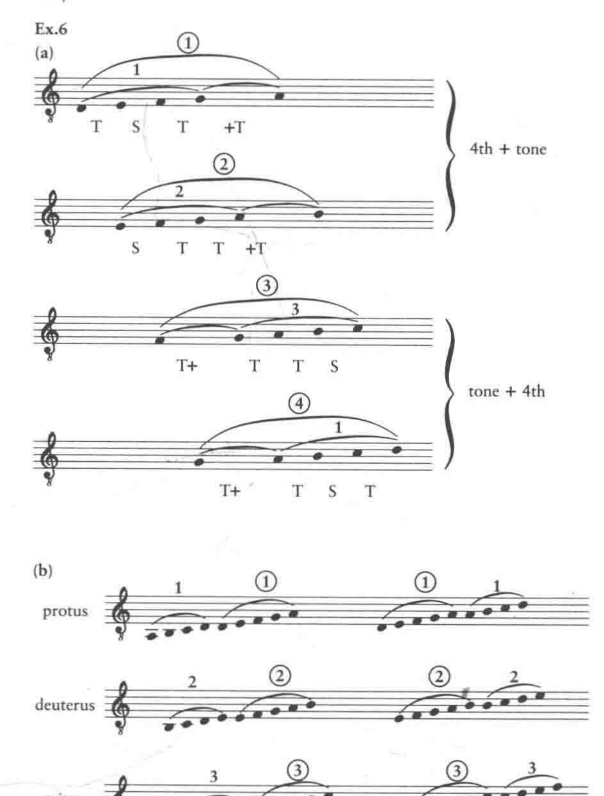
TABLE 3: Psalm-tone tenors and modal finals

The addition of the tenor to the final and the initials further refines the hierarchy of single-pitch modal functions, for it implies that one among the secondary strong points has a certain limiting power and governance over the others; it is the one that in fact is the upper limit of the theoretical possibilities for a resting point, and it is to be established by reference to the psalm-tone tenor. A four-tiered system of modal pitch functions results: at the first level the final, at the second level the tenor, at the third level the other initial–medial strong points, and at the lowest level the remaining degrees of the scale.

(ii) Reichenau theory of modal species and locations. In Guido's references to mode, whether in connection with the eightfold system or as the quality of a note in its melodic environment, no mention is made of one of his two lasting inventions, the didactic syllables *ut re mi fa sol la* (not yet called HEXACHORD), the device which by the mid-13th century had become indissolubly associated with the idea of modal quality. Nor is there any treatment of species of the modal octave or of the smaller consonances. The aspect of modal theory first seen in the work of the Reichenau theorists was a coordination of four hitherto independent elements: the eightfold system; the species of the 4th, 5th and octave; Hucbald's Boethian double octave as constructed in tetrachords; and modal quality. Its culmination was Hermannus Contractus's scheme of hexachordal 'seats of the tropes' (*sedes troporum*).

(a) Modal species of the consonances. Guido's contemporary Berno of Reichenau built up the species of the consonances on the abstract description of an anonymous earlier work (*GerbertS*, i, 313; see Bernhard, 1989, pp.77–84), designating specific locations in the double octave for their primary positions. The three species of the 4th are differentiated according to the position of the tones and the semitone: tone–semitone–tone; semitone–tone–tone; and tone–tone–semitone (placed *d–e–f–g*, *e–f–g–a* and *g–a–b♮–c'* by Berno). (The first species of 4th is clearly to be distinguished from the 'tetrachord of the finals' first described by Hucbald. Species of the 4th, with all possible positions of the semitone, are used in the description of modes; tetrachords are invariant in form and are simply the elements used for building the background system of pitch relationships, the Boethian double octave.)

The four species of the 5th were generated by adding tones above and below the three species of 4th; Berno's placement is shown in ex.6*a* (from *GerbertS*, ii, 67, after *GerbertS*, i, 313). In ex.6*b* (from *GerbertS*, ii, 69–70, after *GerbertS*, i, 313) are shown his constructions of the eight modal octave species, analogously generated by adding species of the 4th above and below the four species of the 5th. (Numbers above the staff indicate which species of 4th, circled numbers which species of 5th.) To the abstract intervallic descriptions in his source (*GerbertS*, i, 313) Berno added not only specific placement (in terms of the usual Boethian Greek note names) but also some explanation in his own words (*GerbertS*, ii, 69):



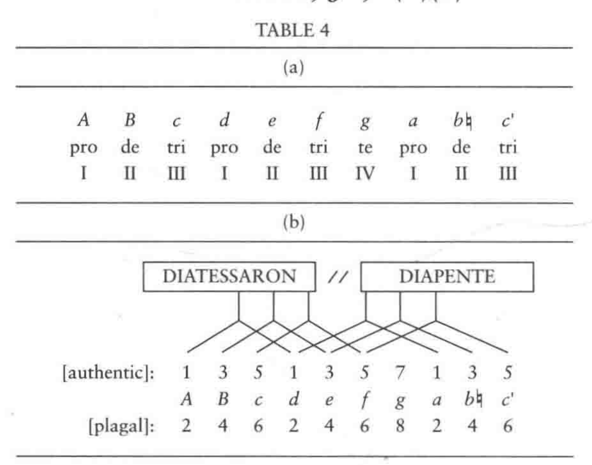


TABLE 4

(a)

A	*B*	*c*	*d*	*e*	*f*	*g*	*a*	*b*♭♮	*c'*
pro	de	tri	pro	de	tri	te	pro	de	tri
I	II	III	I	II	III	IV	I	II	III

(b)

What I am saying is this: the first tone has the liberty of rising from its final, that is from [*d*], up in a [first species] 5th, that is to [*a*], and from [*a*] to [*d'*], which is the first species of the 4th. The second tone, however, which is called its subsidiary, rises to the same 5th, but by the same species of the 4th descends from [*d*] to [*A*], by tone, semitone, and again tone.

The theoretical contributions of Berno's younger colleague Hermannus Contractus (*d* 1054) originated as improvements on Berno's *Musica* and Guido's *Micrologus*; though neither author is mentioned by name, the doctrines criticized are unmistakable. Hermannus's new theory began from a more elegant systematization of the modal species of 4th, 5th and octave, which were generated from the four fixed tone–semitone–tone tetrachords of Hucbald's Boethian double octave. He then made each of the four tetrachords the nucleus of a hexachordal module linking melodic configuration and modal quality together, and both to the background double octave. Hermannus's *De musica*, unlike the *Musica* of Berno, was not circulated widely in manuscript, however. Despite the elegance of his system and the resemblance of some of its most novel features to central features of later theory, there is no clear evidence that his work directly influenced hexachordal and modal theory after the 11th century.

Modal quality pertains to all degrees in Guidonian theory, though it is only the modal quality of the final that can determine the mode of a chant. There is a theoretical inelegance in the Guidonian scheme, however, visible in the diagrams shown in Table 4. It is most evident in the failure of *g*, the seventh degree of the system – 'te'/IV, tetrardus, in table 4*a*, modal pair 7–8 in table 4*b* – to have any parallel or affinity elsewhere in the system comparable with those for the protus–deuterus–tritus qualities (4*a*) or the modal pairs 1–2, 3–4, 5–6 (4*b*).

Hermannus's rectification of this inconsistency, arising originally out of his criticism of Berno's derivation of the species, led him into a new doctrine of great significance: in different contexts certain degrees of the scale can have different modal qualities. Specifically, the degrees *d* and *d'* can have either protus or tetrardus quality; and it follows as a corollary that the tone–semitone–tone species of the 4th is also twofold when it is located on *d–e–f–g* in the double-octave system (ed. Ellinwood, 27):

Let us denote the degrees of the tetrachords ... by their own letters. One [note] in the middle is enumerated (not measured) twice [*d*/*d*]. ... The *graves* or *principales*, then, are *A*, *B*, *c*, *d*, the *finales d*, *e*, *f*, *g*. The first species of 4th [*diatessaron*] is necessarily then *A–d*, consisting of tone–semitone–tone, enclosed by its own letters; the second *B–e*, consisting of semitone–tone–tone, [is] bounded by its own letters this side and that; the third *c–f*, consisting of tone–tone–semitone, [is] secured on both sides by its own letters. The fourth species *d–g* – first [species] in disposition [of intervals] but fourth in the system and in power [*constitutione et potestate*] – delimits the seven intervals of the degrees [*septena vocum discrimina*] in this way [ex.7].

Hermannus objected that his predecessors 'did not attend to the oft-mentioned double form of *d*, and erred [in] withholding recognition of the fourth trope in the fourth place' (ed. Ellinwood, 59).

Just as the species of 4th are constructed by linking the melodic functions I, II, III, IV in the tetrachords of the *graves* and *finales*, the species of 5th are based on the modal affinities of I, II, III, IV in the *finales* and *superiores* (ex.7). And so the whole system of conjunct and disjunct tetrachords is built up on the basis of replication of the four modal qualities and the assignment of both protus and tetrardus potential quality to *d* and *d'*.

Ex.7

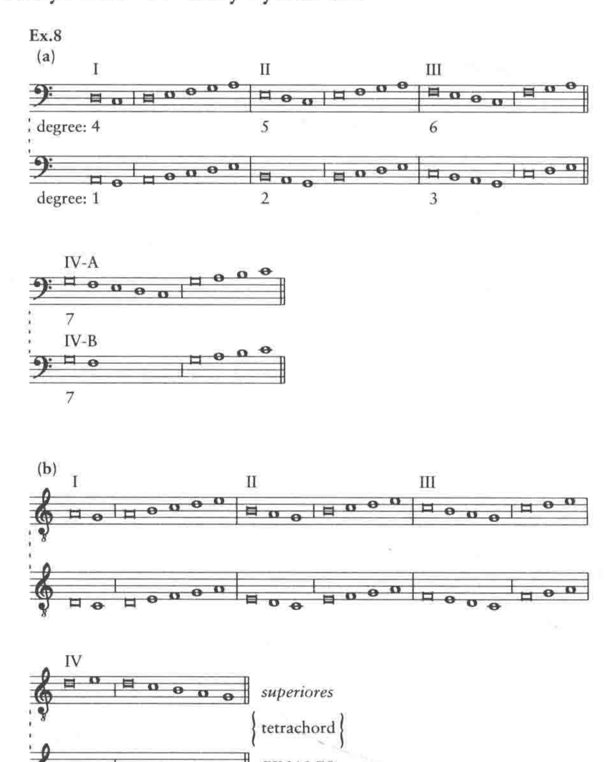
the four tetrachords, each with four modal degrees

I II III IV/I II III IV I II III IV/I II III IV

the four modal qualities

four species of the 4th, the 5th, and the octave

protus — I I I I — species 1



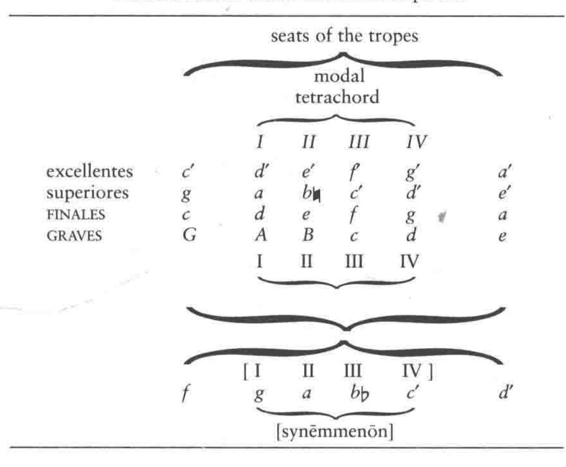
deuterus — II II II II — species 2

tritus — III III III III — species 3

tetrardus — IV IV IV IV — species 4

The build-up of modal octave species is also based on the presence of the same modal quality – I, II, III or IV – on degrees an octave apart in the system. Hermannus's system has the advantage of bringing everything – modal quality, position within the structural tetrachord, and species of 4th, 5th and octave alike – under the same set of numbers. Its one serious inconsistency arises if one tries to connect his modal octaves with the scale types of the seven octave species. If octave species are to be derived only by filling in between modal qualities an octave apart in the system, there can of course be only four of them, and Hermannus duly allotted both the octaves *A–a* and *d–d′* to the first species, *B–b*♮ and *e–e′* to the second, *c–c′* and *f–f′* to the third, and of course *d–d′* as well as *g–g′* to the fourth (ed. Ellinwood, 30ff). From a modal point of view this is eminently satisfactory, but of course it is in no way usable as a description of diatonic scale type in the octave species. And it was, in fact, the seven species of the octave, as integrated with the eightfold system in the New Exposition of the *Alia musica* and transmitted to and by Berno's *Musica*, which continued as the basis of the doctrine of modal octaves.

(b) Modes of the degrees and the 'sedes troporum'. In both chapter 7 of the *Micrologus* and the letter to Michael *De ignoto cantu*, Guido discussed the modal qualities of the degrees of the diatonic system under the name 'modes of the degrees' (*modi vocum*) (ex.8*a*; protus, deuterus, tritus and tetrardus are marked I, II, III and IV, the last being shown in two versions – IV-A from *De ignoto cantu*, IV-B from *Micrologus*). The fuller explanation is in *De ignoto cantu* (*GerbertS*, ii, 47):



> Degrees are alike and make similar sounds and concordant phrases [*concordes neumas*] only insofar as they are raised and lowered similarly with regard to the disposition of tones and semitones. So the first degree *A* and the fourth, *d*, are alike and are designated 'of a single mode' because both have tone in descent and tone–semitone–tone–tone in ascent, and this is the first similitude in degrees, that is, the first mode. The second mode is in the second [degree] *B* and the fifth [degree] *e*, for they both have tone–tone in descent and semitone–tone–tone in ascent. The third mode is in the third [degree] *c* and the sixth [degree] *f*, for both descend semitone–tone–tone and ascend tone–tone. But the seventh [degree] *g* makes the fourth mode alone; it has tone–semitone–tone–tone in descent and tone–tone–semitone in ascent.

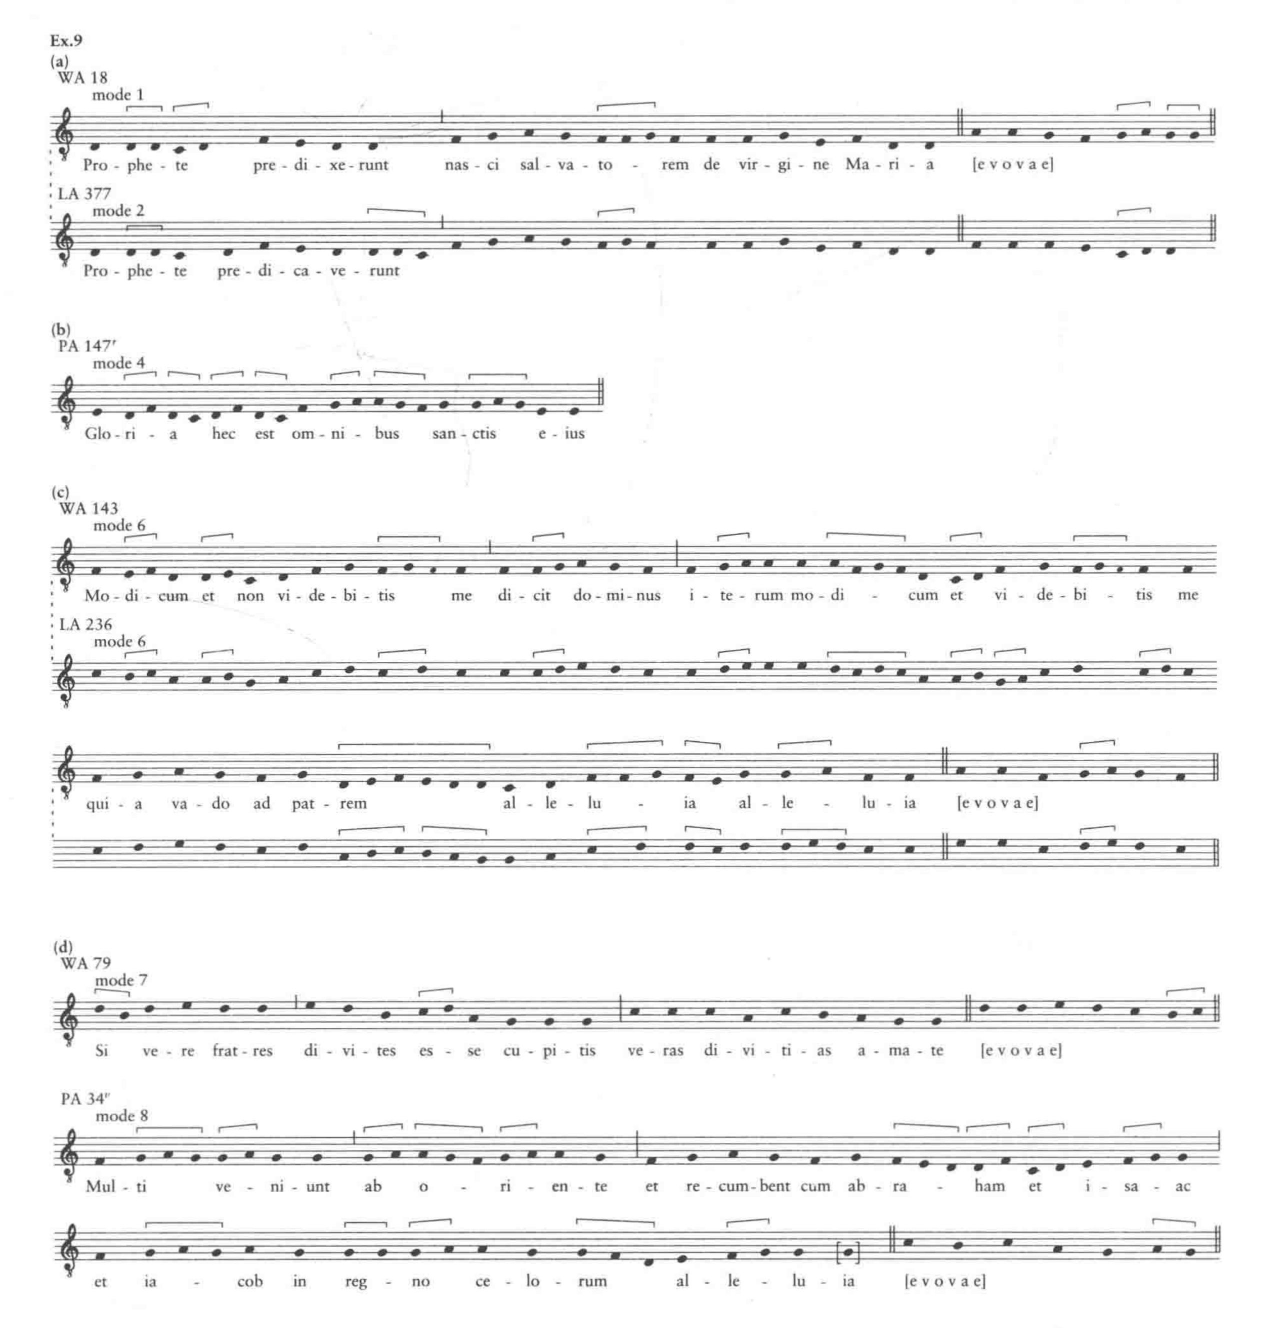
In chapter 7 of the *Micrologus*, the version of Guido's *modi vocum* known to Hermannus and later writers, a more limited descent is ascribed to the fourth mode of the degrees: 'but the fourth [mode] is lowered by a tone, and rises through tone, tone, semitone, like *g*'.

Hermannus's solution for the lack of modal affinity for the degree *g* in the Guidonian system was corollary to his doctrine of the 'biformity' of *d* and *d′*. His 'modes of the degrees' (*modi vocum*), though in all but the tetrardus identical in form with Guido's, were different in nature. Hermannus completed his system symmetrically, by developing Hucbald's treatment of the *g–d′* relationship, whereby '*g* and *d′* should be deputed as much as possible not to the end but to beginnings' (see §2(i) (*b*) above). He did not derive his modes of the degrees by starting with single degrees and building outwards as far as possible. Rather, he began with his existing cluster of four modal degrees in the tetrachord, modified to allow for melodic extension to the limits possible for parallel modal degrees everywhere in the diatonic double octave; thus he arrived at the modal aggregate of six degrees which he called the 'seat of the tropes' (*sedes troporum*). Hermannus described its construction: 'Take any tetrachord you want, for instance the *graves*, and having added a tone on both sides, you have the limits of the modes, which makes the seat of the tropes' (ed. Ellinwood, 57). Ex.8*b* shows Wilhelm of Hirsau's version of the modes of the degrees (chaps.27, 38) after Hermannus (ed. Ellinwood, 58–9).

Table 5 shows Hermannus's construction of the *sedes troporum* from the modal tetrachords, with the additional tetrachord appended after Wilhelm of Hirsau. Hermannus's discussion of the individual *modi vocum* ('modes of the degrees') is given below in the version transmitted through Wilhelm, which supplies brief but significant additional detail both in the theory and in the practical examples cited (*Musica*, chap.38). Wilhelm's additions are set off in diamond brackets; those of Hermannus's

TABLE 5: Modi vocum and sedes troporum

words that Wilhelm omitted are supplied in brackets and identified.



I. The first *modus vocum* appears wherever a degree can be lowered by a tone and raised by a first species of 5th [tone–semitone–tone–tone], as can be recognized in *A.d.a.d′*, the principal degrees of the protus; and therefore this mode is [indifferently] [as to authentic or plagal] suited to the protus, as the [authentic] antiphon *Prophete predicaverunt* [ex.9*a*] shows [Hermannus: and in *In tuo adventu*, and in similar ones that do not exceed six degrees].

Wilhelm's 'indifferently' emphasized an important aspect of the *modus vocum* of the protus, to wit, that it may shape the nuclear structure of either authentic or plagal antiphons. The versions of *Prophete predicaverunt* in ex.9*a* are in fact in mode 1 in the Worcester Antiphoner (WA) and mode 2 in the Lucca Antiphoner (LA).

II. A degree shows the second mode [when it is] lowered by a ditone [tone–tone] and raised by a second species 4th [semitone–tone–tone], which appears in *B.e.b*♮*.e′* the principal degrees of the deuterus [to which this mode is related]. The [plagal] antiphon *Gloria hec est* [ex.9*b*; PA – Petershausen Antiphoner] shows this [Hermannus: and similar ones, either authentic or subsidiary, which do not exceed six degrees].

Hermannus's reference to authentic deuterus is curious. A deuterus composition strictly within the limits of the *sedes troporum* can either reach only to a 4th above the modal degree, in which case it would be plagal, or never get down to its final at all; if the modal degree is *e*, for example, the *sedes troporum* can be only *c–a* (plagal) or *g–e′* (without the final beneath).

III. The third mode is lowered by the third species of 4th [tone–tone–semitone] and raised by a ditone [tone–tone], as the principal degrees

of the tritus *c.f.c′.f′* show, of which this is the mode. Evidence of this [mode] is in the [plagal] antiphon *Modicum et non videbitis* [see above, ex.9*c*].

The applicability of a *modus vocum* at any point in the double octave where it fits is nicely illustrated by the Worcester and Lucca versions of *Modicum et non videbitis*, at *f* and *c′* respectively. This *modus vocum*, like that for the deuterus, is again only applicable here to the plagal. The authentic tritus sung with *b♭* would be a hypothetical possibility for a *modus vocum* if one were to construct a *sedes troporum* around *g–a–b♭–c′* by adding *f* and *d′* at the extremes. Though Hermannus did not use this tetrachord, the tetrachord *synēmmenōn* was mentioned by Wilhelm (*Musica*, chap.38) as the basis of a *sedes troporum* (see above, table 5).

IV. We set up the fourth mode of the degrees raised by a tone and lowered by a fourth species of 5th [tone–tone–semitone–tone] [Hermannus: in the tetrardus] since its principal degrees produce that. [This mode has the speciality among the others that] you can recognize [not only the authentic] antiphon *Si vere fratres* [but also the plagal] antiphon *Multi veniunt* [ex.9*d*] [Hermannus: and the like].

Hermannus's tetrardus *modus vocum*, as exemplified in *Multi veniunt*, was built from *g*, the final of mode 8, downwards. There are perhaps only half a dozen antiphons that would fit into this pattern used in this way, but this part of mode 8 is an important element in many antiphons with a higher reach. Since a *modus vocum* can be built around any modal degree, not necessarily just a final, Hermannus was able to follow up Hucbald's hint to attend 'not to the end but to beginnings' in *d′* and in *g*, and use the same *modus vocum* from *d′* as a module for the authentic tetrardus mode 7, even though mode 7 ends on *g*. *Si vere fratres* represents a common melody type in mode 7 (discussed by Apel, 1958, pp.400ff). This and several other mode 7 types begin on *d′*, or move up to *d′* rapidly, and then work their way down through the fourth species of 5th to the final *g*.

An elegant theoretical feature in Hermannus's *modus vocum* and *sedes troporum* was that the systems were completely symmetrical in terms of their components as described. That is, the *modi vocum* in pairs – protus and tetrardus, deuterus and tritus – are invertible as to pitch, as are the species of 4th and 5th that are their greater components; their lesser components, the tone and ditone, are of course self-inverting. This symmetry was noticed and elaborated by a few other writers, notably Aribo (*GerbertS*, ii; CSM, ii), where it was likened to symmetries in other domains.

(iii) Authentic–plagal distinctions. Hermannus's *modus vocum* of the protus could refer to authentic or plagal, 'indifferently', as Wilhelm added. But of course any particular antiphon in a particular liturgy would be assigned one way or the other, since one or the other psalm tone had to be chosen for the psalm verses. For Hermannus's first example, *Prophete predicaverunt* (or *predixerunt*), the choice could go either way, as ex.9*a* shows. A number of medieval treatises included discussions of how to make the choice of authentic or plagal in such cases. Both Guidonian and Reichenau theorists discussed modal features that might be relevant to the choice, and both their points and their examples give excellent insights into the medieval sense of mode and modality. These discussions were most extensive regarding the protus, as was the case with most medieval essays on the specific details of modal theory.

(a) Repercussion. The *Dialogus* gives rationalized guidance on making such choices. The discussion begins and ends with two criteria: if it falls short of the 5th, it is plagal; if all else fails, judge by the traditional psalm tone. But in between there are clear instructions for making the choice on the basis of the modal structure of the antiphon (*GerbertS*, i, 260):

There are, however, many songs among them which are neither lowered to *G*, *A* or *B*, nor raised to the 10th or 11th [scale-steps *c′* or *d′*]. The discrimination [*discretio*] for them is this:
[A] if they do not reach the 8th or 9th [*a* or *b♭*], they are certainly in the second tone;
[B] the 8th and 9th [*a* and *b♭*] are common to both [authentic and plagal]; when the song rises up to them it will be of the first mode if:
[1] it dwells in them at length, or
[2] it strikes [*repercutiat*] them three or four times, or
[3] it begins in the 8th [*a*].
[C] If, however, it begins in lower [notes] and reaches to them [*a* and *b♭*] infrequently (according to the size of the antiphon) it will be of the second mode.
[D] Otherwise, they are discriminated according to the varieties and differences [*differentiae*] of their formulae [i.e. of their psalm tones].

The rule labelled '[B2]' above particularly reverberates through the literature on mode through Marchetto to Tinctoris and beyond. A note that is *repercussa* several times becomes a single-note medial function of a mode, like the tenor of the psalm tone, with which it is usually identical in fact and confused in principle.

(b) Mechanical measurement of average tessitura. In the 13th-century scholastic *Summa musicae* a mechanical routine for distinguishing authentic from plagal was suggested (chap.18):

as there are four final degrees [*claves finales*], so there are four discriminatory degrees [*claves discretives*]. ... Each discriminatory degree effects the distinction of two tones, for *f fa ut* discriminates the first [tone] from the second, *g* the third from the fourth, *a* the fifth from the sixth, and hard *b* [*b♮*] the seventh from the eighth. ... If a protus song has more notes above *f fa ut*, to that extent [*quantum ad hoc*] it is authentic and of the first [tone]; if more beneath, to that extent it is plagal and of the second. [And so forth, for *g*, *a*, and *b♮* in deuterus, tritus, and tetrardus.]

The 'discriminatory degree' midway between the modal final and its upper 5th became an important part of the modal doctrine of Marchetto and Tinctoris, under the name of 'chorda'; as *chorda mezana* it was later developed in a different direction by Zarlino.

4. Mode in the later Middle Ages.

(i) Modal quality and hexachord syllables. The existence of modal qualities in parallel places in the Boethian double octave had been stipulated by Hucbald; the tetrachords embodying the set of four such modal qualities had been expanded to hexachordal *sedes troporum* by Hermannus and Wilhelm. The other 11th-century hexachord was the set of 'Guidonian' solmization syllables *ut re mi fa sol la*; but Guido himself connected his syllables neither with his own doctrine of affinities – *d* with *a*, *e* with *b♮*, *f* with *c′*, and so on – nor *a fortiori* with modal theory. It can be shown that by the end of the 11th century the 'Guidonian hexachord' must have been conceived as fully transferable to any place in the system where its stepwise successions would fit, that is, where there were affinities (see *Commentarius anonymus*, ed. Smits van Waesberghe, 120). Yet there is no documentary evidence for what would seem to have been the obvious connection between the Guidonian *ut re mi fa sol la* transferable according to

intervallic affinity and the Reichenau *sedes troporum* transferable according to modal quality. Hermannus's passage explicating his hexachordal *modi vocum* and *sedes troporum* appears in only a few other 11th-century works, notably Wilhelm of Hirsau's *Musica*. Another passage in Wilhelm's work summarizing the structure of each of the four *modi vocum* as the property of a trope is paraphrased in turn by Aribo (*GerbertS*, ii, 217; CSM, ii, 32); and this is recast in the treatise of Engelbert of Admont (*GerbertS*, ii, 348), who died in 1331. Apart from this no direct transmission of the Reichenau hexachord has been traced.

(a) Regular finals and transposed affinals. It is only in treatises from the second half of the 13th century that the connection between hexachordal syllables and modal quality is documented. Yet the treatise of the Dominican Hieronymus de Moravia (*d* after 1271), the earliest fully to explain the modal quality of hexachord syllables, makes no more claim than any other 13th-century writing to be presenting original doctrine in this area. The source is almost certainly not Reichenau; but whatever it is, the connecting of the hexachord syllables with the modal qualities of the four tetrachordal degrees united the functional approach of the 11th-century Italian writers with the structural analysis of their northern contemporaries. Hieronymus's explanation of the location of modal finals and affinals in the hexachords follows below and is illustrated in Table 6 (A): 'the first and second tone end in *d* or in *a*, with *re*. The third and fourth tone end in *e* or in *a*, with *mi*, or in *b*♮ … . The fifth and sixth tone end in *f* or in *c′*. The seventh and eighth end only in *g*' (*CoussemakerS*, i, 77–8; ed. Cserba, 159ff). The hexachordal syllables for the tritus and tetrardus finals, which

[ ] – regular final; ( ) affinal (final in a transposed mode); ◇ Final in a transformed mode

Hieronymus neglected to mention, are given in a similar passage from the *Speculum music* of Jacobus of Liège (*d* after 1330). Table 6 (B) illustrates 'chants ending in *fa* are of the fifth or sixth tone, and in fact chants ending in *sol* are of the seventh or eighth' (bk 6, chap.75). The association of the four central hexachord syllables with the four pairs of authentic–plagal modes was simply the final stage in the evolution of a constant symmetry extending back through the four positions in the structural tetrachord and four modal qualities: *re*, modes 1 and 2, I, protus; *mi*, modes 3 and 4, II, deuterus; *fa*, modes 5 and 6, III, tritus; *sol*, modes 7 and 8, IV, tetrardus.

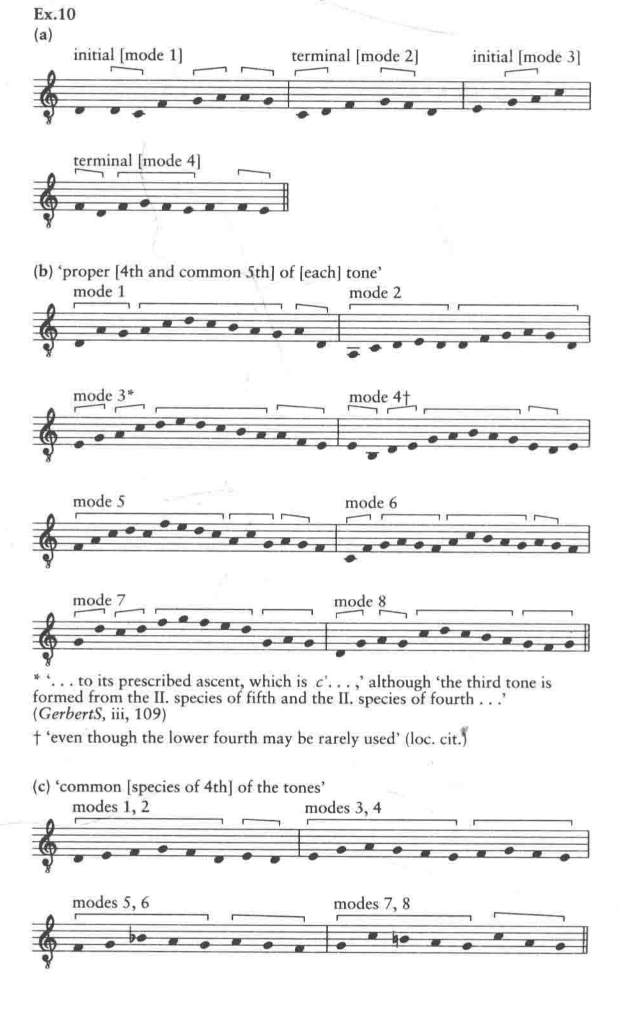
Some necessary substitutions for convenience of solmization at the approach to the tritus and tetrardus finals is supplied here from an anonymous treatise on the eight tones 'by some Chartist monk' (written probably at the end of the 14th century), and illustrated in table 6 (C): 'The fifth and sixth [tones] in *f fa ut* are also ended in *ut* when the hexachord [*cantus*] is soft and … descends to the final. Similarly the seventh and eighth [tones] are ended in *ut* when their chant [*cantus*] descends to the final' (*CoussemakerS*, ii, 442).

(b) Transformed finals. The use of *a*, *b*♮ and *c′* as protus, deuterus and tritus at the upper 5th had been recognized in Hucbald's 'associated together' and Guido's doctrine of affinity and term 'affinal'. But the conjunct tetrachord *synēmmenōn* (*a*–*b*♭–*c′*–*d′*), which made the 'second 9th degree' *b*♭ of the *Dialogus* available, was regarded at the outset as auxiliary to the system rather than essential; the same in principle remained true of its *b*♭ taken alone, which was considered merely a variant for *b*♮ despite its early and continuous recognition as essential in the tritus modes. Hence theoretical recognition of the projection of the finals at the upper 4th rather than the upper 5th was long in coming. A corollary of this projection, that one note could serve as modal final for two different scale types, caused particularly keen theoretical discomfort in the case where the note was a regular final, namely *g*. The process of turning *g* tetrardus into *g* protus (or for that matter *a* protus into *a* deuterus) by using *b*♭ was called 'transformation', and was not considered quite respectable by theorists until the full integration of the hexachords with the modal system. Jacobus of Liège drew attention to the hexachordal orientation of the protus on the tetrardus final *g* in the course of objecting to the use of a tetrardus–protus transformation within a mode 8 antiphon, one also discussed in the *Questiones in musica* (ed. Steglich, 51); table 6 (D) illustrates Jacobus's location of the *g* protus final (chap.78):

every regular or irregular chant, if it terminates suitably and finally in *re*, is of the first or second tone wherever it may be found or with whatever letter of the monochord it may be joined. For that [*re*] is the final degree [*vox finalis*] of the first and second tone, and it begins the first species of 5th, which is common to those two tones. Moreover I said 'if … suitably' on account of those [mode 8] chants which have their final in *g* with *b*♭ … such as the [mode 8] antiphon *Magnus sanctus Paulus*.

(ii) Italian modal theory in the 14th and 15th centuries. The last phase of medieval modal theory developed in Italy; the seminal work was the *Lucidarium* of Marchetto da Padova (*GerbertS*, iii; ed. Herlinger, 1987), completed by 1318, a few years before the *Speculum musice* of Jacobus of Liège. Aspects of the tradition for modal description and classification established by Marchetto

endured for more than three centuries. One of the lasting features of the theory was in itself not new: the formal disposition of the scale structure of the modes according to species of the 4th and 5th. A second feature was the classification of the modal ambitus and melody into five categories: perfect, imperfect, mixed, pluperfect (some later writers preferred the term 'superfluous') and commixed. A third feature of the theory was a functional ordering of the species of 4th and 5th 'as they may be named when positioned in the tones' (*GerbertS*, iii, 114; ed. Herlinger, 488ff). The first four among these functional species were named 'principal' (or 'initial'), 'terminal', 'proper' and 'common'; also included were commixed species, conjunct and disjunct species (*aggregata*, *disgregata*), species rising or falling, and species with all possible interruptions (i.e. omissions of one or more notes between the outer tones of the consonance).



Up to the 16th century this theory was transmitted in Italy itself, where it is first documented over a century after the *Lucidarium*, in book 1 of the *Declaratio musicae disciplinae* of Ugolino of Orvieto, written in the 1430s (CSM, vii). Much of Ugolino's treatment is an enormously expanded and rationalized commentary on Marchetto's work. (This work should be added to those discussed by K.W. Niemöller in *KJb*, xl, 1956, pp.23–32.) Several writers of northern origin working in Italy were influenced by the theory, such as Johannes Gallicus (*Libelli musicalis de ritu canendi*, pt 2, bk i), the teacher of Nicolò Burzio. The Franco-Flemish Tinctoris, whose *Liber de natura et proprietate tonorum* was written in 1476 in Naples, was very much in the centre of this Italian tradition. His exposition is the most complete of any and his work is characterized even more than Marchetto's by the use of examples composed to illustrate the points.

Franchinus Gaffurius's exposition of the doctrine is in book 5 chapters 6–8 of his *Theorica musicae* (Milan, 1492), and book 1 of the *Practica musice* (Milan, 1496, first draft before 1487). Gaffurius's *Practica musice* was the principal vehicle for aspects of the theory outside Italy (see Cochlaeus, 1511, bk 2, chaps.2–3, and Wollick, 1509, bk 3, chap.3). Pietro Aaron also belongs to the tradition, and part iii of Lanfranco's *Scintille di musica* (Brescia, 1533) should be included. As late as 1588 Pietro Pontio used and cited Gaffurius (*Practica musice*, bk 1, chap.8) for the five categories of modal ambitus and melody.

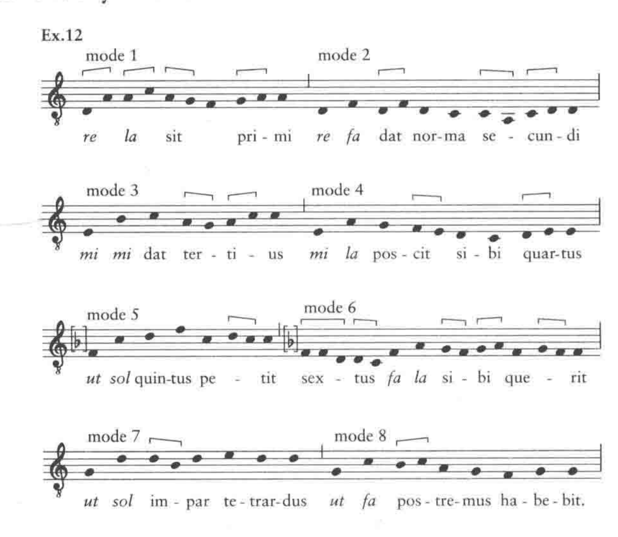
Marchetto's approach was implicitly scholastic, and Ugolino's *Declaratio* explicitly so. The first stage in the process of modal differentiation was a threefold classification of intervals; they were called conjunctions, and Marchetto defined them as 'disposition or arrangement [*ordinatio*] of sounds' (ed. Herlinger, 308). Tone, semitone, major and minor 3rds were 'syllable conjunctions', which were in turn the immediate constituents of 'species conjunctions', the consonances of the 4th, 5th and octave (plus the 11th, 12th and double octave). Ugolino defined this relationship metaphysically: 'Since there is no giving form without material ... we claim the tones, semitones, ditones and other conjunctions of the degrees, from which the species of 5th and 4th are fitted together, to be the material for the form' (CSM, vii, 92). Marchetto's third class of conjunctions comprised the 6ths and the other intervals from diminished 5th and tritone to major 7th and diminished octave. The species of 4th exhibited the familiar structure tone–semitone–tone, semitone–tone–tone and tone–tone–semitone; three of the species of 5th were derived from them by adding a tone at the upper end, but the tone–tone–tone–semitone species of 5th 'arises from itself' (Marchetto, *Lucidarium*, ed. Herlinger, 354; Ugolino, *Declaratio*, bk 1, chap.29). These species were then summed in pairs to form the eight modal octaves, as they had been by Berno and his sources three and more centuries earlier (see ex.6*b*).

The passages in Marchetto's *Lucidarium* (ed. Herlinger, 488ff) and Ugolino's *Declaratio* (bk 1, chap.46) that classify the species according to function rather than structure are close in both text and illustrations. Their first two types of functional species – initial and terminal – are yet another representation of the importance of opening gesture and cadential approach. Ugolino's illustrations, shown in ex.10*a*, are not labelled as to mode, but they hardly need to be. The first 'initial' is Gevaert's *thème* 6, and the other is as clearly mode 3, from the final *e* up to the tenor *c*′. The first 'terminal' can be cadential in either protus mode, but is more frequent in mode 2, and is evidently so intended since the second 'terminal' is unmistakably mode 4, a deuterus plagal.

The species of 5th common to each authentic–plagal pair of modes reaches from final up to fifth. The species proper to each individual authentic or plagal is the species of 4th conjoined above or below the common 5th, respectively, to form the mode, that is, the modal octave.

Ex.10*b* gives Ugolino's unambiguously composed illustrations showing the conjoining of proper 4th and common 5th in each mode. Appropriate cautionary footnotes are added from Marchetto's *Lucidarium.*

The doctrine also includes a 'common species' of 4th (ed. Herlinger, 434):



> In any of the tones, that species [of 4th] is called common which begins ... where the tone has to end, and rises upwards; this species of course is used in [both] authentics and plagals, although it can be put more often in plagals. For if in a chant [lying] high this species is struck [*repercussa*] several times, [provided] the chant does not rise beyond the 6th, the tone will be judged plagal.

Ex.10*c* is the illustration given by Marchetto and Ugolino for the species of 4th common in each authentic–plagal pair. In his *Practica musice* (bk 1, chap.9; trans. Miller, 53) Gaffurius misunderstood this notion of Marchetto's. Tinctoris, however, used it cogently in his *Liber ... tonorum*:

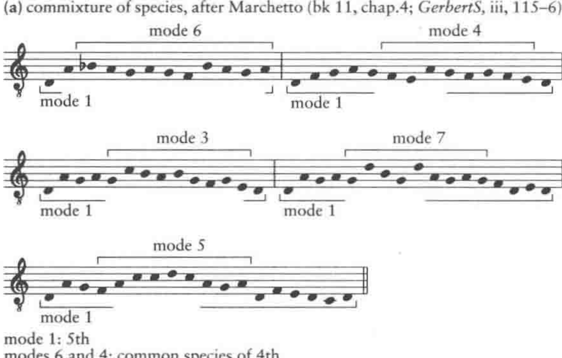
> If the tone rises above its final to the 5th plus a tone or semitone and descends a tone or semitone below, it will still be called authentic, as is proven here [ex.11*a*] ... [but if] common species of 4th are struck [*repercutiantur*] several times, it will be judged plagal, as appears here [ex.11*b*]. [chap.30]
> If a tone not descending beneath its final does not rise above the 5th, and [if it] frequents the 5th as much or more than the common 4th, it is authentic; otherwise, [it is] plagal, as is proven here [ex.11*c*, *d*]. [chap.35]

The contrast between common species of 5th as a mark for authentics and common species of 4th as a mark for plagals is thus both assimilated to and developed from the notion of repercussion, as first expounded in the *Dialogus*. The repercussion – or common 5th/common 4th – coincides with the corresponding psalm-tone tenor for three of the four authentics and for two of the plagals; neither historically nor musicologically have the distinctions between repercussion and tenor been observed as scrupulously as is sometimes necessary. Ex.12 shows a mnemonic verse found in several 16th-century German works in which in effect the common 5th of the authentics and the tenor of the plagals has been combined, to form a consistent pattern of repercussions. In the third part of Lanfranco's *Scintille di musica* (p.117, *recte* p.107) the same pattern may be found, thus making explicit the

connection of repercussion with (common) species, as well as with the term 'melodia' (which sometimes also means psalm-tone tenor, or psalm-tone *differentia*, or the whole psalm tone): 'The repercussion, which is the *melodia* or interval proper to each chant ... all of which repercussions are called species of chant'.

The confinal too is occasionally taken not as the final of the whole piece projected on the system a 5th higher but rather simply as the conclusion of a piece on the note a 5th above what would normally have constituted its final. This is Gaffurius's interpretation of the antiphon *Nos qui vivimus* 'which ends on the *confinalis* ... [in] a very old antiphoner ... it ends on its untransposed *confinalis d la sol re*' (*Practica musice*, bk 1, chap.14; trans. in CSM, xx, pp.60–61).

When a species of 4th or 5th that was neither proper nor common to the mode of a melody was introduced, it was called 'commixed' with respect to the species of the mode in question. Marchetto illustrated this by devising commixtures of the common species of 5th for mode 1 (*d–a*) with species common or proper to every other mode except 2 and 8 (the former shares the same final, the latter the same octave species), as may be seen in ex.13*a*.

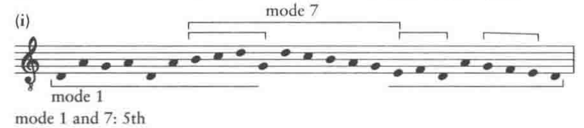


Commixture of species produced commixture of modes, the most novel of Marchetto's five categories of mode with reference to ambitus (which in this category was not confined merely to the sense of compass above and below the final). Among the illustrations devised by Tinctoris are the following (*Liber ... tonorum*, chap.13):

> If the fourth species of 5th – regularly attributed to the seventh [tone] – is established in the first tone, then this will be called first tone commixed with seventh, as appears here [ex.13*b*, (i)]. Likewise, if the third species of 4th ... which according to the regular tradition is assigned to the eighth [tone], is put in the second tone, then the tone is called second commixed with eighth, as is proven here [ex.13*b*, (ii)].

Citations of chant items specifically referring to commixture were infrequent. Marchetto (and others including Gaffurius after him) referred to an initial *e* in a mode 1 chant as commixed (ed. Herlinger, 418, 431). Ugolino said that 'within the protus first authentic we include another commixed octave not pertinent to it, namely, *c* to *c*'' (CSM, vii, 186), and listed a number of mode 1 chants operating in that compass straightforwardly in terms of the common 5th (*d–a*) with a tone below and a minor 3rd above. Commixture is nonetheless a useful concept and has proved especially so both to Renaissance and to

Ex.13



(a) commixture of species, after Marchetto (bk 11, chap.4; *GerbertS*, iii, 115–6)

mode 8: common species of 4th

modern scholars trying to account for polyphonic music in terms of traditional chant modality (see, for example, Meier, 1974, pt ii, chap.2).

The other four categories of mode according to ambitus – perfect, imperfect, pluperfect and mixed – have to do solely with compass. Ugolino's definition of 'perfect' limits it strictly to the modal octave, as composed of its species of 4th and 5th; Marchetto considered the perfect range to be a 9th (with one exception):

> That tone is called perfect which fills its mode [i.e. modal octave] above and below. Now to fill its mode in an authentic [tone] is to rise from its final to the octave and not beyond, and to descend from the same final by a tone, excepting the tritus [authentic], which has a semitone below the final [ed. Herlinger, 378]
> [and] the fifth tone very seldom descends below its final [p.470]
> To fill its mode in a plagal [tone] is to rise from its final to the 6th, and from the final to descend to the 4th [below]. [p.380]

Imperfect and pluperfect have to do with an authentic or plagal mode that falls short of or exceeds the outer limit that makes it authentic or plagal:

> Imperfect is that tone, be it authentic or plagal, which does not fill its mode [i.e. modal octave], above [authentic] or below [plagal]. [ed. Herlinger, 382]
> The authentic tone which rises beyond the octave from its final, namely to the 9th or 10th, is called pluperfect. The plagal tone which descends below the 4th under its final is [also] called pluperfect. [p.384]

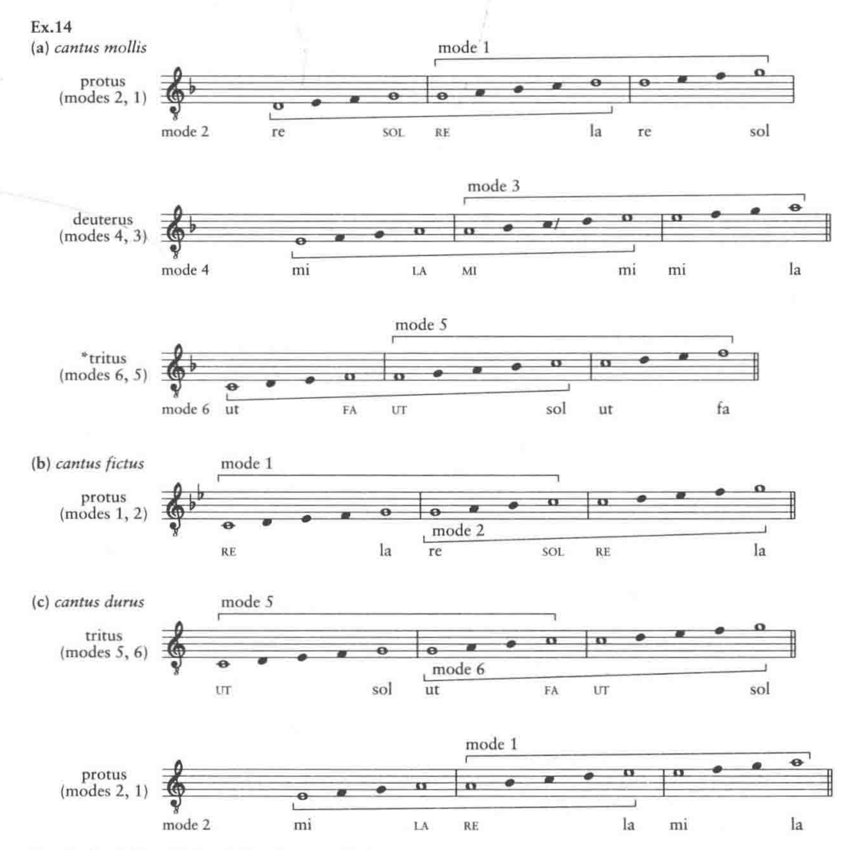
Either authentic or plagal can also encroach upon the compass proper to the other; that is, a melody may not only fill (or surpass) its 'proper' octave but may also extend in the other direction, into the territory proper to its companion. Such modes were called 'mixed'. 'If a tone is authentic it is called mixed if it descends more than one note below its final, touching something of the descent of its plagal ... . A plagal tone which rises above the 6th from its final, touching the ascent of its authentic, is called mixed' (ed. Herlinger, 386ff). In chapters 28–48 of his *Liber ... tonorum* Tinctoris explained and illustrated the possible combinations of perfect, imperfect, pluperfect (superfluous) and mixed ascent and descent for authentic and plagal. It was in connection with imperfection – in effect, small ranges above the final – that he invoked the repercussions to common 5th versus common 4th as a criterion for distinguishing authentic from plagal.

Marchetto's fifth and final category of modal ambitus, the commixed tone, has already been discussed. His descriptions of the eight modes by their species are outlined below, annotated with some of his comments (ed. Herlinger, 394–488), given in square brackets:

> (i) Species I 5th (*d e f g a*) + species I 4th above (*a b♮ c′ d′*) + tone below (*c*) [either it ascends beyond its first species only as far as *c′* [!] and no further, and then it ought to be sung always with b♭, and may be said to be common with the 6th [mode], ... or it ascends to the aforesaid *c′* [or *a fortiori* beyond it] several times ... before it descends to *f*, and then it will be sung with *b*♮].
> (ii) Species I 5th (*d e f g a*) + species I 4th below (*d c B A*) and common (*d e f g*).
> (iii) Species II 5th (*e f g a b*♮) + species II 4th (*b♮ c′ d′ e′*), + tone below (*d*) [such a chant may want to rise to its prescribed ascent, which is upper *c′*.
> (iv) Species II 5th (*e f g a b*♮) + species II 4th below (*e d c B*) and common (*e f g a*) [even though the lower 4th may be rarely used].
> (v) Species III 5th (*f g a b♮ c′*) + species III 4th above (*c′d′e′f′*) in ascent [when it rises from the final to the 5th above in whatever way, the extension through these notes passes more sweetly and smoothly to the ear ... so that we may use the third species of 5th, which can be used in no other tone but this and its plagal]; in descent species IV 5th (*f g a b♭ c′*) [so that when it wants to come from the 5th above to the final, it may avoid the harshness of the tritone] + species III 4th above.
> (vi) Species III 5th (*f g a b♮ c′*) + species III 4th below (*f e d c*) in ascent; species IV 5th (*f g a b♭ c′*) + species III 4th below (*f e d c*) and common (*f g a b*♭) in descent [Why it is so formed, and how it ought to be sung with *b*♭ or *b*♮, is the same reason as was said of its authentic].
> (vii) Species IV 5th (*g a b♮ c′ d′*) + species I 4th above (*d′ e′ f′ g′*) tone below (*f*).
> (viii) Species IV 5th (*g a b♮ c′ d′*) + species III 4th [common] (*g a b♮ c′*) [which begins in high *c′* tending downward; though this species is in common with its authentic, yet it should be put more often in the eighth]; also, species IV 5th (*g a b♮ c′ d′*) + species I 4th below (*g f e d*).

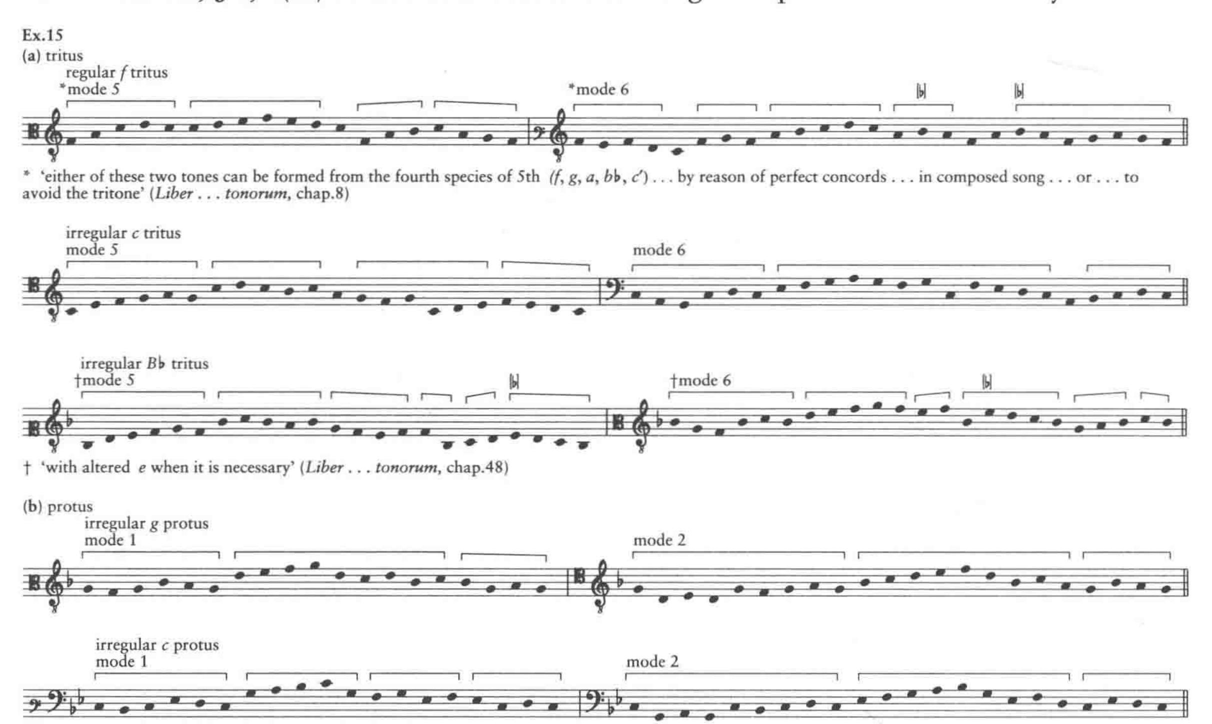
Like his contemporary, Jacobus of Liège, Marchetto accepted with only *pro forma* reservations the projection of the modes anywhere they could fit on the system:

> The first tone and its plagal can be ended in any part of the [Guidonian] hand where the species which form it above and below can be arranged. [ed. Herlinger, 400] ... Such a tone is called 'proper' in terms of composition but 'improper' in terms of location, because it is settled in a place other than its own. [p.430] ... And we claim the same for any other tone, authentic as well as plagal. [p.402]



The principle was to cover projections of modal degrees both at the upper 5th, to the affinal (or confinal), and at the upper 4th. First, 'if any tone finishes in its confinal, it is because of accidence [*propter accidens*]' (ed. Herlinger, 404). Marchetto used accidence in contradistinction to substance or essence. He took as his example the gradual *Nimis honorati* (*GR*, 391), one of the so-called 'Justus ut palma' type. These graduals are in mode 2 ending on the affinal *a*, a projection required because of two 'accidentals' (p.406); regularly in mode 2 there was neither a semitone above the final nor a major 3rd below it. Second, 'there are also some chants which can finish neither in the final nor in the confinal on account of some inconvenient accidentals falling in them, such as the communion *Beatus servus*. ... Such a note is called "acquired" [*tonus ... acquisitus*]' (pp.408–16). *Beatus servus* (*LU*, 1203) is discussed at length in Jacobsthal *Die chromatische*

Alteration (pp.99ff), although his constructions can be considerably improved with the better text of chapter 21 of Johannes Cotto's *De musica* (CSM, i). It is a mode 3 piece that also must finish on *a*; it uses *b♭* in mode 3 phrases at the beginning and end, but there are two medial phrases reflecting mode 1 that use *b♮*.



(iii) Expansion of the tonal system. The freedom to claim the species of the 5th and 4th as modal, no matter where they might fall in the system, had radical implications. The soft hexachord provided a protus final on g, but to use it 'suitably' in the sense meant by Jacobus of Liège entailed a consistent use of *fa* on *b♭* along with the protus final *re* on *g*. Hence the soft hexachord *f–g–a–b♭–c′–d′* became a *sedes tonorum* encompassing *g* protus modes, and *b♭* became an essential degree, no longer accidental, just as the natural hexachord *c d e f g a* was the *sedes tonorum* encompassing the regular *d* protus modes, which use *b♮* of the hard hexachord as the essential sixth degree and *b♭* of the soft hexachord as the accidental. The acceptance of *g* protus modes with an essential *b♭* as their third degree further entailed a new accidental sixth degree, *e♭′*, solmized *fa* in a new soft hexachord *b♭–c′–d′–e♭′–f′–g′*. The *b♮* of the original system was reduced to the status of an alteration for approaching *c′* in cadences. By the 16th century the new system came to be called *cantus mollis*, because *b♭ mollis* is essential, as opposed to the traditional system where *b♮ durus* is essential, which thereby came to be called *cantus durus*.

Ex.14*a* illustrates what became the most conventional 16th-century usages of the *cantus mollis* system, in which all voices had a signature of B♭. The hexachordal and species patterns of the protus and deuterus modes (1, 2, and 3, 4) are identical with those of the traditional system – that is, *cantus durus* – but the letter names are different, so that protus finals are on *g* (solmized *re*) and deuterus finals are on *a* (solmized *mi*). For the tritus modes, conversely, the *cantus mollis* was used for the regular final *f*. For these two modes, from Hucbald (9th century) to Guido (11th century) to Marchetto (14th century), *b♭* was recognized as at least as powerful as *b♮* in practice and in theory; the *cantus mollis b♭* signature simply recognized the fact. (However, the acquisition by the system as a whole of a soft hexachord *b♭–c′–d′–e♭′–f′–g′* made available to the tritus on *f* the same *subtonium* that all the other regular modes had always had.)

Once *b♭* as *fa* of the soft hexachord could be considered an essential rather than an accidental degree in the system as a whole – a possibility not readily open to *b♭* as a member of the extra tetrachord *synēmmenōn* (see §2(i) above) – the same principle could be extended to *e♭′*, the *fa* of the new soft hexachord: it could be seen as the essential third degree in a new protus first species of 5th *re–mi–fa–sol–la*, *c′–d′–e♭′–f′–g′*. Since this extension provided for an essential note name (E♭) that had not formed even an accidental part of the traditional system, it was regarded as musically contrived, or somehow not quite real – *musica ficta* or *musica falsa* as opposed to *musica vera* – and the system of hexachordal relationships providing for it came to be called *cantus fictus*, as opposed to *cantus durus* and *cantus mollis*. The protus species of *cantus fictus* are shown in ex.14*b* (*see also* MUSICA FICTA).

*regular finals, but with fourth (*ut sol*) species of 5th instead of third (*fa / fa*) species of 5th

Cantus mollis tetrardus modes on *c* had been theoretically available in chant theory as transformations at the tritus affinal *c*, but they were extremely rare. The more common orientation for a *c* mode was the traditional tritus affinal, much in evidence as a *sedes* for mode 6 (Hypolydian). Also in frequent use were the protus modes at the affinal position with the *sedes a*, especially the plagal protus.

Ex.14*c* shows the *cantus durus* interpretation of the species in *a* protus, and *c* and *c'* tritus. For the protus modes there is an essential difference between the *cantus mollis* 'transpositions' (in the modern sense) and the *cantus durus* transpositions, which continue in the medieval sense. The medieval transposition simply projected the melody against a different segment of the double octave, with no effect on the background system. A protus melody with its final set at *a* could thereby have a major 3rd below its final (*f'*) and the minor 6th above its final (*f'*) as logically essential notes; it also gained the option of using an accidentally lowered second degree (*b♭*), and it lost altogether the possibility of using a major 6th above the final. In terms of the hexachordal species shown in ex.14*c*, the common species of 5th for the protus *re–mi–fa–sol–la* (as in *a–b♮–c'–d'–e'*) dominated, but the conjoined species of 4th (below for plagal, above for authentic) was *mi–fa–sol–la* (as in *e–f–g–a*), which was proper to the deuterus rather than to the protus. A protus using its confinal *a*, then, was a commixed protus. In the tritus modes, on the other hand, both the common 5th *ut–re–mi–fa–sol* (as in *c'–d'–e'–f'–g'*) and the proper 4th *ut–re–mi–fa* (as in *g–a–b♮–c'*) had the same hexachordal syllables as those for the species of the tritus in *cantus mollis* at the regular final *f*. The only tritus species unavailable as a modal element in *c*-final projections was the third species of 5th fa*–sol/re–mi–fa*, with its internal mutation between natural and hard hexachord, which could only be projected at *f–g–a–b♮–c'*.

The extension of the hexachord system in such a way as to provide modal species and modal finals in unaccustomed places was a part of the development of polyphonic music, that is, 'composed songs, in primary attention to which', Tinctoris stated, 'I have principally undertaken this treatise' (*Liber de natura et proprietate tonorum*, chap.19). He concluded his treatise in fact with a discussion (with his usual ad hoc illustrations) of what he designated as 'irregular finals'. These included any final other than the regular finals *d*, *e*, *f*, *g*, and the confinals *a*, *b♮*, *c'*. These last three involved transposition only in the medieval sense and did not involve the transformation of the whole system effected by changing *b♭* from accidental to essential; in that sense Tinctoris had chosen to consider the three confinals as regular also. So, for example, the medieval tritus confinal at *c'* was not represented among his 'transpositions'. An octave lower, however, *c* was an 'irregular' tritus final, as shown in ex.15*a*. Also shown in ex.15*a* are the irregular tritus modes on *B♭* and *b♭*, along with Tinctoris's earlier examples for the regular tritus at *f*. It should be noted of the regular tritus at *f* and the irregular tritus at *b♭* that express provision was made for the perfect 4th above the final, *fa* as *b♭* or *e♭'*, respectively. Conversely, *fa* occurred naturally as *f* in the irregular tritus at *c*, which passed without any comment, indicating that the fourth degree above this tritus final *c* would never occur otherwise than as *f*.

Ex.15*b* shows two of Tinctoris's illustrations for irregular protus modes. One pair is *g* protus, in *cantus mollis*; the other is *c* protus, in *cantus fictus*.

III. Modal theories and polyphonic music

1. Elements of polyphonic modal theory: (i) The poetic function of the modes: (a) Modal ethos in the Middle Ages (b) Modal ethos for polyphony (ii) Modality in a polyphonic texture: (a) The modal voices (b) The modal ensemble. 2. Polyphonic modal functions: (i) Cadences and openings (ii) The integration of modality and polyphony. 3. Polyphonic modal theory and the eightfold system: (i) Aaron and the

1. ELEMENTS OF POLYPHONIC MODAL THEORY. Between the 13th century and the 15th modal theory was rationalizing and integrating an edifice of doctrine and analysis whose elements and concepts had been largely worked out two centuries earlier, initially to deal with a repertory yet more ancient. During the same period, while creative musicians were devising artistic forms of polyphony, theory too was attending with greater interest to the problems of rhythm and proportion in durations, and structure and succession of simultaneities – in short, to mensural notation and to discant and counterpoint. Johannes de Grocheio, writing about 1300, specifically excluded mode from polyphony (trans. Seay, 1967, 31):

Certain people describe a tone by saying that it is a rule that judges every song by its end [*regulam quae de omni cantu in fine iudicat*]. But these men seem to err in many ways, for when they speak of 'every song' they seem to include popular and measured song [*cantum civilem et mensuratum*]. This kind of song does not perhaps proceed through the rules of a tone, nor is it measured by them. Further, if it is measured by them, they do not speak of the method by which it is used nor do they make mention about it.

Earlier Grocheio had specifically included organum, conductus and motet in the category of measured song, so the presence or absence of a plainchant tenor as the basis for a polyphonic composition had no bearing on the question of whether or not it ought to be considered modal.

There may be more to this than merely the correction of a definition. Fuller (1990) pointed out that already in 1271 Amerus had applied the modes to 'cantilenis organicis' (almost certainly polyphony) in his *Practica artis musice* (CSM, xxv, chap.1). The *Compendium de musica* sometimes ascribed to Jacobus of Liège (*c*1300) also seems to connect modes and polyphony (chap.iii.3; ed. J. Smits van Waesberghe, E. Vetter and E. Visser, Buren, 1988, pp.88–122). The first unambiguous application of the eight modes to polyphony occurs in the anonymous treatise in the Berkeley Manuscript (*US-BEm* 744, dated 1375; ed. O. Ellsworth: *The Berkeley Manuscript*, Lincoln, NE, 1984). A continuous tradition in the application of modal theory to polyphony begins only with Tinctoris (*Liber de natura*, 1476; CSM, xxii).

Nevertheless, well over two centuries after Grocheio, Sebald Heyden (Haiden) could still ask 'Why is it necessary to pursue religiously the ranges of authentic and plagal tones, as they are called, and the *differentiae* added to them, when we perceive that they are hardly taken into account in figural music?' (*De arte canendi*, 1540; trans. after MSD, xxvi, 113). Heyden was chiefly interested in *tactus* and proportions. Nonetheless, such a statement is surprising, for it came at a time when secular polyphonic collections ordered according to the eight modes were beginning to make an appearance. Moreover, immediately following Heyden's own summary and examples for the traditional modes and psalm tones he himself printed polyphonic compositions illustrating each of the eight modes (see Wiering, 1995, pp.176–83). The question draws attention to the fact, however, that between modes and modal theory on the one hand and the actual composition of polyphony on the other there was no necessary connection either in theory or in practice. Between counterpoint – the rules governing simultaneities and their successions – and modality there was nothing comparable to the indissoluble link between harmony and tonality that prevailed from Rameau's *Traité de l'harmonie* (1722) to Schoenberg's *Harmonielehre* (1911).

(i) The poetic function of the modes. During the period 1450–1600 musicians increasingly came to feel that polyphonic music must somehow be modal. But a mode, unlike a key in 18th- and 19th-century music, was not an abstract general pattern of tonal relationships inherent in the grammar and syntax of the musical language. It was, rather, a part of musical style. Musicians believed that the modes furnished a number of differently structured sets of coherent musical relationships each of which had its own set of expressive characteristics that could naturally and of themselves reinforce the affective sense of a verbal text.

(a) Modal ethos in the Middle Ages. The tradition that a mode has inherent expressive properties and extramusical associations was of ancient Greek origin; this notion is in fact an essential part of most modal systems (*see* ETHOS). In the humanist Renaissance the doctrine of the inherent expressive properties of modes received powerful support from direct reference to classical sources. But the tradition of modal expressivity as well as the details of the eightfold system came to Renaissance musicians proximately from their medieval forebears.

At the beginning of chapter 14 of his *Micrologus* Guido had proposed that 'the diversity of tropes is suited to the diversity of mentalities' and had described four of the eight modes briefly. Engelbert of Admont (*d* 1331) reported the tradition as follows (*GerbertS*, ii, 340):

Guido says that the third tone has broken leaps, and so its song is impetuous. The sixth in truth has gentle leaps, and this is voluptuous. The seventh is indeed garrulous, on account of many and short turnabouts [*reflexiones*]. The eighth is more agreeable on account of its lingering and less frequent turnings [*propter morosos et pauciores reflexus*].

Seen in this way, the modes are not merely members of a closed system of categories for musical classification, nor just a convenient traditional code helping to link a handful of recitation formulae with a galaxy of separate songs, nor only a collection of scales or melody types. Guido's tropes are depicted as real, individual entities, with characters identified as 'impetuous ... voluptuous ... garrulous ... agreeable'. Such characters as these are ethic; they have to do with the expressive and even the moral power of a musical entity to act on a human spirit.

For the most part, the general idea of modal ethos was accepted in medieval theory without question (where it appeared at all), and specific doctrines regarding one mode or another are ad hoc, and purely traditional. Like many other usages in medieval musical theory the notion of ethos (though not the term) was borrowed ultimately from classical antiquity. A characteristic instance is a story about the ethos of the Phrygian *harmonia* whose name had become attached to the authentic deuterus by the end of the 9th century. This story is retold after

Boethius (see Strunk, 1950, p.82) by medieval and Renaissance theorists from Regino in the 9th century (*GerbertS*, i, 235) to Glarean in the 16th (bk 2, chap.23). Engelbert's version reads (*GerbertS*, ii, 340):

Boethius tells in the prologue of his *De musica* that the Phrygian tone, that is, the third, sung to a musical instrument, aroused one young man listening, the suitor of a certain girl, and provoked him to such rashness that he wanted to break into the girl's room at once, by force. And when the Phrygian tone was changed to Hypophrygian, that is, the third to the fourth tone, the young man calmed down, appeased by the gentleness of the tone.

A modernized version appears in Artus Thomas's *Philostrate* (1611): a French nobleman became so aggressive when hearing a composition by Claude Le Jeune (in Phrygian?) that it was necessary to calm him by playing some music in the Hypophrygian mode (Walker, 1941–2, pp.113–14). Such a reworking of ancient legend shows that modal ethos was not only something of the past, but a reality in contemporary culture as well.

While modal ethos plays a smaller role in Western modal theory than it does in modal systems in some other cultures, there are ample listings of modal affect among medieval and Renaissance sources to illustrate the phenomenon. These lists are by and large in agreement as to the general character of an authentic as against its corresponding plagal, in that in each pair the plagal is almost always darker or softer than its corresponding authentic; beyond this there is only partial agreement. There follows below a compilation of modal affects from three 11th-century sources, as an illustration of the kinds of similarities and differences that can exist in the ascription of ethos to the members of a modal system. The sources are Hermannus Contractus (mid-11th century, ed. Ellinwood, 65), Frutolfus of Michelsberg (before 1100, ed. Vivell, 105) and Johannes Cotto (*c*1100, ed. in CSM, i, 109). They probably do not represent independent traditions, despite their mutual differences. Frutolfus and Johannes knew Guido's work, and Hermannus must have also; and Frutolfus knew Hermannus's work since he borrowed from it elsewhere.

mode 1, authentic protus, Dorian: Hermannus, 'serious or noble'; Frutolfus, 'mobile because it is capable of all affects'; Johannes, 'lingering and courtly meanderings'.
mode 2, plagal protus, Hypodorian: Hermannus, 'agreeable'; Frutolfus, 'mournful, because its melody seems more suitable to sad and unhappy things'; Johannes, 'deep-voiced seriousness'.
mode 3, authentic deuterus, Phrygian: Hermannus, 'excited or leaping'; Frutolfus, 'excitable'; Johannes, 'harsh and rather indignant leaping about'.
mode 4, plagal deuterus, Hypophrygian: Hermannus, 'moderate or lingering'; Frutolfus, 'moderate and serious'; Johannes, 'adulatory'.
mode 5, authentic tritus, Lydian: Hermannus, 'voluptuous'; Frutolfus, 'joyful'; Johannes, 'moderate wantonness and a sudden fall to the final'.
mode 6, plagal tritus, Hypolydian: Hermannus, 'mournful'; Frutolfus, 'voluptuous'; Johannes, 'lacrymose'.
mode 7, authentic tetrardus, Mixolydian: Hermannus, 'garrulous'; Frutolfus, 'joyful and merry'; Johannes, 'theatrical leaps'.
mode 8, plagal tetrardus, Hypomixolydian: Hermannus, 'joyful or exultant'; Frutolfus, 'agreeable and sweet'; Johannes, 'seemly and rather matronly'.

An anonymous *Tractatus de natura et distinctione octo tonorum music*e (part of the composite *Tractatus de musica plana*; *CoussemakerS*, ii, 434ff, from a manuscript copied in Ghent in 1503, the contents of which may be considerably older; *see* ANONYMOUS THEORETICAL WRITINGS, §2, no.27) makes an effort to illustrate and justify ascriptions of ethos to church modes by choosing chant examples whose texts are congruent in some way to the traditional ethos of the mode of their traditional melodies. Though the demonstration is necessarily specious, it was of course possible to find texts in the enormous liturgical corpus with the right affect in the right mode. Perhaps the most difficult case would have been mode 3, the Phrygian, whose ascribed ethos lends itself ill to liturgical texts; but the author found an ingenious rationalization. Since this mode is 'harsh and inciting to wrath and war, it is suitably applied to those matters where something of bravery or power is shown, such as [the Responsory] for the mystery of the Holy Cross, *O crux gloriosa* [*Variae preces* (Solesmes, 5/1901), 151]' (p.446). The verbs in the *repetendum* of the respond warrant the affect: '[O glorious cross ... wonderful sign] Through which the devil was conquered, and the world was rescued through the blood of Christ'.

The system of modes was also correlated with extra-musical octenary, quaternary and binary systems. Near the very outset of the medieval development Aurelian stated in his own supplement to the 'De octo tonis' that begins chapter 8 of *Musica disciplina* that the eight modes appear to imitate the motions of the zodiac and of the seven planets (the moon, Mercury, Venus, the sun, Mars, Jupiter, Saturn). Ramis de Pareia (*Musica practica*, 1482) presented an elaborate comparison of the eight modes and the celestial orbits, which reappears on the title-page of Gaffurius's *Practica musice* (1496; see Haar, 1974). In the Guidonian tradition the eight modes were likened to the Beatitudes and also the parts of speech. Johannes reported the last congruence, and added another (*De musica*, chap.10):

It seems very fitting that as all that is said is contained in eight parts [of speech] so all that is sung may be governed [*moderetur*] by eight modes. But though they are now eight they were once only four, probably in imitation of the four seasons. For as the ages are diversified by the four seasons, so all song is diversified by the four modes.

In chapter 14 of the 13th-century *Summa music*e attributed to Perseus of Würzbrug and Petrus (*GerbertsS*, iii, 190–248; ed. C. Page, *Summa musice:a Thirteenth-Century manual for Singers*, Cambridge, 1991) the eightfold system is correlated with the macrocosmic elements of the universe and the human microcosm of bodily fluids and temperaments. Authentic and plagal were more often than not called principal and subordinate, or master and disciple or servant; Aribo (*GerbertS*, ii, 205, late 10th century) expanded the roster of dichotomies to include not only rich and poor but also male and female, which was further elaborated by Johannes de Grocheio (*c*1300): 'Just as the masculine universally exceeds the female in skill and virtue, so it seems appropriate that the principal modes exceed their plagals in ascent' (trans. Seay, p.33).

(b) Modal ethos for polyphony. Renaissance notions of textual expressiveness and the humanists' recovery of more and better classical authorities stimulated great interest in the idea of modal ethos as an aid to the musically expressive setting of a text. Chapter 5 of Nicolò Burzio's *Musices opusculum* (1487, pt ii) is entitled 'How chansons [*cantilenae*] ought to be composed'. After recommending that a composer be thoroughly familiar with repertory and acquire experience through practice in his art, Burzio continued: 'most important of all, let him be familiar with the tropes, or (to use the term of practising [musicians]), the tones; for some of these induce joy,

others rather sadness, while others [are] holding to a mean' (ed. Massera, 124). The ethic properties of the eight modes, according to Burzio 'as found in documents of the musicians', are:

(1) '... induces happiness ... capable of producing all affects'; (2) '... heavy and pitiable ... suitable for lamentations'; (3) '... provoking to anger'; (4) '... inciting to pleasure and tempering wrath'; (5) '... delightful, modest, and cheerful'; (6) '... pious and lacrymose'; (7) '... partly ... playful and pleasant ... partly ... inciting, and having a variety of leaps'; (8) '... more gladdening ... and stimulates pleasantness'.

Hermann Finck (1556, bk 4) drew attention to the difficulties of applying the traditional stipulations for the eight modes in composition, given the needs of the contemporaneous method of setting a text, for while a plainchant mode (Rr i*v*–Rr ii*r*):

is recognized according to the ordinary precepts, with almost no difficulty by [even] the moderately erudite, polyphonic [music] does not follow the ordinary rules [of the modes]. ... The chief reasons are [1] the observation of affects in the text, and according with that [2] the [textually] appropriate variation of the points of imitation and of the cadences [*fugarum ac clausularum conveniens variatio*]. ... Hence ... the limits of the tones cannot be observed strictly in polyphonic music.

Notwithstanding the variety of affect within a piece, a single mode will probably predominate, 'For the song as a whole is to be ascribed to the tone to which the greater part of its points of imitation and cadences can be referred' (Rr ii). So even though the method of recognizing a mode may be completely different, a predominant affect will be established, and Finck concluded the fourth book with a list giving the property (*proprietas*) of each tone, that is, its ethic affect. Along with traditional attributes Finck included the seven planets (presumably after Gaffurius; no mention is made of the zodiac for the eighth mode); the authentics are deputed to the unwavering sun and outer planets, the plagals to the moon and inner planets with their variable phases. Authentic–plagal pairs are male–female, in one case master–servant.

(1) 'Dorian ... has the liveliest melody of all, arouses the somnolent, refreshes the sad and disturbed ... [it is] like the Sun, who is deemed first among the planets ... the foremost musicians today use this tone the most'. (2) 'Hypodorian ... is diametrically opposed to the former ... produces tears, makes [one] morose ... pitiable, heavy, serious, most subdued of all ... [like] the Moon'. (3) 'Phrygian ... not wrongly attributed to Mars ... moves to choler and biliousness ... loud words, hideous battles, and bold deeds suit this [tone]'. (4) 'Hypophrygian ... represents the parasite, who caters to the passions of his master ... is assigned to Mercury on account of the likeness in nature'. (5) 'Lydian ... not unlike the sanguine [temperament] ... corresponds with cheerfulness, friendliness, the gentler affects ... since it pleases most of all, it averts quarrels, calms agitation, fosters peace, and is of a jovial nature ... [it is] the joy of the sorrowful, the restoring of the desperate, the solace of the afflicted'. (6) 'Hypolydian ... [is] contrary to the former ... not infrequent in prayers ... by others attributed to Venus'. (7) 'Mixolydian ... has more in common with Saturn ... shows itself with stentorean voice and great shouts, so as to be a terror to all'. (8) 'Hypomixolydian ... is not unlike an honest matron, who tries to soften and calm the wrath and turmoil of [her] husband with agreeable discourse ... studiously avoids offence ... pacific'.

To what extent Renaissance composers of polyphonic music concerned themselves with the expressive possibilities of modal ethos is moot. That polyphonic modalities based on the eightfold system came to be used by the greatest masters of the 16th century is beyond question. This is especially clear from the large number of collections that are organized as 'modal cycles' employing all eight (or, later, 12) modes in numerical succession (408 cycles through the modes and psalm tones are listed in Wiering, 1995, appx C). Such cycles were by no means uncommon in plainchant. Polyphonic settings of the *Magnificat* and the psalm tones began to be organized in cycles from the second half of the 15th century onwards. The earliest example may be the *Magnificat* cycle in *I-Rvat* S Pietro B80), containing works by Binchois, Du Fay, Dunstaple and anonymous composers, compiled around 1460. Sebastian z Felsztyna's *Opusculum musice* (1517) contains what may be the oldest non-psalmodic cycle, which consists of eight short pieces in three-voice note-against-note counterpoint. The first free cycle in a practical source, Thomas Stoltzer's *Octo tonorum melodiae*, a collection of five-voice instrumental fantasies, dates from approximately the same time and place. From the 1540s onwards polyphonic collections fully or partly ordered as modal cycles were published in considerable numbers. Among these are Rore's first book of five-part madrigals (1542), nos.1–17, and Palestrina's offertories (1593), nos.1–32. Such regularity might seem incompatible with the notion that the mode of a composition was determined by the principal affect of its text. In Palestrina's settings of the offertories for the Sundays from Advent to Trinity in chronological and modal order there is of course no question of choice of modal ethos. Nonetheless, the general theory of modal affect as well as the specific affects of individual modes were expounded with enthusiasm by Renaissance theorists. These included the classicizing humanists who propounded the 12-mode system, Glarean and Zarlino.

Among modern scholars Bernhard Meier has argued that consideration of modal ethos played a central role in the musical setting of textual affects with such composers as Rore and Lassus. Meier also endeavoured to show that the eight modes, four authentics and four plagals, were pre-compositional realities in Renaissance polyphony in much the same way as the keys were in tonal music from the 18th to the early 20th century. Structural and ethical functions of the modes are closely interrelated in Meier's view: departure from the norms of the modes is a 'licence' that the composer may take only when it serves to underline the meaning of the text. Meier's interpretation of polyphonic modality has been adopted by many who aspire to 'authentic analysis' of Renaissance polyphony. But it has also been criticized on methodological grounds. As early as 1968 Dahlhaus questioned the validity of the authentic–plagal distinction for polyphony. Harold Powers, working from an ethnomusicological perspective, contended that mode is not an objective (etic) property of a polyphonic composition, but a subjective (emic) category that has no meaning outside the cultural context of a composition (Powers, 1981; 1982).

(ii) Modality in a polyphonic texture. Until the middle of the 15th century modal theory remained almost wholly separate from theories of counterpoint. This is not to say that independent sections dealing with each could not appear in a single work; indeed, hardly any discant treatise is without an inserted or appended chapter 'on the eight tones'. In about 1460 Johannes Gallicus (*Libelli musicalis de ritu canendi*, chap.2.i.12) rejected the application of modes to polyphony, asserting instead that such pieces were composed in the Boethian constitutions. Yet barely 20 years later, Guilielmus Monachus (*fl* late 15th century) concluded his treatise with a section on the modes (CSM, xi, 9). He began almost as though he had intended to contradict Johannes de Grocheio. 'A tone, as it may be

summarized here, is a certain rule [*regula*] which judges in every song [*in omni cantu dijudicat*], and I say "in every song" rightly, either plain [song] or polyphonic [*sive firmo sive figurato*]'. But the rest is exclusively a discussion of chant mode criteria: 'ascent–descent', psalm-tone intonations and mediations, finals and tenors. Only one more passing reference to polyphony occurs, in a discussion of extended compasses in authentics, which 'can be comprised in measured or polyphonic music [*in cantu figurato sive organico*] or in ... the music ... of sequences, but not in Gregorian plainsong', (CSM, xi, 55).

Johannes de Grocheio's objection that 'if [measured music] is measured by [modes], [the writers] do not speak of the method' began to be met when the late medieval authors such as Tinctoris (*Liber ... tonorum*, written in 1476 in Naples; CSM, xxii) applied both commixture and mixture to counterpoint and to mode together (chap.24):

it is to be noted that commixture and mixture of tones are made not only in plainsong but also in composed [song], so that if the music [*cantus*] be composed with two, three, four, or more parts, one part will be of one tone, another of another – one authentic, another plagal – one mixed, another commixed.

(a) The modal voices. If a mixed mode can be authentic and plagal combined contrapuntally as well as melodically, it would seem to follow that a polyphonic composition would most naturally be assignable as a whole to a mixed mode according to final, without distinction as to authentic or plagal – to a *maneria* (Gaffurius, 1496, bk 1, chap.7 has 'maneries'). For some time it was the common practice of modern scholars to do just that: to refer to any polyphonic *g* protus piece as '*g* Dorian', or to any *f* tritus piece as '*f* Ionian' or '*f* Lydian', and so on. There is some evidence for informal systems of 3 or 4 modes, based on the quality of the final only (Judd, 1992; Wiering, 1995, chap.5); yet the term 'maneria' has been used more in modern times than it ever was in the Middle Ages or Renaissance. But in fact, the authentic–plagal distinction was as scrupulously maintained in the Renaissance as in the Middle Ages, beginning with Tinctoris in the continuation of the above passage:

Hence, when some mass or chanson [*cantilena*] or whatever other composition you like is made from different parts carried through in different tones, if anyone asks of what tone such a composition may be, he [who is] interrogated ought to reply, for the whole, according to the quality of the tenor, because that is the chief part and the foundation of the whole relationship [*fundamentum totius relationis*]. And if one be asked in particular, about some part, of what tone it may be in a composition of this sort, he will reply, this [tone] or that. For, if anyone were to say to me, 'Tinctoris, I ask you, of what tone is the song [*carmen*] "Le Serviteur"?' [by Du Fay], I would reply 'in general, of an irregular first tone [*c* protus authentic], because the tenor, the principal part of the song, is of such a tone'. If however he were to ask in particular, of what tone the superius or contratenor might be, I would reply in particular, [that] the one and the other were of the second tone, also irregular [*c* protus plagal].

The modal characteristics of Du Fay's *Le serviteur* are given in Table 7.

In Tinctoris's famous dictum the tenor is to be taken as the 'chief part' only in the contrapuntal sense. As Gaffurius put it, 'since the tenor [1] supports the cantus and [2] is supported by the *baritonans*, it is called the foundation of the relationship' (1496, bk 1, chap.15). There is no necessary implication either that the tenor is the chief melodic part, though it may be so, or that it has the 'chief part' because it was there first, though it may have been. Nicolò Burzio (1487) described two ways of composing a chanson (*cantilena*; cf Tinctoris's dictionary *Terminorum musicae diffinitorium* written *c*1475); both methods result in a 'discant–tenor framework' with added contratenor (ed. Massera, 124ff):

you may compose first the *cantus*, or as they say, soprano, after careful consideration [*investigatione premissa*, presumably of the text]; then the tenor, corrected in all rigour; and finally the *contra[tenor] bassus*, producing no dissonances with the others. ... Having shown the fabrication of a [free] polyphonic song, it [remains] only to be told how [one] is to be arranged on a plainchant ... it is necessary that the plainchant have been made first. Next then, let the soprano be produced or composed with great ingenuity, having regard to the tenor (which is the plainchant), thence arriving at a *contra[tenor] bassus* [which is] to be completed, rooting out with mind, eyes, and reason whatever will have stood in the way of the sweetness of the harmony.

In both Burzio's methods the composer's primary imaginative effort is directed to the soprano; in the second not only 'careful investigation' but also 'great ingenuity' is required because of the pre-existing tenor. Given Burzio's previously quoted exhortation to the composer that he be familiar with the modes and their affects above all else, the inference that the soprano is the modal voice is inescapable. Meier's modal analysis of a number of chansons by Du Fay and others in a Ferrarese manuscript of about 1450 (*P-Pm* 714) has shown the primacy of the upper voice, and Meier proposed that the compositions demonstrate conscious use of modal affect (1953; but see also Fallows, 1981, on the genesis of this source).

In the *Opus aureum* (Cologne, 1501), freedom to choose a modal voice freely is specifically stipulated: 'Therefore, desiring to compose something, first it is necessary that one put a tenor – or indeed another part [*chorum*] if desired – yet such that it be well formed according to the requirements of the tone under which it is ruled' (Schanppecher, 1501, ed. Niemöller). A decade later one begins to read that the voices should be taken in pairs, in what was rapidly becoming the standard distribution: 'The tenor [*media vox*] produces the soprano part [*supremam vocem*] and the bass [*gravis*] the alto [*acutam*]; and in the way in which the soprano seems subject to the tenor, so let the alto be subject to the bass' (Philomathes, 1512).

From this time on, though most writers continued to mention the tenor as the principal modal voice, the soprano and tenor pair in fact functioned together in this role. Principal cadences in the four-part distribution were mostly formed by the tenor and soprano, with the bass and alto providing harmonic support and filling, respectively. A complete summary of the functions of the four 'primary voices' is in Burmeister (1606, p.11):

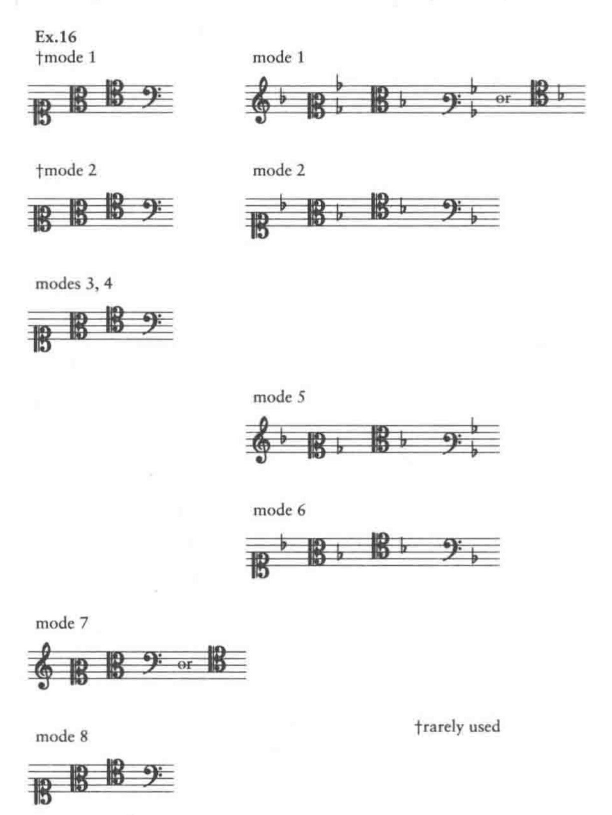
TABLE 7: Du Fay, *Le serviteur*

Voice	*Range*	*Final*	*Octave species*	*Mode*
superius	*g–c″*	*c′*	*g–c′–g′*	2
contratenor	*c–e♭′*	*g*	*d–g–d′* [?]	2
tenor	*c–e♭′*	*c*	*c–g–c′*	1

Discant ... because it is the highest in the system [*temperamentum*] of [paired authentic and plagal] modes, it is defined by the diapason or octave above the tenor.
Alto ... its limit is set in the octave which is median in the system of modes, between the discant and the tenor.
Tenor ... the nearest to the foundation of the harmony [i.e. the bass], suitable for maintaining the status of the mode by which the harmony or melody is defined.
Bass ... the lowest among the primary voices, carrying out the duties of fulcrum or foundation in the harmony.

Burmeister's useful term for the functionally paired voices – the modal tenor–soprano, the supportive bass–alto – was 'conterminous' (because their respective highest and lowest points just meet), while adjacent pairs of voices were 'disterminous' (because their registers overlap rather than conjoin). However, Vicentino (1555, f.48) proposed the bass as the principal modal voice. It seems that, especially in instrumental music, the range and final of the bass was sometimes considered the fundamental criterion for the determination of the mode (for example in Galilei's *Fronimo*, 1584; see Wiering, 1998, pp.98–101).

(b) The modal ensemble. Though the tenor or soprano, or both, might be designated as the chief modal parts, the fully imitative musical style of 16th-century polyphony went far to obfuscate any distinctive type of line, pace or registral position that could mark one voice as modal and its neighbour as merely supporting. Gallus Dressler (1563) explained the matter with his wonted explicitness (ed. Engelke, 229):



in free counterpoint account is taken not only of the tenor but of all the other *voices* ... the ambitus of the tones, which is shown by the customary cadences and repercussions, is observed, by which means account is taken of all the *voices* ... in songs which consist of points of imitation [*quae ex fuga constant*] the voice beginning the point is primary and pre-eminent.

As musicians came consciously to think of the modes of the eightfold system as essential to the full enrichment of their art they began to favour particular modal complexes of voices selected from the expanded tonal system. Such a complex could be designated through the particular choice of *canto durus* versus *cantus mollis* combined with a higher as against a lower general disposition of the clefs for the voices. Together with the final of the work, these characteristics are known as the 'tonal type'. Tonal types are usually rendered by an expression consisting of the signature, the clef of the superius, and the final, as in ♭–g2–G. The concept was introduced as *Tonartentype* by Siegfried Hermelink (1960); however, it gained wide acceptance only after Harold Powers used it to distinguish between an *a priori* and an *a posteriori* approach to tonal structure in Renaissance polyphony (Powers, 1981; 1982). Powers considered the tonal type to be *a priori* pre-compositional property, and mode to be an *a posteriori* method of classicification. He described their relationship as follows (1981, pp.466–7):

contrasting patterns in system, in cleffing representing *ambitus*, and in final sonority can be seen as objective criteria minimally marking off one from another a certain number of tonal types, each with its own distinctive musical profile. Though these tonal types were frequently used to represent church modes it leads only to confusion to treat them as though they somehow were church modes. The anthropologist's distinction of 'etic' from 'emic' is useful here, and the church modes might better be regarded as culture-contextual 'emic' musical concepts while the tonal types are objectively marked 'etic' musical entities.

One of the earliest polyphonic collections showing a consistent combining of clefs and systems for modal purposes is Rore's first book of madrigals for five voices (1542). Nos.1–17 constitute a modal cycle. They are disposed in a conventional pattern of systems and clefs which was the preferred norm until into the 17th century: *g* protus and *f* tritus modes were set in *cantus mollis*, *e* deuterus and *g* tetrardus modes in *cantus durus*: the authentic modes (1, 3, 5, 7) were set in high clefs (*chiavette*) and the plagals (2, 4, 6, 8) in 'normal' clefs. Ex.16 shows the convention as reported in 1595 (see Meier, 1959); Rore's dispositions in 1542 differ from these only in that he distinguished plagal from authentic deuterus by using *c*′2 *c*′4 *c*′4 *f*3 *f*5 clefs for mode 4. The systems and clefs of Palestrina's second book of spiritual madrigals (1594) are disposed exactly as in ex.16 (with the normal *cantus mollis* protus modes). To avoid making a distinction between modes 3 and 4 is a common usage. Glarean observed that 'it often happens ... among *symphonetae* [polyphonic composers] that [Hypophrygian] songs rise to small *d* [i.e. *d*′] and do not descend below *D* [i.e. *d*], which range the Phrygian, its principal mode, also has' (MSD, vi, 254). Since contrast of high clefs and low clefs is merely the polyphonic equivalent of the traditional contrast of authentic and plagal, the common clef disposition for both modes 3 and 4 is perfectly consistent.

2. Polyphonic modal functions. Modal prescriptions and the rules for the formation and succession of simultaneities came together only very gradually, and in some respects never completely. There was no real need to try to link the fields of modal theory and counterpoint so long as it was felt that mode belonged only to the

chant, or even that mode could be understood in terms of a single newly composed voice; given one modally correct voice, the rules of counterpoint would handle the rest of the polyphonic texture automatically. Of nearly 70 concocted illustrations in Tinctoris's *Liber ... tonorum*, only five are in two voices, even though Tinctoris proclaimed the work as largely in the interests of polyphony (*cantus compositus*); and his five two-voice examples are all concerned with the tritone. But the change from composing predominantly on a tenor to composing free imitative counterpoint gradually made some inroads into modal theory.

(i) Cadences and openings. The first of the modal functions to be accommodated to counterpoint was the cadence, final and medial alike. In 1490 Adam von Fulda wrote, as the first of his ten counterpoint rules (*GerbertS*, iii, 352, with emendations from Riemann, *Geschichte der Musiktheorie*, 2/1920, p.321):

> In every song at least one voice is appointed to be adapted to a correct tone. Moreover, to adapt to a tone (namely, of the eight tones) is this: it is to place cadences beautifully and appositely, for as the rise and fall of speech (*accentus prosae*) is set off by the period, so the tone by a perfection.

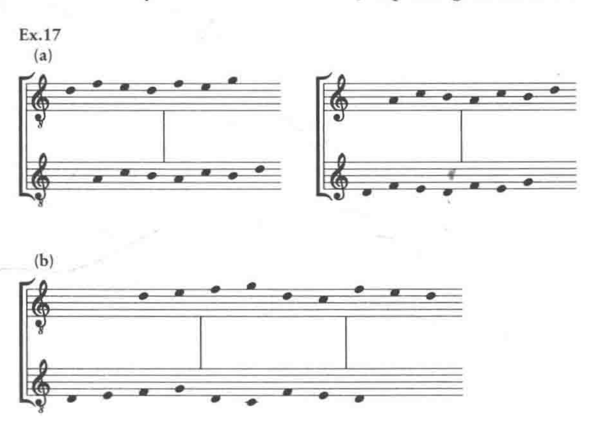
In his *Liber ... contrapuncti* written in 1477 Tinctoris (MSD, v, 135) had phrased it negatively (and he supplied two pieces in illustration): 'The fifth rule [of counterpoint] is that above absolutely no note, be it medium, superior, or inferior, should a perfection be taken by which a removal from its mode [*distonatio*] can happen'. A 'perfection', according to Tinctoris's dictionary, 'designates ... the conclusion of a whole piece or of any of its sections' (p.48); under 'clausula', the cadence is defined as 'a small part of some section of a piece, at the end of which ... is found a perfection'.

To make a cadence function modally in counterpoint, however, raises hardly any question for traditional modal theory. Cadences were of two voices (other voices when present being treated as accompanying) and were normally led to the perfection of an octave or unison, thus merely doubling the letter name and hexachord syllable alike of the modal degree. Even though medially 'an imperfect one is inserted from time to time' (Tinctoris, MSD, v, 136), the modal voice is not thereby affected. As for the course of the music between perfections, which most sets of counterpoint rules allowed to be filled with imperfect consonances if desired, only one voice is relevant to the mode.

Changes in compositional technique during the 16th century did not affect the fundamental structure of the cadence as a two-voice progression with accompaniment, and the general principle established in the later 15th century by Tinctoris and his contemporaries, that the making of a cadence established a modally significant degree, continued to be valid. Beginnings, however, were more of a problem. As long as the counterpoint rule 'begin with a perfect consonance' reflected a practice of beginning all the parts together – as in Tinctoris's examples for his fifth rule (MSD, v, 135–6) – no question about the modal voice need in principle arise. But the great variety of possible starting pitches stipulated in chant theory was drastically reduced, according to Tinctoris, even for the one modal voice (*Liber ... tonorum*, chap.19; CSM, xxii): 'any tone can begin in any place in its ambitus. Nonetheless, there are some places more suitable than others ... and out of 50 composed songs there may be hardly a one which does not begin in the place where it finishes'. Such a neat formal link between the opening and closing notes of a piece – making the final the initial – was often wistfully mentioned by chant theorists, but no fixed rule could be made in the face of the enormous variety of chant initials in every mode. The anonymous 11th-century Italian *Dialogus* put it, 'the beginnings, too, are found most often and most suitably on the sound which concludes the melody' (Strunk, 1950, p.113).

In the 1470s and 1480s the imitative style was well on the way to achieving the pre-eminent status it was to enjoy in the 16th century, and to make a simple analogy of an opening perfection with the modally significant cadential perfection could hardly have sufficed, nor does it seem to have been suggested. It was the point of imitation, the *fuga*, that developed a modal significance. Like other contrapuntal and compositional devices imitation was not linked to modality when its descriptions first began to appear in the literature. One of its essential features, however, ensured that in time it would be so linked.

Tinctoris defined 'fuga' in his dictionary (written in about 1475, printed in 1495) as: 'the identity in a song of the notes and rests of the parts as to [1] value, [2] name, [3] shape, and sometimes as to [4] location'. Under 'solfisatio' Tinctoris confirmed that 'name' (*nomen*) referred to the hexachord syllables.



Bartolomeo Ramis de Pareia (1482) also described imitation. The same passage appears in substance and partly verbatim in Burzio (1487), though this was a work directed against Ramis; as had Ramis, Burzio appended the passage as a supplement to the counterpoint rule recommending contrary motion. Ramis's passage (p.68), with Burzio's important changes (ii, ed. Massera, 122), reads as follows:

> The best fashion of making organum [*modus organizandi*], however, is when the organum [Burzio added 'or "soprano", to use the common term'] imitates the tenor in ascent or descent. It begins making the same melody at the same degree [*eundem cantum* – Burzio had *eandam melodiam – in eadem voce*], not at the same time, but after one or more notes. Or [it makes] a similar melody at the 4th or 5th or even octave, or in their replications and reductions below or above [Burzio omitted this sentence]. This fashion practising [musicians] call *fuga*.

Ex.17 shows Ramis's illustration, with one subject imitated at the 4th below and the 5th above, and another at the octave above.

Burzio's omission of Ramis's list of intervals of imitation, seen in the light of Tinctoris's definition, goes to the heart of the matter. Ramis had discarded the traditional system of hexachords, replacing it with an

Ex.17

octave solmization system of his own, and he was thereby forced to name the 4th and 5th as intervals of imitation. Burzio, who defended the traditional hexachord system, was under no such constraint. As Tinctoris made clear, it was enough that the points of imitation use the same hexachord syllables, whose location in hard, natural or soft hexachord automatically designates Ramis's intervals of imitation. Ramis's imitations at the lower 4th and upper 5th (ex.17*a*) would be solmized *re fa mi re fa mi sol* in all locations. This is of course the first species of the 4th, and since it occurs with *re* at *a′* and *a* as well as at *d′*, it is a modal species of the protus, in terms of the late medieval Italian theory. The leading voice (*dux*) works in the common species of 4th *re–sol* (*d′–g′*) while the answering voice (*comes*) exploits the proper species *re–sol* (*a–d′* or *a′–d″*).

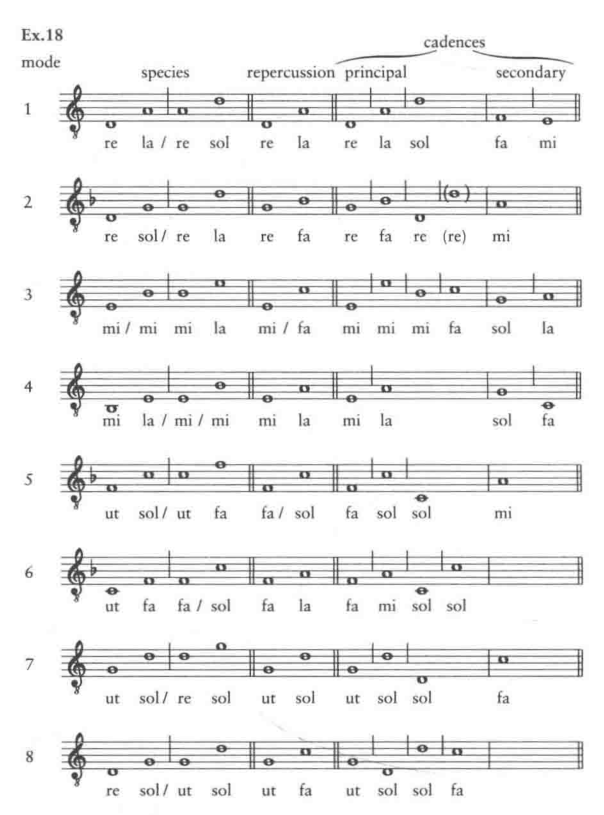
The connection of the modes with the intervals of imitation was not explicitly to be made for several decades, though there are passages implying such a connection. In his *Compendium musices* (1537) Lampadius gave three 'rules' for imitative beginnings and for cadences. The first warned not to let the parts of a composition 'wander outside the regular tone, otherwise the melody will be corrupted'; the second warned not to exceed the double octave; the third stated that 'Josquin, who in this art is deemed most experienced [and] to be emulated, was the most distinguished of all in forming cadences and points of imitation'. There follow cadences combined with points of imitation (p.89), made, however, not with modal species but with the intonation plus the principal *differentia* of each of the eight psalm tones, or as Lampadius and numerous other German writers called them, 'the tropes of the tones, with which psalms conclude'. The confounding of tone as church mode with tone as psalm tone is as old as the modal system in the West (*see* PSALM, §II, 6), and central European modal theory from the 16th century often shows a particularly strong inpulse to do so, as compared to Italian sources. In Finck's *Practica musica* (1556) mode and psalm tone are so confounded, and claimed for polyphonic music as well: 'A trope is a brief phrase beginning in the repercussion of each tone which is added at the end of the individual verses of psalms and responsories ... [these are] the differences [*differentiae*], an understanding of which is as necessary as the knowledge of their tones, especially in polyphonic music' (p.iii). It was of course necessary for a church composer to know how to set psalms and canticles polyphonically, and their recitation tones were often used as subjects; but a psalm tone as subject is modal only in the sense that any plainchant subject is modal, and in certain respects it is less so, for a psalm-tone *differentia* taken out of context can be strikingly at variance with the structure – in terms of species, or as final with ambitus – of its corresponding mode.

Where Lampadius left connection of the modes with imitation and cadences implicit, Finck stated it very pointedly, as quoted earlier, and stated it again in almost the same words: 'a song is referred to the tone which has the most cadences and points of imitation relating to it [*plures clausulae ac fugae sibi familiares*]' (Rr ii). This statement is a curiously apt transformation into indigenous polyphonic terms of one of the oldest doctrines of chant theory: 'A melody ... belongs most to the mode in which a majority of its distinctions lie' (anonymous (Pseudo-Odo) *Dialogus*, *c*1000, chap.8; Strunk, 1950, p.113).

(ii) The integration of modality and polyphony. That composers were consciously considering the modes in their work is established at the latest by the 1540s, when the ordering of pieces within collections according to the order of the modes can often be confirmed by the objective evidence of orderly clef and system combinations. Modern scholars have tried to demonstrate that older composers were also consciously applying the modes in their compositions, irrespective of any modal assignment that might arise from a plainchant tenor or model. Perkins (1973) investigated the possibility for two generations earlier; Treitler (1965), Meier (1953) and Reichert (1951) raised the question for two and more generations earlier still. But all these studies are necessarily based on the scholar's own analysis of the music, based on more-or-less compelling inferences drawn from theorists like Tinctoris. Until the mid-16th century, direct assistance from contemporaneous writers is available only in the form of general directives in the areas just considered: a modal voice might or must be chosen, and cadences (and latterly points of imitation) had to reflect and not distort the mode.

In chapter 7 of his *Isagoge* (1516) Glarean expressed a discomfort with traditional modal theory which he exorcized by radical means in his *Dodecachordon*, by incorporating traditional modal theory into a more comprehensive new system that he believed to be founded on both classical authority and reason. The inability of modal theory satisfactorily to account for polyphonic practices was dealt with in another way by 16th-century German theorists who stressed *musica poetica* – the art of composition – as a third and culminating branch added to the traditional branches of musical doctrine, *theorica* and *practica*. *Musica poetica* offered a natural disciplinary forum for combining traditional modal theories and the teaching of counterpoint.

The clear and thoughtful manuscript treatise of Gallus Dressler (1563) brings the doctrines of modality and counterpoint into as close a symbiosis as they were ever to achieve. His manuscript is annotated with references to a few compositions; his lectures must have been replete with them. The work is one of a few sources fully discussing the art of polyphonic composition in terms of the traditional eightfold system; Dressler himself adopted Glarean's 12 modes in his own *Musicae practicae elementa* (1571), and was followed in this by numerous German theorists of the next half-century, most of whom cited or supplied profuse illustrations of the modes in polyphonic music.



Chapters 1–8 of Dressler's *Praecepta musicae poeticae* make up a well-ordered conventional treatise on counterpoint, divided into *simplex* (note-against-note), *floridus* or *fractus* (smaller values over a cantus firmus) and *coloratus* (free counterpoint); chapters 7 and 8 are on the traditional construction of four-voice sonorities and cadences by means of adding to the soprano–tenor framework. Chapters 9–14 describe the proper use of counterpoint for developing modal structures and thereby compositions – that is, for *musica poetica*. Chapter 15 contains a summary of the method, and recommendations to study four generations of masters, from Josquin to Lassus, each in terms of special characteristics of compositional style.

Like his immediate predecessors, Dressler stressed the importance of controlling contrapuntal beginnings and cadences through the modes; he also specified how it ought to be done (ed. Engelke, 239):

> What the period and comma are in speech the cadences are in *poetica musica* ... it is not enough therefore to know only the composition of cadences, but students are to be taught in what rank order the cadences are joined together so that they may render a correct *harmonia* to the ear. ... First, they ought to correspond to the words ... whatever *virgula*, comma, or period there may be, to them are cadences designated. Second, in what rank order the music may admit cadences is known from the doctrine of the tones ... we may make three kinds of cadence ...
> [1] principal ... in which the chief foundation of the tone consists ... the cadences ... are built on the [notes bounding the] species of 4th and 5th, or on the [notes of the] repercussions.
> [2] secondary [*minus principales*] ... which do not flow from the special sources [of the tone] but which can be inserted without offence in the middle part of the song.
> [3] foreign [*peregrinae*] ... which have no proper place but rather invade from another tone.

In showing the cadences for each mode Dressler listed its (unfilled) species of 4th and 5th, and its repercussion, in hexachord syllables. The interval of the repercussion was simply that of the final of the mode and the tenor of the psalm tone, but in his work on *musica poetica* there was no reason for Dressler to allude to psalm tones, and the repercussion was treated as a purely modal function. The term 'repercussion' could refer to the single note or to the interval formed with the final, with or without other notes between.

The principal cadential degrees are listed, clearly in rank order of their importance, and then the secondary cadential degrees (if any); remaining degrees are classed as foreign. Dressler's species, repercussions and principal and secondary cadences are shown in ex.18 (after *Praecepta*, ed. Engelke, 239ff).

After describing three types of imitation (*fuga integra*, *semifuga*, *fuga mutillata*), Dressler wrote that imitations that initiate phrases, like cadences that conclude phrases, arise from the species and the repercussions; he divided them into four types (p.243):

> (1) The foundations of imitations are taken from the species of 4th or 5th ...
> (2) The foundations of imitations are taken from the repercussions of the tones which [and this will apply to species too] are made not only empty [*nudae*] but also with many other intervals intervening.
> (3) Imitations may arise out of cadences in the musical tones [i.e. modes], so that we may get from one cadence to another.
> (4) 'Mixed' imitations are made partly from the repercussions and partly from the species of 4th and 5th; thus the *exordium* in Crequillon's *Deus virtutum* is made partly from the species of 4th *fa ut* and partly from the repercussion *fa la*, for it is of the sixth tone.

The touchstone of *musica poetica* is its parallel with the language arts. The use in a composition of a number of musical units one after another, each demarcated by imitation at the opening (or simultaneous entry) and cadence at the close, is conceived in terms of *exordium*, *medium* and *finis*. About the modality of the regular final ending Dressler said little, but he warned the student (p.248) that 'an irregular [final] is not to be introduced without an instance from an acknowledged composer [*sine probati authoris exemplo*] ... and is mostly to be given to the first part of a song, where a second part is expected; rarely, however, [is it] to be regularly constructed as a final ending'.

The middle, between *exordium* and *finis*, can be composed with or without imitation. Four general rules are suggested, of which the first is a summary list of Dressler's modal affects: 'First of all, a tone suitable to the matter [of the text] is to be chosen: for some tones are joyful, like 1, 5, and 8; some are sad, like 2, 4, and 6; and some are captious and harsh [*morosi et austeri*], like 3 and 7'.

The *exordium* is crucial, compositionally, modally and aesthetically (p.244):

> *Exordia* are taken moreover from the chief sources of the tones, namely [1] from the species of 4th and 5th, or [2] from the repercussions and [3] the principal cadences ... as we see the poet put forth his proposition in the *exordium* and the first lines ... so we in music – whose alliance with poetry is very close – should express the tone in the *exordium* itself.

Exordia are of two types: '"Full" [*plenum*] is when all the voices begin at the same time [*uno tempore ictu*]: "bare" [*nudum*] ... when they come in one after another. *Exordia* of this type are mostly constructed of imitations'.

The beginning of Lassus's *In me transierunt* (*Sacrae cantiones*, 1562, no.14) is an imitative *exordium* made with the repercussion. Though all the deuterus pieces in this collection are set in the same modal complex – low clefs in *cantus durus* – this one at least is unmistakably announced as authentic by its opening subject, the repercussion for mode 3; the solmization is *mi*, *mi/fa*, *mi/la*, *sol*. The piece is attributed to mode 3 by a number of writers, including Dressler himself in a marginal note (ed. Engelke, 239). It was analysed in detail by Burmeister (1606), and the analysis is discussed by Palisca (1972).

3. Polyphonic modal theory and the eightfold system. Most of the inconsistencies and anomalies of polyphonic modal theory arose from incompatibilities

between *a priori* systems of modes and compositional practice. In contrast to the casual attitude of composers towards particular aspects of modality, polyphonic modal theorizing – Renaissance and modern alike – tends towards the universal. It has often been assumed on historical, traditional, humanistic or analogical grounds that there has to be an inherent system of modalities in polyphonic music; that this system can be deduced or induced with the help of a proper understanding of the medieval tradition, or with the help of classical authority, or through systematic and rational analysis; and that the system can then be demonstrated in the repertory.

(i) Aaron and the psalm-tone differentiae. Pietro Aaron was the first theorist to undertake a thorough-going study of polyphonic repertory in modal terms. His theoretical premises were those of chant theory as formulated in the late medieval Italian tradition; they were set forth in his *De institutione harmonica* (1516), i.26–35, and appear in summary form in his *Compendiolo di molti dubbi* (*c*1550), i.29–50. Aaron referred many times both to Gaffurius and to Marchetto; though he usually took issue with Marchetto, for example in *Lucidario* (1545), i.4,7, it was only in matters of detail, while the theoretical concepts of Marchetto's doctrine were taken for granted (the relationship being much like that of Kirnberger and Rameau).

Aaron (1525) cited a substantial number of polyphonic pieces, almost all taken from Petrucci prints, in exemplification of his modal assignments, which are made according to the eightfold system. These examples have been studied extensively by Powers (1992) and Judd (1995). Criteria for determining the mode of a composition are its final and its species of 4th and 5th; medial cadence points must be in support of the other two.

Voices are governed modally by their courses of motion through the species of 4th and 5th; Aaron's term is 'procedure' (*procedere, processo*), a sometime synonym for 'ambitus' (cf Jacobus of Liège, *Speculum musice*, CSM, iii, 6, chaps.38, 67). Long before Aaron's time the word 'ambitus' had come to refer to the 'Guidonian' ambitus, which was not controlled by modal species; at the same time the term had lost any implication of motion implicit in its etymology and had acquired a purely static sense of compass. On both counts Aaron's choice of 'procedure' was apt. To refer simply to compass he used 'ascent' and 'descent'.

Aaron's doctrine of the finals is at once the most ingenious and the most specious aspect of his work. There are three kinds of finals: regular finals *d*, *e*, *f* and *g*; irregular finals, which can refer both to *a*, *b*♭♮ and *c′* (which he also called confinals) and to any other concluding degree found in a composition; and the concluding notes of psalm-tone *differentiae*. The *differentiae* are needed not because Aaron wished to include psalm-tone functions by right; conspicuously absent from his list of functions is the psalm-tone tenor (or its equivalent the modal repercussion). He invoked the *differentiae* to account for the combined procedure and final of most works ending with *a* or *c′*/*c*; indeed Aaron usually preferred to cite psalm-tone *differentiae* as modal finals even where confinals were available for the purpose, probably because psalm-tone *differentiae* are much more frequent in plainchant practice than confinals.

Psalm-tone *differentiae* were originally of the essence of movement and continuity, in their role as adjustable melodic links between psalm verse and antiphon. It is ironic that they should have taken on the function of pseudo-finals; it is not, however, unprecedented. The 12th-century Cistercian radical reformers of the chant had considerably reduced the number of psalm-tone *differentiae*, and for the introit verse tones they not only confirmed them at one per mode but also recomposed those of modes 3, 5 and 7 to bring them down to a conclusion on the modal final (see Huglo, 1971, pp.365–6, and Sweeney, 1975).

Aaron's principles for assigning a mode to a given piece turn on a hierarchical authority of modal functions. Regular finals *d*, *e*, *f* and *g* prevail in determining a mode except in the case of *g* protus modes in *cantus mollis* where the species govern (*g* being otherwise the regular tetrardus final). The modes of both *f*-final and *d*-final pieces in *cantus mollis*, however, are determined by the final, since there is no question of a conflict of two modes sharing one regular final; Aaron did mention *f* and *g* as possible pseudo-finals for those modes where they occur as *differentiae* in the corresponding psalm tones, but he had no occasion actually to use them in that way. The pseudo-final *differentiae* he needed were those on *a* and *c′*.

For pieces ending elsewhere than on one of the regular finals the species and procedure prevail. For example (*Trattato*, after Strunk, 1950):

> Certain other [presumably mode 1 or 2] tenors end on *a la mi re*; here you will need to consider and examine whether their procedure is suited and rational to such an ending, for if a tenor end irregularly in the first or second tone, not proceeding with its proper form, it may easily not belong to it, even though this step [*a*] is one of its irregular finals and an ending of its *Saeculorum* or diference [*differentia*]. As you will understand from what follows, this is because the third and fourth tones also use this step [*a*] as a difference [*differentia*]. For this reason, then, you will assign such a tenor to the first or second tone only when you find the proper form, as in *La plus de plus* by Josquin, which is of the first tone in view of the course of its diapente [5th] and its upward range. [p.213]
> You will also find certain other compositions ending on *a la mi re*; when these observe the appropriate procedure they will be assigned to the third tone, for example, *Miserere mei Deus* by Josquin. [p.215]

The compositional difference between *a* modes that Aaron's distinction reflects is a real one, and it is not that of the *a* protus and *a* deuterus of chant theory, the former in *cantus durus*, the latter transformed by the *cantus mollis*. It has to do rather with a property of the tonal system itself making the modal quality of *a* ambiguous. In §II, 3(ii) (*b*) above, Guido's passage on the *modi vocum* was quoted; it included a description of the affinity of *A* and *d* in the melodic environment of what would come to be called a rising first species of 5th, *re mi fa sol la*, plus the tone beneath. In his next chapter Guido dealt with 'other affinities of the degrees', and began by showing that 'A and E agree in descent, which with both is made by two tones and a semitone', that is, by a descending second species of 4th *la sol fa mi* (*a g f e* = *e d c B*).

In both pieces that Aaron cited the first species of 5th *a*–*e′* in the hard hexachord dominates the music. In *La plus de plus* the *a*–*e′* in both superius and tenor is joined with the first species of 5th, *d*–*a*, in the tenor, so that the piece works with the protus species of 5th in two positions. Hence the piece is indeed 'proceeding with the proper form of the first tone', and it ends 'on one of its irregular finals'.

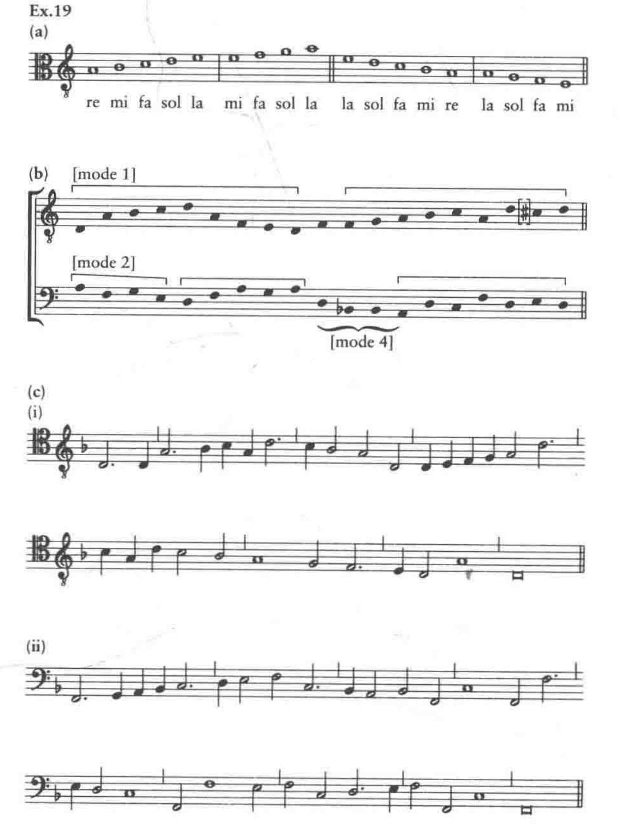
In the *Miserere*, on the other hand, the 5th *a*–*e′* is joined with the second species of 4th *a g f e* (*la sol fa mi*) in the

bass, so that the structural voices exploit the octave *e–e′* divided at *a*. The ascent and descent between *e* and *e′* call for assignment to mode 3; the conclusion on *a* is accounted for by invoking the third psalm-tone *differentia* ending at *a*.

Aaron's reliance on the *differentia* as a pseudo-final led him into a novel explanation for pieces having irregular finals at *c′* and *c*. He granted (Strunk, 1950, p.216) that pieces ending with *c′* may be said 'to be of the fifth tone, both with and without the flat signature, for example, *Si sumpsero* by Obrecht; this is solely in view of the [psalm-tone] difference which the plainsong sometimes exhibits here'. For Aaron the existence of a psalm-tone *differentia* was decisive: the credentials of a note existing in a mode as a confinal but not at the same time as a *differentia* were insufficient to permit it to serve as an irregular final if any explanation for such a final invoking a *differentia* could be found. Thus despite the chant tradition for transposing mode 6 to the position with *c′* as final, for Aaron 'The sixth tone is lacking on this step [*c′*], even though it is the confinal of the fifth and sixth tones regularly ended, for the step [*c′*] can bear no form or difference appropriate to it'. The curious consequence of this doctrine is that no *cantus durus c*-mode piece is assigned to the tritus modes. Obrecht's *Si sumpsero* is a *cantus mollis f*-mode piece which happens to end at *c′*; Aaron's classification of it as mode 5 ending at the psalm-tone *differentia* is appropriate. But a piece like Josquin's *Comment peult avoir joye*, a setting of a popular or courtly tune, published by Glarean as *O Jesu fili David*, cannot by Aaron's criteria be considered as in mode 6, despite its overwhelmingly preponderant composition with the species *ut–sol* (*c′–g′*) and *ut–fa* (*g–c′*) – not to mention the constant repercussion of *fa* and *la*, *c′* and *e′*. He has to call it mode 7, since it is in the octave *g–g′*, with a pseudo-final at one of the mode 7 psalm-tone *differentiae*, *c′*.

Similarly, pieces ending at low *c* are not considered to be mode 5 irregular, as Tinctoris would have considered them (see above, ex.15*a*). On the contrary (Strunk, 1950, p.217):

> Those ending on *c fa ut*, for the reason given above [... we see them clearly continue in what the proper and regular tones naturally need and require ...] and also because they do not have the proper diatessaron [4th], I assign to the eighth tone and not the seventh.



Aaron appears to be saying that pieces ending on *c*have at least a perfectly normal tetrardus species of 5th (*ut–re–mi–fa–sol* = *c–d–e–f–g*), as used in both tetrardus modes, but that the species of 4th set above it (*ut–re–mi–fa* = *g–a–b♮–c′*) is not, however, that of mode 7, the authentic tetrardus. That assignment thereby being eliminated, only mode 8 remains. As far as the 'ascent and descent' of such tenors are concerned, from *c* up to *d′* or even *e′* or *f′*, it is perfectly appropriate for mode 8, but not at all for mode 7.

For each mode Aaron listed internal cadence points both appropriate (chaps.9–12) and inappropriate (chaps.13–20), followed by listings of initials (see Strunk, 1950, p.208, n.4). But since four of the modes have five or more allowable cadential degrees, only one as few as three, and no criteria for their applications, Aaron's general admonition about cadences and species seems a more useful guide (Aaron, 1525, chap.13):

> It is necessary that the composer take care to process in his music with [the correct] species or form, through which the movements will seem pleasing and harmonious. But if you proceed in some other way in the tone, the tonally discordant path will always appear [*nascera sempre il distonata via*], and so also if you use contradictory cadences.

(ii) Composite modes. The most elaborate exposition of the eightfold system as a theory for polyphonic music was that of Aiguino (1581), who referred to Aaron as his 'maestro irrefragibile'. This treatise, the last in the long series beginning with Marchetto's *Lucidarium*, considers the species of 4th and 5th in as many combinations as possible within the diatonic systems. The traditional plainchant mode 2 at the affinal position is regarded as a composition of species from two modes; ex.19*a* shows Aiguino's composite forms for modes 1 and 2 (*Il tesoro*, ff.77*v*–8). Aiguino's term is 'mixed modes' (obviously not in Marchetto's and Tinctoris's sense, though he also used the term 'commixture'). Though the 4ths are of the second species, and thus pertain to modes 3 and 4, 4ths are the 'minor species' in a mode, according to Aiguino. Here the 'major species' is the protus first species of 5th, which determines the modes as 1 and 2.

Aiguino argued that this construction made it unnecessary to add to the eightfold system the separate authentic and plagal modes on *a* proposed by Glarean and Zarlino (see Schubert, 1993). Neither this construction of 'mixed modes' nor this usage of the term originated with Aiguino, however. Tinctoris had already given an instance (ex.19*b* from *Liber ... tonorum*, chap.18; CSM, xxii) of the 'second tone commixed with the fourth, so as to make *fa* against *mi* into a perfect consonance' – that is, to avoid a diminished 5th; as a result, 'the *B♭* put against *f* creates the second species of the 4th in the fourth tone [in the lower voice]'. Vicentino called the combination of *d–e–f–g–a* with *a–b♭–c′–d′* (ex.19*c*, from *L'antica musica*, f.51*r*)

a 'mode mixed from the first [species of] 5th from mode 1 and the second [species of] 4th from mode 3'. In Bermudo's *Declaración* (iv, 40) the same combination of 5th and 4th – the authentic *d* mode in *cantus mollis* – is called a 'mingling [*mezclan*] of the first tone with the fourth'.

The concept of modal 'mixture' is also used by Vicentino and Bermudo to account for the traditional *f* tritus in *cantus mollis*. Vicentino called it a mode-7 5th (*ut re mi fa sol*) with a mode-5 4th (*ut re mi fa*), as in ex.19*c* (ii). Bermudo said that 'always playing the sixth [mode] with flat sign is similar to the eighth [mode] in its [species of] 5th' (iv, 23), and later, 'the mode which is played as the sixth is composed of the eighth and the sixth' (iv, 40).

(iii) Modal cadences and polyphonic psalmody. Pietro Pontio (1588, bk 3) gave a full account of the application of cadential degrees in modal polyphony, an account based not only on the theory of the modal species but even more on his observations of compositional practice. Principal and obvious cadential degrees are mentioned without much elaboration, but for all other cadential degrees Pontio provided not only comment but also precise references to cadences in compositions by Rore, Giaches de Wert, Morales and himself, and many others.

Besides this Pontio made a clear distinction between modal cadences 'as in motets, masses, madrigals, and the like' and 'in psalms, because the psalms have different cadences, proper and separate from those of motets, and different composition, and they have their own endings' (p.101). This distinction was by no means always carefully made, and Pontio drove the point home by supplying an illustrative duo not only for each mode (except mode 4) but also for each of the eight psalm tones.

Pontio was anxious to isolate polyphonic psalmody from polyphonic modality; but in analysing distributions of modal cadences he was quite ready to recognize influences from the corresponding psalm tones, to which more often than not his comments attributed subtle but important elements for distinguishing authentics from plagals, especially in the deuterus and tetrardus modes where transposition is less easily available for the task.

Table 8 is a conspectus of Pontio's discussion of modal cadences (iii, 94ff), showing cadential degrees in the eight modes. As in Dressler, so also in Pontio the eightfold system found an intelligent and gracious, pragmatic spokesman, a composer, in an age when speculative rational theorizing about the modes was bringing them to utter confusion.

4. Systems of 12 modes.

(i) The 12 modes before Glarean.

(a) Four extra melodic types. At the end of the Carolingian 'De octo tonis' text in chapter 8 of Aurelian's *Musica disciplina* the author related that 'there were some singers who claimed that there were certain antiphons which could in no way be adapted to their rule; hence your pious and august ancestor Charles ordered four [tones] to be added'.

Though *Noeane* syllables are named, no antiphons for the extra modes are mentioned. In a number of later sources, however, there are citations of chants (see Huglo, 1971, pp.35ff, 79ff and 156–7 for sources and references). In some of the sources the extra modes are called *mesi*, in others *parapteres* (or *paracteres*) and *circumaequales* (see Atkinson, 1982). Though the sources are by no means in full concord in their choice of chant citations, three relevant facts do come out: the extra modes were never more than a curiosity; but the tradition of their existence was fairly widely known; and the antiphons cited were indeed anomalous.

In Berno of Reichenau's *Musica* the tradition is reported for the last time, applied now to melodies anomalous only in that they are confined to the common 5th, making it difficult to fix them definitely as authentic or plagal: 'Some are accustomed to call these medial tones [*tonos medios*], and because they can be put between the four individual authentics and plagals, they add these four to those eight, and claim to have demonstrated twelve tones' (*GerbertS*, ii, 73).

(b) Modal divisions of the octave. The integration of eight modes with seven octave species was achieved towards the end of the 9th century in the New Exposition of the *Alia musica* (see §II, 2(ii) above), through the device of modes 1 and 8 sharing the octave species *d–d′* mediated in two positions (see ex.3*a*). The 11th-century *Questiones in musica* points out how the operation of transposition a fifth upwards brings about a similar pairing of modes in two other modal octaves: modes 3 and transposed 2, sharing the octave *e–e′*, modes 7 and transposed 6, sharing the octave *g–g′* (ed. Steglich, 1911, p.55). A logical completion of this pattern would try to divide every modal octave by two medians. Such a division was described by Wilhelm of Hirsau, in the latter half of the 11th century (*Musica*, chap.37), and by Johannes Gallicus in the 15th century (*Libelli musicalis de ritu canendi*, chap.2.i.6).

(ii) Glarean's 12 modes. Glarean's *Dodecachordon* is the product of an extraordinary synthesis of medieval tradition, both practical and theoretical, with Renaissance classicizing humanism, original system building and musical analysis. The publication of writings on ancient Greek music, including sources both of musical theory (such as Valla's 1497 edition of Cleonides' Aristoxenian *Eisagōgē*) and of musical anecdotes (the Aldine edition of Athenaeus's *Deipnosophistae*, 1524) ensured Glarean a supply of classical authority when he needed it. Glarean was also a lifelong admirer of Boethius, whose doctrines he always preferred as the source for his own. Finally, he was devoted to the Church and its traditional music; his analyses of plainchant in *Dodecachordon* (bk 2, chaps.36–7) show an enthusiasm for the beauty of the chant matched only by the perspicacity with which its musical properties are expounded.

The synthesis of classical authority and medieval tradition shows itself in all phases of Glarean's study of the modes save one: for analysis of the structure of actual music, plainchant or polyphony, he could have no classical models. But he hoped to bring order and reason to existing modal theory, to reconcile it with classical sources wherever possible, and through it to provide a uniform

TABLE 8

MODE	CADENCES			
	Primary	*Secondary*	*Transitory*	*Inimical*
1, 2	*d a*	*f*	*g c*	*e b*♮
3, 4	*e a*	*c′*	*g b*♮	*f*
5	*f c′*	*a*	*d′ g*	*e b*♮
6	*f c′*	*a b*♭	*d′ g*	*e b*♮
7	*g d′*	–	*c′ f a e*	–
8	*g c′ a′*	–	*f a*	–

doctrine to guide his readers to an understanding of the wonders of both kinds of music.

(a) The 12 modal octave species and their Greek names. Apart from classical writings there were four main sources for Glarean's theory: Gaffurius, Cochlaeus, Boethius and 11th-century chant theory. Gaffurius's work (1518), upon which Glarean drew heavily, was itself under the influence of rediscovered classical writings on music. It is brought into the *Dodecachordon* at a crucial juncture, in the last chapter of Book 1, as a preparation for Book 2 which has no separate introduction. In the introduction to Book 3 Gaffurius is lauded again, along with Cochlaeus, Glarean's teacher at Cologne between 1507 and 1510. Cochlaeus's teaching on mode, as reflected in Tract iii of his *Tetrachordum musices* (1511), was a combination of the late medieval Italian theories of species conjunction and five types of modal ambitus (perfect to commixed) with a German version of the repercussion doctrine and emphasis on the psalm tones. And finally, in the dedicatory preface, Glarean concluded (after references to Plato, Aristoxenus and Boethius) by alluding to a number of writers he had studied at a Benedictine monastery near Freiburg not long after he went there from Basle in 1529. The manuscripts he saw contained two further kinds of sources: a better text for Boethius than he had seen before, and a group of six 11th-century chant theorists. Three of these were 'Guidonian': Guido himself, 'Otto' (certainly the author of the *Dialogus*) and Johannes (Cotto, but like other writers of his time Glarean identified him with Pope John XXII). The other three are of the Reichenau school: Berno, Wilhelm (of Hirsau), and his disciple Theogerus (of Metz).

That the 11th-century writers had some influence on Glarean's thinking seems more than probable. Glarean was anxious that his 12-mode system be taken as a reconstruction, not a new creation, and he was quite ready to invoke medieval authority when it suited him, as well as classical. In justifying the number of his principal modes as six, and, by implication, the total number as 12, he cited Plato's *Republic* (*Dodecachordon*, prologue; MSD, vi, 38; cf Strunk, 1950, pp.4–5) and Aristoxenus (bk 1, chap.21; MSD, vi, 102, presumably after Cleonides; cf Strunk, 44). But, in reality, no classical source could give him the number 12 for his modes, so he also reported that 'Berno ... says there had been some who devised four other modes, so that there were twelve modes in all; so far has the truth about the 12 modes left some trace even among the men of so barbarous an age' (bk 2, chap.37; MSD, vi, 197). And in arguing the logical case for dividing every octave at both the 4th and the 5th, Glarean observed (bk 2, chap7; MSD, vi, 115) that:

> since they [the early church musicians] could not separate the eighth mode from the first mode ... they were forced by necessity to have recourse to the inversion of a system [*d–a–d'* into *d'–g–d*]. When they saw that this turned out successfully, they also considered the arithmetical and harmonic interchange of the other modes. Thus, after these eight modes, they invented four besides, [each of] which still remained in the same system [as one of the others].

Since Glarean knew of Wilhelm of Hirsau's work it seems more than likely that the above refers to the first part of chapter 37 of Wilhelm's *Musica*, as Gerbert pointed out (*GerbertS*, ii, 54). Glarean continued: 'these last four modes ... seem to have been neglected ... either because they were not known to all or because the first eight seemed enough'.

Glarean's own construction of the 12 modes is based on a consistent rule differentiating the seven diatonic octave species according to combinations of the species of 4th and 5th (bk 2, chap.2; MSD, vi, 104ff). Each one of the four species of 5th is combined in turn with each one of the three species of 4th above, making 12 species of octave, and with each of the three species of 4th below, making another 12. Of these 24 octave species, however, 12 are rejected on the ground that they have either fewer than two or more than three whole-tone steps between the two pairs of semitones. Of the 12 octave species then remaining, five have the same pattern of tones and semitones as another five, differing from them only in the way the 4th and 5th are disposed; these five plus the two unduplicated octave species make seven, which encompass the 12 legitimate combinations of the 4th and 5th. Two more modes are mentioned but rejected, because their octaves cannot be properly divided. One is the Hyperaeolian, which shares its octave species *B–b* with the Hypophrygian, but can only be divided improperly into the diminished 5th *B–f* and the tritone *f–b*. Likewise the octave *f–f'* of Hyperphrygian, the other rejected mode, is improperly divided into the tritone *f–b* and the diminished 5th *b–f'* (bk 2, chaps.8, 18, 25; MSD, vi, 121, 150–51, 168–9). Despite their rejection, Glarean provided polyphonic examples for these two modes in Book 3 of the *Dodecachordon*. Table 9 and ex.20 show the seven octave species (*a*), Glarean's modal names and numbers for their harmonic and arithmetic divisions (*b*), the modal divisions of the octave (*c*), and Zarlino's renumbering (1571; 1573) and rearrangement of the names (*d* and *e*). Note that Glarean's first eight numbers and the associated names and species are those of the eightfold system. For modes 11, 12 and 8 Glarean also used the names Iastian, Hypoiastian and Hyperiastian, since these names were said to be in Aristoxenus (along with Aeolian and Hypoaeolian); on his retention of old names and assignment of new, see *Dodecachordon* Book 1, chapter 21, and Book 2, chapters 4, 7, 9, 10.

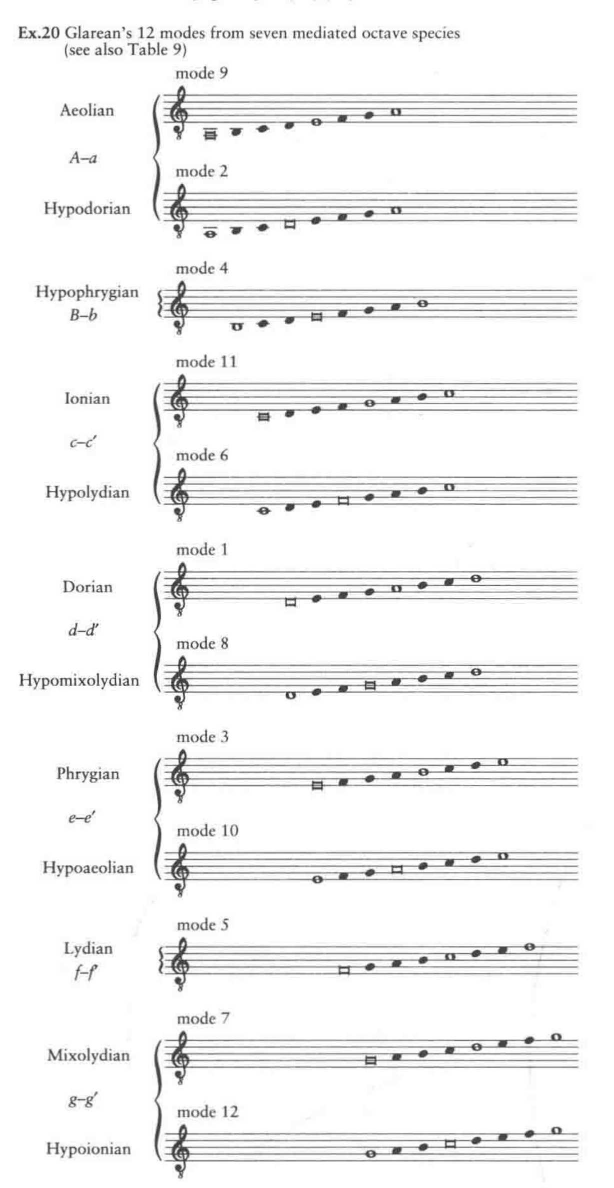
With his modes firmly rooted in mediated octave species, Glarean was forced to maintain that distribution of the semitones is the essential feature of a mode. He argued that if replacing *b*♮ with *b*♭ in a mode with *g* final changes it from mode 7 to mode 1, replacing *b*♮ with *b*♭ in a mode with *f* final should change the mode also. He claimed that Lydian and Hypolydian (modes 5 and 6) if performed with *b*♭ throughout are really Ionian and Hypoionian (modes 11 and 12), transposed so that their finals are at *f*. Indeed, Glarean referred to Ionian and Hypoionian many times as 'new mode 5' and 'new mode 6' – whether *f*-final in *cantus mollis* or *c*-final in cantus durus – in contrast with 'old' modes 5 and 6 (that is, *f*-final modes in *cantus durus*, which he presumed to have been the original condition of Lydian and Hypolydian melodies).

By the same token, Dorian and Hypodorian (modes 1 and 2) with *b*♭ throughout must be redesignated Aeolian and Hypoaeolian – or rather restored to their putative rights, for Glarean supposed that his Aeolian was 'old indeed, but deprived of a name for many years' (bk 2, chap.17; MSD, vi, 142); or conversely, as he observed, 'one rarely finds a song in the Dorian which they have not somewhere turned into the Aeolian through the *synēmmenōn* tetrachord [that is, by using *b*♭], which I do not condemn if it is done with good judgment' (bk 2, chap.21;

TABLE 9

(a)	(b)		(c)	(d)	(e)	(a)
A–a	Aeolian	9	*A–e, e–a*	11	Aeolian	*A–a*
	Hypodorian	2	*A–d, d–a*	4	Hypophrygian	
B–b♮	(Hyperaeolian)	–	*B–f, f–b*	–	–	*B–b♮*
	Hypophrygian	4	*B–e, e–a*	6	Hypolydian	
c–c′	Ionian	11	*c–g, g–c′*	1	Dorian	*c–c′*
	Hypolydian	6	*c–f, f–c′*	8	Hypomixolydian	
d–d′	Dorian	1	*d–a, a–d′*	3	Phrygian	*d–d′*
	Hypomixolydian	8	*d–g, g–d′*	10	Hypoionian	
e–e′	Phrygian	3	*e–b♮, b♮–e′*	5	Lydian	*e–e′*
	Hypoaeolian	10	*e–a, a–e′*	12	Hyperaeolian	
f–f′	Lydian	5	*f–c′, c′–f′*	7	Mixolydian	*f–f′*
	(Hyperphrygian)	–	*f–b, b–f′*	–	–	
g–g′	Mixolydian	7	*g–d′, d′–g′*	9	Ionian	*g–g′*
	Hypoionian	12	*g–c′, c′–g′*	2	Hypodorian	

MSD, vi, 157). One such piece is the mode 1 antiphon *Ave Maria* (Gevaert's *thème* 5) which Glarean wished to call Aeolian.



Glarean's synthesis of medieval and ancient sources is also demonstrated in his method for assigning names to his new modes. He retained Boethius's names for the seven 'modes or tones or tropes' in the sense in which they had come to be understood in the Middle Ages, as octave species; he retained the medieval usage of 'hypo-' meaning 'plagal' when prefixed to a principal modal name; and he ransacked classical authorities for a set of five names that might be made to fit the modal scales left over. Glarean was quite frank in saying, after a great deal of discussion of the 'more than twenty names by which the seven octave species are designated' (bk 1, chap.21; MSD, vi, 101), that 'we shall now attempt to fit these names of modes into a definite form which is appropriate to the art and also adhered to by us in the following, howsoever the names may have occurred among writers' (bk 2, chap.7; MSD, vi, 117). Table 9(*b*) shows his final results. Boethius's seven names having been given to their customary medieval modal scales, 'the remaining five modes in the writings of Aristoxenus, as Valla reports [cf Cleonides; Strunk, 1950, p.44], are named … Hypoiastian, Hypoaeolian, Iastian, Aeolian, and Hyperiastian' (bk 2, chap.7; MSD, vi, 115–16).

To distribute these five names among the five remaining modal scales Glarean had recourse to a passage in Athenaeus in which the Aeolian and Hypodorian are equated (bk 2, chap.7; MSD, vi, 116; Strunk, pp.48–9); Glarean took the equation as meaning that they share the same octave species. With the Aeolian placed in the octave *A–a*, divided *A–e* and *e–a*, its plagal the Hypoaeolian reverses the species of 4th and 5th and occupies the other form of the Phrygian octave, *e–e′* divided into *e–a* and *a–e′*. This leaves only one pair of similarly related modal scales, *c–g–c′* and *g–c′–g′*, for the Iastian–Hypoiastian pair. From other classical sources Glarean (bk 2, chap.7; MSD, vi, 116) got the equation of Iastian with Ionian, which he preferred as being a Greek tribal name more on a par with Dorian and Aeolian. Hyperiastian – '[one degree] above the Iastian' – occupies the position of the plagal form of mode 7, the Hypomixolydian. The two 'rejected' scales are given names with the 'hyper-' prefix by analogy. Taken as a whole, the confection is as brilliant as it is specious; with very few loose ends and inconsistencies several classical authorities are adduced to justify an *a priori* construction improving upon and extending a purely medieval tradition.

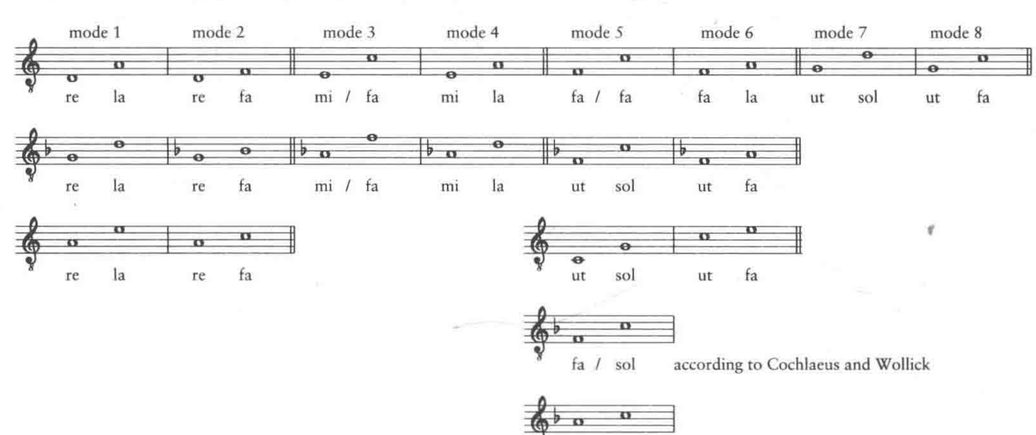
(b) Modal function and non-modal consonance species. Classical authority, however, could give Glarean no direct support for analysis of repertory, and his musical discussions reflect the influence of traditional modal theory as he must have learnt it from Cochlaeus at Cologne. Book iii.1–4 of the latter's *Tetrachordum musices* deals with non-psalmodic aspects of the eightfold system. Chapters 1 and 4, as Miller has shown (MSD, xxiii, Preface), are modelled on Wollick (1501), but Cochlaeus replaced Wollick's 'Guidonian' doctrine of measuring modal ambitus solely by its extent above and below the final; in chapter 2 the finals, confinals and systems of modal species of the 4th and 5th are described, surely under the influence of Gaffurius's *Practica musice*, from which Cochlaeus borrowed directly elsewhere. In chapter 3 Cochlaeus discussed the five types of ambitus (perfect to commixed) of the Italian theory, also doubtless after Gaffurius.

Cochlaeus's teaching on the species of the smaller consonances may well have predisposed Glarean towards a construction based on those species along with the octave, reinforced as it would have been by the species doctrines of Boethius and Berno. But *Tetrachordum musices*, iii.4, reflecting the same doctrines as Wollick (1501), seems the clearest influence of the Cologne theorist on Glarean. For while Glarean proposed 'that modes are recognized principally by the octave division, which is made through the fourth and fifth consonances' (bk 2, chap.36; MSD, vi, 194), he also stressed 'that modes do not always fill out the outermost strings, but are recognized partly by *phrasis* and also partly by the final key' (bk 2, chap.37; MSD, vi, 197).

Glarean nowhere defined the term 'phrasis' (which in rhetoric means 'style' or 'diction'), but at one point he referred it back to 'certain rather easy and relatively common rules [for melodic movement] which … certainly should not be neglected' (bk 1, chap.13, bk 2, chap.36;

Ex.20 Glarean's 12 modes from seven mediated octave species (see also Table 9)

MSD, vi, 71, 195). The rules turn out to be a form of the familiar list of eight pairs of characteristic modal intervals, those pairs consisting of the final and one other note, a note variously derived from (psalm-tone) tenor or (modal) repercussion, called *melodia* by Cochlaeus, Wollick and other writers in the German orbit, and now *phrasis* by Glarean. Ex.21 is a composite reference list of all the modal pairs in *cantus durus* (two hexachordal positions where relevant) and in *cantus mollis*, which is the norm for the regular *f*-final modes (note that as usual in their case the use of *cantus mollis* effects no transposition). This is the most important meaning Glarean attached to *phrasis*, but not the only one. The term in fact covers a wide range of meanings, from octave species (bk 3, chap.16; MSD, vi, 256) to personal style (bk 3, chap.26; MSD, vi, 278).



Wollick (1501, ii.9) gave a diagnostic definition of *melodia* in which the psalm-tone tenor and the modal melodic function are completely amalgamated (ed. Niemöller):

> it is necessary to distinguish authentics from plagals … considering thereunder two things: (1) the *melodia* itself, that is, its nature or essence, of which more later; (2) the ambitus … . [p.56] The *melodia* infallibly leads us to recognition of the tone. Every chant finishing in *re*, taking the beginning of its 'seculorum amen' [that is its psalm-tone tenor] in *la* is of the first tone … . To put it another way: … in every chant often attaining to *la* [and] recurring to *fa* above [i.e. *b*♭ over *a*, *f′* over *e′* or *e*♭*′* over *d′*], if a chant of this kind finishes in *re*, it is of the first tone. [p.58]

Cochlaeus's wording of the doctrine emphasizes further the melodic aspect of the two notes in the pair, and separates this aspect of *melodia* from the sense of *melodia* as psalm-tone tenor (which he mentioned briefly at the beginning of iii.5): 'The *melodia* of a tone is a conventional progression of notes, according to fixed intervals, which is more common to one tone than to another. For its recognition there are four rules, according to the [four] finals of the tones'. Following his list of four (pairs of) rules Cochlaeus gave an ad hoc formula or progression to demonstrate the role of the *melodia* in the course of each of the eight modes. The title of Stoltzer's *Octo tonorum melodiae* refers to the same intervals, which are quite conspicuous in the tenors of these works (as are the octave species; Wiering, 1995, pp.168–70).

In Glarean (1547) the equivalent term 'phrasis' occurs constantly, and in contexts where it implies both a still

Ex.21 *Melodia* (Cochlaeus, Wollick)/*repercussa*/*phrasis* (Glarean)

greater generality in melodic emphasis and at the same time a still greater specificity as motivic nucleus. The variant for mode 5 in Glarean's list (see ex.21) demonstrates an evident desire to turn the traditional *melodia* of his Cologne mentor into a unique definition of the mode. The traditional *cantus mollis melodia* for mode 5 is the third species of 5th *ut sol* (or *fa/sol*); *ut sol* is also the *melodia* for mode 7. Glarean's substitution of *mi sol* as the characteristic interval for mode 5 has two effects. First, by dispensing with the final of the mode as a member of the pair, Glarean showed that he conceived the *phrasis* as a melodic interval, not a pair of modal functions or a single prominent note to complement the final. Second, the substitution eliminates the one duplication of intervals in the traditional list, *ut sol* in both modes 5 and 7. Now every modal pair is intervallically unique: one minor 6th (*mi/fa*); two 5ths differently composed (*re la* and *ut sol*); two 4ths likewise (*mi la* and *ut fa*); one major 3rd (*fa la*); and two minor 3rds differently composed (*re fa* and *mi sol*).

In Book 2, chapters 36–7, Glarean discussed the species of consonances as non-modal boundaries of pitch areas in which melodies operate – melodies whose true modality is determined by their finals and *phrasis*. Non-modal use of the consonances was of course not new: it was part of the 11th-century Italian theory of the ambitus, and the consonances were used as registral boundaries in the 9th-century *Alia musica* (see, for example, Chailley ed., pp.121ff, for an analysis by non-modal consonances of the Advent introit *Rorate coeli*).

(c) Mode as ethos, category and inherent property. As a humanist Glarean was fully committed to the doctrine of modal ethos, and here too his work reveals his synthesis of the classical revival with the medieval heritage. The two modes of the Phrygian octave species (*e–e′*) are particularly revealing (bk 2, chap.23; MSD, vi, 160):

> The Phrygian is commonly called the third mode, a particularly famous and ancient mode ... Horace calls it '*barbarus*' ... Lucian calls it 'divinely inspired', Apuleius, 'religious' ... some say that it evokes the harsh reviling of the indignant [cf Johannes in §1(i) above], others say that it incites to battle and inflames the appetite of a frenzied rage [cf the anonymous Chartist in §1(i) above]. Well known is the fable of the Tauromenian youth

Glarean then retold the Phrygian story from Boethius, quoted in §1(i) above in the version of Engelbert of Admont. For the Hypoaeolian mode, however, Glarean could report no ethos; the only classical source he had for the name was the Aristoxenus passage quoted in Cleonides, where Hypoaeolian is merely listed, and of course there was no medieval tradition for it. The arithmetically mediated octave *e–a–e′* got the name Hypoaeolian solely by virtue of being the plagal rearrangement of the *A–e–a* octave, which Glarean had had an excellent classical justification for calling Aeolian.

Glarean must have felt that the contrast in surviving richness of ethic attributions for these two modes was paralleled in their surviving musical manifestations in the chant. For the Phrygian, 'since it is known to everyone we shall be content with one example' (bk 2, chap.23; MSD, vi, 160); but the Hypoaeolian 'is infrequently used in our time, and one finds few songs in choirs [i.e. chant] according to it' (bk 2, chap.24; MSD, vi, 162). Yet as his only plagal *a* mode the Hypoaeolian is necessarily his category for two of the most provocative melody types in the repertory, probably very ancient, with apparent calendaric associations. First, there are 'some Graduals, as they are called, many of which are sung in Advent, and in Easter time, also some at other times' (bk 2, chap.25; MSD, vi, 167). These are the *Tollite portas–Haec dies* mode 2 transposed graduals (see Apel, 1958, pp.357ff, and PalMus, ii, iii; also G.M. Suñol y Baulenas, *Introduction à la paléographie musicale grégorienne* (1935), Plate F, for a tabular analysis). Glarean went on to observe that 'this [Hypoaeolian] mode is also found between small *e* and large *F* [i.e. *e′* and *f*] ... within the same range as the Lydian ... yet it ends on its proper final, small *a* [i.e. *a*], while the Lydian ends on large *F* [i.e. *f*]. We shall present an example of this', and he printed the antiphon *Exaltata est* (*Liber responsorialis*, 374, 'mode 4 transposed') – Gevaert's *thème* 29 – cited two more of the same melody type, and went on: 'Similar also are many used in Advent and other times, especially during Lent' (bk 2, chap.24; MSD, vi, 162–3). (For a brief discussion of this melody type see Apel, 1958, pp.398ff.) Glarean also used the Hypoaeolian as he did the Aeolian, as a modal assignment for protus melodies that use the flat 6th degree exclusively, as do many mode 2 responsories (see Apel, pp.332ff, for discussion of the type and references).

In applying his system to polyphony Glarean was limited in three ways. First, for him as for others the modes were monophonic, and a principle for integrating the voices was needed. Second, though the *Dodecachordon* includes a discussion of mensuration and proportion (bk 3, chaps.1–12), there is no treatment at all of counterpoint or of the composition of the sonorities, and thus no doctrine of polyphonic cadences or beginnings. Third, Glarean the humanist was committed to the integrity of the octave species; though he was aware of the potential modality of the smaller species he mentioned them only incidentally in his analyses, normally preferring rather vague invocations of *phrasis* when reference to a modal element of narrower compass was needed (though he often also used *phrasis* in a context implying the full span of a modal octave).

Glarean's examples are modally labelled according to the tenor, but in no sense did he discuss polyphonic compositions in terms of a single modality. He postulated natural relationships among modes as entities; though these relationships in fact turn on the existence of smaller species common to two modes, for Glarean the mode as a whole remains the unit of discourse (bk 3, chap.13; MSD, vi, 250):

> There is a certain hidden relationship of the modes and a generating of one from the other, certainly not acquired through the ingenuity of *symphonetae*, but determined in this way by the nature of the modes. For we see this happen whenever a Hypodorian tenor [e.g. *a–d′–a′*] is arranged so that its bass is Dorian [*d–a–d′*], often also Aeolian [*A–e–a′*] ... . Contrariwise, whenever the tenor is Phrygian [*e–b♮–e′*], the bass and cantus often fall into the Aeolian [*A–e–a*, *a–e′–a′*] ... . Sometimes the cantus comes into the Hypophrygian [*b♮–e′–b♮′*].

Glarean's 'hidden relationship of the modes' is nowhere better illustrated than in his own observations on the combinations of the Aeolian modes with the Dorian modes on the one hand and the Phrygian on the other. This relationship of modal systems is the equivalent, in Glarean's terms, of Aaron's distinction between final *a* as mode 1 confinal and final *a* as mode 3 *differentia*. Looked at yet another way, the relationship of Glarean's Aeolian to both Dorian and Phrygian reflects the mixed composition of the *a* modes, which consist of the *re la* mode 1

(protus) species of 5th and the *mi la* mode 3 (deuterus) species of 4th.

As an example of the Aeolian mode Glarean quoted the 'Pleni sunt coeli' from Josquin's *Missa sine nomine*, 'in which the higher voice begins, and after two *tempora* the lower voice follows at the fourth below, as they usually say. But its system is truly Aeolian, not Dorian as some have written, and also ends on the lowest string [i.e. degree] of the [Aeolian] fifth'. This canon is constructed on the same tonal principle as Bartolomeo Ramis de Pareia's little demonstration *fuga* in ex.17*a*: each voice lies within a single hexachord, natural (*c′–a′*) in the upper voice and hard (*g–e′*) in the tenor, and hence would be solmized with the same syllables. In terms of modal species of 5th both voices are protus, set at two positions a 4th apart.

Josquin's five-voice *Miserere* was one of Aaron's examples for mode 3 ending at its *differentia* on *a*; Glarean said of the same piece, referring like Aaron to the pattern of its ostinato tenor, 'One truly sees here the Hypoaeolian from small *e* to large *E* [i.e. *e′* to *e*], indeed divided arithmetically at small *a* [i.e. *a*], on which it also ends, namely on the lowest string [i.e. degree] of the [Hypoaeolian] fifth [*a–e′*]' (bk 3, chap.20; MSD, vi, 260).

The relationship of Glarean's Ionian and Hypoionian to the rest of his system is of a different kind. First, *c*-mode pieces, otherwise considered secondary forms of members of the eightfold system, could now be supposed to have separate modes of their own. For instance, Josquin's *Comment peult avoir joye*, which Aaron had assigned to mode 7 ending on its *differentia c*, naturally became Hypoionian when Glarean printed it with the words *O Jesu fili David*. Second, Glarean's insistence on the integrity of the semitone distribution in his modal octaves required him to consider *f*-mode pieces in *cantus mollis* as transpositions of his Ionian or Hypoionian mode because they had the same intervallic structure. This made the *cantus mollis f* modes systematically consistent with the other *cantus mollis* modes (bk 3, chap.16; MSD, vi, 256):

> Ionian ... all the examples of this mode are transposed from the proper tonic by a fourth ... which change usually occurs in most other modes, as in the Dorian and Hypodorian, its plagal, and in the Hypoionian, the plagal of this [Ionian] mode. ... Moreover, a beautiful five-voice example of this mode is the *Stabat mater dolorosa* of Josquin des Prez.

Aaron had also cited the Josquin *Stabat mater*, an *f*-final *cantus mollis* composition, as one of his instances for mode 5 with the regular final, Glarean's 'old' Lydian; in so doing he was following the centuries-old tradition of considering *b*♭ – from the *synēmmenōn* tetrachord – a co-equal member of the tonal system when it occurred in tritus modes.

The simple and logical symmetries of Glarean's system eliminated cumbrous lucubrations over modal assignments for pieces ending with *a* or *c′*; it also eliminated the apparent inconsistency by which *f* modes were considered to be modes 5 or 6 in *cantus durus* and *cantus mollis* alike, while *g* modes in *cantus durus* were modes 7 or 8 but in *cantus mollis* they were modes 1 or 2. On the other hand, the 12-mode system also logically eliminated important and by no means over-subtle distinctions, such as those between the two kinds of *a* modes in *cantus durus*. Of course such distinctions could continue to be made on a secondary level, as Glarean and some of his immediate successors made them. But those who took up the 12-mode system, whether directly from Glarean or from Zarlino, eventually lost sight of such distinctions in their enthusiasm for the simple, rational and universal paradigm that the system provided.

(iii) Zarlino's synthesis of modality and polyphony. The modal doctrine of Zarlino is expounded in detail in Part iv of his *Istitutioni harmoniche* (1558, 2/1573); important concepts are also found in Part iii, on counterpoint. Zarlino adopted Glarean's system of the 12 modes; he added to it the polyphonic modal functions that had been creeping into the literature since the 15th century; and more than that, he succeeded in bringing polyphonic texture, modal structure and modal ethos under the rule of a single unifying musical principle.

Zarlino had already used Glarean's names for the 12 modes in his early motet collection *Musici ... moduli* (1549) (see Flury, 1962). In the 1558 edition of the *Istitutioni* he retained Glarean's numbering, but did not use the classical names for the modern modes, since the intervals between the (modern) modal octave species did not agree with those of the classical modes (pt iv.8). Zarlino was generally much more sensitive to the differences between classical and Renaissance modality than Glarean was. In the *Dimostrationi harmoniche* (1571, pp.270ff) Zarlino explained his views more fully, and renumbered the modes to begin with the authentic and plagal *c* modes as modes 1 and 2, the *d* modes as 3 and 4, and so through the hexachord up to the *a* modes as modes 11 and 12 (see above, table 9(*d*)). This reordering was also used in the revised editions of the *Istitutioni* of 1573 and 1589. Of the six reasons offered for the reordering, the most important was that his tuning was based on just intonation of the (C) major scale (for which his classical warrant was Ptolemy's syntonic diatonic). Although he argued that the compasses of the modes could now be made to agree with classical sources, calling the *c* modes Dorian, the *d* modes Phrygian and so on, Zarlino hardly ever used the names again, apparently expecting the new usage to be confusing.

Zarlino often adopted Glarean's comments on the ethos of one or another mode. For instance, he said that mode 9/11 – Glarean's Aeolian – is 'very old, yet it has long been deprived of its name and proper place' (1573, p.411), and shortly thereafter he listed several epithets translated from Glarean's classical sources. A survey of modal ethos according to Zarlino is given in Table 10 (translations after Cohen). Zarlino's musical comments on individual works are not unlike Glarean's, but with regular reference to the smaller species of consonances, especially in cases

TABLE 10

Mode	*Ethos*
1	somewhat sad
2	lamenting, humble and deprecatory
3	somewhat hard; moves one to weeping
4	lamenting sad; supplicant lamentation
5	joyous, modest and pleasing
6	devout and tearful
7	lascivious; cheerful; expressing threat, perturbation and anger
8	joy with great gaity and sweetness
9	cheerful, sweet, soft and sonorous
10	not very different from that of modes 2 and 4
11	suitable for dances; lascivious
12	for texts about love that include lamenting

where his new doctrine of modal structure produces something flagrantly at variance with what he knew to be the practice. On the Phrygian, for instance, whose regular cadence points he required to be *e*, *g*, *b*♮ and *e′*, he observed (1573, p.401):

If this mode had not been mixed ... with [the Aeolian], and if it were heard plain, it would have had a harmony rather harsh. But because it is tempered by the 5th of mode [9/11, Glarean's Aeolian, namely *a*–*b*♮–*c′*–*d′*–*e′*] and by the cadence that is made on *a* which is so greatly used, some have thought on that account that it has the character of moving to tears; therefore they set it freely to words that are tearful and full of laments. It has great conformity to the aforesaid [Aeolian], because they have the [*mi fa sol la*] species of 4th in common.

In the treatise on counterpoint (Part iii), Zarlino introduced polyphonic modal functions. The fifth of his six general rules for composition requires that 'a composition be ordered under a prescribed and determined mode, or tone, as we like to call it' (pt iii.26; trans. Marco and Palisca, p.52). He went on to require that imitative voices enter on modal degrees (iii.28; p.55):

the interval between the initial notes of the two voices should be one of the perfect consonances named above [... unison, fifth, octave, or compound ...], or a 4th. This is not unreasonable, for one begins on the extremes or the middle points of the modes on which the melody is founded.

The cadences are to be on the modal degrees also (iii.53; p.142):

The cadence has a value in music equivalent to the period in prose and could well be called the period of musical composition. ... The end of a sentence in the text should coincide with the cadence, and this should not fall on an arbitrary tone but on the proper and regular steps of the mode used.

In its details Zarlino's counterpoint treatise is a summary, extension and codification of existing doctrine. But permeating the polyphonic web Zarlino saw the same 'sonorous numbers' that he had used for his tuning system, those perfect and imperfect consonances of just intonation which he had measured in the simple ratios of the numbers one to six. The small-number ratios of just intonation now allowed the 5th easily to be conceived as harmonically and arithmetically mediated into major and minor 3rds with simple ratios, just as the octave had always been simply mediated into a perfect 5th and a perfect 4th. As a consequence, the general bilateral pattern of both structural and ethic contrast that had been associated with the harmonically mediated authentic octave versus the arithmetically mediated plagal octave could be claimed as well for the harmonically versus the arithmetically mediated 5th.

The 5th and its 3rds now became the sonorous glue of the contrapuntal texture. Zarlino portrayed them in their new role as follows:

The variety of the harmony ... results from the position of the note that divides the fifth ... . On this variety depend all the diversity and perfection of harmonies. [iii.31; p.69]
Since harmony is a union of diverse elements, we must strive ... to have those two consonances [the third and the fifth] or their compounds sound in our compositions as much as possible. [iii.59; p.188]

Zarlino was of course quite ready to recognize the existence of other consonances in the texture, but he regarded them as substitutes for the 3rd or 5th (iii.59; p.188):

True, musicians often write the sixth in place of the fifth, and this is fine. ... Especially in three-voice writing the octave may be used in place of one of them to preserve a beautiful, elegant, and simple voice line. To want to use those consonances constantly in such pieces would be impossible.

The consonances that dominate the contrapuntal composition of the texture were also invoked to govern the modal disposition of the structure, establishing the final, its upper 5th and its mediating 3rd (major or minor) as the proper scale degrees for beginnings and cadences: 'The true and natural beginnings not only of this but of any mode you like should be at the boundary degrees [*chorde estreme*] of their fifths and fourths, and on the median degree [*chorda mezana*], which divides the 5th into major 3rd and minor 3rd' (1573; iv.18; p.392). And again Zarlino recognized the realities of practice, though in this case he attempted no explanations: 'All the same, many compositions that have their beginnings on other degrees are to be found'.

To allow for anomalous cadence points is both prudent and customary, and Zarlino did so; what is new is his prescription of a uniform basis for fixing cadential norms, the same for all 12 modes (1573, iv.18):

Cadences are found to be of two kinds, 'regular' and 'irregular'. Regular are those which are always made on the boundary notes or degrees of the modes. (Where the octave in each mode is harmonically or arithmetically mediated or divided by a median degree, those degrees are the boundaries ... likewise where the 5th is divided by a median degree into a major 3rd and minor 3rd.) Any other [cadences] then may be made wherever you like; they are called irregular.

The intervals that permeate the contrapuntal texture and regulate the modal structure are also said to determine the general ethos of a mode (iii.10; pp.21–2):

the fifth, sixth, seventh, eighth, eleventh and twelfth [modes, numbered as in 1558, see table 9(*b*) and (*c*)] ... are very gay and lively, because in them the consonances are frequently arranged [in an order] according to the nature of the sonorous number, that is, the fifth is harmonically divided into a major and minor third which is very pleasing to the ear. ... In the other modes, which are the first, second, third, fourth, ninth, and tenth, the fifth is arithmetically divided by a middle note, in such a way that one often hears the consonances arranged [in an order] contrary to the nature of the sonorous number. Whereas in the first group [of modes] the major third is often placed beneath the minor, in the second [group of modes] the opposite is true, with a result I can only describe as sad or languid.

This theory of a bipolar modal ethos based on the harmonic or arithmetic division of the modal 5th in Part iii is a generalization; in Part iv specific, usually traditional, affects are attributed to each mode individually (see above, table 10). Zarlino's recognition of the realities of compositional practice regarding 'irregular' cadences in the Phrygian has been quoted. The two-part examples in Part iv illustrate regular modal procedure, particularly for cadences. In addition, a number of multi-part compositions are listed for each mode, illustrating (among other things) that musical practice abounds with irregular cadences. Finally, his recommendations for a predominant use of 3rds and 5ths in the texture did not prevent him from providing for the actual construction of simultaneities through the conventional rules for adding first the bass and then the alto to a principal interval in soprano and tenor (iii.58; pp.178ff; see especially the table on pp.182–3). Nonetheless, his synthesis of texture, mode and affect through their joint participation in a background ambience of major 3rds, minor 3rds and 5ths was an enduring contribution, and it had a devastating effect on polyphonic modality. The essence of all traditional modal theory, as applicable to polyphonic music, had been that the tonal relationships specific to each mode were treated as completely independent of the general tonal relationships governing vertical sonorities and their successions. Zarlino's construction on Glarean's 12 modes

broke down the barrier between modal structure and chord structure and left them wholly dependent on each other.

5. TRANSITION TO MAJOR AND MINOR KEYS.

(i) The 12 modes in the late 16th century. The new and systematically conceived theory of 12 modes was promulgated with both sets of names and numbers. One was Glarean's, and Zarlino's 1558 version as well: modes 1 (Dorian) to 8 (Hypomixolydian) – the old eightfold system – and modes 9 (Aeolian) to 12 (Hypoionian) as authentic–plagal pairs of *a*-final (9, 10) and *c*– or *c′*-final (11, 12) modal octaves. The other set of numbers and names was Zarlino's second version from 1571 and 1573: six pairs of authentic–plagal modal octaves, with finals in order of the natural hexachord, *c d e f g a*; *c* authentic (mode 1) to *f* plagal (mode 8) were now called by the old names, Dorian to Hypomixolydian; the *g*-final modal octaves became Ionian and Hypoionian, and only the names Aeolian and Hypoaeolian (modes 11 and 12) referred to the same modal octaves as they had in Glarean's system. (See above, table 9(*e*).)

In the later 16th century and early 17th the 12-mode system was taken up enthusiastically, by composers as well as by theorists. In Germany at first Glarean was the source, so that mode 1 (Dorian) continued to be *d* authentic in *cantus durus* with *b*♮, or *g* authentic in *cantus mollis* with *b*♭. The earliest large-scale musical embodiment of Glarean's new system was a setting of the Gospel texts for the whole year, published in 1565, in four cycles of the 12 modes, by Glarean's student Homer Herpol. Alexander Utendal's 1570 settings of the seven penitential psalms (plus five texts from the Prophets) in the 12 modes, along with Herpol's works, were among those often cited as examples for the 12 polyphonic modes in music textbooks for the German Lateinschulen well into the 17th century (see Bossuyt, 1981). The 1577 *Cantiones* of Eucharius Hoffmann is another 12-mode collection, and in Hoffmann's 1582 treatise *Doctrina de tonis seu modis* Lutheran chorale tunes were added to the recurrent roster of citations exemplifying the 12 modes. Andreas Raselius also wrote about the 12 modes, illustrating them in his *Hexachoardum seu questiones musicae practicae* (1591) with chorales, polyphonic works and newly written canons, and published two collections of motets on German Gospel texts, one set for Sundays and the other for important feasts, 'in which living examples of Glarean's *Dodecachordon* in both scales [*cantus durus*, *cantus mollis*] have been invented' (*Teutsche Sprüche*, 1594–5); these are only partly in cyclical order. Raselius also prepared a huge manuscript collection, the *Dodecachordi vivi … exempla* (*D-Rp* 774), containing 12 works by different composers for each of the 12 modes in Glarean's ordering.

In Italy too the earlier 12-mode system was preferred, not because musicians were unaware of Zarlino's new scheme, but because it was easier in a liturgical context if the first eight modes could be associated directly with the traditional eightfold system; organists had not only to play independent pieces during the service but also to collaborate with both the polyphony and the plainchant of the choir. Keyboard compositions using the 12 modes proliferated in the late 16th century and early 17th. Luzzaschi's second book of *Ricercari* (1578 or earlier) is the oldest surviving of these; it is exceptional in using Zarlino's new numbering. Andrea Gabrieli's *Ricercari* of 1595 form a full set of extended compositions in all 12 modes (using the traditional numbering). Table 11*a* lists their modes (called 'tones') along with their scales (*cantus durus* unmarked, *cantus mollis* designated by a flat sign), their endings and their putative transpositions from the abstract system.

In France, conversely, Zarlino's second scheme was generally accepted in principle, with the *c* authentic modal scale being mode 1, or Dorian. (Conflicts that arose in liturgical situations were accepted, though they had to be explained.) Claude Le Jeune composed several modal cycles in this order. In his *Octonaires* (1606; ed. in MMFTR, i, 1924, and viii, 1928) each of the 12 modes has two chansons for four voices and one for three; the *c*-final and *d*-final authentic–plagal modal pairs – modes 1 (Dorian) to 4 (Hypophrygian) – are set in *cantus mollis*, to end with *f* and *g*. Table 11*b* lists the modes, scales, endings and putative transpositions for this collection.

The potential for confusion in two co-existing sets of names is only terminological; in any specific circumstance one set of names or the other will be found. But the 12 modes and the eightfold system were two genuinely

TABLE 11

(*a*)

Tone	*Scale*	*Final*	*Putative transposition*	*'Natural' final*	
1	–	*d*	–		
1	♭	*g*	, 4	*d*	
2	♭	*g*	, 4	*d*	
3	–	*e*	–		
4	–	*e*	–		
5	–	*c*	↓4	*f*	(in B♭ scale)
6	♭	*f*	–		
7	–	*g*	–

9	♭	*d*	↓5	*a*	
10	–	*a*	–		
11	♭	*f*	↓5	*c′*	
12	–	*c′*	–		

(*b*)

Tone	*Scale*	*Final*	*Putative transposition*	*'Natural' final*	*Name of mode*
1	♭	*f*	, 4	*c*	Dorian
2	♭	*f*	, 4	*c*	Hypodorian
3	♭	*g*	, 4	*d*	Phrygian
4	♭	*g*	, 4	*d*	Hypophrygian
5	–	*e*			Lydian
6	–	*e*			Hypolydian
7	–	*f*			Mixolydian
8	–	*f*			Hypomixolydian
9	–	*g*			Ionian
10	–	*g*			Hypoionian
11	–	*a*			Aeolian
12	–	*a*			Hypoaeolian

competing theories, one rational and unified, the other traditional and diverse. Coupled with that source of confusion was the matter of transposition (in the modern sense) of modes. Even considering only the traditional overlapping systems of *cantus durus* and *cantus mollis* – the scale with *b*♮ and the scale with *b*♭ – the number of octave scales of potential modal legitimacy was doubled without there being much increase in the number of finals in the system as a whole. From table 11 two preliminary illustrations may be extracted.

The Gabrieli *Ricercari* (see table 11*a*) include two *f* modes, one authentic and one plagal, both with the *b*♭ scale; one of these, however, is called mode 11 (Glarean's Ionian) transposed down a 5th while the other is the traditional mode 6 of the eightfold system, the ancient tritus plagal mode with its traditional *b*♭. A similar coupling occurs with the *c* and *c′* modes: one is in principle a transposition of the traditional mode 5 (with its traditional *b*♭) into *cantus durus*, down a 4th to *c*; the *c′* mode is called mode 12 (Glarean's Hypoionian). Finally, the set includes two *d*-final authentic modes, mode 1 in its regular position and mode 9 a 5th lower. They differ in their sixth degrees, but the distinction is minimized by the normal practice of using *b*♭ over *a* (*fa* over *la*) in the authentic protus at *d*. (The downward transposition of mode 9, like the transposition of mode 5 down to *c* and mode 2 up to *g*, is ultimately a reflection of systematic adjustment of the organ to a convenient pitch level for the choir in the musical liturgy: see §5(ii) (*b*) below.)

Quite different instances of two modes sharing the same final due to the overlapping *cantus durus* and *cantus mollis* systems are furnished by Le Jeune's scheme for the *Octonaires* (see table 11*b*). The collection includes two sets of plagal–authentic *f* modes, and two sets of plagal–authentic *g* modes: in each set with common final one pair uses *b*♮, the other *b*♭, like Gabrieli's mode 1 and mode 9. In the *f* modes the contrast in scale system comes in their fourth degrees, the old question of theoretical tritus versus practical tritus. The contrast in the third degrees of the *g* modes, *b*♮ and *b*♭, is also reminiscent of an old modal contretemps, the transformation of mode 7 tetrardus on *g* to mode 1 protus on *g* (see §II, 4(i) above); but here it is not a question of changing modes in one piece but of the existence of whole pieces in different modes with the same final. This is the converse of the situation illustrated in the Gabrieli *Ricercari* by the first two pieces, which are both in the authentic protus mode but with different finals – *g* (in the *b*♭ system) and *d* (in the *b*♮ system).

These collections between them embody three elements of disorder for polyphonic modality: the existence of a new modal theory in conflict with the traditional eightfold system; systemic ambiguities arising ultimately from the practical requirements of transposition; and contrasts in scale type over common finals arising out of two parallel systems of scales, *cantus durus* and *cantus mollis*.

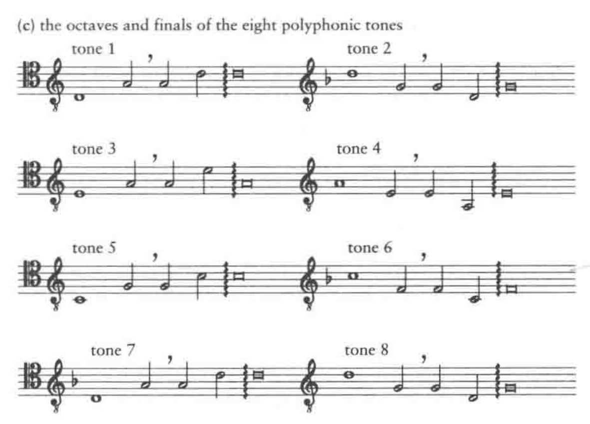
(ii) The modes in the 17th century.

(a) Transposition of modal scales. Before the humanists with their classical authority came to rationalize the eightfold system and make it more consistent it had been an essential part of the Catholic liturgy, and so it continued. An ever more important part in both Mass and Office was played by the organ, and in performing *alternatim* Mass sections and *Magnificat* verses with the choir the organist had to be ready to accommodate his music to pitch levels comfortable to the choir. This meant that the whole complex of modes and psalm tones had to be available in practice at pitch levels on the keyboard other than those embedded in the traditional system of note names, out of which the design of that keyboard had developed. The background diatonic assemblage of course already provided for one substantial and useful shift in relative pitch level through the two parallel systems of *cantus durus* and *cantus mollis*, the scales with *b*♮ and *b*♭. *Cantus fictus*, with its two flats, was a way of considering transpositions by a whole step downward as only slightly contradicting the conception of a single diatonic framework with exchangeable ancillary notes. Practical transpositions to other parts of the keyboard further augmented both the number of places a given mode could be projected and the number of modal scales that could be projected at a given place. This process, accompanied by necessary acoustic refinements, led in time to the abandonment of the extended double octave coupled with hexachord syllables as the model for the background assemblage of pitches and pitch relationships available for music.

(b) The eightfold system and the 12 modes. The organist's need to transpose arose from his interaction with the choir; a considerable share in the confusions of later polyphonic modality in Catholic countries is due to the intersection of the practical need for transposition with conflicting systems of 12 modes, eight modes and eight psalm tones.

Pietro Pontio had made a clear and emphatic distinction between the eight tones used for motets, masses, madrigals and the like, and the eight tones used for the psalms, which, he rightly observed, have their own cadences and even their own endings (see §3(iii) above). Those adhering in principle to the new 12-mode systems generally made this same distinction; Zacconi, for instance, distinguished 12 'tuoni harmoniali' from eight 'aeri di salmeggiare' (*Prattica di musica*, ii, 1622, p.43), and proposed that in any case the latter are derived from the former. Cerone, who added four new examples to Pontio's eight tones for the psalms (*Melopeo*, 1613, pp.884ff), is one of the few authors who claimed the existence of 12 psalm tones.

Others, especially those inclined to prefer the traditional eightfold system as the basis for tonal distinctions, were not ready to build a wall between tone (for psalms) and mode (for everything else). Banchieri (1614) gave a thorough, fully illustrated account of a kind of conglomerate modal system that was typical in Catholic usage well past the first half of the 17th century, with some local variations. Basically these systems were developed in three stages. First, members of the two eightfold systems – like Pontio's tones for motets and tones for psalms – were mingled together in theory, as in liturgical performing practice, into a single eightfold system. Second, the conglomerate eightfold system was compared and correlated with the 12 modes in *cantus durus* and *cantus mollis*. The third stage then either recognized the systems as separate in function or derived one of the systems from the other, implying or stating that there was only one true system of modes. The organist's practical experience with transposition played a leading role in the construction of the conglomerate system, but only *cantus durus* and *cantus mollis* were originally drawn on to provide theoretical scales for constituent modes in a closed system.



Banchieri began his discussion with a list of the traditional eight modes, illustrated however not by

stepwise species or final–ambitus but by modal degrees within their octaves, in the manner of Zarlino (ex.22*a*); this is followed immediately by the eight psalm tones illustrated by the ancient and familiar couple of modal final with psalm-tone tenor (ex.22*b* – both from 1614, p.68). Shortly thereafter follows the principal demonstration, in which Banchieri depicted an eightfold system of polyphonic modes based on the psalm tones (ex.23, from 1614, pp.70–71). He began with the 'intonation, middle and end of the plainchant' for each of the eight psalm tones at its regular position, ending each with its principal *differentia*. They are all then shown again, each one 'transposed for compositions in polyphony for the choir' (*trasportato alle compositioni coriste del figurato*); following their transposed forms their modal degrees are shown as 'cadences', on a pattern like that shown in ex.22*a*.

The transpositions that are made all occur within the parallel systems of *cantus durus* and *cantus mollis*. Tones 2 and 7 go from *cantus durus* into *cantus mollis*, up a 4th and down a 5th, respectively. Tone 5 appears as though it were merely transposed down within the *cantus durus* system, but Banchieri's tone 5 at the *f*-final position would have had its usual *b♭* in practice (see ex.22*b*); tone 5 is in fact transposed the other way, from *cantus mollis* at *f* to *cantus durus* at *c*.

The practical aim of these transpositions was to reduce the range needed for the choir's psalmody. This is seen clearly in the 'middle' notes of Banchieri's formulation, which represent the recitation pitch of the psalm-tone tenor, on which the bulk of a psalm verse was chanted. Column 1 in ex.23 shows that in the pure diatonic double octave the psalm-tone tenors are spread between *f* and *d′*; their equivalents in the partly transposed system drawing from both *b♮* and *b♭* scales cover only *g* to *c′*. The lowest psalm tone (2), with its equivalent polyphonic tone, has been brought up, the two highest (5 and 7) have been brought down. In the alternative use of a *cantus mollis* transposition by downward whole step suggested by Banchieri for the otherwise untransposed tones 3 and 8, the range of recitation pitches is still further contracted. In the *Cartella musicale* no explanation is offered for these alternative sets of cadence points, but in his *L'organo suonarino* (1605) Banchieri at one point outlined soprano and bass parts for the polyphonic verses of an *alternatim Magnificat* for each of his eight tones, and tones 3 and 8 have indeed been set 'a tone lower for the convenience of the choir' (pp.94, 104), bringing the tenors from *c′* down to *b♭*, thereby compressing the range of recitation tones to a minor 3rd, *g*, *a* and *b♭*.

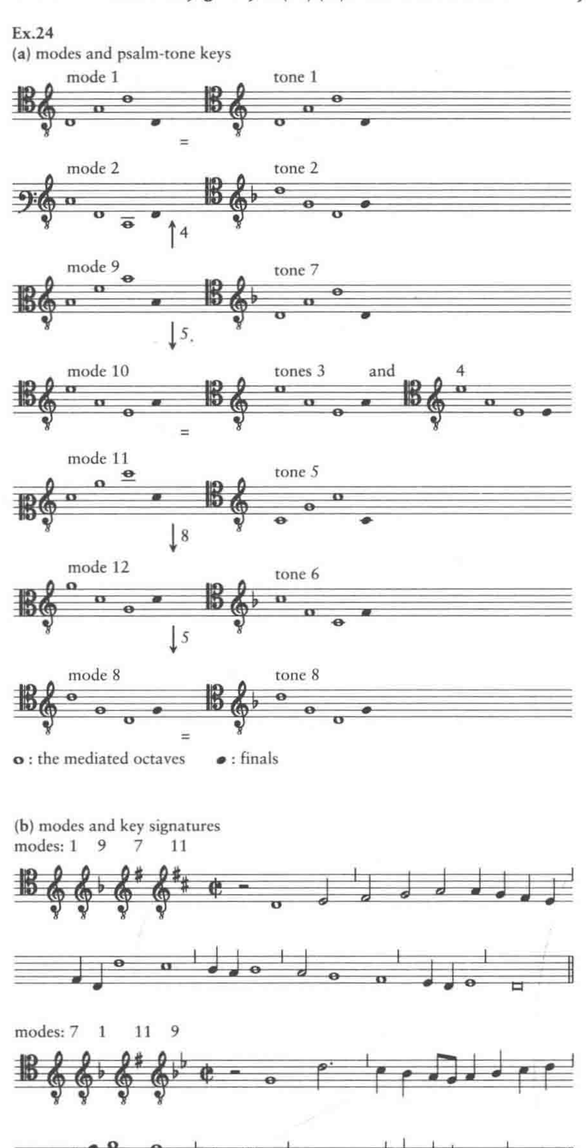
It may be observed that a systemic effect of the mixed pattern of transposition is to subvert one of the fundamental premises of the traditional eightfold system. Instead of sharing a common final in a single diatonic system and being contrasted by higher and lower ambitus, three of the four authentic–plagal pairs – 1 and 2, 5 and 6, 7 and 8 – keep the octave span constant, and it is the final and scale system that change. This may be seen in ex.22*c* (from 1614, pp.84–7), which shows the prescribed intervals of imitation and the last notes in the tenor part for each of Banchieri's eight tones (the points of imitation are assigned to the extremes and the mean of each modal octave).

Tones 3 and 4 also have different finals, but both are in *cantus durus* and they have different octave spans as well. Tone 3, like all the others, is a psalmodically engendered polyphonic mode, and *a* is the last note of its most prominent *differentia*. The emphasis on *a* and *c′* in mode 3 is of course nothing new, but using *a* as the final of mode 3 is only justifiable when the psalm tone is the model for the mode. In a system of polyphonic modes avowedly derived from psalm tones there is no reason to call particular attention to this final in tone 3, and there is nothing inconsistent in Banchieri's taking it for granted. What is inconsistent is the treatment of mode 4. In his model for the derivation of the system (ex.23) he assigned two sets of modal degrees to tone 4, as he did for tones 3 and 8. The basis for the substitution – borrowed from Zarlino – is entirely different, and has to do neither with psalm tones nor with the convenience of the choir (p.75):

> Because the degree *b♮* does not have an upper [perfect] 5th, and so much the less a [perfect] 4th below, imitations by the 5th from *e* to *A* responding [to those] by the 4th from *a* to *e* are permitted. The proper cadences in two voices are *c′* [upper] terminal, *b♮* median, *g* indifferent, and *e* final; but with more voices, because of the aforesaid impediments [arising] from the note *b♮*, cadences on the two notes contiguous to the *b♮* are permitted, that is, the note *c′* [as] median cadence and *a* as indifferent, or *a* as median and *c′* as indifferent, as you wish.

After a detailed exposition and correlation of Zarlino's 12 modes in both scale systems and his own eight polyphonic tones Banchieri revealed himself as in the end rather partial to the claims of the two-scale eightfold system (p.136):

Ex.23



It has already been said how much to be esteemed are the 12 modes, on their own degrees or transposed, as learnedly expounded by Gioseffe Zarlino ... but it seems right to me to warn the novice composer of the difficulties, found on closer examination, that pervade them: [1] that really in every composition [i.e. worldly as well as churchly] the eight or nine ecclesiastical tones [the ninth being the *misto tuono*, that is, *tonus peregrinus*] come into the 12 modes; and [2] that the 12 modes do not exceed the eight (or nine) tones if they are desired to be usable in more than two parts.

(c) The eightfold system and the 24 major and minor keys. The conception that 12 modes in each of two scales, 24 in all, should be compressed into a combined system of eight modes, some using one scale and some the other, continued in Italy for several generations. A succinct report appears in Bononcini's *Musico prattico* (1673), ii.17, pp.121–2: 'Of the 12 tones ... there are seven that are normally used' (ex.24*a*, based on pp.137–47). The reduction of 12 modes to seven rather than eight devolves from the correlation of mode 10 with both tone 3 and tone 4: Bononcini distinguished them only by their endings. Ex.24*b* (based on pp.148–53) is Bononcini's demonstration of how a melody can be converted from its 'natural' mode to any other mode by changing the key signature.

By a circuitous but traceable route through French- and German-speaking Catholic countries (documented in Lester, 1989), what had begun as Banchieri's eight 'psalm-tone keys' were finally incorporated into the system of 24 major and minor keys in Mattheson's *Das neu-eröffnete Orchestre* (1713). After a discussion of the '12 *modi*, or Greek manners of singing' (p.57), Mattheson described the final stage of the eight 'psalm-tone keys' (p.60): 'The Italians and the present-day composers employ another fashion of differentiating their *modulationes*' (shown in Table 12). As his source for this set of eight tones Mattheson must have used the 'regular tones or modes' in Georg Falck's *Idea boni cantoris* (1688), since he continued with a second eightfold set of four major and four minor keys corresponding to Falck's *fictus* or transposed modes, observing that they are 'no less usable and customary'. Mattheson concluded 'Whoever is desirous of knowing all tones must include the following', and completed the 24 by adding the remaining four major and four minor keys (cf Riemann, *Geschichte der Musiktheorie*, 2/1921, pp.454–5). But shortly thereafter he returned to the 24 major and minor keys, first set out as a whole in 1711, only two years earlier, in Heinichen's *Neu erfundene und gründliche Anweisung ... des General-Basses*, recommending the more familiar approach: 'There are just the 12 semitones of the chromatic octave, each of which can be differentiated once, through the major or through the minor 3rds; thus the aforementioned 24 arise, and so it remains' (Mattheson, 1713, p.63).

A few traces of the heterogeneously agglomerated major–minor key system can be observed in 18th-century musical practice. Most conspicuous are the key signatures with one flat or one sharp too few or one sharp too many, representing transpositions of mode 1 or mode 2 (minor keys with one flat too few or one sharp too many), transpositions of mode 8 (major keys with one sharp too few), or use of a one-flat or two-flat signature as though

it were *cantus mollis* or *cantus fictus* (major keys with one flat too few). Certain details of early 18th-century harmonic movement or aspects of tonal relationships also represent vestiges of polyphonic modality; familiar and obvious is the IV(6-3)–V half-cadence in minor keys, a survival of the mode 4 cadence to the final with an upper leading note in the lower voice. Cycles through the psalm-tone keys continued to be written for a long time. One of the last, the so-called *Octo toni ecclesiastici*, was written by Beethoven's teacher Albrechtsberger in about 1760; it consists of a cadenza, six verses and a fugue for each *tono*.

(iii) The modal triad. In his *Cartella musicale* Banchieri listed the cadential degrees for his eight modes (see ex.22*a*) and his eight psalm-tone keys (see ex.23). His cadential degrees, however, are not those of a partly traditional, partly empirical scheme of species boundary tones and repercussions; rather they follow Zarlino's doctrine stipulating the same three cadential degrees for each and every mode, regardless of its diatonic species: the final, the upper 5th, and the mediating 3rd. A set of any three things is called a 'triad', and the set of three modal cadential degrees may be called a 'modal triad'.

Claiming the degrees of the modal triad as the regular cadence points in every mode eliminated in theory (though by no means in practice) the variable distributions of cadential degrees that had differentiated polyphonic modes based on the eightfold system. Furthermore, just as an octave cannot be mediated into perfect consonances in more than two ways, which had always distinguished authentic modes from plagal modes, so a 5th cannot be mediated into 3rds in more than two ways, which came to distinguish major keys from minor keys. Granting overriding importance to the final, upper 5th, and mediant 3rd in all modes alike had the effect of calling attention to the modal triad common to all modes mediating their 5ths in the same way; concomitantly subordinated were most of the theoretically decisive modal distinctions supposed to arise from varying placements of the semitones in the modal octave.

Around 1600 German theorists began to manipulate simultaneities comprising three pitch classes as single entities, that is, as chords. Burmeister (1606, p.22) called them 'conjugate' and named the pitches *basis*, *media* and *suprema*. Harnisch (1608) offered for the first time a description of 6-3 chords as though they were in versions of 5-3 chords; his term for them is 'composite consonance', 'imperfect' and 'perfect' respectively, and he also discussed both doubling and open spacing in terms of octave duplication of chordal degrees (see Lester, 1974, p.110, and 1989, pp.31–3).

In the writings of Calvisius's student Johannes Lippius (published 1609–12), appears the expression 'harmonic triad' (*trias harmonica*), along with 'monad' (a single note in a melodic context) and 'dyad' (a two-note interval). Lippius not only defined 5-3, 6-3 and 6-4 chords as triads, however; he also defined each of the 12 modes in terms of the triad of its final, third and fifth degrees, defined the general 'lively' or 'sad' affect of each mode by the affect of its modal triad, and then finally listed the cadential degrees of modes in terms of that same modal triad, thus making the modal triad the single foundation of melodic identity, poetic affect and formal structure in each of the 12 modes.

Lippius's theories were transmitted to later generations through the publications of Johann Crüger, whose first significant work, *Synopsis musicae* (1630), borrowed not only its title but most of its language from Lippius's *Synopsis musicae novae* of 1612, simplifying or eliminating the theology and numerology and also expanding and clarifying the explanations (see Lester, 1989, pp.52–9). The *trias musica* is made up of three sounds, and (chap.8):

> this harmonic Trinity is the true and correct root of the *unitrisona* [one sound in three pitches] ... it is twofold. One is natural, perfect, noble, and suave [and Crüger added] having the major 3rd below the

TABLE 12

tone						
	1	D	F	A or	D	minor
	2	G	B♭	D	G	minor
	3	A	C	E	A	minor
	4	E	G	B♮	E	minor
	5	C	E	G	C	major
	6	F	A	C	F	major
	7	D	F♯	A	D	major
	8	G	B♮	D	G	major

minor 3rd ... . The other is imperfect and soft [*mollior*] ... . Each harmonic triad has its species, now native, now fictive through chromatic notes. [ex.25*a* and *b*] ... Other species of triad ... [ex.25*c*].

Crüger grouped the modes by the species of triad:

The modes, because of the proper and individual harmonic triad that each has, are either natural, consisting of a natural harmonic triad, or soft [*molliores*], consisting of a soft triad. Ionian, Lydian, Mixolydian are natural; Dorian, Phrygian, Aeolian are soft.
They are either authentic and primary, or plagal and secondary, by virtue of the 4th conjoined to the harmonic triad. ... If the 4th is placed above the harmonic triad to complete the ambitus of an octave it will represent an authentic and primary mode ... if below, a plagal and secondary mode [ex.25*d*].

Crüger then ascribed poetic content to each mode according to two hierarchic criteria, the modal triad and the scale type (chap.11):

The nature of each mode follows the nature of its fundamental triad [*naturam radicis unitrisonae*], and of its intervals – tones and semitones disposed in the ambitus of an octave – by which the modes are distinguished from each other.
Thus the one is vigorous and cheerful – Ionian extremely so, Lydian enchantingly, Mixolydian moderately – and the other is soft, weak, sad, serious – Dorian moderately so, Aeolian less so, Phrygian completely.

The primary, secondary and tertiary cadential functions handed down from the latter part of the 16th century are now mechanically assigned (as in Zarlino) to the lowest (and 'final degree'), the highest and the median parts of the harmonic triad; the foreign cadences (*peregrinae*) 'arise irregularly, from the harmonic triad of another mode' (chap.15).

Varying combinations of elements from Glarean's modal doctrines and Lippius's doctrines as promulgated by Crüger continued to appear in German textbooks throughout the 17th century. The 12-mode doctrine, however, was never amalgamated with any other theory of modal or tonal structure; unlike the Italian modal theories it was not gradually transformed and merged into an evolving tonal theory. It survived as an antiquarian anachronism – but it also survived as well in one kind of musical practice, the Lutheran service, as can be observed in many of Bach's chorale settings and elaborations. Both the doctrine and the practice of Glarean's 12 modes at that time are summarized in J.G. Walther's *Musicalisches Lexicon* (1732, p.409):

Modus musicus is the way of beginning a song, continuing it correctly within fixed limits, and ending it suitably. The Greeks principally had 12, namely six chief and as many collateral modes ... only the Greek names survived, and they are applied to the diatonic melodies placed on the following six keys: D, E, F, G, A, and C ... to know this doctrine is indispensable particularly to organists, since they have mostly to do with chorale songs, among which ever so many have been set and handed down in those old modes.

Walther listed five to ten familiar German chorale tunes under ten of Glarean's modes; he rejected Lydian and Hypolydian, quoting Glarean at length on the point.

IV. Modal scales and traditional music

1. MODAL SCALES AS A NEW MUSICAL RESOURCE. In the early 19th century the term 'mode' signified the major or minor scale; alternatively, it could refer to an ancient Greek mode, which would signify one of Glarean's 12 authentic or plagal octave species. By 1800 practising musicians on the Continent had come to believe that the major and minor modes had resulted from the historical reduction of earlier diverse scales to their essential features. Koch's *Musikalisches Lexikon* (1802) observed that 'our two modern modes are the descendants of the old Ionian and Aeolian'. Theorists in the 19th century usually began with the diatonic major and minor scales as the foundation of their teaching. Occasionally, however, composers could conceive of modality outside the major and minor conventions, as did Beethoven when he composed a four-part, chorale-like movement 'in the Lydian mode' in his String Quartet op.132. With this experiment Beethoven wished to evoke a reverent mood in a thankful release from illness. Composers from Schumann to Fauré, Grieg and Wolf used modality to extend this evocation of religious feeling or, alternatively, to suggest folk practice ('im Volkston').

Modes, as they evolved in popular tradition, arise from generalized types of melodic movement in existence before the abstract theories of ancient Greece or the medieval Church. The modern turn, around 1800, towards European folk music as a resource for composers was already evident in the settings of British folk tunes made by Beethoven, Haydn and others for the publisher George Thomson. In part this was the outcome of the stirrings of Romanticism, for the poetry of Ossian and Burns had drawn the attention of intellectuals to Scotland, where Allan Ramsay and others had been avidly collecting traditional song material throughout the 18th century. The settings by these composers, while often skilful and harmonious, misunderstand the modal character of the melodies. Indeed, this misunderstanding was nothing new. Composers such as Purcell and J.C. Bach tried to get to grips with the 'gapped' pentatonic or hexatonic melodies that proliferate in Scottish folksong: the ambiguous modal character of these tunes, for instance, or the habit of ending on a note other than the presumed tonic, puzzled composers with a conventional major–minor harmonic vocabulary.

Throughout the 19th century folktunes were a constant well of inspiration as composers began to reflect national feeling: Chopin drew on the mazurka dances of Poland, for example, Liszt on Hungarian Gypsy traditions. Both employed folk scales, indigenous or derived from Romani practice, as well as novel rhythms and textures that were unfamiliar to concert audiences. Minorities, conscious of their cultural identity, made their mark through the original use of modality: Mahler, brought up in a Jewish enclave on the borders of Bohemia and Moravia, adapted formulae from both German-language and Moravian folksong, including the Lydian 4th, in his melodic style. Janáček's absorption of folk modes stemmed from his devotion to Moravian folk music, as collector and arranger, from the 1890s. His opera *Jenůfa* (1908) and his mature works display not only mastery of the principles of folk modality but his creative synthesis of these.

Eastern Europe, especially Russia, gave rise to novel conceptions of harmony and melody derived from folk modes. Glinka had already drawn on Russian folk melodies for his early works: his strong attachment to the 'foreign lands and peoples' announced in Schumann's *Kinderszenen* led him to travels in Italy and, notably, Spain, which inspired a number of his compositions and whose Andalusian Hispano-Arabic melos also generated pieces by Chabrier, Debussy, Ravel and others. Musorgsky, famously, mined the modality of Russian melodies in works deemed strange or crude by his contemporaries. The first version of his song *Kalistratushka* (1864), for example, is called 'a study in folk style' and the cadential dissolution of the harmony into bare octaves is typical of the genuine folk polyphony recorded by Yuliy Melgunov, Kastalsky and others. By contrast, Rimsky-Korsakov oscillated in his lyric operas and tone poems bretween a diatonic style suffused with Russian folk music and an 'oriental' style that is usually chromatic or based on a whole-tone scale in its specifially melodic inflection. His 'revision' of Musorgsky's work was a typical misunderstanding, by a conservatory-trained musician, of an original, folk-influenced melodist.

Saint-Saëns was just such an academician: believing Musorgsky to be deranged, he brought back from Russia a score of Musorgsky's *Boris Godunov* thereby, however, introducing a new element into French music. He himself experimented with scalar novelties and produced several works, such as *Samson et Dalila* (1877) that conjure up 'exotic' scales and are often in the minor key with a minor 6th and raised 7th. Verdi had also injected elements of modal exoticism into *Aida* (1871), conjuring up visions of the 'remote' lands where Aida lived by means of an oboe melody that wavers between major and minor. Attracted to the modal features of peasant melodies, the 'antique' modes of the Middle Ages or Renaissance or the melos of peoples outside Europe, composers explored scalar systems other than those of major–minor, and this had become a distinct trend by the turn of the 20th century (*see* EXOTICISM).

Debussy, who visited Solesmes and was fascinated, like his contemporary d'Indy, by Gregorian chant, explored a variety of pentatonic structures: many of his works, as

well as 'exoticisms' like *Pagodes*, are saturated with pentatonicism. He conjures up an antique world, as in *Pelleas et Mélisande*, or one in which ambiguity is central, as in the *Chansons de Bilitis* by mixing modality (usually Dorian) and chromaticism. The attitude of Ravel, on the other hand, towards modal-melodic pastiche was sometimes ironic: he described his *Bolero* as being in the 'whining and monotonous style of Spanish-Arabian melodies'. But like Debussy he admired Javanese music and derived melodic and harmonic elements from it, as in the tolling of temple bells in 'Laideronnette' from *Ma mère l'oye* (1911). Similarly in debt to Debussy as well as to plainchant and Hindu sources, Messaien evolved 'modes of limited transposition' (i.e. modes able to be transposed by a semitone a limited number of times, after which the original set reappears). The importance of these modes in his composition is such that the horizontal line is harmonized exclusively by the notes of the mode.

Stravinsky, who had himself collected traditional tunes, transcended the inspiration of folk models by condensing, repeating or superimposing modals cells often derived from Russian folk sources as in, notably, the *Rite of Spring* (1913) or *Les noces* (1917). While his procedures in these early works have little to do with past modal practice, they do refer to diatonic pitch relations (e.g. the D- and G-scales or to hexachordal segments of these). The source of Stravinsky's well-documented octatonic pitch construction, on the other hand, which stretches over his entire output, may well have been Rimsky-Korsakov; it begins with the second tableau of *Petrushka* (1911). Bartók's complex use of modal structures reflects his interest not only in the Hungarian peasant music that motivated Kodály but also in the diffusion of melodic styles into Europe from the Middle East and North Africa. Nevertheless, Bartók stressed that in eastern Europe most of the old modes (Dorian, Phrygian, Mixolydian, Aeolian etc.) were robustly alive. His construction of harmonies by condensing these melodic patterns is a central feature of his style: the melodic mode articulated in the finale of the Sonata for Two Pianos and Percussion (1937) is a composite of the Lydian and Mixolydian modes (one used by Fauré, Debussy and Ravel) and makes for contrast with modal chromaticism because of its relationship to the open overtone series based on C.

From around 1900 the discovery and invention of modal procedure as a compositional resource evolved in two directions: first, towards a regional style of composing based on the collection of European folktunes; and second, towards works that incorporated musical elements from Africa, the Americas and Asia. The invention of the phonograph in 1877, the increased collecting of music in different parts of the world and the founding of phonograph archives at Berlin, London, Paris and Vienna permitted composers to absorb and adapt musical styles detached from their original context. At the same time, conferences such as the Congrès de musique arabe held in Cairo (1932) brought together composers (e.g. Bartók, Hába) and musicologists (e.g. Hornbostel, Lachmann, Sachs) from East and West to discuss topics such as melodic or rhythmic modes, and the 'musical scale' and, more broadly, to reach a greater understanding of both modal conceptions and musical difference.

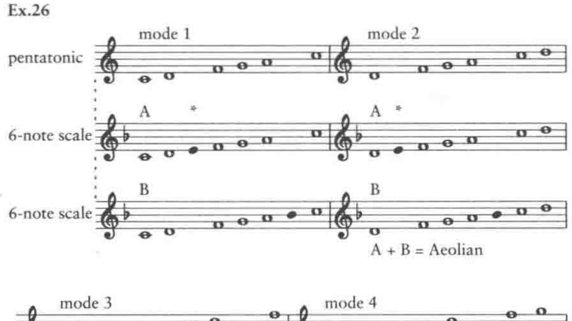
The enthusiasm for folksong of English composers such as Holst and Vaughan Williams and of the Australian Percy Grainger stimulated them to fashion idioms based more on the open melodic style of traditional music than on its harmonic implications. This procedure emerges to some extent from the wider span of English-language folk tunes compared with the narrow-range melodies with which their east European colleagues were working. Grainger, instinctively drawn to the modal qualities of traditional music, also made arrangements of Balinese and Javanese music he transcribed from the recorded collection *Musik des Orients*. The collecting activity of Cecil Sharp in both England and the USA and the populist effect of singers and collectors in the USA before and after World War II helped move some American composers towards folk styles, among them Roy Harris, who made a systematic use of modes, sometimes combining one or more modal type, Colin McPhee, who studied gamelan music in Bali, and Henry Cowell, who took over drones, modal scales and other effects from Celtic, Amerindian and east European folk music. The adaptation of structural elements from African and Asian music cultures (though not as models of sound) has continued in the music of Steve Reich, Philip Glass and John Adams, while the use of elements from European folk and liturgical sources has continued with Górecki, Pärt and Tavener.

2. Modal scales and melody types in Anglo-American folksong. During the second half of the 19th century, while continental composers were becoming ever more interested in indigenous traditional musical sources, English and American professional musicians remained dependent on the mainstream style as taught in continental conservatories. A few collections of British traditional songs with their melodies were published during this period by educated amateurs; one of the first was *Sussex Songs*, collected from agricultural workers and privately printed in 1843 by John Broadwood. His niece Lucy Broadwood was one of the founders of the English Folk Song Society. Although notated tunes had occasionally appeared with the literary collections of ballads and popular lyrics that began to be published in the mid-18th century, it was with the publication of the *Journal of the Folk Song Society* from 1899 that extensive tune collections made by the members of the Society began to provide sufficient material for serious musical study.

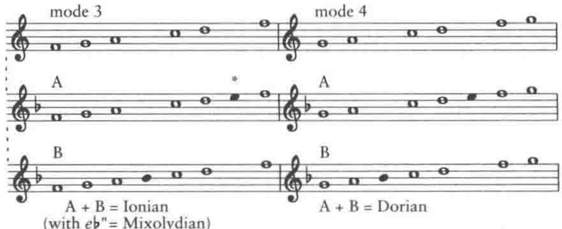
(i) Folksong scholarship and the modes. Professionally trained musicians and scholars were associated with the Society from the outset. J.A. Fuller Maitland was one of the founders, and both Vaughan Williams and Percy Grainger published collections in its journal. Grainger made the first attempt at a really precise notation of performing practice. His elaborately detailed transcriptions, made from wax cylinders, were published in no.12 of the journal in 1908.

(a) Folksong and pseudo-Greek modes. Grainger's preface to his transcriptions included a section on 'Folksong scales in the phonograph' in which he made some analytical observations about the modality of the songs: 'Of seventy-three tunes phonographed in Lincolnshire, forty-five are major and twenty-eight modal. ... Most [of the latter] are in a mongrel blend of Mixolydian and Dorian' (p.156). Grainger summed up his observations by saying that (pp.158–9):

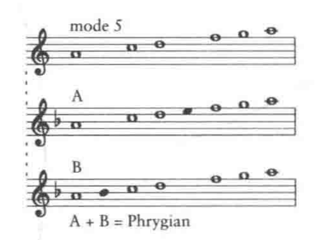
> the singers from whom I have recorded do not seem to me to have sung three different and distinct modes (Mixolydian, Dorian, Aeolian), but to have rendered their modal songs in *one single loosely-knit modal folksong scale* ... consisting of:



Firstly – the *tonic, second, major and minor* (*or unstable*) *third, fourth, fifth*, and *flat seventh* ...
Secondly – the *sixth*, which is generally major, though sometimes minor ... and the *sharp, or mutable seventh*; which intervals do not, as a rule, form part of the bed-rock of tunes, but act chiefly as passing and auxiliary notes.



Grainger's grouping of his repertory into two basic classes, major as against modal, accords well with the fact that rural American singers even in much more recent times used to sing major tunes with instrumental accompaniment – 'chording' – and other tunes without. But Grainger's theory was very much at variance with the by then already conventional modal doctrines of the Society – so much so that the editorial committee of the journal responded to his 'mongrel blend' observation in an editorial footnote. These doctrines are summed up in chapter 5, 'The Modes', of Cecil Sharp's *English Folksong: some Conclusions* (1907). On the tunes of Grainger's second class, Sharp wrote (pp.36–7):



The scales, upon which many English folk-tunes are constructed ... are generally known as the Greek modes. ... It has been customary to look upon the ancient modes as mere relics of a bygone day ... but the recent discoveries of English folk-song have thrown a fresh flood of light upon the matter ... for here are scores of melodies cast, it is true, in the old despised modes, yet throbbing with the pulse of life ... such melodies as these cannot be quietly dismissed as archaic survivals. ... Nor, again, are they to be confounded with the music of the church. Except for the fact that they happen to be cast in the same scales, they have but little in common with the melodies of plain-song.

Sharp continued with a summary exposition of the diatonic species of the octave, concluding with Glarean's modal names and the observation that 'amongst secular musicians the old scales are known by the pseudo-Greek names' (p.44). To the diatonic modal scales Sharp added the five octave species of the anhemitonic pentatonic scale (the general scale made up of minor 3rds separated alternately by one tone and a pair of tones). He observed that the anhemitonic pentatonic collection: 'is still used by the peasant-singers of Scotland and Ireland, and also by the natives of New Guinea, China, Java, Sumatra, and other Eastern nations. It is occasionally used in English folk-music' (p.44). In contradistinction to Grainger's modal theory, which was derived largely from observation, however limited, the modal theories of the Folk Song Society were at first based entirely on the conception of a set of pre-existing 'old scales ... known [amongst secular musicians] by the pseudo-Greek names'. This of course accorded well with the Romantic idea of a living survival of some older and purer pre-Raphaelite music in what was left of the as yet uncorrupted rural countryside, and this flavour of quaintly antique peasant modalism is still very much a part of the folk music cult.

Ex.26

(b) A new modal theory for Anglo-American folksong. A truly creative contribution to the theory of modality in folk music of the United Kingdom was made by Annie Gilchrist in a brief 'Note on the Modal System of Gaelic Tunes' (*JFSS*, (1910–13), iv, p.150; and see ex.26). Gilchrist's scheme is based on the set of five anhemitonic pentatonic octave species, which she expanded to hexatonic and heptatonic octave species by filling in the minor 3rds. Her attitude towards modalism in general was fully rooted in the late 19th-century presuppositions embodied in Sharp's chapter on 'The Modes' in that the pentatonic scales are regarded as more 'primitive' (p.150) and the hexatonic scales 'form a convenient index to the modifications of the pentatonic scale on its way towards a seven-note system' (p.153). Nonetheless her scheme is in no way *a priori* but rather is empirically founded on the specific collection to which her 'Note' is appended. Furthermore, she made a point of the necessary distinction between 'tonic' and 'final'. At the same time she drew attention to the musical uncertainties inherent in this kind of modal theory, uncertainties consequent on its need to make an assignment of tonic function to some one degree of every tune, whether or not the 'true tonic' can be established (p.153):

No doubt there will be differences of opinion regarding classification in some of these tunes, especially those in which the modes are mixed, and certain others in which it is difficult to believe that the last note of the tune is the true tonic. ... In examining the tunes in MS., there was also some uncertainty in certain cases as to where the tune really ended, owing to the fact of the song beginning with the chorus or refrain. [footnote] Some of these tunes, being of the 'circular' class, have *no* definite ending.

Gilchrist did not go so far as to suggest that some tunes might not have any definite tonic either, but she came closer here than any of those who followed her. The annotations to her table of modes (facing p.152; see ex.26) regarding strong and weak notes also testify to an extraordinary appreciation of the subtle importance of strong and weak degrees in a melody. She commented on modes 1-A, 2-A and 3-A that 'the E [marked *] is sometimes flattened in these three modes, more especially when occurring as the 7th degree of mode 3'. She also commented that 'The distinction between mode 1-A and mode 3-B, which appear to correspond in scale, lies in whether the 3rd or the 4th degree of the mode be an essential note, belonging to the original pentatonic framework'; and 'Similarly, in the case of mode 2-A and mode 4-B, the distinction lies in whether the 2nd or 3rd degree be the imported note'. Also 'The characteristic Highland mode formed by the filling-up of the gaps in

mode 1 by E♮ and B♭ is distinct in tonality from the Mixolydian mode, whose scale it resembles; it corresponds more nearly to the Hypo-Ionian, owing to the prominence of F and A, its 4th and 6th degrees'.

Gilchrist's modal scheme was adapted by Sharp for *English Folk Songs from the Southern Appalachians* in 1917 (see pp.xxx–xxxiv of the 'Introduction to the First Edition' in the second edition of 1932); the scheme thus adapted was thereafter cited or used by other studies, for instance Buchanan in 1939. The youngest descendant of Gilchrist's combined pentatonic-hexatonic-heptatonic scheme is the 'modestar' of Bertrand Bronson (*The Traditional Tunes of the Child Ballads*, ii, pp.xi–xiii, first described in his article 'Folksong and the Modes', 1946; repr. in Bronson, 1969). Bronson's diagram is a seven-pointed star schematically representing the connections of pentatonic, hexatonic, and heptatonic scale types, in terms of contrasting or overlapping scale degree content, by means of interior angles and intersections.

(ii) Melody type in Anglo-American folksong.

(a) Mode as a musical property. Bronson's modal designation for the tunes in *The Traditional Tunes of the Child Ballads* (1959–72, i) and his description of the system (p.xxviii) were, as he put it, 'generally either ignored or charged a little impatiently with being rather cryptic, or "fuzzy", or imperfectly described' (ii, p.xi). Whether such criticisms are apt or otherwise, there is one thing that Bronson did not attempt to do with his modes, and that is to use them as a basis for classification of the melodies. Kolinski (1968), opening with the words 'Bronson's classification of tonal structures' (p.208), merely criticized the modestar's pentatonically-based system for failing to be arranged like his own pentatonically-based system for ordering and classifying notated melodies (Kolinski, 1961). Cazden (1971) at one point referred to the 'imaginative epicycles of Bronson' (p.47) along with Sharp's 'church-mode plan' (p.57), and both are taken as being among the 'accepted mode classifications'. Yet neither for Sharp nor for Bronson was 'mode' a tool for classifying melodies, as is for instance Kolinski's congeries of modal 'tint-complexes' (Kolinski, 1961 and elsewhere).

Scholars have usually failed to make a clear distinction between mode in connection with melodic type and mode as a classifying rubric. Herzog (1937), observing that 'typology and classification are merely different facets of the same procedure', nonetheless warned against confusing them. In Bronson's monumental collection of ballads the hundreds of tunes that there are for some of the ballads are grouped and subdivided not according to modes but according to the tune families to which they belong. Bronson's modal theories have not prevented him from ordering the tunes with the greatest sensitivity to their melodic typology. The only claim he made for his cyclic formulation of modal scales is that 'the solid connections of the whole system show us how, in the chances of oral transmission, the same basic tune may pass from mode to mode almost imperceptibly' (ii, p.xiii). For Bronson, as for Sharp before him, 'mode' was an inherent musical property. As Sharp put it: 'Each of the modes has its own set of intervals from which it derives an individuality as characteristic and distinct as that of the major or minor. ... The character of every melody is, in part, derived from the mode in which it is cast' (1907, p.47).

(b) Tune families. Like the construction of modal theory, the consciousness of tune relationship has its roots in the work of the English Folk Song Society. Samuel P. Bayard observed of Gilchrist that she 'has, almost uncannily, the faculty that discerns the basic tune in its persistent phrasal pattern, contour, intervals, and diagnostic formulae' (1953, p.128). The collectors were well aware that the existence of different tunes for the same text and the singing of different texts to very similar tunes betokened tune 'types' or 'styles' at several levels of resemblance, and the pages of the *Journal of the Folk Song Society* are replete with references to such tune resemblances by the name of some particularly well-known tune of the kind. More recently the writers most concerned with the theory of tune relationships have been Bronson and, above all, Bayard.

The term 'tune family' was first used consistently by George P. Jackson, but it is indelibly associated with Bayard's name as a result of a series of papers on tune families stretching over three decades. From the outset Bayard dealt only with abstractions inferable from the tunes. His intention was 'to identify specific melodies in as many of their variant forms as possible' (1950). In the process of attempting to isolate factors common to tunes that singers, collectors and scholars with a wide acquaintance with folksong tunes agree to be related, he arrived at a certain number of important factors, no one of which is universally consistent in tunes of the same family, but many of which can be observed to cluster and form melodic prototypes. Among his observations on the relatedness of tunes is that 'the mode in which an air happens to be cast of course means nothing' (1939, p.125). In the same paper he asserted that 'the number of separate tunes is not large ... the well-known tunes in the British folk repertory [are] about fifty-five in number' (p.124), and he suggested three central factors in tune resemblance, namely, contour, important degrees of the scale, and stereotypical motifs (pp.125–6):

[1] consistently parallel melodic lines ... are much more important than any similarity in modal or rhythmic features
[2] strongly accented ... diagnostic tones
[3] closely related melodic formulae of progression and cadence

He went on to observe in more general terms that:

> the problems of variation can never be solved by thinking in terms either of independently composed tunes in great numbers, falling into similar conventional lines or of mere rearrangements and recombinations of stock musical phrases. ... The versions resemble each other in ways too deep and too intricately detailed to be accounted for in either manner.

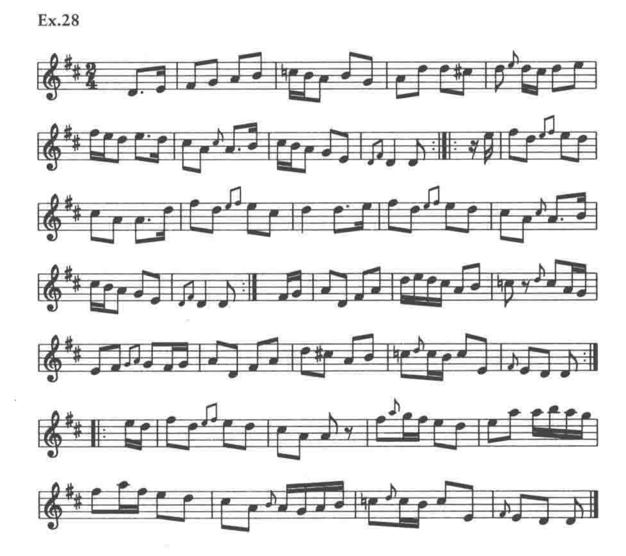
Over the subsequent decades Bayard refined, elaborated, and demonstrated the theoretical premises here set forth, without needing to modify them in any essential way. The specific number of tune families suggested varies trivially; in 1953 he wrote that 'over forty such tune-families are current' (1953, p.132), and went on to discuss seven of them thoroughly. In his 'Prolegomena to a Study of the Principal Melodic Families of Folksong' (1950, repr. 1961) Bayard developed his 1939 outline of the principal factors in tune resemblance in great detail, and mentioned yet another number of tune families: 'no fewer than thirty-five' (p.115). In the same article he referred to three hierarchical levels of tune relationship: 'tunes, tune-versions, and tune-families' (p.118). Bayard's one really extensive comparative analysis, 'Two Representative

Tune Families of British Tradition' (1954), is a full and convincing demonstration of his command.

Another study dealing directly with tune families is Bronson's 'Some Observations about Melodic Variations' (1950; rewritten in 1954 and so repr. in Bronson, 1969), and of course Bronson's grouping of tunes under each ballad in *The Traditional Tunes of the Child Ballads* is an epic demonstration of results of the tune family approach. Charles Seeger's 'Versions and Variants of the Tunes of "Barbara Allen"' (1966) is a sophisticated discussion and analysis of two of the tune families associated with this ballad. (In Bronson, ii, four tune families for 'Barbara Allen' are represented by over 200 individual tunes.) The 30 notated tunes analysed by Seeger are transcriptions from the holdings of the Archive of American Folk Song (Library of Congress) and may be heard on their recording AAFS L54.

Ex.27 shows skeleton outlines of six versions of the tune 'Demon Lover', taken from among those included by Sharp for two Child ballads in his *English Folk Songs from the Southern Appalachians* (2/1932). Versions of this tune sung to some other Child ballads may be seen in the same collection: 4-F, H, I ('Lady Isabel'), 7-H ('Earl Brand'), 13-G ('Edward'). Despite the apparent variety in scale type and several striking deviations of contour and emphasis they are patently the same tune in all but the narrowest sense.

While Bronson demonstrated the efficacy of the tune family concept for grouping tunes in collections, he criticized its use in theoretical ventures:



> Obviously, the knowing annotator achieves a gratifying sense of mastery within his range of familiarity, and this is good for his psyche. The game can be fascinating to those who like to play it. But ... will clarification be the end product, or only a patternless complexity like that of the interrelations of the human generations that begot this melodic flux? (1969, p.141).

Facing similar concerns, later scholars have tended to avoid further theorizing about tune families, although several have adopted the idea as a tool for categorizing and generalizing in area studies. Shapiro developed systematic refinements to this procedure which are appropriate for organizing large collections (1975).

A proposal for an expansion of the concept involves three basic principles – outlining, conjoining, and recombining – which may be applied to describe relationships between tunes in a given repertory (Cowdery, 1984; 1990). Unlike previous theoretical work with tune families, which often involved diachronic speculation concerning 'earlier' and 'later' versions based on historical records of dubious credibility, these principles address synchronic relationships between co-existent tunes, illuminating the creative processes of traditional musicians.

Outlining refers to the overall relationships illustrated in ex.27. Conjoining denotes the common traditional practice of combining a new melody with an older one. This procedure is particularly evident in dance tunes; for example, the two Irish polkas in ex.28 have different first sections which are conjoined to similar second sections. Versions of these second sections may be found in Bayard's 1954 study of 'The Job of Journeywork', where they are similarly conjoined to unrelated sections. Tunes related through recombining draw from a pool of melodic

Ex.28

Ex.29

motives which, through long association with each other, belong together somewhat like the characteristic features of explicit modal systems. The three Irish song melodies in ex.29 share certain melodic gestures – indicated as A, B and C – while their overall contours differ significantly. A and C are essentially the same motive at different pitch levels; this congenial symmetry may account for their frequent use together.

This augmentation of the tune family concept provides a link between theoretical and practical studies of traditional musics. Bayard himself acknowledged these three principles as compositional processes in his last major collection (1982, p.7), Quigley documented them in his study of a French Canadian fiddler and composer (1995, pp.104–5) and Jeffery noted similar evidence in the repertory of Gregorian chant (1992, pp.101–2).

(iii) Mode as musical property versus mode as category. Bayard's '35' or 'over 40' or '55' tune families are certainly comparable in order of magnitude with Gevaert's 47 *thèmes*, in contrast to the fixed number of modes in Gilchrist's, Sharp's or Bronson's systems, or in the eightfold system. But even Bronson has not proposed his system of modes as a set of superordinate categories for the tune families corresponding to the role of the eightfold system for Gevaert's *thèmes*. So far the modes of Anglo-American folksong, whatever they may be, have been treated by most of those who know the repertory best more as properties of individual items than as universal categories. All the same, there is a constantly recurring and obviously powerful urge to imbue all items believed to have a common mode with a common musical property so distinctive or so fundamental that it warrants claiming all those items as members of a modal category.

In the 20th-century interest in systematic modal order set alongside ever changing congeries of melodic types, it is certainly not going too far to see a parallel to similar relationships that have arisen at least twice before: between the eightfold system and the antiphons in the 9th century; and between the eight or the 12 modes and vocal polyphony in the 16th century. The same kinds of musical results also seem to ensue: modern professional folksingers compose 'in the modes', as had the late medieval composers of tropes and rhymed offices, or the late 16th- and 17th-century composers of collections ordered by the eightfold system or by Glarean's or Zarlino's 12 modes.

V. Middle East and Asia

1. Introduction: 'mode' as a musicological concept. By the mid-18th century, 'mode' in European languages meant a collection of degrees of a scale (and its aggregate intervallic content), being governed by a single chief degree: a mode was a scale with a tonic, which was the last note of a melody or the root of a final triad. This is the sense in which the major and minor scales, as well as the so-called 'church modes', are still deemed 'modes', and it was with this sense that the term 'mode' was first applied to phenomena and practices in other musical cultures.

The earliest full-scale attempt to deal with a modal system in a living non-European musical culture was Sir William Jones's 'On the Musical Modes of the Hindoos', first published in 1792, translated into German in 1802 by Dalberg and reprinted several times since then. He gave a systematic exposition, in terms of

> the variety of modes, or manners, in which the seven harmonic sounds [diatonic degrees of the scale] are perceived to move in succession, as each of them takes the lead, and consequently bears a new relation to the six others.... [Since] we find twelve semitones in the whole series, and, since each semitone may, in its turn, become the leader of a series formed after the model of every primary mode [diatonic octave species] we have seven times twelve, or eighty-four, modes in all.

Jones observed further that 'the Persians and the Hindoos (at least in their most popular system) have exactly eighty-four modes, though distinguished by different appellations and arranged in different classes'. As the last words imply, however, the number 84 is not necessarily obtained by multiplying the seven diatonic octave species by the 12 semitonal degrees of the total chromatic. That process may be seen as the theoretical basis of a Chinese system of 84 *diao* (see §5(i) below). The Iranian theoretical 84 was merely one of a number of Iranian and Arabic schemes, this one comprising the sum of 'twelve *makams* or *perdahs*, [plus] twenty-four *shobahs*, and forty-eight *gushas*', a scheme partly related to older Iranian and Arabic theories, and dimly reflected in present Iranian practice. The South Asian 'most popular system' is arrived at through the 'families of the six rāgas ... each of whom is ... wedded to five rāginīs ... and father of eight ... sons' (p.146), so that the South Asian 84 arises from six groups of 14 'modes' each, each group of 14 comprising one *rāga* plus five *rāginīs* plus eight sons. But this too was only one of many such symmetrical classification schemes, by no means the most widespread, and it is the only one that adds up to 84.

In any case, individual Iranian '*makams* or *perdahs*' and South Asian '*rāgas* and *rāginīs*' in musical practice do not fit the 18th-century European abstract scale-type 'mode' well. In fact almost a century earlier Jean Chardin had located the Iranian entity at the melodic rather than the scalar end of the spectrum: '*Perdah* is the Persian term which means "[the] tune of [a] song" [*air de chanson*], and they distinguish the tunes by the names of their ancient kings, and by names of provinces' (*Voyages*, 1711). Jones himself was well aware that: '*rāga*, which I translate as mode, properly signifies a *passion* or *affection* of the mind', and he knew of more specific ethic attributes as well.

It seems to have been Willard who first perceived the incompatibility of the standard European conception of 'mode' with the phenomenon of *rāga* in South Asian practice, in a perceptive discussion at the beginning of the chapter 'Of Rags and Raginees' in his *Treatise on the Music of Hindustan* (1834). The review in the *Journal of*

the Asiatic Society, xxv (1834) sums it up: 'The author [Captain Willard] corrects Sir William Jones' rendering of *Rág* by the expression "*mode*" or "*key*" for which the Hindus have the distinct word t'hat [*ṭhāṭ*]: *Rág* signifies rather "*tune*" or "*air*"'. But Willard in fact had not moved *rāga* quite wholly to the melodic end of the scale-tune spectrum: 'It is not strictly a tune ... it is likewise not a song, for able performers can adapt the words of a song to any Raginee; nor does a change of time destroy its inherent quality'. In short, Willard saw *rāga* as falling between the 19th-century European conceptions of 'mode' and 'tune', and he almost always left it untranslated.

The grey area between a comparatively undifferentiated scale-type 'mode' and a comparatively precisely determined 'tune' became a matter of continuing interest for European musicological scholarship only in the 20th century, at first as a result of greatly intensified work in the music of Eastern Christianity and Judaism. In the year before the outbreak of World War I a seminal article, 'L'octoëchos syrien' by the Benedictines Jeannin and Puyade in *Oriens christianus*, radically extended the scope of what had come to be understood as modal:

> The modality of a musical item is principally determined by the arrangement of intervals on the scale. But in the case where the arrangement of intervals is the same for several modes, there are other empirical means for distinguishing the modality of a particular melody: return of certain cadences or of certain melodic formulae, preponderance of certain dominant degrees, and lastly, the final note.

In the same year an article along similar lines was published by Idelsohn, who devoted his life to the collection and study of Jewish music. He defined the Arabic term *maqām*, as he had come to understand it from his vantage-point in Jerusalem in the closing years of the Ottoman Empire:

> In the musical sense, *maqām* is now used for 'tone'.... In the wider sense *maqām* in music signifies in effect *Musikweise*, that is, a musical type [*Musikart*] which makes use of its own proper degrees of the scale [*Tonstufen*] and motivic groups [*Motivgruppen*]. In no way may the concept *maqām* be identified with 'church mode' [*Kirchenmodus*] or even 'tonality' [*Tonart*]. For while these latter merely denote the scale in which tunes [*Weisen*] can be sung as desired, in *maqām* both scale type and melody type [*Tonleiter und Tonweise*] are comprised, and pre-eminently the latter. For in *maqām* the main emphasis is laid on the melody type [*Tonweise*], that is, on the organization and articulation of the tones [*Tongruppierung und Tongefüge*].

The definition of 'mode' that Idelsohn gave in 1929 is given earlier in this article (see above, §I); it differs in no essential particular from his definition of *maqām* in 1913.

In 1920 Egon Wellesz introduced Idelsohn's contrast into an article on the Serbian eightfold system (*osmoblasnyk*) (*ZMw*, ii, 1919–20):

> Now if one examines the eight groups of songs according to the characteristics of the church tones [*Kirchentöne*], one concludes that no differentiation seemingly conformable to the nature of the eight modes can be worked out. On the contrary, it turns out that in each group of songs certain formulae appear which in turn are lacking in the other groups, and that the presence of just these formulae is the essential characteristic for whatever group a melody is to be assigned to. This however leads us on to the path that Idelsohn and Jeannin-Puyade have shown for the analysis [*Erschliessung*] of Arabic and Syrian songs.

Here the new notion of melodic type and the traditional notion of church mode are still thought of as separate, even opposed. But an increasing awareness of the importance of melodic formula in Byzantine chant in time led Wellesz to equate the individual members of the (Byzantine) eightfold system (*oktōēchos*) with their melody types (1961): 'The mode, we may therefore conclude, is not merely a "scale" but the sum of all the formulae which constitute the quality of an Echos'. The melody type phenomena observed in *maqām* and *ēchos* are proposed as members of a larger metacultural musical entity:

> this principle of composition is of far greater importance than was at first thought. Further investigations have shown that it was not confined to the melodies of a few areas, but was the ruling principle of composition in Oriental music and, with the expansion of Christian music, spread over the whole Mediterranean basin.

The Indian *rāga* and Perso-Arabic *maqām*, as well as the Byzantine *ēchos*, thus independently came to be seen by European musicians and musicologists as falling between or combining together, or both, scale-type and melody-type. Furthermore, each term has had its own musicological history of association with the term 'mode' of European languages.

Similar associations of the European term 'mode' with technical words in Asian musical cultures still farther east are now widely accepted. For instance: '*Pathet* is the Javanese system of classifying gamelan pieces, usually translated as mode' (Becker, 1972); 'these modes, or *chōshi* as they are known in Japanese' (Garfias, 1975). The association of such culturally and linguistically diffused terms as *ēchos* (Greek), *maqām* (Arabic), *rāga* (Sanskrit), *pathet* (Javanese), and *chōshi* (Japanese) with the much expanded European concept of mode has naturally led to an almost unquestioned assumption of some minimal underlying metacultural or scientific category 'modality', to which concepts and phenomena of specific musical cultures might be referable as special cases. For example, Mantle Hood, in *The Ethnomusicologist* (1971), wrote that:

> in considering existing definitions of 'mode'.... We discovered that there were quite a few in print ... [but] none of them could be applied on an international level. In fact, all of them taken together, contradictions aside, could not account for Indian raga, Javanese patet, Persian dastgah, and modal practices of other musical cultures.... After spending four or five months examining modal practices in various parts of the world, the Seminar was able to construct a definition ... that rests on the assumption that mode itself is a continuum.
>
> Basic features of Mode seem to include the following: (1) a gapped scale ...; (2) a hierarchy of principal pitches; (3) the usage of ... ornamental pitches; and (4) extra-musical associations.

It is not clear, however, here or elsewhere, whether 'mode' in such a broad sense is an ontological or merely an epistemological object, an inherent musical property or a scientific paradigm. In the following sections several terms in Asian languages that have been associated with 'mode' and 'modality' are discussed with the aim of highlighting the similarities and, even more, the differences in the musical phenomena to which they refer in the different cultures.

The four kinds of modal entity whose comparison forms the focus of the following discussion are not only drawn from four different Asian musical cultures or genres but also represent four different points on the modal spectrum between abstract scale and fixed tune. The Middle Eastern *maqām*, Central Asian *makom* and particularly the Indian *rāga* are nearer the tune end; the *pathet* of Javanese gamelan music and particularly the *chōshi* of Japanese court music (*gagaku*) are nearer the scale end. But they differ strikingly in some much less abstract aspects of their performing practice. First, most obviously and most significantly, the art of West and

South Asian musical high cultures is pre-eminently the art of the virtuoso vocal or instrumental soloist, while the gamelan music of Java and the *gagaku* of Japan are for ensembles including many different types of melody instrument (sometimes including solo or choral vocal parts), performing simultaneously most of the time. Second, the number of named modal entities in the West and South Asian spheres, the number of *maqāmā* or *rāga*, runs to many dozens, even hundreds; the sets of central Javanese *pathet* or Japanese *chōshi* number fewer than ten entities each. Finally – and perhaps subsuming the dichotomies of tune versus scale, solo versus ensemble, and many versus few – the West Asian and Indian modal entities are primarily compositional-improvisational models, while the South-east and East Asian modal entities are primarily categories of a repertory.

2. Middle East and Central Asia: 'maqām', 'makom'

(i) The basic terms. *Maqām* (pl. *maqāmāt*; Turkish: *makam*, pl. *makamlar*) is an Arabic word meaning 'position', or 'place'. Its modal meanings ultimately derive from a basic meaning of 'tone' or 'degree of the scale', that is, a particular place in the general scale of all the pitches available in the system. The use of *maqām* in the sense of mode first became established in 15th-century Ottoman treatises written in Turkish, where it replaced the older Persian terms *pardeh* and *shedd*. The term *maqām* defined modal entities by their particular position on the general scale, thus introducing a new system of nominally equivalent note and *maqām* names. This system was adopted in Turkey and Arab countries of the Ottoman empire, but remained unknown in Persia. *Pardeh* continued to be used to denote 'fret' and latterly, 'key' of a piano; in this sense *pardeh* parallels the basic meaning of *maqām*, referring to a particular position in a general system of available pitches.

In contemporary usage, *maqām* is one of several terms used to denote two contrasting modal concepts: 1) tonal-melodic type and 2) cyclical genre. Analogous terms for *maqām* in the sense of tonal-melodic type are *naghma* ('tune', 'voice'), *ṭab'* ('nature', 'effect') and *gusheh* ('corner', 'piece'). *Naghma* is used interchangeably with *maqām* in speech, but rarely in published sources, in Arabic-speaking countries of the eastern Mediterranean. *Ṭab'*, the term traditionally used in the Maghrib (Algeria, Libya, Morocco and Tunisia), has largely been superceded by *maqām*. In Iran, individual modal entities called *gusheh*s are organized in 12 modal families called *dastgāh* (organization, system) and *maqām* refers only to scale type. Cyclical *maqām* genres include the Iranian *dastgāh*, Iraqi *maqām* (*maqām 'irāqī*), Azeri *mugam* or *mugam-dastgāh*, *maqom*, Uighur *muqam*, Turkish *fasıl*, Mevlevi *ayin*, eastern Mediterranean *waṣla* and North African *nūba*. Each of these genres comprises an ordered sequence of different kinds of performed items grouped together according to their modal character.

(ii) Modal entities and the general scale. In Arab, Turkish and Iranian traditions, modal entities are composed of particular scale degrees which are conceived as belonging to a general background collection known as the general scale. The general scale of Arab and Turkish music is in turn capable of generating an infinitude of particular modal complexes. Each of these complexes, composed of a succession of tones linked by certain intervallic relationships with inherent melodic functions, constitutes a special mode, or *maqām*.

The general scale of all three traditions is ultimately derived from the 17-note-per-octave scale of medieval Arab and Persian music theorists. Ṣafī al-Dīn's scale of 17 notes per octave, shown as frets on the *'ūd*, is derived from Pythagorean limma/comma divisions of the octave into two conjunct tetrachords, each comprising two whole steps (lima, limma, comma) and a limma half step, followed by a whole step. This arrangement provided the principal model for subsequent generations of theorists. The treatise of Prince Dimitrie Cantemir (1700) divides the general scale into a total of 33 scale degrees over two octaves, *yegâh* (*D*) to *tîz hüseynî* (*e′*), shown as fret positions on the *tanbur* (long-necked lute). Cantemir's fundamental octave *dügâh* (*A*) to *muhayyer* (*a*) is divided into 17 named notes of which eight are *tamam perdeler* (literally, whole frets) or basic scale degrees, and seven are *na-tamam* or *nim perdeler* (literally incomplete or half frets) or secondary scale degrees (Table 13, after Feldman, 1996, p.203). Individual *makamlar* consist of basic scale degrees alone or a mixture of basic and secondary scale degrees, but never of secondary scale degrees alone. Cantemir provides no precise interval measurements, but simply uses the note names to describe modal progressions or the tuning of the *tanbur*.

The traditional 17-degree scale was first reconceptualised as a 24 quarter-tone (*rub'*; pl. *arbā'*) per octave scale in Syria in the late 18th and early 19th centuries. The 24-tone scale was adopted in Egypt, Turkey and Persia in the early 20th century. In Arabic and Turkish usage, every degree has its own Arabic-Persian name, with Turkish versions differing slightly from the Arabic. In Persian music, number-position names, indicating the positions of the seven notes of the basic scale in numerical order,

were used until the 18th century. In the 20th century, Persian music adopted French solfège terms, which are also used in Arab and Turkish music as alternatives to indigenous note names. Western staff notation is widely used in all three traditions.

The general scale of Arab music comprises two octaves, from *yakāh* (*G*) to *jawāb tīk ḥijāz* (*g′*; see Table 14, after Marcus, 1989, p.99). The individual degrees fall into three hierarchical categories: 1) the fundamental scale degrees with independent Arabic-Persian names; these include the fundamental octave, from *rāst* to *kardān*: *c–d–e½♭–f–g–a–b½♭–c′*; 2) seven *arbā'* (half-tones, also *anṣāf*) per octave, whose Arabic-Persian names are generally the names of the particular *maqām* they characterize; *qarār* (lower octave) and *jawāb* (upper octave) qualify a standard name at the extreme ends of the scale; and 3) five *nīmāt* and five *tīkāt* per octave, named as *nīm* ('low') or *tīk* ('high') plus a standard name, divide the remaining undivided half-tones. Theorists recognizse basic melodic intervals of two, three, four and six quarter-tones; intervals of one and five quarter-tones are rare and their use is highly circumscribed. Although the 24-tone Arab scale was originally conceived as equal-tempered, this notion was challenged in the 20th century, and some Syrian theorists have adopted Pythagorean intonation under Turkish influence (*see also* ARAB MUSIC, §I, 6).

The Turkish 24-tone scale is based on precise interval measurements according to the Pythagorean system of commas (Table 15, after Signell, 1977, p.28). Turkish convention uses letter names a 4th below the Arabic, that is, the fundamental octave is notated *rast* (*G*) – *gerdânîye* (*g*). Theorists recognize five basic melodic intervals: small half-tone (four commas), large half-tone (five commas), small whole-tone (eight commas), large whole-tone (nine commas) and augmented 2nd (12 commas). In practice, both Turkish and Arab musicians may deviate from the theoretical intervals, their intonation depending on factors such as modal and melodic context, regional custom and individual preference.

45.	Tiz Çargâh	c
46.	Tiz Nim Hic.	d′–5
47.	Tiz Hicaz	d′–4
48.	Tiz Dik Hic.	d′–1

In Persian music theory, the 24 quarter-tone scale is conceived as equal-tempered. In practice, Farhat identifies five melodic intervals whose exact intonation is variable: small semitone (minor 2nd), small neutral tone, large neutral tone, whole-tone (major 2nd) and plus-tone (between a whole-tone and augmented 2nd). The whole-tone and semitone are relatively stable, the neutral tones are very flexible, and the plus-tone is particularly unstable (*see also* IRAN, §II, 2).

(iii) Modal nucleus and modal complex in Arab and Turkish music. In Arab and Turkish music theory, the smallest named modal entity is the tetrachord, or *jins* (pl. *ajnās*; Turkish *cins*; derived from Gk *genos*: 'genre') composed of four successive scale degrees (more rarely, trichords and pentachords are identified). An alternative term is *'iqd* (pl. *'uqūd*: 'necklace'). A fundamental concept of both Arab and Turkish music theory, tetrachords originated in medieval Arab treatises, but disappeared between the 16th and 20th centuries. They were reintroduced into Turkish music theory by Rauf Yekta and Sadettin Arel in the early 20th century, and to Arab music theory by Yekta's student, the Syrian SHAYKH 'ALĪ AL-DARWĪSH, principal informant of Rodolphe d'Erlanger. Tetrachords first appear in modern Arab music theory in the 1932 Cairo Congress publications (Kitāb, 1933; Recueil, 1934).

Individual *ajnās* combine in conjunct, disjunct, or overlapping combinations to form complex modal entities. The *ajnās* are identified by their root degree and intervallic structures, and they take the same name as the *maqām* in whose scale they appear as the initial, or root tetrachord. Arab music theory recognizes nine or 11 principal tetrachords; the larger grouping distinguishes *huzzām* (*sīkā* tetrachord) and *'irāq* (*sīkā* transposed to B½♭) from the *sīkā* trichord. Some 20 more *ajnās* are named in modern theoretical sources.

D'Erlanger presents the individual *maqāmāt* as separate ascending and descending scales of two or nearly two octaves comprising four to five consecutive *ajnās* in each direction, sometimes with alternative *ajnās*. The upper octaves do not necessarily replicate the lower. D'Erlanger's model influenced a generation of Arab music theorists, including al-Shawwā, al-Ḥilū and Maḥfūz. Present-day Arab and Turkish theorists have simplified this model: *maqāmāt* (*makamlar*) are typically presented as single octave ascending scales comprising two tetrachords.

(iv) Turko-Arabic simple and mixed modal complexes. Turkish *makamlar* and their Arab equivalents can be mixed together to form compounds (Turkish *mürekkep*; Arabic *murakkab* or *tarkīb*) in two different ways. In the first, a single *makam* dominates the composition and the second enters for a deceptive final cadence, as in ex.30*a*, the last line of a *şarkı* of the Turkish *makam beste-nigar* (*sabā* plus *irak*). Illustrations from the Arabic equivalent, the beginning and end of *taqsīm* in *bastah-nigār*, appear in ex.30*b*. The Turko-Arabic *makam beste-nigār* is composed of the modal nucleus of *makam Sabā* placed above that of *makam Irak*, with which *Sabā* has three scale degrees in common.

In the second type of compound, the constituent *makams*, which may have the same or different finals, co-exist as more-or-less equal partners throughout the piece. A consituent *makam* in either kind of compound need not be 'complete'; it is sufficient that enough motivic or

intervallic individuality, or both, be present for the *makam* to be identified (*see* TURKEY, §IV, 2).

The phenomenon of creating new *makams* by compounding existing ones is associated with the development of the *taksîm* (a novel, non-metred performance-generated genre) in Turkey in the 17th and 18th centuries. Cantemir uses the term *terkîb* to cover all subsidiary modal entities, including compounds. Of the 30 'functioning' *terkîb* he mentions, 12 belong to the first type of compound, and six to the second. New compounds proliferated from the middle to the end of the 18th century, when over 100 *terkîbs*, representing almost all the compounds known in modern Turkish music, were in use. The creation of *terkîbs* declined in the 19th century and virtually ceased in the 20th.

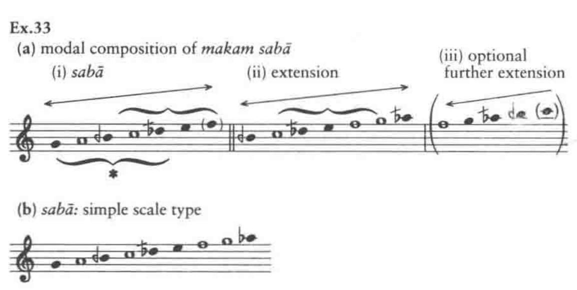
In modern Arab music, the phenomenon of compound *maqāmāt* is recognized more by theorists than by practising musicians, who tend to interpret combinations of *maqāmāt* as temporary modulations from a dominant *maqām*.

(v) Modal nucleus and modal complex in Persian music. In the limited sense of modal nucleus, the term *gusheh* is equivalent to *maqām* (*makam*), although in terms of registral span a typical *gusheh* is comparable rather to a *jins*. However, a *gusheh* is also a specific melodic entity, and certain *gushehs* have formal as well as modal characteristics: while most *gusheh* names identify particular modal structures, others denote characteristic melodic-rhythmic patterns (e.g. *kereshmeh*) or fixed compositions in particular forms or styles (e.g. *pishdarāmad*, *chāhārmezrāb*, *tasnif*, *reng*), whose modal identity is variable.

The sense of a larger modal complex is implicit in the concepts of *āvāz* or *dastgāh*, used to denote whole

Ex.31

collections of modally-related *gushehs* arranged in a fixed order. For example the expressions *dastgāh-e chāhārgāh* and *āvāz-e chāhārgāh* refer either to the complete series of *gushehs* whose principal modal nucleus is called *chāhārgāh*, or to a performance of selected items from the same series. However, both terms may also denote the principal modal nucleus itself, the *gusheh* called *darāmad* (introduction), presented at or near the beginning of the performance. In that sense, *dastgāh-e chāhārgāh* and *āvāz-e chāhārgāh* are synonymous with *darāmad-e chāhārgāh*. Ex.31 (after a synthesis of Farhat, 1990, pp.56–64; Nettl, 1972, *Daramad* and 'Notes'; and the *santūr* performance by Nasser Rastegar-Nejad on Lyrichord CD 7434: *In a Persian Garden*) presents the modal nuclei *gushehs* of *dastgāh-e chāhārgāh* in their characteristic order of performance, aligned to show the modal nuclei in overlapping registers. Also marked are the modal functions: Ā = *āqāz* ('initial'), F = *forud-e kāmel* ('final'), S = *shāhed* ('predominant'), and I = *ist* ('temporary stopping-note').



(vi) Modulation. The term is used in Western writings on Middle-Eastern music in three distinct senses. In the first, a modal nucleus is transposed in its entirety to another pitch level, as in ex.30*a* where *irak* is a downward transposition (by a 4th) of *segāh*. In the second, the intervallic structure of the modal nucleus and its position in the general scale remain constant, but there is a change in melodic emphasis, or melody type, as in ex.31, *mokhālef* and the version of *hesār* with *f*♮ and *e*♮ where *g* is replaced as predominant and final with *a*½♭. In the third, a modal nucleus is replaced by another at the same pitch level and with the same root degree, but with a different intervallic structure. This is a change in scale type, as in ex.32 (after Signell, 1977, p.83) where in the third line *makam sabā* on *a* is replaced by *makam hicaz* on *a*. All three senses may (but do not always) entail a change of *maqām* or *gusheh*. The upward extension of *makam sabā* shown in ex.33*a* (reduced from Signell, 1977, p.62F) involves changes of pitch level, scale type, and necessarily melody type, yet it is simply part of the larger domain of *makam Sabā*. In the Arabic tradition, *nahāwand* on *c* remains *nahāwand* when transposed onto *f*, but may become *būsalīk* when transposed onto *d* or *g*.

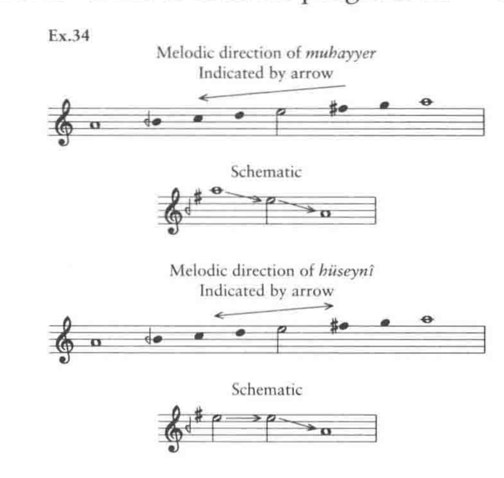
Evidence of modulation appears in 13th century treatises by Ṣafī al-Dīn and Quṭb al-Dīn, although in these early sources its substance remains obscure. Modulation, especially of the third type, was stimulated by the development of the *taksîm* in the 17th and 18th centuries.

Ex.32

Ex.33

For Cantemir, the major significance of the *taksîm* was its ability to create 'consonance' by uniting the disparate modal entities of the *makam* system through modulation. The seventh chapter of his treatise (1700) closes with a verbal description of a *taksîm* entitled 'nağme-i külliyât-i makamât' (compendium of the makam) that modulates through the entire *makam* system, presenting a total of 41 modal entites (*makam* and *terkîb*).

Cantemir has no term for any of the modulations he describes except transposition (*şedd*); *geçki*, the current



Turkish term for modulation, seems to be of 20th-century origin. Both Arabic and Turkish terminology distinguish between transposition (*taṣwīr* in Arabic; *şet* in Turkish) and other types of modulation (*intiqāl*, *taḥwīl* and *taghyīr* in Arabic). Every *maqām* can in theory be transposed onto all 24 degrees, although in practice, transpositions are normally at a 4th or 5th (the intervals at which the fundamental scale repeats).

Modulation plays an essential role in defining compositional structure. In Turkish music, almost all genres, including the *taksîm*, have the basic *zemîn-miyân-zemîn* structure (*ABA*) where the *zemîn* (ground) presents the nominal *makam* and the *miyân* (middle) modulates to a higher tessitura or a new *makam*, as in ex.32, a Turkish *ilâhî* (hymn) in *makam Sabâ*. In the third line (coinciding with a change of rhyme) the melody enters *makam Hicaz*, at the same pitch level as *Sabâ* but with a completely different intervallic structure. The fourth line returns to *Sabâ*. In the instrumental *peşrev* and *saz semaisi* and their Arab counterparts, the *samā'ī* and *bashraf*, each of the four sections (*hanes*; Arabic *khaānāt*) has a different *makam*, separated by a refrain (*teslîm*) in the nominal *makam*: AA′ BA′ CA′ DA′.

(vii) Tonal function and melodic progression. In the Turko-Arabic tradition, the concept of a distinctive melodic progression for individual *makams* around an octave framework (*seyir* in Turkish, from Arabic *sayr*: 'travel', 'journey') distinguishes *makam* from non-*makam* genres. While Turkish treatises from as early as the 15th century include terms for the opening degree (*ağaze-i, mahreç*), final (*mahat, karar*) and (occasionally) one other characteristic degree, Cantemir (1700) was the first Middle-Eastern music theorist both to define and create a term, 'hareket', for melodic progression. His prose descriptions of the characteristic melodic movement for each *makam* reflect a gradual development in the concept of *seyir* in 17th-century notated sources, a development that continued in both theoretical and practical traditions in the 18th and 19th centuries. In the 20th century, Turkish music theory, with its focus on tetrachords and intervals, has largely relegated *seyir* to the oral tradition of practical musicians. A notable exception is Rauf Yekta (1921) who provides notated *seyir* for 30 *makams*.

The *seyir* of each *makam* spans a framework of specific tonal centres: *karar* (final); *tiz durak* (octave above the final); *güçlü* (usually a 5th, 4th or occasionally a 3rd above the final) and *iptida* or *giriş* (entry tone, or tonal centre of the first musical phrase: generally the *karar*, *tîz durak* or *güçlü*). These degrees mark the beginning, middle and end points of temporary rest. *Makams* sharing the same scale, final and dominant are differentiated by their *seyir* and overall melodic direction, which may be either ascending (*karar, güçlü, karar*); descending (*tîz durak, güçlü, karar*); or ascending-descending (*güçlü, güçlü, karar*). *Hüseynî*, for example, may be considered the ascending-descending version of the descending *makam muhayyer* (ex.34, after Signell, 1977, pp.55–7). The direction that *makamlar* extend beyond their basic octave is related to their melodic direction: ascending *makamlar* tend to extend below the final, while descending *makamlar* extend into the octave above. Extending *makamlar* do not necessarily repeat at the octave (e.g. the upward extension of *makam Sabâ*; see above, ex.33).

Arab music has no universally recognized term for melodic progression. MUSHĀQA (1840), who describes

specific melodic paths for each of 95 *maqāmāt*, is the last Arab source to present melodic progression as a factor, independent of scale and final, in determining the identity of a *maqām*. D'Erlanger (1933; 1949) introduced a new method of describing melodic movement by specifying the order of *jins* in performance. Present-day Arab music theorists generally disregard melodic factors in defining individual *maqāmāt*, a tendency that reflects the lack of a uniform approach in Arab composition. Musicians distinguish between pre-composed genres, whose melodic direction is unspecified, and performance-generated genres, notably the *taqsīm*, which ascend from the final in an overall arch-like shape, regardless of *maqām*. Prior to the 1930s, *maqām* progressions were far more varied, reflecting Turkish concepts of melodic direction. Only 27 of Mushāqa's 95 *maqām* examples start on the final, and of the 68 that start above the final, 53 remain above until the final cadence. A maximum of 14 have an arch-like contour and one third have a clear descending progression. In d'Erlanger (1949) fewer than half the *maqāmāt* (only 45 of 101 illustrated) start with the root *jins*.

While some Western scholars have proposed that individual *maqāmāt* are defined by specific melodic motifs, the idea of obligatory, universally-recognized motifs, exclusive to particular *maqāmāt*, has been challenged by scholars such as Tūāma and al-Fūruqī. However, it seems that both Arab and Turkish traditions use typical cliché phrases to evoke particular *maqāmāt*, especially in performances of *taqsīm*.

In Arabic music, the term *qarār* ('final', or 'resting place') has been replaced by *asās* ('fundamental', 'principal') and *rukūz* ('centre') in the 20th century, reflecting changes in concept and function. The 1932 Cairo Congress proceedings used *qarār* and *asās* interchangeably; later sources use *asās* and *rukūz*. All three terms embrace the concepts of both final and anchor degree, that is, the root degree of the *maqām* on the general scale. However, the *qarār* was not necessarily either the lowest degree (e.g. in *'ajam*, *b♭* not *B♭* is the final) nor the predominant, since it could be neglected until the end of the performance. When the *maqāmāt* began to be presented as scales around the turn of the century, the final acquired the status of principal degree, with a new prominence in performance. The final may also determine nuances of intonation, for instance, *maqām rāst* and *bayyātī* use identical scale degrees; however, *e*½♭ is slightly higher in *rāst* (final *c*) than in *bayyātī* (final *d*).

Mushāqa (1840) is the first to use the term *ghammāz* to signify the degree second in importance to the final and octave. For Mushāqa this degree was always the 5th. Starting with d'Erlanger (1949), the *ghammāz* could also be the 4th or 3rd from the tonic. Present-day theorists equate the *ghammāz* with the lowest degree of the upper *jins* (in most cases, *g*) although the term itself is rarely used outside academic circles. *Markaz* or *marākiz* (centre) is used by d'Erlanger (1949, p.100) to signify 'all passing, momentary or secondary stopping points', effectively the initial notes of the constituent tetrachords of a *maqām*. The term is virtually unknown in Arabic sources.

The concept of a fixed starting degree has been controversial since 1904, when al-Khulā'ī described this concept as distinguishing Turkish from Arab traditions. D'Erlanger follows Mushāqa in specifying a distinctive starting note, which is not necessarily the final, for each *maqām*, but the idea met with only limited approval from the Cairo Congress. There is no commonly accepted Arabic term for starting note, and Arabic sources use a variety of descriptive phrases instead. D'Erlanger's terms *mabda'* and *madkhal* (1949) have been taken up by European scholars, but are not found in any Arab source. Powers (1980) is the only source that uses *āqāz*. Arab theorists and musicians alike deny the existence of a fixed starting note in contemporary practice.

While Persian music shares the same basic Turko-Arabic scales, it lacks the concept of octave division, or melodic progression (*seyir*) within the octave scale: most *gushehs* have an ambitus of no more than a 4th or 5th. Characteristic modal functions include the *āqāz* ('initial'), *forud-e kāmel* ('final'), *shāhed* ('predominant'), and *īst* ('temporary stopping-note'), as indicated above in ex.31.

(viii) Modal systems and cyclical genres. The *maqāms* of Arab and Turkish music are indefinite in number. D'Erlanger's list of 119 *maqāmāt* (1949; produced around 1930) of which 'hardly 30 are in common use' is based on the 95 *maqāmāt* Shaykh 'Alī al-Darwīsh collected in Aleppo and elsewhere in Syria. Other comprehensive lists since the 1930s have identified between 74 and 108 separate *maqāmāt*; the general tendency, however, has been to reduce lists to as few as 12 or eight. Marcus (1989) estimates that in Cairo, about 12 *maqāmāt* are common in mainstream practice, and about 12 more are used occasionally. Signell (1977) estimates 60 to 70 *makamlar* in Turkey.

The predominant system of classifying the Arab *maqāmāt* is by their final degrees. Mushāqa recognized eleven groups, al-Khulā'ī ten, and d'Erlanger proposed first eight (1933) then nine (1949); eight groups are standard, but some contemporary Arab sources recognize only four based on finals *c*, *d*, *e*½♭ and *f*. An alternative classification system introduced by the 1932 Cairo Congress groups the *maqāmāt* into varying numbers of *faṣīlas* ('families') according to the identity of their lower *jins*. The *faṣīlas* may in turn be divided into fundamental *maqāmāt*, which share the same name as the unifying *jins* of each *faṣīla*, and subsidiary or branch *maqāmāt* whose names are different. In a system proposed by an Egyptian government committee (1964), 46 basic *maqāms* are grouped into 11 *faṣīlas* which are further divided into two groups, according to whether or not the basic *jins* use three-quarter tone intervals.

All the above systems comprise phenomena of actual practice, and the criteria of categorization are purely musical (albeit rather mechanical or even arbitrary); as a result, the systems are on the whole non-symmetrical and potentially open-ended at each level. The fact that most of the older classification systems are wholly or partly symmetrical and evidently closed suggests that the classifying began with the system rather than with the phenomena, and that the phenomena which did not fit well were sometimes either forced in or left out. The system reported by Jones (see §V, 1, above) is an extreme case: 12 *maqāmāt*, 24 *shu'bas*, 48 *gushehs*, with each level double the previous level.

Between the 13th and 15th centuries, there developed a four-fold classification system: *pardeh* (*perde*), *shu'ba* (*şübe*) *āvāz* and *tarkīb* (*terkîb*). The distinctions were usually based on extra-musical, specifically astrological criteria. The 12 *maqāmāt* of al-Lādhiqī in the 15th century are correlated not only with three general ethical categories of Platonic origin, but also with the 12 zodiac signs and the four elements; his seven secondary *āvāz* correspond to the seven planets and his four *shu'bas* to the four elements. At the primary level, though, the *tarkīb* ('mixtures') are real musical entities, whose numbers are, in principle, infinite: 'in our time however there are about 30' (d'Erlanger, iv, p.428.

The ancient tension between open-ended and closed modal systems came to a head in Turkey in the 17th and 18th centuries, eventually resolving in distinctive Persian and Turko-Arabic traditions. It was, above all, the proliferation of mixed modal complexes (*terkîb*) in the *taksīm* that laid the foundation for the open-ended, non-hierarchical modal system of the Turko-Arabic tradition. By the 17th century, as concepts of *makam* and modal combination expanded, the standard four-fold divisions gave way to various two-fold systems, in which primary (*shedd*, *pardeh*, *maqām*, *naghma*) and secondary (*shu'ba*, *āvāz*, *tarkīb*) modal entities were distinguished according to purely musical criteria. During the 18th century, the various modal categories and their hierarchial relationships were gradually obliterated until by the mid-19th century all modal entities were called *makam*.

In Persian music, the core vocal repertory, *āvāz*, is based on memoriszed, non-metred melodic formulae called *gushehs*. *Gushehs* began to replace the older Persian composed forms in the late 18th century, providing a tune-like basis for improvisation. Their fixed arrangement in 12 modal families (*dastgāh*) in the 19th century produced the closed, hierarchical modal system (*radif*: 'row') of modern Persian music.

The terms *dastgāh* and *āvāz* refer not only to a system of classifying modal entities, but also to their particular cyclical arrangement in performance. The presentation of the principal modal complex in the *darāmad* is followed by a selection of *gushehs*, generally at successively higher levels, culminating in the highest point, or *owj*. The diverse modal entities are unified by the *forud* ('descent'), a cadential formula returning, both between *gushehs* and at the close of the performance, to the original modal area of the *darāmad*.

Like the Persian *āvāz*, the core vocal repertories of both the Azeri *mugam*, or *mugam-dastgāh*, and the Iraqi *maqām* comprise more-or-less fixed, non-metred melodic models. Both are still theoretically open-ended systems, comparable in their basic organization to the Persian repertory before its codification in the late 19th century. The 130 or so named modal entities of the Azeri repertory

include over a dozen main *mugams*; *sho'bes*, or secondary *mugams* which function primarily as pre-determined modulations within the main *mugam*; and *gushehs*, metred compositions whose melodic types may fit with more than one *mugam*. The *mugam-dastgāh* is an extended presentation of a principal *mugam* with excursions into other *mugams*, *sho'bes* and *gushehs*; unlike the *gushehs* of the Persian *dastgāh*, however, the precise arrangement of the Azeri melodies, including their sequence of modulations, is flexible.

The 50 or so Iraqi *maqāmāt* include some 30 modulatory pieces, or *quṭa'* which, like the Azeri *gushehs*, are transferable between *maqāmāt*. Like the Persian *dastgāh*, the modal-melodic features and overall structure of each *maqām* are pre-determined; the more complex *maqāms* ascend to a high register in a section called *al-meyāna*, comparable to the Persian *owj*.

The cyclical formats of the Iranian *dastgāh*, Azeri *mugam-dastgāh* and Iraqi *maqām* are characterized by tonal-melodic principles of sequencing. In the four national traditions of the North African *nūba* (pl. *nūbāt*), in contrast, the fundamental principle of sequencing is rhythmic-metric. The core vocal repertory, allegedly of medieval Andalusian origin, is based on specific rhythmic-metric patterns called *īqā'āt*, and grouped *maqām* into a fixed number of *nūbāt*: 11 in Morocco, 12 in Algeria, and 13 in both Tunisia and Libya; each *nūbā* is named after the *maqām* or predominant *maqām* of its component repertory. Within each *nūbā*, the individual songs are arranged in a fixed order of *īqā'āt*. The *nūbāt* themselves are conventionally performed in a fixed order, thus producing a macro-cycle based on tonal-melodic criteria. In theory, the *nūbāt* are closed systems, admitting no new repertory.

In the various Ottoman cyclical concert formats (e.g. the Mevlevi *âyîn*, the various types of *fasıl* and the eastern Mediterranean *waṣla*), the sequencing of individual items likewise emphasizes rhythmic-metric contrast, although the specific rhythmic-metric patterns (*uṣūls*) are variable. In each of these cyclical formats, different types of pre-composed genres are grouped together with improvisatory genres in the same predominant *makam*, in a specific order of performance.

The fixed, metred compositions constituting the core vocal cycle of the Central Asian *shashmakom* form both rhythmic-metric and tonal-melodic cycles. The principal part, *sarakhbār*, introduces the essential tonal-melodic material of the entire cycle; the gradually ascending tone-groups in the principal *maqām* culminate in a melodic and emotional climax, *owj*, where modulations, or *namuds* ('reflections'), are introduced before a final descent to the initial modal nucleus. In its tonal-melodic organization, the *sarakhbār* thus follows the basic structure of the Iranian *dastgāh* or Iraqi *maqām* with *meyāna*. After a series of song genres in the same principal mode (*shu'ba*) but different rhythmic-metric patterns, a seamless transition (*suparish*) introduces a new *shu'ba*, whose principal part (*nasr*) is again followed by a song or series of songs with characteristic rhythmic-metric patterns. Normally two or three *shu'bes* constitute a single performance. Until the mid-20th century, it was customary for a final *suparish* to lead back to the original *maqām*. With its sequencing of registral levels and modulations in the highest register, the *sarakhbār* foreshadows the sequencing of principal *maqām* followed by contrasting modal types (*shu'bes*) in the cycle as a whole.

See also BEDOUIN MUSIC.

3. SOUTH ASIA: 'RĀGA'.

(i) The basic terms. The two art musics of South Asia, Hindustani and Karnatak music, are similar and dissimilar in roughly the same degree as West Asian musics. Of the span of the scale-tune spectrum covered in West Asia by the Arabic word *maqām*, the major part, stretching towards the tune end, is designated in South Asia by the Sanskrit word *rāga* (*rāg* in North Indian languages, *rāgam* in the South). The feminine derivative *rāginī*, regularly found along with *rāga* in North Indian sources from the 16th century to the 19th, is identical with *rāga* in musical meaning.

The basic meaning of the Sanskrit word *rāga* is 'emotion', 'affect', 'passion'. Like the Arabic word *maqām* ('position', 'place') and the Persian word *dastgāh* ('system'), *rāga* is used widely in its common-language senses as well as in its musical sense. The strikingly different semantic fields of the musical terms *rāga* and *maqām* suggest that their musical senses may have less in common than at first appears. The identity of a *rāga* seems ultimately to devolve from the associative and expressive effects of its tonal configurations, while the identity of a *maqām* seems to depend more on the means of producing those configurations, ultimately on the position of the *maqām* in, and its relationship to, an instrumentally definable scale. This is not to say that a *rāga* cannot be discussed in terms of its scale. On the contrary, for several hundred years Indian theory has had precise, instrumentally determined means for describing intervallic structures and scale-types. But from the outset a clear distinction has been made between a *rāga* and its scale-type.

The word *ṭhāṭ* ('framework', 'arrangement') is used in the North precisely to denote 'scale-type'. The *ṭhāṭ* of a *rāga* was originally the 'arrangement' of frets that would produce the intervals needed for the *rāga*. The term *ṭhāṭ* first appears in the commentary of a musical treatise of 1609 (Somanātha, *Rāga-vibodha*), where it is used as the equivalent of the Sanskrit *mela* ('assembly'), an assembly of degrees of a scale. The word *melam* is still used in the sense of scale-type in South Indian theory; another 17th-century term *melakarta* ('that which produces a *mela*') is also used, and helps to prevent confusion with other musical senses of the word *melam*.

The terms *mūrcchanā* and *jāti*, theoretically connected with the idea of mode, are often encountered in the literature on Indian music, but refer to the musical systems of the pre-Islamic period. *Mūrcchanā* signified the sets of octave species (actually heptads) drawn from background pitch collections (a pitch collection is called *grāma*); the word *mūrcchanā* is not in current usage in this sense. *Jāti* – literally 'genre' or 'type' – is now used in only one restricted musical sense. It denotes the type of a *rāga* in terms of the number of scale degrees it includes within an octave: the *jāti* of a *rāga* can be *auḍava*, *ṣāḍava* or *sampūrṇa*, as it allows five, six or seven different scale degrees.

It is believed that the melodic types (*jāti*) first described in chapters 28–9 of the *Nāṭyaśāstra* must have been a classification for modal structures similar to *rāga*; the word *rāga* is not used as a technical musical term in the *Nāṭyaśāstra*, however, and appears for the first time in

that sense only in about the 8th century (*see* INDIA, §III, 2(ii)).

(ii) Modal entities and the general scale. There are a few evident parallels between South Asian and West Asian orderings of modal complex and general scale. For instance, in both cases a given modal entity will use only some of whatever pitch positions an octave span of the general scale makes available – in principle seven – and normally no more than two intervals of the semitone class will occur in succession in a single modal complex. But the designation of degrees of a scale in Indian music, their organization into modal complexes, and above all the relationship of modal complex to general scale are very different from West Asian conceptions.

The underlying point of reference in Indian pitch nomenclature is melodic function rather than intervallic structure. The basic note names are vocal solmization syllables that were only secondarily adapted to the designation of measured intervals. An octave span in the centre of the Indian general scale provides seven independent note names – *sa ri ga ma pa dha ni* – as compared with 14 in the central octave of the West Asian general scale. Extension to registers above or below produces replications of note names in the central octave. In other words, the basic set of West Asian note names denotes in principle a general scale of all available pitches, while the basic set of Indian note names denotes degrees of the scale of any possible modal entity but without specifying precise pitch relationships.

To provide for more precise description, Indian theory declares that some one particular scale-type, some particular intervallic arrangement of seven pitch positions, is to be deemed 'basic' and that any pitches other than those occurring in the defined 'basic' scale will be considered as having been 'altered'. 'Altered' scale degrees have the same names as 'basic' ones, but with an attributive term added.

The term denoting a degree of a solmization scale is *svara*. A *svara* in the 'basic' scale is called 'pure' (*śuddha*); any alteration of its pitch makes it 'modified' (*vikṛta*), and different terms for designating the 'modified' degrees came into use. By the 17th century the designation of pitch as 'pure' or 'modified' had been adapted to the fret positions on the contemporary *vīṇā*. The frets provided for 12 semitone positions in an octave. Note names of the seven 'pure' solmization degrees (*svara*) plus from five to ten 'alterations' of them (including enharmonic equivalents) were assigned to the semitone positions determined by the frets, each of which was called *svarasthāna* ('position for the solmization degrees'). From the general scale of 12 such positions to the octave, various systems of seven-degree scale-types were extracted. These systems were based on intervallic structures found in *rāga* of contemporary practice, and named for them; each of these was known as a *mela* or *ṭhāṭ*.

The distinction between a general scale of available pitches and numerous particular scale-types is an important part of Indian scale theory today, for both Hindustani and Karnatak music. The particular scale-types may be considered either as abstractions from *rāga* (modal entities) or as selected subsets of all the available pitch positions.

(iii) The system tonic. The emphasis in modern Indian theory on an abstract scale-type (*mela* or *ṭhāṭ*) intervening between the general scale (the whole set of pitch positions) and a specific modal complex (the *rāga*) is directly related to a basic feature of Indian music that radically differentiates it from West Asian music. Every Indian *rāga* has a tonic, the *svara* named *sa*, which occurs in every *rāga* and which has only one *svarasthāna*, that is, no higher or lower varieties. In terms of the Indian general scale all *rāga* have the same tonic, unlike the Turkish, Arabic or Iranian *maqām*. (The scale degree *pa*, a 5th above *sa*, also has no higher or lower varieties, but it is omitted altogether in some *rāga*, such as those illustrated below in exx.35 and 36.) All the abstract seven-degree scale-types (*ṭhāṭ* and *mela*) take *sa* as the first degree. The pitch used by a performer for *sa* is the system tonic for every item he or she may render. In Hindustani music it is the *sur*, in Karnatak music the *śruti* or *ādhāra-ṣaḍja*.

Note that 'tonic' does not mean 'final' nor 'predominant' nor any other modal function. The tonic in Indian music belongs to the system as a whole, not to individual modal complexes. Every *rāga*, like every *maqām*, has its own set of modal functions and its own internal melodic and harmonic relationships, motif to motif as well as note to note. But beyond and in addition to all that, every note and every motif and every relationship is additionally related to the system tonic. In normal performance the system tonic is constantly present as an unchanging drone, in contrast to the sporadic drones of West Asian music, which may change pitch not only from one modal entity to another but also between one part and another in the same modal entity. Of course *sa* as a degree of the scale may well have a modal function specific to the *rāga* as well, but that is not the same as its general function as tonic for the whole system.

As a rule a performer at the end of an item will indeed subside to the system tonic; but this is 'repose' not in the sense of 'finality' for the particular *rāga* being performed but in a universal sense. In the Hindustani *rāga Mārvā*, for example (see ex.35*a*, after O. Thakur, *Saṅgītāñjalī*, iv, 134), the degree *sa* (*c′*) is mostly avoided, and this avoidance is a most essential element in the individuality of the *rāga*. When *Mārvā* finally subsides to *sa*, with no more motions towards other degrees, it is the system tonic, not a modal tonic, that has emerged. The system tonic, in short, pervades and overrides all *rāga*; by being a required part of each it is a definitive part of none.

There is no tonic of this kind in West Asian music. If one chooses to take 'tonic' as synonymous with the modal function *qarār* ('final, repose') or with *shāhed-ghammāz* ('predominant'), or any other modal function, then West Asian modal entities have different tonics, in terms of the background system. So for example simple melodies in the Arabic *maqām sīkā* and *maqām rāst* work with the same basic aggregate of intervals – the nucleus may be written *c′*-*d′*-*e*–½♭′-*f′*-*g′* – and are distinguished sometimes only by whether they cadence finally to *e*–½♭′ (*sīkā*) or *c′* (*rāst*). In Indian music the system tonic and the general scale are inseparable, and together they provide the frame of reference for the individual modal entities, the *rāga*. In West Asian music there is a general scale as frame of reference, but no system tonic.

(iv) Modal nucleus and modal entity. An Indian *rāga* in performance is developed in the same general way as a Persian *āvāz* (see above, ex.32): low-register modal nuclei are brought in first; then the general tessitura moves up through ever higher-pitched modal nuclei (with occasional *forud*-like gestures back to the original cadential material);

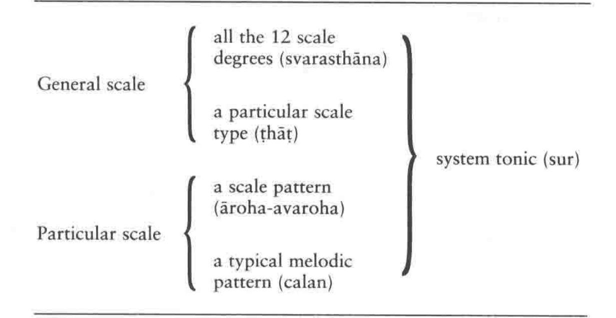
after the highpoint has been established a return to the original register is made. (Ex.35*a*(i), *b*(i), after O. Thakur, iv, pp.109–10, shows typical though compressed sequences of phrases in two Hindustani *rāga*.)

The characteristic Persian use of separate names for different levels of register of the same modal complex, however, has no counterpart in Indian music. Instead a general term *aṅga* – 'limb' (of the body), 'member', 'component' – may be coupled with various attributives to designate different 'components' of a *rāga*. The compounds *pūrvāṅga* and *uttarāṅga* designate formal and registral components or both, *mukhyāṅga* and *rāgāṅga* designate thematic or motivic components, which are referred to specific *rāga* by compounds with the *rāga* names, such as *kānaḍāṅga* or *bihāgāṅga*. All these compounds extend the basic term *aṅga* in many different directions but all convey the fundamental sense of a distinctive yet fully integrated part of some larger whole. (The word *rāgaṅga* is used in Karnatak music with a different meaning, where it signifies a *rāga* which is used as a scale-type, a *melekarta*.)

The two principal components of a *rāga* are the *pūrvāṅga* 'prior component' and *uttarāṅga* 'higher component', to give *pūrva* and *uttara* their primary meanings. Actually two contrasts are implied in the dichotomy between *pūrva* and *uttara*: prior-subsequent (temporal) and lower-higher (registral). These contrasts are of course mutually consistent, since in a typical presentation of a *rāga* the lower-pitched material is in fact supposed to appear first, the higher-pitched afterwards as a 'response' (another meaning of *uttara*). Ex.36*a*, *b*, shows three registrally delineated components (*aṅga*) of the Hindustani *rāga Mārvā* and *rāga Pūriyā*, based on the epitomes in ex.35*a*(i), *b*(i). The first *aṅga* to be fully developed in performance, even before the full elaboration of the *pūrvāṅga*, is the *mandra* ('low [register]'); in a full rendition there would also be an extension of the *uttarāṅga* into the *tāra saptaka* ('high heptad') before the return to the *pūrvāṅga*. (In ex.36 T = *sa* ('system tonic'), V = *vādī* ('predominant'), S = *saṃvādī* ('secondary predominant').)

The registral components of an Indian *rāga* contrast with their West Asian counterparts in yet another way. In addition to other features, a *rāga* is almost always characterized by one or more striking motivic tags, by recognizable thematic elements. Such 'stereotyped motifs'



are not merely ancillary to the *rāga* system, they are its central feature. One term for such an element is *mukhyāṅga*, 'chief component'. Ex.35*a*(ii), *b*(ii), show *mukhyāṅga* for *rāga Mārvā* and *Pūriyā*. Emphasis on their modal degrees is of course part of the identity of each *rāga*, but in *Pūriyā* particularly there are characteristic melodic ideas dominating every stage of the proceedings (see ex.35*b* (i)). In the *pūrvāṅga* of *Pūriyā* the last two segments of units [4] and [7] represent a characteristic rising contour followed by the cadential figure; unit [2] is another version of the same sequence, and unit [3] is a less characteristic form of the rising figure (as before, ending with *ga* resolved from a long held *ma*). In the *uttarāṅga* the configuration *ma-dha-s'a* establishing the upper tonic is striking, but this motif is found in a number of other Hindustani *rāga*. Absolutely characteristic for *Pūriyā*, though, is the way of making the descent from *ni* to *ga* that is shown in unit [6]. In any rendition (improvised or otherwise) of a *rāga* some such absolutely characteristic phrases, or group of phrases, of the *rāga* must be heard first, before anything else, so that the identity of the *rāga* is unmistakably clear.

A glance through the sample procedures (*calan*) for *Mārvā* and *Pūriyā* shown in ex.35 will illustrate how each thematic-registral component is fully developed in both rising and falling configurations before a shift is made to the next level. In *Pūriyā*, for instance, units [1–2], [3–4], [5–6] and [7] are each self-contained cycles within *mandra*, *pūrvāṅga*, *uttarāṅga* and return to *pūrvāṅga*, respectively. Yet the levels can be bridged by a wide-ranging flourish across two or more registers, as in the *Mārvā calan* in the middle segment of unit [4], or in the *Pūriyā calan* at the beginning of unit [5]. To run through such a full sweep of a *rāga* is to show its *āroha* and *avaroha*, its ascent and descent. Indian theoretical descriptions tend to summarize *rāga* in terms of a full scalar ascent and descent – *āroha* and *avaroha* – across the registers, showing in the process both which degrees in the *mela* or *ṭhāṭ* (abstract scale type) are to be omitted (*varjya*), and which degrees (if any) occur out of straight ascending or descending order (*vakra*) as a result of required motivic configurations. Ex.35*a*(iii), *b*(iii) shows the *āroha* and *avaroha* for *Mārvā* and *Pūriyā* as given by Omkarnath Thakur. In the *Pūriyā āroha-avaroha* the suggested ascent-descent is so characterized by out of order scale degrees (*vakra svara*) as to be no 'ascent-descent' at all but rather an abbreviated *calan* ('procedure'). His ascent-descent for *Mārvā* is a more straightforward scale pattern, though it does show how the system tonic *sa* (C) is characteristically omitted (*varjya*) in the ascent.

The conventional type of ascent-descent description adds yet another stage to the progressive crystallization of modal individuality from the general to the particular scale. The points on the scale-tune continuum for a Hindustani *rāga* can be summed up as in Table 16, reading from top to bottom. The same scheme would apply to the description of a Karnatak *rāgam*, substituting the words *mela* for *ṭhāṭ*, *sañcāra* for *calan* and *śruti* for *sur*.

TABLE 16

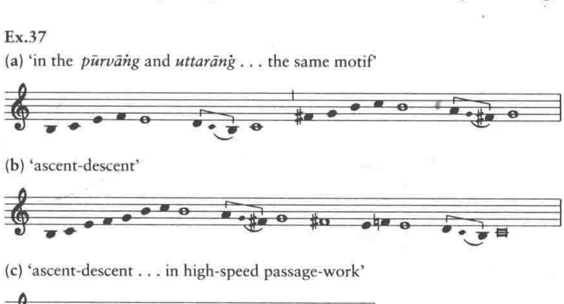
(v) 'Pure' and 'mixed' modal entities. An old tripartite classification divides *rāgas* into *śuddha* ('pure'), *chāyālaga* ('[with] tinges added' from other *rāgas*), and *sankīrṇa* ('mixed'). This appears not unlike the distinction of simple and compound *maqām* in Turkish and Arabic music, but there are significant differences. The underlying conception of 'pure' (*śuddha*) in this context has nothing to do with the mechanics of mixed versus unmixed scale types, but rather with how a given *rāga* is directly apprehended. 'Pure' means uncontaminated by melodic configurations audibly reminiscent of other *rāga*. As explained by Somanātha in 1609, 'pure [*śuddha*] is what is pleasing by itself, that is of its own accord, and without resorting to other tinges [*chāyā*]' (*Rāga-vibodha*, iv, 3, comm.; cf. Kallinātha comm. *Sangīta-ratnākara*, ii, 133).

This conception is still current. O. Thakur (ii, 1954, p.1) began by defining 'purity' of *rāga* the same way, then speculated that a concomitant feature of 'pure' *rāga* may be parallel tetrachords:

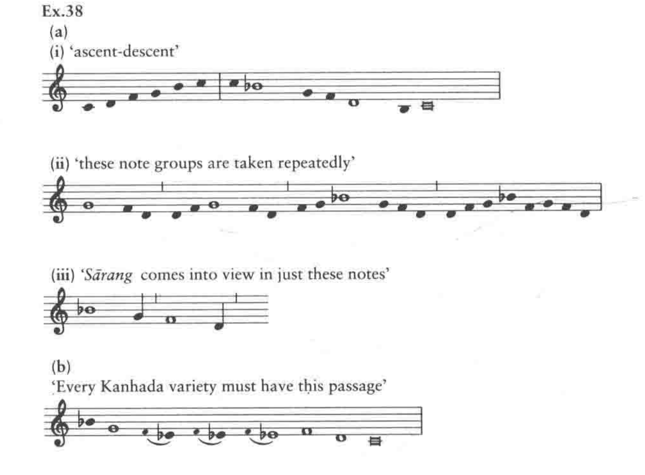


> A *rāg* in which there is no tinge or mixture [*chāyā yā miśraṅ*] of another *rāg* is regarded as a pure [*śuddha*] *rāg*. But there is another key for understanding pure *rāg*, arising from experience .... In the pure *rāg* the same [intervallic] structure of degrees of the scale is found in the *pūrvāṅg* and uttarāṅg [lower and upper sections of the central octave]. There are even some *rāg* of this sort in which the same motif is found in both components [*aṅga*]. *Bihāg* is one such *rāg*; the [parallel] motifs in *bihāg* are like this: [ex.37*a*].

Thakur then showed an *āroha-avaroha* ('ascent-descent') incorporating these figures (ex.37*b*), and a simple rising-falling scale (ex.37*c*).

The conception of *chāyālaga* – 'a tinge [of another *rāga*] added' – is the clearest illustration of the difference between the Turkish and Arabic and the Indian approaches to mixture of modal entities. Since the *chāyā* ('shadow', 'image', 'reflection', tinge') of a *rāga* is produced whenever a particular melodic configuration brings that *rāga* to mind, there need be neither a change of register nor a change of scale-type for the *chāyā* of an extraneous *rāga* to be evoked. A characteristic motif from the other *rāga*, or even an emphasis on one of its modal degrees (if that contrasts with those of the established *rāga*) is sufficient.

Ex.38*a* (after O. Thakur, i, 39) shows a few configurations illustrating the pentatonic Hindustani *rāga Sārang*.



Ex.37

(a) 'in the *pūrvāṅg* and *uttarāṅg* . . . the same motif'

(b) 'ascent-descent'

(c) 'ascent-descent . . . in high-speed passage-work'

A *chāyā* ('tinge') of this *rāga* in turn strongly permeates the large and important group of Kānaḍā *rāga*, of which one, *Darbārī Kānaḍā*, may be the most widely performed and recorded of all Hindustani *rāga*.

The link among all *rāga* of the *Kānaḍā* class is a recognizable melodic configuration with several elements (Ratanjankar, 1951, 103):

The mark of the Kanhada [Kānaḍā] *anga* [component] is an oscillating Komal Gandhara [*ga*], Komal Ni-Pancham Swara Sangati [*ni-pa* interval] and Vakra Gandhara in the *avaroha* [out-of-order *ga* in the descent]. To illustrate: [see ex.38*b*]. Every Kanhada variety must have this passage, whatever else it may have.

Ex.39*a* is a *calan* for the *rāga Darbārī Kānaḍā*. The *Kānaḍā* component appears in full in the final descent at the end, and elements of it appear separately earlier; all are marked *.

The *chāyā* ('tinge') of *Sārang* permeates the *rāga Darbārī Kānaḍā* because of the prominence of two of its principal elements as parts of the *Kānaḍā* component (O. Thakur, v, 122):

The very sustenance of this *rāg* [Darbārī Kānaḍā] is coming onto these *Sārang* notes *b♭′-g′* [*ni-pa*] and *f′-d′* [*ma-ri*]; ... taking these two intervals in the descent is unavoidable because from them the *rāg* is manifested. It is true what the learned say, that the *Kānaḍā* component is formed by the use of out-of-order *e♭′* [*ga*] and *a♭′* [*dha*] in the *Sārang* degrees of the scale [i.e. *ni-pa* and *ma-ri* become *dha-ni-pa* and *ga-ma-ri*]. These *Sārang* elements are found in almost all *rāg* of the *Kānaḍā* type.

The addition of *dha* in the *ni-pa* component to make the *uttarāṅga* descent in *Darbārī Kānaḍā* is not a matter of a different scale-type for *Darbārī* than for *Sārang*. The *rāga Sahānā* (ex.39*d*) uses *śuddha dha*, and *Nāyakī* (ex.39*c*), like *Sārang* itself, has no sixth degree at all. Nonetheless, all three are clearly *Kānaḍā* melodic types, and *a fortiori* all three show a *chāyā* ('tinge') of *Sārang* in the *uttarāṅga* because of the *ni-pa*.

The *Kānaḍā* component, as a whole or in part, provides much of the descent material for the *rāga* in the *Kānaḍā* group, as may be seen in the four *rāga* illustrated in ex.39*a–d*; the *Kānaḍā* component is marked *. Each has its own melodic individuality as well as its own *rāgāṅga* – *rāga* component – that is, its characteristic motivic configurations (marked with daggers in ex.39).

The melodic contrasts among these four related *rāga* in some cases also entail registral emphasis or pace, or both. For instance, a contrast of serious and stately (*gambhīr*) versus playful and wild (*cancal*) in *Darbārī* versus *Aḍāṇā* is a reflection of the rather faster than average performing tradition of *Aḍāṇā* as well as of its characteristic emphasis on a higher tessitura.

Thus the *Kānaḍā rāga* illustrated in ex.39 show a twofold layering of purely melodic allusion. All the *rāga* have the elements of the *Kānaḍā* component, a common *rāgāṅga*; but in addition the *Kānaḍāṅga* in all its contexts incorporates a shading, a 'tinge', of the 'pure' *rāga Sārang*.

None of these *Kānaḍā rāga*, however, would be called *sankīrṇa*, that is 'mixed', since none of the individuating non-*Kānaḍā* components by itself suggests any different *rāga*. It is quite otherwise with another much-performed and recorded Hindustani *rāga*, a variety of *Bihāg* called *Māru Bihāg*, in which virtually every element is also an element in another fully independent *rāga*. The configurations of *Māru Bihāg* are illustrated in ex.40; bracketed numbers in ex.40*a* are keyed to O. Thakur's analysis (ii, 15):

This *rāg* [*Māru Bihāg*] has obtained a widespread currency these days. Going *sarinisa*, *ga-ma* [1] and then back to *ga* is quite like *Bihāg*; but if one makes a pause on *ma* it [*Bihāg*] is suppressed and the *chāyā* of *Nand* is shown. Having shown its *chāyā* to that extent, then do *pa ma ma ga-sa* and again *Bihāg* is manifested [2]. And from then doing *sa-ga-ma♯ pa gama♯-pa* [3], at that point comes a view of *Suhāg*. In the *uttarāṅg*, show the *chāyā* of *Nand* [with] *pa dha ni pa, dha ♯ma, pa ga* [4] for the *Bihāg* component [i.e. instead of using the *uttarāṅg* in the *Bihāg* fashion, as in the second unit of ex.37*a*, do the same notes in such a way as to call to mind the *rāga Nand*]. Then couple this with the *Kalyāṇ* motif *♯ma ga gari-sa* [5]. From these gestures collectively a complete form of the *rāg* [*Māru Bihāg*] stands forth. Remember that

Ex.40

showing any one component repeatedly in the whole structure of this *rāg* will be a mistake. The *rāg* arises from the mingling of the components indicated above. Therefore when singing this mixed [*sankīrṇa*] *rāg* one has to develop it keeping in mind the varying movements in its assorted components.

In ex.40*b* a typical *calan* of *Māru Bihāg* is shown. Of the elements not already identified in the above analysis only the *sa-ga-ma-ga* in the last segment is special to *Māru Bihāg*. The approach to and descent from the upper tonic are found in the already mentioned *rāga Nand*, which is itself a mixed *rāga*; the upper register descent, considered separately, shows a *chāyā* ('tinge') of *Kalyāṇ*. Ex.40*c* is a less elaborate form of the first three segments of ex.40*b*, the *rāgāṅga* or *pakaḍ* ('catch') for *Māru Bihāg*.

(vi) Modal functions. Modal functions in Indian music have been defined in two ways: according to general tonal function; and according to phrase structure. Sets of terms for each exist in traditional music theory, both originating from lists in the *Nāṭyaśāstra*, where they are applied to *jāti*; hence the names of modal functions antedate the appearance of the word *rāga* in the meaning of modal entity: *vādī*: 'sonant' (i.e. sounding out); *saṃvādī*: 'consonant'; *anuvādī*: 'assonant' (i.e. auxiliary); *vivādī*: 'dissonant'. These four terms originally designated interval classes (*vādī* being unison and octave), but by an easy transition came to be applied to individual degrees of the scale as well. The last two terms are obsolete, but *vādī* and *saṃvādī* are important in Hindustani terminology, where they designate the 'predominant' and 'secondary predominant' degrees in a *rāga*. In ex.36 and ex.39 – the *Mārvā* and *Pūriyā* registral segmentations and the outline of four *Kānaḍā* type *rāga* – these two modal functions are marked 'V' and 'S'. *Vādī* is analogous to the Iranian *shedd*; *saṃvādī* would be analogous to the *shedd* of a principal *gusheh* in another register (see §V, 2(i) above and ex.31).

Two things may be observed of the *Mārvā* and *Pūriyā* modal functions (and compare also the melodic outlines in ex.35). First, the two *rāga* share the same scale type exactly, and a contrast in the *vādī-saṃvādī* pair is a major aspect of their modal differentiation. *Mārvā* stresses the degrees *komal* ('flat') *ri* and *dha*. The chief degrees of *Pūriyā* are *ga* – the normal phrase final in both *pūrvāṅga* ascent and *uttarāṅga* descent, in both cases usually following a prolonged *tīvra* ('sharp') *ma* – and *ni* at phrase beginnings, and often sustained. Second, while the *vādī-saṃvādī* degrees are normally mutually separated by 4th or 5th, the 4th or 5th is not necessarily perfect (though it almost always is); in *Mārvā* the augmented 5th or diminished 4th interval of *vādī* and *saṃvādī* is due to the retention of the traditionally predominant pair even after the original scale type of *Mārvā* had undergone a change.

The registral placement of predominant and secondary predominant degrees – *vādī* and *saṃvādī* in the four *Kānaḍā rāga* illustrated in ex.39 – suggests the enormous range of contrasting possibilities available even to melodically related modal entities. Four different predominant pitches (*vādī*) are represented: one is high (*Aḍāṇā*) and the others are low; two are established in descent (*Nāyakī* and *Sahānā*), one is established in the ascent (*Aḍāṇā*), and the oscillating *komal ga* of *Darbārī* is approached freely from both sides. (According to a different view, the *vādī* of *Darbārī* is *ri* and the *saṃvādī* is *pa*.)

The other way of characterizing the function of a single degree of the scale in a modal entity is according to registral or temporal position. The various forms of the rather longer list of such terms differ slightly in different sources and at different times or places. The following list of *rāga* characteristics – *rāga-lakṣaṇa* – is typical; it is taken proximately from Śarṅgadeva (ii, 23–4), where it is said that the degrees of the scale exhibiting these features of a *rāga* must be made manifest in an *ālāpa*, that is, in an improvised exposition:

1. *graha*: initial
2. *aṃśa*: predominant
3. *mandra*: low point
4. *tāra*: high point
5. *nyāsa*: final
6. *apanyāsa*: secondary final
7. *alpatva*: weakness: a degree of the scale that is not repeated (*anabhyāsa*), and is 'skipped over' (*langhana*), that is, omitted or 'touched lightly' as a passing note
8. *bahutva*: strength: a degree of the scale which can be repeated (*abhyāsa*), and is not 'skipped over' (*alanghana*)
9. *ṣāḍava*: hexatonic (one of seven possible degrees of the scale is wholly absent)
10. *auḍava*: pentatonic (two degrees of the scale are wholly absent)

The purely negative property of complete absence – today called *varjatva* – is covered by characteristics 9 and 10. The two criteria for strength/weakness of a degree are reiteration (or presumably prolongation) and temporary omission or 'touching lightly' (see Śarṅgadeva, i.7, 49–50; Widdess, 1995, 264–7). The *mandra-tāra* 'low point-high point' couple – *lakṣana* no.3 and no.4 above – is associated in ancient and modern times alike with the registers below and above the central operating register. The simple designation of specific degrees of the scale as outer limits is not common, though it is easy in almost any *rāga* to see points where to ascend or descend beyond a certain degree of the scale would require further movement in the same direction in order to complete the gesture thereby begun. For instance, in the Hindustani *rāg Pūriyā* illustrated in ex.35*b* and ex.36*b*, the note *ga* is a phrase ending in descent. To go below a low *ga* in the *mandra* register would require continuing through low *ri* to low *sa*, with the sequence *ma-ga-ri-sa*, since *ri* can neither begin nor

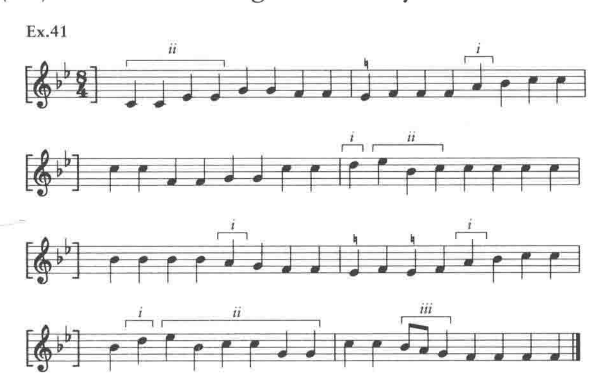
end a phrase in *Pūriyā*; hence, low *ga* is an effective lower limit to a rendition of *Pūriyā* for most singers.

The remaining four modal functions – nos. 1, 2, 5 and 6 – are analogous to the four principal modal functions in the modal entities of West Asia, as suggested in Table 17.

In the older Sanskrit technical literature there is some argument about whether there is any difference between the terms *graha* and *aṃśa* – initial and predominant – in this list, since in most sources the *aṃśa* and *graha* are invariably the same degree. The distinction is between two aspects of modal predominance. The *aṃśa* was a temporal-formal predominant, marked by frequency, reiteration, prolongation etc. *Vādī* refers not only to the 'strength' of the *aṃśa* but also to its support by the consonant *saṃvādī*. In time the terms became effectively synonymous.

Ex.41 illustrates these modal functions; it is a metrical melody illustrating the *rāga Madhyama-grāma* preserved in the *Saṅgīta-ratnākara* (ii, 2, 67–8; Widdess, 1995, pp.264–5). As transcribed here, the initial (*graha*) and predominant (*aṃśa*) are C, the low point (*mandra*) C, the high point (*tāra*) E♭, the final (*nyāsa*) F, the secondary final (*apanyāsa*) C (note the cadence on this pitch at the end of the fourth bar, half-way through the melody), the weak notes D and A, and the strong notes C, E♭, F and B♭. The strong notes are all frequently reinterated, whereas D and A occur only singly (*i*), or are omitted altogether (*ii*). The last bar perhaps illustrates 'touching lightly' (*iii*). G is less strong than the strong notes: it is sometimes reiterated, sometimes used singly and sometimes omitted.

Another historical confusion around the terms *graha-aṃśa-nyāsa* (initial-predominant-final) anticipates the present-day ambiguities regarding the system tonic. The group of 16th- and 17th-century treatises in which the notion of scale-type – *mela* or *ṭhāṭ* – was first developed also report the degree *sa* as initial, predominant and final for almost all *rāga*; only in a few evidently exceptionally striking cases are other degrees of the scale reported as having any modal function.



Other than the *vādī-saṃvādī* couple in Hindustani music, few terms for modal functions are used consistently by practising musicians, North or South. In Karnatak music the term corresponding to the Hindustani *vādī* is *jīva-svara*, meaning 'life[-giving] degree of the scale'. The Tamil *eṭuppu* 'taking up' is used for the initial note of a phrase; it is a translation of *graha* ('taking, seizing'). The term *nyāsa* is used, but in the sense of a mid-phrase note sustained without oscillation, as well as in the sense of a phrase-final degree of the scale: it can mean a note to finish with, but it can also mean a note to pause upon, a function also conveyed by the term *viśrānti-svara* ('resting degree'). The common Hindustani expression for sustaining a tone in this way is *mukām karnā* ('to make a halt').

(vii) Modal systems. In the oldest sources of Indian music theory modal entities are associated with performance in the theatre, and the systematizations of them reflect this connection in various ways. But well before the 13th century (when the treatise *Saṅgīta-ratnākara* was written) music theory was quite independent of dramaturgy, and post-13th-century modal systems are clearly akin to modern ones.

TABLE 17

The number of *rāga* current in either Hindustani or Karnatak music is indeterminate (*see* INDIA, §III, 2(i)(c)). Some of the systematizations of Indian modal entities have been symmetrical and closed, others have been open-ended and asymmetrical. Sometimes the criteria for structuring a system have been musical, sometimes extra-musical. Sometimes systems are closed at superordinate levels but open at the primary level.

An idea of the diversity of past Indian modal systems may be gleaned from Gangoly (1935) and Bhatkhande (*c*1930). An outline of three models still current will indicate the range of possibilities:

A traditional group of *rāga* still respected by some older musicians is called the 'Hanuman doctrine'. It is a closed symmetrical system of 36 entities comprising six *rāga* personified as male, to each of which are assigned five (female) *rāginī*. This system is known with two slightly differing distributions of *rāginī*. One is attested in a number of musical treatises; the other form is widely represented in numerous sets of 36 miniature paintings in which each personified *rāga* or *rāginī* is depicted in some stylized indoor or outdoor setting. There are several older schemes which also have superordinate classification levels of six *rāga*; in some the six *rāga* are specifically assigned to the six seasons of the year in North India: cold season, spring, summer, rainy season, autumn, winter. Beyond this extra-musical association there is no certain iconographical or musical basis for the grouping in these symmetrical systems, though an argument can be made for an original pentatonicism of the six superordinate *rāga*. The systems are purely traditional associations of *rāga* names and iconographies, found together long before any record of their musical properties exists. In some cases, in fact, differences over time or geography, or both, in both melodic type and scalar type in particular *rāga* can be demonstrated to have taken place during the long period over which the names of these *rāga* have been classed together. The earliest fully comprehensible source for both scale-type and melody-type for a complete set of 36 *rāga* and *rāginī* is the treatise *Saṅgīt-sār*. It was compiled some time before 1805, and there was then no more musical basis for the classification than there is now; indeed, some of the 36 are unmistakably the same musically as their modern embodiments.

The present South Indian system is closed and symmetrical in its superordinate levels but open-ended at the level of the modal entities themselves. The closed system is a symmetrical arrangement of 72 scale-types (*melakarta*) whose generating algorithm was devised by Venkaṭamakhin of Thanjavur in the 17th century. In his time only between 12 and 23 scale types had been inferred from existing *rāga* (he himself mentioned 19). Venkaṭamakhin proposed a method for providing scale-types for any and all modal entities that might evolve in the future, based on systematic permutation of the variable pitches of the five degrees of the scale subject to 'modification' – that is, all but the system tonic and its invariant upper 5th (*see* INDIA, §III, 2, ex.7). Within each scale-type, however, an infinite number of ascent-descent patterns are possible, since in actual *rāga* one or two degrees may be omitted (*varjya*), one or more degrees may be taken out of order (*vakra*) and this sometimes more than once, or an altered variety (*anya-svara*) of one or more of the variable degrees of the scale may be used in some contexts. *rāga* showing any of these three 'deviations' from scalar regularity are often said to be *janya* ('born', 'generated') of their superordinate scale-type, called *janaka* ('giving birth', 'generator'). Early in the 20th century V.N. Bhatkhande, after investigating the southern system of scale-types and its historical prototypes, devised his own system of ten scale-types (*ṭhāṭ*) for Hindustani music. He chose to follow the principle of Venkaṭamakhin's predecessors and contemporaries, however, using the fewest scale-types possible that might still be made to accommodate modal entities existing in musical practice.

In South India the term for a *rāga* whose degrees are taken as representing one of the 72 scale types is *rāgāṅga-rāga*. In North Indian usage, however, the word *rāgāṅga* means the *aṅga* – melodic 'component' – that characterizes a *rāga*, as the *kānaḍāṅga* (ex.38*b*) characterizes the *rāga Darbārī Kānaḍā* and a number of other *rāga* (ex.39), or as the *bihāgāṅga* (ex.37*a*, first unit) characterizes a small group of *rāga* including *Māru Bihāg* (ex.40).

Musicians and theorists (including V.N. Bhatkhande) often draw attention to the fact that there are many clusters of *rāga* like the *Kānaḍā* and *Bihāg* groups in Hindustani music. Ratanjankar (1951, p.100) observed that:

> distinctions in the swara sancharas [scale degree patterns] have given rise to classifications and groupings of ragas from an aspect totally different from the Janya Janaka [modal entity scale-type] aspect. There are about 20 such ragangas [generalized nuclear motifs] which have given rise to as many groups of ragas, whatever melakartas [scale-types] they might belong to as regards their flats and sharps.

He went on to list some *rāgāṅga*, and discussed five of them, including the *kānaḍāṅga* (see above and ex.39*c*). A number of motivically characterized components (*rāgāṅga*), each dominating a group of its own, is of course as much a two-layer modal system as any formally symmetrical *rāga-rāginī* system or any rationally ordered *ṭhāṭ-rāga* system. Being open-ended and asymmetrical at all levels it has many more loose ends. On the other hand it also has the same expanding-contracting capacity as any of the innumerable modal entities, the *rāga* themselves, whose separate individualities emerge into musical practice or are submerged by it as the passing of years and the tenacity of tradition continue their endless conflict.

See also INDIA, §III, 1–2 and (for bibliographical details of treatises), §§I–III, bibliography.

4. SOUTH-EAST ASIA: PATHET.

(i) Introduction. What have been deemed to be modes and modal systems in South-east and East Asia contrast strikingly with the *rāga* and *maqām* systems. In heterophonic ensemble music such as that of the Javanese gamelan, a given underlying melodic or modal structure will be expressed in very different ways by the various instrumental and vocal parts. These parts are rendered distinctive by their strongly contrasting idioms, distinguished by tone colour, range and rhythmic density. The melodic phrases (*cèngkok*) of the *gendèr barung* (metallophone) and multi-octave *gambang* (xylophone) parts are pulsed and relatively rapid; the corresponding phrases (*gatra*) of the single-octave *saron* metallophone are also metrically bound, but in much longer note-values. The *rebab* (spike fiddle) and *suling* (flute) parts are rhythmically free, as is the vocal line of the *pesindhèn* (female solo singer). These parts have diverse ways of expressing affiliation with the *pathet* (modal category).

(ii) Pathet.

(a) South-east Asian modal systems. There are generally at least two basic modal levels in South-east Asian musics, as in South Asian and Western Asian, but the numbers of named entities involved, and even to some extent the relationship of the hierarchic levels, are very different. In Myanmar (Burma), for instance, over a dozen basic named song types are grouped into four superordinate named categories; for each of these four 'modes' some of the strings of the Burmese bow harp *saùng-gauk* have to be retuned. In traditional Vietnamese music there are two modal categories called *điệu* – named *bắc* ('north') and *nam* ('south') – and each *điệu* has three or four subordinate 'nuances' appended; *điệu* and 'nuance' alike are mutually distinguishable on the basis of pitch content and organization, as well as by circumstances of performance or type of ensemble, or both.

(b) Modes and scales in Javanese gamelan music. There are two different tunings for the fixed-pitch instruments of Javanese gamelan, called *laras pélog* and *sléndro*. The two *laras* are similar to the two *điệu* of Vietnam in that the contrast in their intervallic structuring involves much more than a mere choice of different degrees or intervals from a common stock; *pélog* and *sléndro* are altogether different from each other. The difference has nothing to do with the fact that interval sizes differ from one gamelan to another in any case; the basic contents and even concepts of the two tunings differ. *Sléndro* is always an anhemitonic pentatonic tuning, with only five named degrees of the scale. *Pélog* is always a heptatonic tuning of seven named degrees of the scale, with two conjunct intervals somewhat smaller than the others; (in any specific musical context only five degrees of the scale are prominent, but at least one 'semitone' must be among them). The degrees of these two tunings are listed in Table 18 as though naming the keys of two single-octave metallophones *saron* (one tuned for *pélog* and one for *sléndro*), with Javanese names and modern cipher equivalents, to which are added Western equivalents. The Roman letter A is arbitrarily set as though it were a common pitch (*tumbuk*) for the degree *nem*/6 between a set of paired gamelan; all other apparent pitches are necessarily approximate and the intervals

TABLE 18

Pélog			*Sléndro*		
barang	7	B	C	1	barang
nẹm	6	A	A	6	nẹm
lima	5	G♯	G	5	lima
pelog	4	F♯			
dḫadḫa	3	E	E+	3	dḫadḫa
gulu	2	D	D	2	gulu
panunggul	1	C♯	C	1	barang

would differ widely from one gamelan to another in either system. Degree 4 (*pélog*) is normally much closer to 5 (*lima*) than to 3 (*dhadha*); degree 3 (*dhadha*) in *sléndro* may be closer to 5 (*lima*) than to 2 (*gulu*) in certain gamelan. In short, the note *pélog* might as well have been represented by F$_\times$ and *dhadha* (degree 3) in *sléndro* by F♮; the same applies with only slightly less force to other scale degrees, and instruments not having pre-set tunings (including the human voice) seem to be inflected one way or another, according to *pathet* ('mode') even within a single gamelan ensemble.

In the Central Javanese gamelan, traditional repertory items in each *laras* are assigned to one of three *pathet*; *pathet* is the term customarily rendered as 'mode'. To consider each *laras* – *sléndro* and *pélog* – as a 'mode' with several subdivisions would make the word 'mode' merely synonymous with 'scale type'. Therefore it seems quite natural to think of the relationship of *laras* and *pathet* as analogous rather to the relationship of *échelle générale* and *gamme particulière*. In that case, however, there would be two *échelles générales*, not one. At the same time, for each of the two *échelles générales*, *sléndro* and *pélog*, there are only three *gammes particulières*, the three *pathet*. Furthermore, each of the three *sléndro pathet* uses all the degrees of the *laras*, so there is no question of *gammes particulières* using particular degrees selected from a larger stock contained in an *échelle générale*. At the same time, in *laras pélog* just such selections of *gammes particulières* are made: *pélog pathet barang* uses scale degree 7 (*barang*/B) to the virtual exclusion of scale degree 1 (*panunggul* C♯); the latter is featured in the other two *pélog pathet*, where degree 7 plays a subsidiary role, normally being omitted altogether. Degree 4 (*pélog*/F♯) is an 'exchange note' (*sorogan*), normally for degree 3(*dhadha*/E) in two *pélog pathet* and normally for degree 5 (*lima*/G♯) in the third, *pélog pathet barang*. Thus in *pélog* several different pentatonic *gammes particulières* are selected from a heptatonic *échelle générale*, by selecting either 1 or 7, and exchanging 4 for 3 or 5; in *sléndro*, on the other hand, each *gamme particulière* is coextensive with the *échelle générale*.

(c) Pathet versus rāga. Both the number of entities – six *pathet* divided between two *laras* – and their hierarchic relationship contrast strongly with the multiplicities of modal entity versus singular *échelle générale* of Western and South Asia. But in addition to numbers and systems, there is a difference in the way modal entities are related to the repertory in performance and to what is expected of the performer. For Javanese musicians the closest quantitative equivalent to the dozens of *rāgas* an Indian musician must control is not the six *pathet* but the hundreds of *gendhing* – compositions set in gong cycles – that they know and can play. Indian musicians must know compositions too, but they are conceived as the embodiments of *rāgas*, and any major performance is dominated by the artist's own ad hoc elaborations in the *rāga*, attached to a composition only as to a convenient peg. Thus, for example, the improvised *ālāpana* of a south Indian artist in a major *rāgam* could be followed by any of several dozen *kīrtanam*.

The opening solo *bubuka* of a Javanese *gendhing*, conversely, is a fixed pattern attached to that particular *gendhing*; if it foreshadows anything, it is no so much the *pathet* in general but rather specific passages of the *gendhing* itself. A musician is not at liberty to transfer a *bubuka* belonging to one piece to some other piece in the same *pathet*. So too the closing soloistic *pathetan* after a *gendhing* is an instrumental elaboration not on the *pathet* as an abstract modal entity but rather on a specific vocal composition in that *pathet*, traditionally attached to the *gendhing*. In short, where a *rāga* is one of hundreds of more-or-less sharply defined musical entities, under the direct control of the artist and in the forefront of his consciousness, a *pathet* is one of a tiny handful of musical categories embodying in the most general kind of way features of hundreds of individual and distinct traditional compositions.

(d) Modal entity and modal functions. The task of explicitly identifying the distinguishing characteristics of the *pathet* has received a great deal of attention both from Javanese musicians and foreign scholars. Since this work has come to focus increasingly on the musical tradition of the city of Surakarta (Solo) rather than the closely related, but distinct, tradition of Yogyakarta, the following description applies to the Surakarta style unless otherwise indicated.

Clear and distinct separate modal functions like predominant, final and the like cannot be established for the *pathet*. The notion of modal 'tonic' (Javanese *bakuswara*: 'basic note') is more plausible, and the word *tonika* has been borrowed in modern Indonesian (McDermott and Sumarsam, 1975, p.236; see also Hood, 1954). The 'tonic' or 'tonics' of a *pathet*, however, are neither finals nor necessarily predominants; they are simply those degrees of the scale that tend to occur more often at important structural positions. Of equal or greater importance in *pathet* recognition, however, is the general avoidance in each *pathet* of a particular degree of the scale at important positions.

The pivotal positions in the structure of gamelan music are the goal notes of the largest divisions: those divisions are called *gongan* because their goal notes are marked by a stroke of the hanging *gong ageng* ('large gong'), and their goal notes are gong notes. Each *gongan* in turn is divided into two or more *kenongan*; mid points of *kenongan* are sometimes marked by the gong *kempul*. The fourth and last of every group of four *saron* beats (every *gatra*) is the goal note for the three that lead up to it. The more important the structural position, the more likely in any given *pathet* that certain degrees will occur with significant frequency at that position and that others will not be heard there.

The predominant usage for degrees of the scale in the three *pélog pathet* is summarized in Table 19, with comments following. (For Javanese note names and approximate intervals, see above, Table 18.) Degree 1 (*panunggul*/C♯) is rare in *pathet barang*, as is degree 7 (*barang*/B) in *pathet lima* and *pathet nem*.

TABLE 19

Pathet	*Basic pentatonic* (*strong*)	(*others*)	*With 4 (pélog) substituted*	*Weak/absent*
lima	1,5	2,3,6	1 2 4 5 6	7
nẹm	6,5	1,2,3	1 2 4 5 6	7
barang	6,2	3,5,7	2 3 4 6 7	1

TABLE 20: Relative strength of pitch classes in sléndro pathet

Pathet	*'Tonic'*	*Also strong*	*Avoided*
nẹm	2	6, 5	—
sanga	5	2	3
manyura	6	2, 3	5

The three *pélog pathet* can be distinguished most concretely by the tonal resources they exploit. The unique pitch content of *pathet barang* is reflected in the provision of separate fixed-pitch idiophones (the *gendèr barung*, *gendèr panerus* and sometimes the *gambang*) for use in *pathet barang*: for example, the *gendèr barung* used for *pathet barang* contains a key for *barang* (7/B) but not for *panunggul* (1/C♯), while the other, used for *pathet nem* and *pathet lima*, has *panunggul* but not *barang*. The latter two *pathet* are identical in pitch content (indeed, the Yogyakarta tradition refers to them collectively as *pélog bem*) but they differ in range. *Pathet lima* makes use of *panunggul* (1/C♯) in the lower octave, a tone not used in any other *pathet*; to reach it, the *rebab* strings must be tuned to *lima* (5/G♯) and *panunggul* (1/C♯), one step lower than their usual tuning (apparently this retuning is not practiced in Yogyanese style). The other distinguishing marks of *pathet lima* and *pathet nem* involve the relative strength of degrees as structural goal tones; for example, degree 6 (*nem*/A) is more probable at points of structural weight in *pathet nem* than in *pathet lima*.

The strength and avoidance of degrees at structurally significant points is also important in identification of the *sléndro pathet*, where each *pathet* uses all five tones of the *laras*, and hence no *pathet* can be distinctive for its unique pitch content. (However, there are *pathet*-related differences in the use of *barang miring*, the importation into *sléndro* compositions of *pélog*-like interval patterns by singers and *rebab*.)

Table 20 compares the relative strength of pitch classes in the *sléndro pathet*. The strongest contrast is that between *pathet sanga* and *pathet manyura*. *Sanga* is in fact the most distinct of the *sléndro pathet*, and the frequency of degree 5 (*lima*/G) at the goal tones of *gongan* and *kenongan* contributes most strongly to this distinctiveness. *Pathet manyura* by contrast avoids degree 5 at strong goal notes; strong positions in *sanga* in turn avoid 3 (*dhadha*/E), a note correspondingly emphasized in *manyura*.

Distinctions between *pathet nem* and *pathet manyura* are less evident when only the functions of pitch classes are considered, as these two *pathet* share strong degrees 2 and 6. *Pathet nem* is distinctive in that it accords roughly equal strength to degrees 5 and 6, whereas *manyura* emphasizes the latter at the expense of the former. The individual profile of *pathet nem* becomes even clearer if we examine the functions of pitches rather than pitch classes. The statistics in Table 21 show the distinctive emphasis of *pathet nem* on degree 2 in the lower octave. By contrast, almost all *kenong*-strokes coinciding with 2 in *manyura* compositions fall on middle-octave 2.

While these features are diagnostic of the *pathet nem* repertory taken as a whole, they are not always useful in identifying the *pathet* of individual compositions, which may avoid low 2 and stress either 5 or 6 but not both. This can lead to disagreement over the assignment of *pathet* labels to particular compositions. Furthermore, emphasis on degrees 5 and 6 (the 'tonics' of *pathet sanga* and *pathet manyura*, respectively) gives *pathet nem* something of the nature of a mixture of these two *pathet*. In fact, *pathet* mixture is quite common and even compositions in the other two *pathet* frequently modulate outside of their home *pathet*. In attempting to explicate these aspects, scholars have come increasingly to study not only the use of scale degrees as structural goal tones but also the manner of approach to those tones.

(e) Melodic aspects: balungan. Goal tones are points of convergence, where the elaborating parts sound the same pitch-class as the 'core melody' (*balungan*). These points of convergence occur at *gong*- and *kenong*-strokes, but also more frequently, normally at the end of every four-beat *balungan* phrase (*gatra*). (The *gatra*, essentially a metric unit, is usually, though not invariably, coextensive with melodic phrases.) It has become customary, in teaching certain elaborating parts, to isolate a number of re-usable *gatra*-length melodic phrases, called *cèngkok* (for this and other senses of this polyvalent term, see Perlman, 1994, pp.555–77).

The *cèngkok* of certain parts have more-or-less marked *pathet* associations and there have been attempts to find similar associations in *gatra*-length *balungan* phrases. Hood was the first to study the latter. He proposed several four-tone 'cadential formulas' (1954, p.124) for each *pathet*. Becker's sophisticated statistical study, the most ambitious to date (1980, pp.78–88), widened the inquiry to encompass all *balungan gatra* in a much larger corpus, nearly 300 compositions. She pointed to significant correlations between *pathet* and the *gatra* appearing at certain structural positions. Her sample has been criticized as unrepresentative (Supanggah, 1985, p.180). It is true that Becker's study mixes idiomatically distinct Yogyanese and Solonese *balungan*, conflates certain two-*gatra* units with normal *gatra*, ignores registral information and includes non-canonical compositions while omitting the extremely common *jineman*, *ayak-ayakan* and *srepegan* genres; nevertheless, its results are consistent with the pattern of pitch-class strength in Table 20, for example regarding the distinctiveness of *sléndro sanga*. This suggests both the robustness of this overall pattern and

TABLE 21
Percentage of all kenong strokes (including gong strokes) in gendhing and ladrang of the sléndro pathet which fall on given balungan pitches (based on Mloyowidodo, 1977, i; columns do not total 100 due to rounding off of figures)

Pitch	*Nem*	*Sanga*	*Manyura*
$\dot{1}$	1	2	2
6	6	7	11
5	4	17	3
3	5	3	19
2	20	10	23
1	3	18	7
$\underset{\cdot}{6}$	21	4	26
$\underset{\cdot}{5}$	21	35	1
$\underset{\cdot}{3}$	5	1	6
$\underset{\cdot}{2}$	13	2	1

Dots below numerals indicate tones in the lower octave; dots above indicate the higher octave.

the soundness of Becker's analysis, at least as far as these broad tendencies are concerned.

Few, if any, of these four-beat phrases are exclusive to any *pathet* and in any case the most distinctive *balungan gatra* are not prominently displayed; they seem to be used less frequently than those *gatra* shared equally by all *pathet*. Hence no single *gatra* functions as a modal identifying tag, like a North Indian *pakaḍ* or a South Indian *piṭuppu* ('catch'). The combination of *balungan gatra* with structural position is more informative: thus 6 5 3 2 is found in all three *sléndro pathet*, but while it is common at gong positions in *nem* and *manyura*, in *sanga* it is extremely rare.

Pathet is more easily deduced from *balungan* phrases longer than a single *gatra*. The Javanese theorist Martopangrawit identified certain two-*gatra* phrases as diagnostic of particular *pathet*. Ex.42 shows these 'fixed patterns' (*cèngkok mati*) for the *sléndro pathet* (Sri Hasanto, 1985, pp.87–8).

(f) Melodic aspects: garap. The *balungan* is one of the main reference-points for the group of 'elaborating' parts. The instruments and voices of this *garap* group (so-called because they 'work' or interpret the *balungan*) include multi-octave fixed-pitch instruments such as the *bonang* (gong-chime), *gendèr barung* and *gendèr panerus* (metallophones) and *gambang* (xylophone), the metrically-bound unison melodies of the *gérong* male chorus, as well as three parts which contribute more-or-less unmetrical elaborations: the spike-fiddle, end-blown flute and solo female voice (*rebab*, *suling* and *pesindhèn*).

Balungan passages which, considered in isolation, are ambiguous with respect to *pathet* can be given a clear *pathet* identity by the elaborating parts (Brinner, 'Knowing Music. . .', 1995, p.62). Indeed, Martopangrawit defines *pathet* in terms of *garap* (1984, p.47), though in this statement *garap* should not be understood to refer narrowly to the elaborating parts, but broadly, to performance practice in general. The elaborating parts are not the only ones to reinforce or clarify the *pathet* implications of the *balungan*; on occasion even the form-defining or colotomic parts play this role. When, in a *sléndro* composition, the *balungan* goal-tone middle-register 1 falls at a *kenong* or *kempul* stroke, the pitch played by those instruments depends on the *pathet*: 1 in *manyura*, 5 in *sanga*. On the other hand, neither are all of the elaborating parts governed by *pathet*. For example, the *pipilan* playing technique of the *bonang* (which involves anticipation of and oscillation between pairs of notes) is too tightly tied to the *balungan* to give any *pathet* indications.

Individual parts have idiomatic ways of marking *pathet*. The *bonang barung* and *bonang panerus* indicate *pathet* through their interlocking figuration (*imbal*). The higher hand positions on the *rebab* distinguish between *sléndro sanga* and *sléndro manyura*: for *sanga* the index finger produces the tones 2 and 5, for *manyura* 3 and 6. The *gendèr* can use choice of register to display *pathet*. When 2 and 3 appear as goal-tones in the middle octave of the *balungan*, the *gendèr* can often choose to represent these pitches with 2 and 3 in either its low or high register. In such cases, use of the low register can suggest *sléndro nem*.

However, recent research has focussed on the patterns (*cèngkok*) which form the more-or-less standardized vocabulary of certain elaborating parts. Some of the principles governing these *cèngkok* seem to apply as well to parts (such as the *gérong*) which are not taught by means of standardized *cèngkok*.

Normally the performer will force an ambiguous *balungan* phrase to be heard in a certain *pathet* by choosing a *cèngkok* with a strong flavour of that *pathet*. However, there are cases in which the performer does not (or cannot) do so, using, for example, a *cèngkok* of *manyura* even though he or she considers the *balungan* to be in *sléndro nem* (McDermott and Sumarsam, 1975, pp.242–3; Mendonça, 1990, p.68). To some extent this may be due to the fact that *cèngkok* with distinctive *pathet* identities are not evenly distributed across *pathet* categories. There are few *cèngkok* diagnostic of the *pélog pathet*, and within *sléndro* there are fewer *cèngkok* strongly associated with *nem* than with *sanga* or *manyura*. The discussion that follows will consequently be limited to the latter two *pathet*.

Cèngkok can be more-or-less strongly stamped with *pathet*, defining characteristics, and the various instrumental and vocal *cèngkok* mark *pathet* in various ways. While some *pathet* markers may be purely conventional, it is nevertheless clear that some of the same tonal emphases and avoidances operative in the *balungan* also define *pathet* in *cèngkok*. This is most easily seen in *cèngkok* approaching tones which have no strong associations with either *sanga* or *manyura* (such as tones 1 or 2). The manner of approach to the goal-tone can signal a particular *pathet* by featuring tones with distinctive modal roles, such as 3 and 5. Since 3 is the 'avoided' tone of

sanga – rarely used at strong metrical positions – its prominence in *manyura* patterns prevents any hint of *sanga* from appearing. 5 is the 'avoided' tone of *manyura* (as well as the tonal focus of *sanga*), so its prominence in *sanga* patterns reduces the feeling of *manyura* and reinforces the sense of *sanga*. Three means for emphasizing such diagnostic tones are illustrated here: the final simultaneities of patterns, the internal caesura tones of the patterns and the pitch boundaries of the cadential gestures of patterns. Ex.43 shows *cèngkok* used by the *pesindhèn* (female solo vocalist), *gendèr barung* metallophone, and *gambang* xylophone to reach the goal-tone 1/C. Two sets of *cèngkok* are presented, one for *pathet manyura* (ex.43*a*) one for *pathet sanga* (ex.43*b*). They are represented with the *balungan gatra* · 2 · 1, though they can be used with other *gatra*, such as 2321. Each *gatra* is common in both *pathet*.

Final simultaneity acts as a *pathet* marker primarily in the *cèngkok* of the *gendèr barung*, though also in the patterns of the *gendèr panerus* and the *celempung* zither (not shown). The cadential pitch of a *gendèr cèngkok* is played by the left hand; the right hand will either duplicate this pitch at the upper octave (*gembyang*) or will strike a tone one *kempyung* (three scale-steps) above it. The interval used is sometimes dictated by the cadential pitch itself. When the cadential pitch is tone 1/C, however, the choice is determined by *pathet*: *gembyang* indicates *manyura*; while in *sanga* the right hand strikes 5/G against 1/C in the left, forming the *kempyung* interval.

The pitches occurring at caesura points within the *cèngkok* also bear *pathet* significance. For the metrically-bound parts, chief metrical stress falls on the final stroke (the goal-tone), with secondary stress at the midpoint. For the unmetred *pesindhèn* line, a caesura may usually be identified at the third syllable from the end, where she would pause, if necessary, to wait for a drum cue in certain genres (Brinner, 1995, pp.234–44; Walton, 1987, p.32). In *manyura*, the *gendèr* and *gambang* patterns have 3/E at their midpoints, while the corresponding location in the *sanga* patterns has 5/G. Similarly, the caesura tone in the *pesindhèn* patterns is 3/E in *manyura*, 5/G or 2/D in *sanga*.

Each of the illustrated melodic patterns approaches its destination with a gesture that occupies a certain segment of tonal space. The pitches forming the outer boundaries of this segment (and in this way given prominence) can usually be correlated with the *pathet* of the pattern. The cadential gestures in the *gendèr* part are played by the left hand. The gesture approaching the final 1/C in the *manyura* pattern has 3/E as its lower limit, compared with 5/G in the *sanga* pattern. The same holds true for the *gambang* patterns (as can be seen by comparing the final four notes in each) and for the *pesindhèn* patterns to upper-octave 1/C.

There have been other attempts to locate general *pathet* markers in the elaborating parts. Hood (1988) analyses these parts motivically, viewing them as successions of elaborated, extended and elided versions of three- and four-tone cadential patterns specific to each *pathet*.

(g) Transposition, transformation and the relationships between pathet. In ex.43 below, the opening gestures of the *pesindhèn cèngkok* for middle-octave 1 in *sanga* and *manyura* share the same contour: the first seven tones

are identical under transposition. The relationship implied here – in which the *manyura* melodic shape is identical to *sanga*, but located one *sléndro* step higher – is in fact generally recognized by Javanese musicians and theorists. Compositions and *cèngkok* can be transposed between *pathet* within one tuning-system, and also 'translated' between tuning-systems. We may look to these possibilities of transposition to study the general relationships between *pathet*; however, they do not describe a consistent system.

Transposition of compositions: between laras. The performance of *sléndro* compositions in the *pélog* tuning system is very common, though the reverse is rare. Due to the conceptual equivalence of tones between the tuning systems, the transformed compositions are not thought of as shifting scale position: the tone *lima* in *sléndro* becomes *lima* in *pélog*, *dhadha* becomes *dhadha* etc. The *sléndro* tone *barang* becomes *panunggul* in *pélog nem*, *barang* in *pélog barang*. The tone *pélog* is sometimes substituted for *dhadha* (in *pélog nem*) or for *lima* (in *pélog barang*). *Sléndro gatra* which would sound unidiomatic if translated literally into *pélog* are often modified, usually preserving the goal-tone: thus in *pélog barang*, the *sléndro* pattern 2321 may become not 2327 but 3567.

In general, compositions in *sléndro sanga* become *pélog nem*, while compositions in *manyura* become *pélog barang*. Compositions in *sléndro nem* display no regular pattern of transformation; in *pélog* they may become *pathet lima* (e.g. *gendhing Rèndèh*), *pathet nem* (e.g. *gendhing Titipati*) or *pathet barang* (e.g. *gendhing Majemuk*). Even in *sanga* and *manyura*, some compositions have multiple possibilities of transformation. *Gendhing Bondhèt sléndro sanga* can be played (under different names) in both *pélog nem* and *pélog barang*; some pieces in *manyura* have, besides the usual *pélog barang* transposition, a *pélog nem* one as well (for which the term *nyamat* or *pélog manyura* is sometimes used).

Transposition within laras: sléndro. Transposition of compositions within *sléndro* is less common than *sléndro-pélog* transformation. Virtually all such cases involve *sanga* and *manyura*, with the *manyura* version one step above the *sanga* version. Most of these compositions are in the smaller forms (*ladrang*, *ketawang* or *jineman*); the few large compositions that shift *pathet* may alter considerably in the process.

Exceptions to this generalization occur in the repertory of songs (*sulukan*) sung by the *dhalang* (puppet master) in the *wayang kulit* shadow-play. (The instrumental parts to these songs are played as preludes and postludes to compositions in gamelan performances, when they are known as *pathetan*.) Many *sulukan* in *manyura* have melodies identical to those of *sanga sulukan*, transposed up one step. However, some *manyura sulukan* are longer than the corresponding *sanga* versions, containing additional phrases at the end. There is also an unusual case of a melody which is played at three pitch-levels, representing all three *sléndro pathet*: it is known as *sendhon Panangalan* in *nem*, *sendhon Rencasih* in *sanga*, and *sendhon Sastradatan* in *manyura*. Remarkably, the *manyura* version is located one step below the *sanga* version, rather than above it (Perlman, 1997). The *sanga* version is two scale-steps above the *nem* version, as might be expected from table 20. However, there is also a contrary example of the *nem–sanga* transpositional relationship: the *sulukan ada-ada Manggalan* in *pathet sanga* (Probohardjono, 1984, p.470) has the same melody as *ada-ada Girisa* in *pathet nem*, but lowered by one step.

Transposition within laras: pélog. Transposition of compositions between *pélog pathet* is less common than in *sléndro*. The few cases of transposition between *pélog nem* and *pélog barang* involve only the replacement of tone 1 by 7 (e.g. *ladrang Sarono* and *ladrang Kagok Liwung*). More common is transposition between *pélog lima* and *pélog barang*. The *pathet barang* version is usually one tone higher than the *pathet lima* version (e.g. *ladrang Retnaningsih pélog lima* and *ladrang Retna-asih pélog barang*), though transposition by one *kempyung* is also found in sections of certain compositions (parts of *gendhing Dhenggung Sulur Kangkung pélog lima* and *gendhing Silir Banten pélog barang*).

Transposition of garap: between laras. Most *sléndro cèngkok* have *pélog* equivalents. In the case of the *bonang*, *gendèr* and *gambang*, the *pélog* patterns often have contours identical to their *sléndro* cognates; this is not the case with vocal lines and *rebab* parts, which may undergo considerable reshaping (ex.44).

Transposition within laras: sléndro. As mentioned above, the transpositional equivalence of *sanga* and *manyura cèngkok* is generally assumed by Javanese musicians. Indeed, published compilations of *cèngkok* often notate either *sanga* or *manyura* forms, but not both, instructing the reader to generate the omitted forms by transposition (Martopangrawit, 1976; Supadmi, 1984). Nevertheless, there are also some untransposable *cèngkok*. A certain degree of transpositional equivalence is found in elaborating parts such as the *rebab* or *bonang*. However, these parts also have idiomatic formulae attached to certain absolute positions of the scale, which are never transposed; for example, both *rebab* and *bonang* (when using the *pipilan* technique) have distinctive ways of approaching the tone 6 in the lower register, regardless of *pathet*. Hence Martopangrawit (1984, p.48) points out that the performance practice of a composition can never be transposed intact between *sanga* and *manyura*.

Transposition within laras: pélog. Many *cèngkok* in *pélog* are regarded as derived from *sléndro* and their *pathet* identities are labelled with the names of *sléndro pathet* (especially *sanga* and *manyura*) rather than *pélog*

Ex.44 Excerpt from the vocal part of *Kinanthi*, comparing *sléndro manyura* and *pélog barang* versions (based on Supanggah, 1985 p.156)

pathet. Musicians do not speak of the relationships of *pélog lima cèngkok* with *pélog nem cèngkok*; instead, they discuss the relative appropriateness of *cèngkok* of *sléndro sanga* or *sléndro manyura* for compositions in *pélog lima* or *pélog nem* (Martopangrawit, 1984, p.136–7).

The only significant example of the transposition of performance practice between *pélog pathet* concerns the *rebab*. Its strings are tuned to 1̣ and 5̣ for *pélog lima*, one tone lower than the usual tuning. As a result, the *rebab* can often use the same fingering for *pélog lima* and *pélog barang*: the hand position for the tones 5̣–6̣–1–2 in *pélog lima* will produce, with slight adjustments of intonation, the tones 6̣–7–2–3 in *pélog barang*. Many of the idiomatic *rebab* gestures for *pélog barang* are transpositions up one tone of *pélog lima* gestures.

(h) Pathet and intonation. It has long been recognized that the intonation of the *sléndro* and *pélog* tuning systems varies from one set of gamelan instruments to another; such variants are called *embat*. Individual musicians are also said to have their own *embat* (Perlman, 1994, pp.534–40). Martopangrawit (1984) suggested that the different *sléndro pathet* imply different patterns of intonation, and that some of the variability of tuning in *sléndro* is due to the variety of ways to reconcile these conflicting intonational demands. Table 22 schematically illustrates the key features of the ideal *embat* for *sanga* and *manyura*.

The intonation pattern for *manyura* is clearly a transposition upwards by one tone of the *sanga* pattern, as is consistent with the general relationship between the *cèngkok* of these two *pathet*. This produces a conflict in the tuning of the intervals 6̣–1 and 1–2 on fixed-pitch instruments, as intervals which should be tuned wide to accord with the feeling of *sanga* must be narrow to accommodate *manyura*, and vice versa. The tuning of the fixed-pitch instruments in actual gamelan sets is a compromise between these possibilities, but musicians identify certain sets as leaning more-or-less strongly towards one or another of the two (*sléndro* instrument tunings are not usually associated with *pathet nem*).

It is possible that flexible-pitch instruments and voices shade their intonation contextually, expanding the 5–6 and 1–2 intervals in *sanga* compositions, the 6–1 and 2–3 intervals in *manyura*. Hatch (1980, pp.130–58) attempted to test this proposition by analyzing the vocal intonation of a *dhalang* (shadow puppet master) during the progression of a performance through *nem*, *sanga* and *manyura*. Setting the boundary between narrow and wide *sléndro* intervals at 250 cents, Hatch's summary findings (no pitch measurements are provided) suggest a tendency to approximate the theoretical pattern of table 22 increasingly closely during the course of a performance.

It is plausible that Javanese musicians feel more cadential weight in a *sléndro* tone which is approached from above by a relatively large interval and tend to contextually exaggerate this effect (such a practice would be comparable to the sharpening of the leading-tone in Western tonal music, where a tone has more cadential significance when approached from below by a relatively small interval). However, this hypothesis has not yet been rigorously tested. Current research focusses once again on the tunings of the fixed-pitch instruments (cf. Arom, Léothaud and Voisin, 1997, pp.22–5). However, it is reasonable to expect individual variation in *pathet*-related ideals of *embat*. Musicians do not always agree on the *pathet* tendency of a given *sléndro* instrument: a tuning heard by some as suitable for *sanga* may be judged by others as suggestive of *manyura*. This fact alone implies that idealized *pathet* intonation profiles, if they exist, may differ from one musician to another.

TABLE 22: Two alternative distribution patterns of wide and narrow intervals along a portion of the sléndro scale, corresponding to two different pathet; based on Martopangrawit, 1984, p.45

	6̣–1	*1–2*	*2–3*	*3–5*	*5–6*
sanga:	*narrow*	*wide*			*wide*
manyura:	*wide*	*narrow*	*wide*		

(i) The nature of pathet. As a modal system, *pathet* is not clearly ordered on consistent, uniform lines. This is due only in part to the existence of modally-ambiguous repertory items, or to compositions whose traditional *pathet* labels seem not to match their melodic content. More fundamentally, *pathet* distinctions are not made by a uniform set of diacritic features: 'a given parameter may be significant in one part of the system and insignificant in another' (Becker, 1981, p.533). The distinguishing features of certain *pathet* are not obvious, even to Javanese musicians and theorists.

Taking these facts into account, recent research has moved away from the attempt to reduce *pathet* to a determinate set of musical characteristics, considering instead how *pathet* functions as a category of musical thought, knowledge or discourse. This has drawn attention to processes of historical change, to the use of the *pathet* system itself to confer social legitimacy and to individual variation in interpreting the *pathet* of specific compositions.

Javanese musicians may differ among themselves concerning the criteria of modal identification, differences which will be reflected in both their conceptualization and practice. As in other modal traditions (Wiering, 1995, pp.101–41), these differences may be conditioned by differing individual experiences or musical roles. But musicians may also respond to the tension between multiple representations of *pathet* embedded in their tradition (Perlman, 1997). Javanese musicians find *pathet* embodied more-or-less clearly in the traditional repertory and norms of performance practice, as well as in the traditional *pathet* labels for compositions. They also inherit cultural tools for ordering and making sense of modal practice, such as traditional styles of discourse about *pathet* (including homiletic, poetic and mystical styles; see Sastrapustaka, 1984) and a cultural schema organizing the *pathet* categories. The latter, an arrangement of six *pathet* in two parallel tripartite groups, one for each tuning system, represents what Brinner terms a 'cultural matrix' (1995, p.437).

This matrix serves most concretely to regulate the sequence of compositions in a performance (whether it be *wayang kulit* shadow-puppet play or *klenèngan*, a musical gathering). A typical evening event has three sections, each divided from the next by the playing of a specific *pathetan*. The first contains compositions in *sléndro pathet nem* and *pélog pathet lima*, played alternately. The second is devoted to compositions in *sléndro pathet sanga* and *pélog pathet nem*, the third to *sléndro pathet manyura* and *pélog pathet barang*. (A daytime performance follows

the same pattern, except that *sléndro pathet nem* and *pélog pathet lima* are replaced by *sléndro pathet manyura* and *pélog pathet barang*.)

This matrix of six *pathet* thus plays a practical role in organizing performances. It also reflects broad aesthetic and melodic relationships between the *pathet*. For example, within each tuning system the sequence of *pathet* corresponds to a progression of moods from the calm or majestic to the mirthful or lighthearted. These emotional associations seem to have certain musical concomitants. The solemnity of *sléndro nem* and *pélog lima* is attributable in part to the fact that they both exploit the lowest register more than the other *pathet* and their repertories contain a relatively large number of compositions in the very largest forms (Table 23). Finally, the six-*pathet* schema shapes historical change by channelling innovation, creating new items to fill modal 'gaps' in the repertory (Brinner, 'Cultural Matrices . . .', 1995, p.448).

The matrix also functions to some extent as a cultural artefact in its own right; it has, for example, been exported into the rather different gamelan tradition of Banyumas (western Central Java), where it was superimposed on local practice, conferring some of the social legitimacy of the court style on this marginal tradition (Sutton, 1986, pp.88–91).

This schema was not designed as an analytical tool, however, and does not capture all of the modal distinctions one might make between compositions based on their melodic behaviour. Both Javanese and non-Javanese theorists have tried to refine and extend it, identifying a fourth explicitly-labelled *pélog pathet* (*nyamat* or *manyura*), two or three unlabelled modal entities within *pélog barang* (Sri Hastanto, 1985, pp.160–76) and a more-or-less distinct sub-*pathet* within *sléndro manyura* (called *galong* in the Yogyakarta tradition).

TABLE 23: Distribution of Solonese compositions by size and formal structure; percentages of total number of compositions in each pathet. Based on Mloyowidodo, 1977.

		Larger ◄			► Smaller	
		64 beats/N	32 beats/N	16 beats/N	8 beats/N	
		k4a & k8k	k4k & k2a	k2k	Ldr	Ktw
SLÉNDRO	*nem*	13.3	28	30.7	26.7	1.3
	sanga	6.8	11.6	28.1	36.9	16.5
	manyura	2.4	10.6	32.0	37.7	18.0
PÉLOG	*lima*	19.5	17.2	36.1	20.8	7.0
	nem	5.4	10.2	14.3	53.7	16.3
	barang	9.6	10.3	14.0	52.6	13.3

Key: 'N' = *kenongan*
k8k = *kethuk 8 kerep*
k4a = *kethuk 4 arang*
k4k = *kethuk 4 kerep*
k2a = *kethuk 2 arang*
k2k = *kethuk 2 kerep*
Ldr = *ladrang*
Ktw = *ketawang*

A small number of compositions not classifiable under these headings have been omitted; rows do not sum to 100 due to rounding off.

Moreover, the melodic relationships implicit in the matrix are only partially consistent with the actual practice of transposing compositions and do not hold with respect to *garap*. Although the matrix might lead us to expect similarities between the *garap* of *sléndro nem* and *pélog lima*, of *sléndro sanga* and *pélog nem*, and of *sléndro manyura* and *pélog barang*, this is not generally true. *Garap* in *pélog lima* is closer to that of *sléndro sanga* overall, and the other two *pélog pathet* each draw on both *sanga* and *manyura garap*.

This fact is consistent with research documenting differences in the means of *pathet* expression between *balungan* and *garap*. This has led some to argue that *pathet* is not a unitary system, but two or more distinct systems operating simultaneously. Taking this view, the internal plurality of the *pathet* concept is a by-product of historical processes of change, either the merger of a voice-dominated ensemble with a purely instrumental one (Walton, 1987, pp.85–92) or the 'superimposition of a three-part theatrical structure upon a two-part, constrative musical division' (Becker, 1981, p.530), though there is also evidence that the present tripartite schema may have replaced a more differentiated fourfold system (Perlman, 1997). In either case, the 'haziness' of the *pathet* concept may play a functional role in Javanese musical culture, permitting individual flexibility and innovation in practice and conceptualization.

Other scholars, while admitting the ambiguities and internal heterogeneity of *pathet*, are reluctant to analytically decompose it into distinct systems. Sri Hastanto attributes the differences in *pathet* expression noticed by Walton to the general differences between *balungan* and *garap* and between the various *garap* idioms (1985, p.84). Taking this view, *balungan* and *garap* represent differing concrete embodiments of stable abstract *pathet* characteristics (just as the modal functions of the tones 5 and 3 are reflected in various ways in the elaborating parts in ex.43).

The extent to which surface variability is anchored by underlying uniformity is also at issue in studies of individual performers' use of *garap* to clarify *pathet*. Martopangrawit's association of *pathet* with *garap* links it to the latter concept's connotations of flexibility and individuality, and indeed performers differ in *pathet* interpretation just as they do in other aspects of *garap*. Such differences are particularly evident in the performance of compositions of ambiguous *pathet*, compositions which contain modulation, and in compositions in *sléndro nem*, which tend to mix elements of *sanga* and *manyura*. In these cases, different performers may agree on the presence of modulation in a piece, but differ in their judgements of its extent or exact location (Soetarno, 1982; Mendonça, 1990, p.69).

In such cases there is still agreement on the modal duties and implications of *garap*; that is, these performers agree on the general fact that *cèngkok* bear *pathet* affiliations and on the specific affiliations of particular *cèngkok*. However, performers may also differ in the scope they allow for such affiliations.

To master fully *garap*, the Javanese musician must acquire not only a vocabulary of melodic patterns but also a set of organizational strategies with which to analyze and make sense of the order within the music. Some of these strategies are associative, making connections between musical items or contexts, while other are

diacritic, drawing distinctions (Perlman, 1994, pp.397–467). The various analytical tools presented in §4(ii)(f) above are precisely diacritic resources which musicians may use to distinguish between compositions or *garap*. Since the diacritic act is ultimately an individual one, individual musicians may differ in the ways they use these common resources. Further, they may be more-or-less motivated to draw distinctions at a given level of subtlety.

Thus with regard to *pathet*, some musicians hyperdiscriminate perceiving micromodulations even within a single *cèngkok*, or alternatively deliberately stripping a *cèngkok* of its most conspicuous *pathet* markers, making it 'indistinct' (*samar*) and hence appropriate for modally ambiguous passages. The three *gendèr* patterns in ex.45 are all suitable for the goal-tone 2/D. The use of 3/E at the midpoint of ex.45*a* and its use an octave higher in the right-hand part, clearly suggest *sléndro manyura*. The appearance of 5/G at the midpoint of ex.45*b* and in the cadential gesture is consistent with *sléndro sanga*. The unusual pattern ex.45*c*, however, is ambiguous. While it resembles ex.45*a*, it avoids 3/E at the midpoint, and upper-octave 3/E throughout. This attenuated modal affiliation is appropriate for a composition like *gendhing Danaraja*, officially classified as *sléndro sanga* but containing many passages which invite *manyura* treatment.

On the other hand, not all musicians distinguish between ex.45*a* and ex.45*b* on the basis of *pathet*: some consider them interchangeable, or distinguish between them on some other basis. Musicians' degrees of discrimination may be an aspect of their personal styles of interpretation, and musicians of comparable experience and training may differ in this regard. However, there seems to be a certain amount of social prestige attached to hyperdiscrimination, and a corresponding tendency to stigmatize hypodiscrimination. Thus the failure to make certain *pathet* distinctions in *garap* is sometimes associated with village musicians and female players (Weiss, 1993; Perlman, 1998).

The prestige of hyperdiscrimination may have historical implications. It is possible that *garap* in the Surakarta tradition has come increasingly under *pathet* constraints over the past century (Perlman, 1998). Lindsay suggests that something similar happened in the Yogyakarta tradition, possibly as late as the 1920s, when dance-style drumming, interlocking *bonang* techniques and male choral singing were adopted into the court performance style (1985, pp.249–55).

5. EAST ASIA: DIAO AND CHŌSHI. China, Japan and Korea, to some extent, share a concept of mode, called in Chinese *diao*, in Japanese, *chō* or *-jō*; the Vietnamese *điệu* is similar. As is the case with the terms 'mode' and *maqām*, interpretations of these concepts vary considerably over time and by region; they also often imply melody or tuning. Ancient Chinese modal theory was exported to Japan and Korea and adapated there over a long period, while continuing to evolve in China. This section mainly discusses the evolution of modal practice in one genre, Japanese *gagaku*, on which detailed work has been done, but first a brief introduction to Chinese systems will serve.

(i) China: diao. In recent years Chinese theoretical sources and excavated instruments have been supplemented by study of the key systems of living folk traditions, such as *kunqu*, *nanguan* and northern temple music. The work of YANG YINLIU and HUANG XIANGPENG has done much to relate ancient theory and living practice.

As Picken has observed, in early Chinese sources the term *diao* may be described as mode-key, made from combining the 12-note *lü* fixed-pitch system with the five- or seven-note scale-degree system. These systems were combined as early as the pre-Qin period, with ample theoretical writings as well as archaeological evidence such as the set of bronze bells from the 5th-century BCE tomb of the Marquis Yi of the Zeng state (*see* CHINA, §II; ZHONG).

The *lü* system is a series of 12 fixed pitches within the octave derived from the circle of 5ths. Parallel to this was a *solfeggio*-like system of scale degrees, not on fixed pitches, with both pentatonic and heptatonic scales from early times (*see* CHINA, §II). The (anhemitonic) pentatonic system consists of the scale degrees *gong shang jiao zhi yu*, equivalent to I II III V VI or *doh ray me soh lah*. A mode was defined by the final (and sometimes the initial) note of the melody. Thus a pentatonic *shang* mode consists of the degrees II III V VI I.

The basic *gong* heptatonic scale fills in the larger (minor 3rd) gaps of the anhemitonic pentatonic series to give a Lydian series with the intervals T T T S T T S. The added degrees (written below in lower case), which occur a semitone below degrees I (*gong*) and V (*zhi*) of the heptatonic series, were conceived of as 'altered' (*bian*) or 'auxiliary' versions of the degrees a semitonic above them, and were named as such: *biangong* (vii) and *bianzhi* (iv).

Another type of seven-note scale (called 'new' by Yang Yinliu) has been traced to the pre-Qin period, with semitones between the vii and I, and between III and iv, effectively a *zhi* mode, Ionian. At least before the 6th century CE a *qingshang diao* was also recognized. This was a *shang* (Mixolydian) scale with semitones between the third and fourth, and between the sixth and seventh degrees.

In practical music-making, mode-keys were created by combining the two systems of fixed pitch and mode, as we might describe a 'Lydian mode on G'. Thus *Huangzhong gong* was a *gong* mode with the fixed pitch

5. *Pingdiao/Hyōjō* (final E)
6. *Huangzhongdiao/Ōshikichō* (final A)

Huangzhong as its tonic. At different periods, and in different sources, the number of mode-keys varied.

Multiplying all 12 *lü* fixed pitches by all seven scale degrees produced a theoretical model of 84 *diao*; multiplying them by the five pentatonic degrees made 60 *diao*. But since not all pitches and modes were commonly used in practice, more practical systems were described, multiplying only four common fixed pitches by the five pentatonic scale degrees (producing 20 *diao*), or multiplying them by the seven heptatonic scale degrees (giving 28 *diao*; some scholars also described this as being engendered by transposing the four common modes *gong*, *shang*, *jiao* and *yu* to seven fixed pitches).

Though the full system of 84 *diao* was never practised in full, it was enduringly cited as a comprehensive model. As Yang observes, 'theoretical definitions and descriptions of modes must be a drastic simplification of what happened in practice, where recognition of melodic identity undoubtedly involved much more than a mechanical use of beginning and ending notes.' The note-weighting of early melodies known from early scores or current practice (such as music for the zither *qin*, or vocal dramatic music) also shows complexity of modal usage within a single piece.

In later times the terms *gong*, *gongdiao* and *yun* were also used. Vocal dramatic music of the Ming and Qing dynasties (14th–19th centuries), notably the 'Northern and Southern arias' (*nanbeiqu*) and *kunqu*, show continuity with the Tang instrumental system, in which 28 *diao* were reduced in practice to 13; in the later period 9 *diao* were also commonly cited. Rather than any musical impoverishment, this historical reduction in the number of mode-keys may show an increasing reflection of practice in written texts. Though these later mode-keys were also extensively codified, the system is still poorly understood. The 13 *diao* consist in principle of 6 *gong* modes, 5 *shang* modes and 2 *yu* modes, while the 9 *diao* comprise 5 *gong* and 4 *shang* modes, but Yang Yinliu found no consistent modal identity in analysing pieces in the different *diao*. Though the pre-Tang *yanyue* system is said to be evident in *gongche* folk instrumental systems today, the four keys of genres such as northern Chinese ceremonial music or *nanguan* seem to have no intrinsic modal implications. However, versions of the 'same piece' in different keys in opera, or in the ceremonial music of Xi'an, are not mere transpositions but also modal variants.

(ii) Japan: chōshi.

(a) Scales and modes in Japanese court music. While features of early Chinese modal usage surviving in folk practice or early scores today deserve attention, the system of Japanese *gagaku*, deriving from Tang dynasty (618–907) China, is better reflected in Western scholarship. The Tang system was exported to Japan and Korea (*Tangak*), and has evolved in Japan to the present day.

The *tōgaku* ('Tang music') repertory of Japanese court music as it is played today embodies in some form an audible ancient system of East Asian ensemble modalities, the *chōshi*. All of the six principal models used in *tōgaku* today may be traced to Chinese sources of the Tang period, such as the stone engraving dated 754, recorded in the mid-10th century compendium *Tang huiyao*, or the late 9th-century source *Yuefu zalu*. Of these, five (*Ichikotsuchō*, *Hyōjō*, *Taishikichō*, *Ōshikichō* and *Banshikichō*) preserve the modal species and relative key relations that they had during the Tang period. The other (*Sōjō*) appears to have been modified by Japanese musicians during the Heian Period (794–1185) in order to accommodate technical limitations of the *shō*, the only fixed-pitch instrument in the Japanese *tōgaku* ensemble.

As we saw, the Tang Chinese modal system of 84 theoretical *diao* was generated by (a) taking each of the seven degrees of a heptatonic Lydian series as the final of one of seven modal species and (b) transposing each of the resultant seven modal species to one of 12 keys.

The names of modal degrees of the basic series from which modal species were generated are as follows (Chinese readings are given first, separated by a slash from Japanese readings): *gong/kyū* (I), *shang/shō* (II), *jiao/kaku* (III), *bianzhi/henchi* (iv), *zhi/chi* (V), *yu/u* (VI) and *biangong/henkyū* (vii). By the mid-8th century, when China was exerting its greatest cultural influence on Japan, modal species were formed on only four of these degrees: a Lydian series on I (*gong/kyū*); a Mixolydian series on II (*shang/shō*); an Aeolian series on III (*jiao/kaku*) and a Dorian series on VI (*yu/u*). No modal species were formed on V (*zhi/chi*) or on either of the auxiliary degrees (iv) and (vii). Each of these modal species was transposed to seven keys to give a total of 28 modes. Of these, 13 were popular in practice; it is to six of these that the present-day *tōgaku* modes may be traced.

Table 24 shows the position that the six present-day *tōgaku* modes had within the Tang modal system. Modal-degree names, which are applied both to individual notes

and modal species, are listed at the top of the table. Only two of the mid-Tang modal species (Mixolydian on II (*shang/shō*) and Dorian on VI (*yu/u*)) survive in modern Japanese practice. Listed vertically to the left of the table are five of the seven pitches (D, F, G, A or C) to which modal species were transposed in the mid-Tang period. Just as the number of modal species is reduced in modern practice, so too is the number of keys (from seven to five). In giving Western equivalents to Chinese pitch names, the fundamental Chinese pitch, *huangzhong/ōshiki*, has been read as C; this strategy, which is supported by historical evidence, brings the ancient Chinese system into line with that of modern *tōgaku*. Within the table, the final of each of the six surviving modes is highlighted in bold and identified in the key below. In order to derive the notes of the mode, pitches should be read from left to right, returning to the column *gong/kyū* when the extreme right of the table is reached: thus *Pingdiao/Hyōjō* comprises the pitches E F♯ G A B C♯ D.

Of the six modes listed in Table 24, five maintain in modern practice the same modal species (Mixolydian or Dorian) and the same final that they had in the Tang sources. The sixth, *Shuangdiao/Sōjō*, has had its modal species transformed from a *shang/shō* (Mixolydian) mode to an Ionian mode by sharpening the seventh degree (Table 25).

This change was perhaps made to accommodate the limitations of the single fixed-pitch instrument in the Japanese ensemble, the *shō*. In its present-day form, the *shō* cannot play the F♮ necessary to realize *Shuangdiao/Sōjō* in its original Chinese form. Traynor and Kishibe (1951, pp.49–50) have suggested that on early Japanese mouth organs such as the 8th-century *Kuretake-shō* preserved in the *Shōsōin*, a pipe sounding F♮ could have been substituted for the pipe sounding F♯ whenever *Shuangdiao/Sōjō* was to be played. Evidence from the flute score *Hakuga no fue-fu* suggests that the original Mixolydian form of the mode continued in use until at least the mid-10th century.

In present-day *tōgaku* practice, all modes are classified as belonging to one of two families. Modes that were of the *shang/shō* (Mixolydian) modal species (*Taishikichō*, *Sōjō*, *Ichikotsuchō*) are now classified as *ryo* modes; those that were of the *yu/u* (Dorian) modal species (*Banshikichō*, *Hyōjō*, *Ōshiki*) are now classified as *ritsu*, though some individual pieces do not conform to this generalization.

In addition to adopting different terms to describe the two families of modes, the modes are re-theorized in modern Japanese practice. While Tang theory conceived all *shang/shō* modes (that is the parents of the modern *ryo* modes) as having their finals on II, in modern Japanese practice the finals of *ryo* modes, while the same pitch, are reconceived as degree I (*gong/kyū*) (compare Table 26 with Table 24). Similarly, while Tang theory conceived *yu/u* modes as having their final on VI, in modern practice the equivalent *ritsu* modes are reconceived as having their finals on I. In the case of *ryo* modes the underlying anhemitonic pentatonic modal structure remains essentially the same as in Chinese theory, that is T T m3 T m3. In the *ritsu* modes, however, it becomes T m3 T T m3. In order to accommodate this change, the degree *jiao/kaku*, which in the Chinese was always degree III, is reconceived as degree IV, though it remains III in *ryo* modes. In order to distinguish them the former is called *ryo-kaku* and the latter *ritsu-kaku*.

TABLE 25: Comparison of Tang-period Chinese forms of modes with those of present-day *tōgaku*

	Tang form	*Present-day form*
Yiyuediao/Ichikotsuchō	D E F♯ G A B C	same
Pingdiao/Hyōjō	E F♯ G A B C♯ D	same
Tashidiao/Taishikichō	E F♯ G♯ A B C♯ D	same
Shuangdiao/Sōjō	G A B C D E F	G A B C D E F♯
Huangzhongdiao/Ōshikichō	A B C D E F♯ G	same
Banshediao/Banshikichō	B C♯ D E F♯ G♯ A	same

In ancient Chinese theory the terms '*lü/ryo*' and '*lü/ritsu*' referred to alternate pairs of semitones. Every successive tone in the scale was divided into two semitones, the lower of which was conceived of as *lü/ryo* and the upper as *lü/ritsu*. Thus, when modem Japanese theory applies the terms *ryo* and *ritsu* to the degree-name *kaku*, it signifies that *ryo-kaku* is the lower form of *kaku* (that is a major 3rd above the final) and *ritsu-kaku* is the higher form (a 4th above the final). It seems likely that it is this distinction, between the lower and higher forms of *kaku*, that provides the basis for the nomenclature for the two families of modes in modem practice.

In the Chinese system, the pentatonic structure was expanded by adding exchange tones a semitone below the degrees I and V. In modern Japanese theory, conversely, exchange tones are normally conceived of as occurring a semitone above degrees III and VI in *ryo* modes and above degrees II and VI in *ritsu* modes (Table 26). In *ritsu* modes they are regarded as sharp (*ei*) forms of the tones below. In *ryo* modes the situation is more complex; for *Sōjō* (the single mode altered from its Tang form by the adoption of F♯ in place of F♮ – see above table 25), for example, a variety of theoretical strategies are adopted.

(b) Modal individuality and transposition especially within the three ritsu chōshi. The principal reason why the modifications described above were made to the modal theory of *tōgaku* is that Japanese modal practice, over the centuries, became more complex than it was at the time *tōgaku* was imported from China. In particular, from the 14th century onwards the two principal melodic instruments, the *ryūteki* (flute) and the *hichiriki* (double-reed pipe), evolved new versions of the melodies that increasingly deviated from the original melodies inherited from China. In time, as the link between the newly evolved melodies and the original melodies weakened, the original diatonic modality gave way to influence from non-diatonic modes found in Japanese folk music and in classical music that developed from the 16th century onwards.

Theoretical descriptions of the melodies now carried by the *ryūteki* and *hichiriki* cannot be fully worked out here. Nonetheless, we may observe that when these instruments perform in *ritsu* modes, degrees iii and vii (the degrees not regarded as part of the underlying pentatonicism) tend to be seriously weakened and frequently omitted, particularly in descent, while degrees II and VI are often flattened a semitone (Table 27). This gives rise to a pentatonic modal series closely related to the *in* scale (see further below), with the intervals S m3 T S m3. In *ryo* modes, that is the group whose underlying pentatonicism is closer to the classical Chinese model, the melodies remain closer to the diatonic modal structures

TABLE 26: Modern *togaku* modes showing position of exchange tones

Ryo modes

Hyōjō	E	F♯>F	(G)	A	B	C♯>C	(D)

of Chinese theory. Nonetheless, modern Japanese attraction to the descending m3 S tetrachord asserts itself from time to time and in varying degrees, even in *ryo* modes.

Such modal deviations are for the most part not notated but are carried in the oral tradition. They are executed by maintaining the fingering while lowering the breath pressure, or even altering the fingerings themselves, in order to alter the pitch of certain degrees of the scale. When and how these procedures are applied is complex and inconsistent, depending not only on formulaic practice but also on such things as melodic direction (alteration is more prominent in descent than in ascent) and the duration of pitches (pitches held longer tend to adher more closely to the pitches of the older Chinese modal system). In general these procedures are applied more frequently in the *hichiriki* part than in that for *ryūteki*. At the same time the *shō*, *biwa* and *gakusō* continue to be bound to a large extent by Chinese modal practice. This modal inconsistency between the instruments produces many of the melodic clashes that give *tōgaku* so much of its characteristic dissonant character. Some further appreciation of this may be gleaned from the following discussion of the piece *Etenraku*.

Versions of *Etenraku* exist today in each of the three *ritsu chōshi*. Ex.46 shows an early form of the melody

Ex.46 *Etenraku*, *shō* mouth-organ part (1308)

(first two sections only) in *Banshiki* mode, based on that in the *Shinsen shōteki-fu* of 1308. This tune may have originated from Central Asia – it has been suggested that the characters used to write 'Eten' ('raku' simply means music) may have been those used by the Tang Chinese for Khotan, an ancient city in Central Asia once famous for its jewel bazaar. Supportive of this theory is the fact that the melody exhibits a number of features, notably the falling 7th figure that begins the melody, and the repeated notes at the end of each phrase, that Picken (1967) identified as typical of ancient Central Asian music. Below the stave are written the degree names that would have been ascribed to each pitch according to Tang Chinese theory.

Ex.47*a* shows the same two sections transcribed from the modern part-books of *tōgaku* (Tōgi, 1884) for *shō*. In most cases, these pitches form the lowest note of the cluster chords (*aitake*) performed by the *shō* in modern practice. It can be seen that once the octave transpositions inherent in the limited pitch set of the *shō* are taken into account along with an increase of note values by four (to reflect the relatively slower tempo of the music), the melody is virtually identical to that in ex.46. Ex.47*b* and *c* are the modern *shō* version of *Etenraku* in the other two *ritsu* modes, *Ōshiki* and *Hyōjō*. Apart from octave transpositions, they are (with the exception of a single

Ex.47 *Etenraku*, modern *shō* part in three modal versions

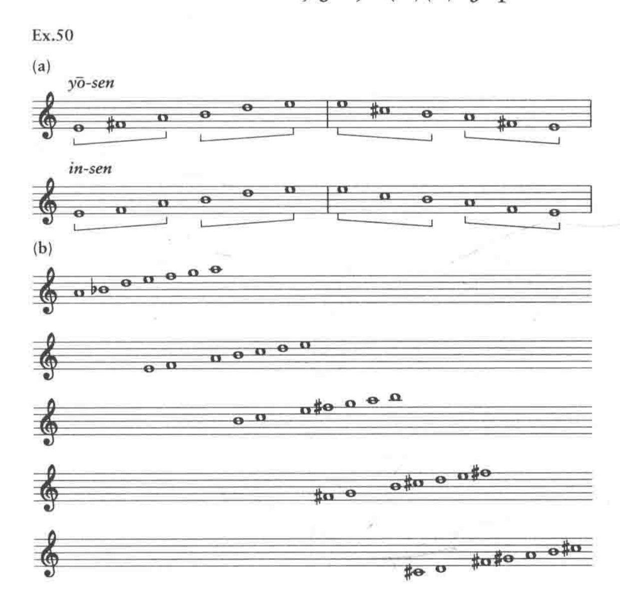
note, circled) exact transpositions of ex.47*a*. Underneath the stave of each are written the degree names the pitches are ascribed according to modern practice. These are identical for all three modern versions, but quite different from those of ancient Chinese theory shown in ex.46.



If this were all there was to modal difference in modern practice, the differences between the different versions of *Etenraku* might be regarded purely as a matter of key. But this is not the case. As stated above, both the *ryūteki* and the *hichiriki* have evolved sigifnicantly different melodies for each mode, each with its own modal character. Some of the grosser differences between the *hichiriki* versions can be seen in ex.48 (first two sections only). These are summarized in ex.49, which gives scale types extracted from the actual *hichiriki* parts of ex.48, omitting note heads that only indicate articulations.

In general, the principles of *ritsu chōshi* outlined earlier hold in these particular examples and endow each of the melodies with its distinct modal character. In particular the basic pentatonic structure of the theoretical *ritsu* scales is maintained along with auxiliary tones. Secondary degrees are, however, regarded as upper-auxiliary semitones rather than lower-auxiliary semitones as they were in Chinese practice. Certain pitches, in particular those on degrees II and VI, are lowered a semitone so that they frequently clash with the pitches carried by the string parts and the *shō*. These factors, combined with the particular formulaic practices peculiar to each mode, mean that despite being underpinned by the same core *Etenraku* melody, each *hichiriki* melody is in fact different. Such difference makes a *chōshi* a modal entity and not just a tonality.

(c) Transformation and transposition: modes, scales and tunings. In Japanese theory associated with traditions such as the *zokusō koto* that evolved from the 16th century, the scale types are no longer discussed in terms of *ritsu* and *ryo*. The male-female dichotomy is now presented in the much more obvious and familiar opposition of *yō* and *in* (equivalent of Chinese *yang* and *yin*), as illustrated in ex.50*a* (after Kishibe, 1969, p.12). A *ritsu* type of scale structure is seen in the *yō* scale; the opposed *in* scale is also a *ritsu* type, transformed by a lowering of the second degree of the scale and the sixth (or its exchange note) from tones or minor 3rds above the

Ex.49 Transformation of *ritsu* scales in *hichiriki* performing practice scales of *hichiriki* part in *Etenraku*

first and fifth to semitones above the first and fifth – the same difference that the *hichiriki* intonations produce in the *chōshi* of *tōgaku*. The *in* scale provides a semitone-major 3rd division of the 4th which is characteristic of the bulk of Japanese traditional music from the 16th century onwards. Ex.50*b* (after Malm, 1963, p.61) shows the five forms of the *in* scale used for the *shamisen* in *nagauta*.

It has been suggested that this characteristically Japanese *in* scale may have influenced the intonations of the *hichiriki* to bend in its direction over the centuries (but cf Garfias, 1975, pp.135f). It has been shown that just such a transformation of a *ritsu*-scale tuning into an *in*-scale tuning in practice was responsible for the composition effectively launching the modern *koto* traditions. Willem Adriaansz, after relating the story of the origin of the first *kumiuta* (*koto* with voice) – that it was developed during the 16th and 17th centuries from the *koto* part of *Etenraku* – showed how it was done (Adriaansz, 1973, pp.147ff). It involves a chain of tuning transformations and structural elaborations, leading from the *ritsu*-scale *Hyōjō* version of *Etenraku* to the *in*-scale form of *Fuki* as it existed in the late 17th century. Ex.51 shows the first part of Adriaansz's demonstration (pp.270f, together with Shiba, 1969, p.111) written out in staff notation, with the *koto* string numbers from his table underneath; two bars of *Fuki* correspond to one measure of *Etenraku*. It may be observed that every string number of *Etenraku* is matched by a string number in *Fuki*; there are also extra actions in *Fuki* filling the pauses, with the single-note bars in *Etenraku* being treated especially elaborately (string numbers for these bars are omitted in ex.51*b*).

Note that it is not the background basic shape of *Etenraku* that was used but the *koto*'s particular version of it. Ex.52 (from Shiba, 1969, pp.161, 155, 111) shows the end of the *koto* part in each transposition of *Etenraku* – the last four bars, equivalent to the last four note heads of the abstracted basic shapes. The two-bar plucking pattern named *shizugaki* (appearing twice in each example) goes all through the piece, with a variant only in the fifth bar of the constrasting C section. For each of the three transpositions the player's physical motions are identical; the same *koto* strings are plucked each time, as

shown in the numbers under the staff notation, and differences of pitch content result only from different tunings of the open strings. Ex.53*a* (after Shiba, 1955, p.4) shows the tunings of the 13 strings of the *koto* for each of the three *ritsu chōshi*. Substituting the designated pitches (or their exchange tones) for the string numbers in ex.52 will produce the figuration shown in the staff notation. The pitch content of the original, and hence the scale or mode, has been transformed, again simply by retuning the *koto*. There is no sure way of knowing from which *ritsu chōshi* version of *Etenraku* the *in*-scale *Fuki* ultimately descended; from ex.53*a* (iii), *b*(i), can be seen how the *hyōjō* tuning of the *koto* might have been modified from a *ritsu* tuning to an *in* tuning to produce the tuning used for *Fuki*, and indeed for the bulk of traditional koto music. This tuning is called *hira-jōshi* (ex.53*b* (i)); *hira* is the *kunyomi* (Japanese) word written with the same ideogram as *hyō* (both words meaning 'plain, level, peaceful, ordinary'), a probably more than coincidental reflection of the transformation of *ritsu*-scale types to *in*-scale types.

Two other Edo-period (1603–1868) *koto* tunings are shown in ex.53*b* (ii), (iii); like the *shamisen* scales of ex.50*b*, all three *koto* tunings can be thought of as simply making available different transpositions of the *in* scale (Adriaansz, 1973, pp.115, 475). Of course the same can be said of the *ritsu*-scale tunings of the *gakusō*, the *koto* played in the *tōgaku* ensemble. And indeed, compared with the flamboyant modal individuation of the *hichiriki*, the *koto* parts seem hardly more than transpositions of one another. Yet they do differ slightly, if only by registral dislocations in the lower strings (ex.52). Perhaps the combination of changing tessituras of the different *in* scales and the constant strings 1 and 2 (ex.53*b*) provide a difference in orientation from one *koto chōshi* to another that is more than just a change in the register – a change

Ex.53

(transposed down a 4th from Adriaansz, 1973)

of 'key' – of the *in* scale. But on the whole, to compare the *hira-jōshi* and *kumoi-jōshi* of the *koto* and voice ensemble with the comparably transposed *Hyōjō* and *Ōshikichō* of the *hichiriki* in the *tōgaku* ensemble is to know the difference between *chōshi* as a mere tuning pattern and *chōshi* as a unique modal entity.

Modelling. The use of an existing piece of music as a model or pattern for a new work, in whole or in part. Modelling may involve assuming the existing work's structure, incorporating part of its melodic or rhythmic material, imitating its form or procedures, or following its example in some other way. Other types of BORROWING in music, such as QUOTATION, PARAPHRASE, parody (*see* PARODY (i)) or ALLUSION, are often evident in instances of modelling, but modelling implies a deeper relationship of imitation or emulation.

Modelling generally involves works of the same genre (e.g. one symphonic movement modelled on another) or the same texture (a polyphonic mass cycle based on a polyphonic chanson), but modelling across genres, textures or styles also occurs and can be of particular interest. The relationship between new work and model is often ambivalent, with some elements borrowed or echoed explicitly and others suppressed or transformed almost beyond recognition. The similarities between the new work and the older one draw attention to the relationship, but the differences may be equally significant. Such ambivalence has been seen as characteristic of emulation – the attempt to equal or surpass the achievement of another artist.

Scholarly studies seeking to establish that one work is modelled on another typically stress the similarities when attempting to prove a relationship and discuss both similarities and differences in interpreting its significance. Even when the similarity is strong, it is often difficult to know how far one work has served as a model for another (*see* BORROWING, §1). For early music, the chronology can be uncertain; some scholars of medieval and Renaissance music have adopted the term INTERTEXTUALITY to describe close relationships between pieces when it is not clear which is earlier or whether both were modelled on a work now lost or unknown. In any period, the range of models a composer drew on may have been wider than the currently known repertory. Claims of modelling may have to be revised when more of the music known to the composer is studied; for example, elements in Mozart's early quartets long thought to have been modelled on Haydn have since been shown to be part of a broader Viennese tradition, and one early quartet is likely to have been modelled on Ordonez (Brown, 1992).

In the Western tradition, composers have used modelling in four main ways:

1. to learn how to compose in a certain style or genre, by imitating a work in that style or genre;
2. to imitate a particularly successful or exemplary work;
3. to emulate, compete with, pay homage to or comment on the work of another composer; or
4. to allude to a well-known work and thus convey meaning.

These circumstances overlap, and two or more may be present at once. The first two are probably as old as music itself, for all music is based on the improviser's or composer's experience of other music and in a broad sense uses modelling. The last two require a tradition that esteems composers and individual works, and they add levels of interpretation and signification not present in the first two.

Examples of the first motivation for modelling – learning a style or genre through imitation – can be found in the early works of most composers: Monteverdi, for example, based early madrigals (or parts of them) on madrigals by Luzzaschi, Marenzio and Wert, and Stravinsky's early Piano Sonata in F♯ minor drew on sonatas by Tchaikovsky, Glazunov and Skryabin. Writings on music as far back as *Musica enchiriadis* (*c*850–900) and Guido of Arezzo's *Micrologus* (1026–32) include works intended as models for how to improvise or compose in a particular style. Many experienced composers undertaking a new genre have also used models; the sections of Mozart's Requiem that he lived to complete are remarkably similar to those of Michael Haydn's Requiem in C minor (1771) in instrumentation, distribution of chorus and solos, texture, structure, text-setting, harmonic plan and other aspects of technique and style, indicating that Mozart modelled his work on that of his former Salzburg colleague.

The second motivation for modelling – imitation of an exemplary work – is evident in the reworking of popular chansons in the Renaissance, either in new vocal or instrumental versions or in imitation masses (*see* BORROWING, §§5 and 7). Monteverdi's laments and Handel's *Messiah* served as models for many successors, as did Haydn's *Creation*, Beethoven's Ninth Symphony and Stravinsky's *Rite of Spring*. In popular traditions, an especially successful work provokes imitators; for example, the Beatles' album *Sergeant Pepper's Lonely Hearts Club Band* inspired responses ranging from the Rolling Stones' *Their Satanic Majesties' Request* to a series of concept albums by the Who, Pink Floyd and many others.

Thirdly, composers often honour, compete with, comment on or respond to their predecessors or peers by using their works as models. Machaut used isorhythmic motets by Vitry in this way, borrowing talea, color or structural plan while expanding on or otherwise outdoing his model; these works may have intertwined homage and rivalry in ways comparable to poetic contests among medieval poets. The reworking of polyphonic models in the Renaissance has been linked to emulation, competition and homage through the concept of *imitatio*, borrowed from rhetoric (*see* RHETORIC AND MUSIC, §I). Sometimes a composer invokes a model yet seeks to distance his new work from it; for example, Debussy's *Pelléas et Mélisande* is modelled on Wagner's *Tristan und Isolde* and can be read as a commentary on or critique of it, with frequent references framed by a different aesthetic viewpoint. Several studies of 19th- and 20th-century composers have cast the use of an older composer's work as a model in the mould of Harold Bloom's theory of 'the anxiety of influence' (*see* BORROWING, §11): examples include Beethoven's reliance on Mozart's String Quartet in A major K464 for his own early A major and late A minor quartets, Brahms's use of Chopin models for piano works, and Bartók's modelling of the second movement of his Piano Concerto no.3 on the third movement of Beethoven's Quartet in A minor op.132.

The use of modelling as a form of allusion to convey meaning overlaps with the previous two categories. In the last example, the Beethoven quartet movement, headed 'Heiliger Dankgesang eines Genesenen an die Gottheit', was written after Beethoven's recovery from a serious illness; the link to Bartók's own circumstances – temporarily improved after three years of being ill from the disease that was soon to end his life – is apparent, making the evocation hauntingly meaningful. The gesture of moving from darkness to light near the opening of Haydn's *Creation* inspired many echoes in both vocal and instrumental music, including Beethoven's Symphony no.5 and Brahms's *German Requiem*. Film composers often use specific works as models in order to evoke similar associations; for example, in his music for the *Star Wars* films, John Williams used as models Holst's *The Planets* (the most prominent orchestral depiction of space) and Wagner's *Der Ring des Nibelungen*, whose system of leitmotifs linking four separate operas Williams imitated to suggest an epic on a similar scale spread over a series of films.

Modena. City in Italy. Although of modest size and until the 17th century lacking a local court to patronize music, Modena has long maintained a lively musical tradition supported by the cathedral and the city government.

The earliest musical sources, those dating from the 9th century (*I-MOd* Cod.O.I.4) and preserved in the cathedral, are linked to the cult of St Geminian; they contain a nightwatchman's song (in diastematic notation), *O tu qui servas armis*, celebrating the unsuccessful siege of the city by foreign invaders. After the translation in 1106 of the body of St Geminian, Modena's patron saint, the musical life of the city centred mainly on the Romanesque cathedral (1099). Two 14th-century plainchant sequences written in honour of the saint survive (*I-MOd* Cod.O.I.16, *Glorietur letabunda* and *Haec sunt sacra festa*). Only from 1453, however, do the *Atti della fabbrica di S Geminiano* record the musicians attached to the cathedral's *cappella musicale*. In that year Alessandro de Galvan was appointed first organist, a post he held for 20 years; in 1463 Zohane de Marchatelo completed the construction of a new organ, installed next to the old one built by Giacomo Guidini da Regio in 1438. The costs of running the chapel are documented from 1472 in the *Atti della fabbrica di S Geminiano*. About 1530 Cardinal Morone, one of the main 'reformers' of sacred music at the Council of Trent and then Bishop of Modena, made the first attempt to reform polyphony there; he aimed to make the text better understood and focus the attention of the congregation on the liturgy rather than the music. During the first four decades of the 16th century the cathedral's polyphonic repertory (*I-MOd* Cod.I–XIII) reflected the styles of internationally renowned composers, and Modena maintained strong ties with Rome and Ferrara (Modena became part of the Este domain in 1336 and became a duchy in 1543 under Duke Borso d'Este). During these decades about ten professional singers and instrumentalists were active in the cathedral in addition to the organist. However, the focus of the city's musical

affairs moved from the cathedral to the local court after Duke Cesare d'Este moved the family seat from Ferrara to Modena in 1598.

Maestri di cappella at the cathedral included Giacomo Fogliano (1479–97, 1504–48), Vecchi (1584–6, 1593–1604), Capilupi (1604–14), Stefanini (1615–26), Bravusi (1626–30), Uccellini (1647–65), Agatea (1665–73), G.M. Bononcini (1673–8), Giuseppe Colombi (1678–94), Pacchioni (1694–1738) and Catelani (1848–66); renowned organists were Fogliano (1479–97, 1504–48), Lodovico Casali (1638) and Cornetti (1639–43, 1646–8).

In the early 17th century the status of Modena's musical activities was raised through the patronage of the Este family (fig.1). The reputation of the musical establishment of the Este court was sufficient to attract significant composers and artists both from nearby areas and from other parts of Italy. The virtuoso cornettist Nicolò Rubini and the harpsichordist Michelangelo Rossi held court positions in 1610 and 1614 respectively. Sigismondo d'India was there in 1623–4 and again in 1626, and composed his eighth book of madrigals for the Este court, 'a gathering ... of the best singers to be heard in Europe' (preface, *Ottavo libro di madrigali*, Rome, 1624). Throughout the 17th century Modena vied with other centres to attract the most celebrated singers.

The court helped to establish a local tradition of string playing and composition which antedated comparable developments in nearby Bologna. Although it is not possible to determine the size of the court orchestra in the second half of the 17th century (it varied with the importance of the functions, as is suggested by the many ad lib parts in works written for the court), its high level of performance attracted significant artists, particularly from Bologna. This vitality was stimulated by the violinist Marco Uccellini during his stay in Modena (1641–65); his novel treatment of violin playing (with scordatura, double stopping and highly embellished passages) and use of instrumental puzzle canons remained characteristic features of the Modenese school, later continued by Giuseppe Colombi, G.M. Bononcini, G.B. Vitali, Domenico Gabrielli and T.A. Vitali. The marriage in 1665 of Alfonso IV d'Este to Laura Martinozzi, niece of Mazarin, opened the Modenese court to French influences, demonstrated not only in the works labelled 'in the French style', but also in the fusion of Italian and French elements in dance forms and in the *sonata da camera*.

During the two decades of Francesco II d'Este's reign (1674–94) music at the court reached its most splendid phase. The young duke stimulated many musical performances, mostly of oratorios and sacred and instrumental music; from 1680 to 1691 about 100 oratorios, many of them dedicated to Francesco II, were performed at Modena. He also made efforts to establish a good library and university there, and played a part in the founding (*c*1683) of the Accademia de' Dissonanti, which held most of its meetings at the court and whose repertory emulated the experiments in novel concerto grosso instrumentation influenced by contemporary Roman practice. The academy became federated with Messina's Accademia Peloritana in 1728, and was renamed Ducale Accademia dei Dissonanti in 1752 and Regia Accademia di Scienze, Lettere ed Arti di Modena in 1817; it is still active, maintaining a sizable library.

Under Francesco II the court *cappella musicale* was led by two *maestri* (Benedetto Ferrari and Giuseppe Paini), two *sottomaestri* (Colombi and G.B. Vitali) and one *capo degl'istromentisti* (G.M. Bononcini), thus providing an exceptional environment for the cultivation of the current instrumental forms. The increasing demand for music during this period also stimulated the activity of many printers, the most representative being those of the Cassiani family, the Soliani family, Cristoforo Canobi, Gasparo Ferri and Antonio Vitaliano.

Among the directors of the *cappella musicale* (a complete list can be found in *I-MOe* Misc.It.L.9.27, f.405–8) were Cornetti (1633–5, 1643–8), Ferrari (1653–62, 1674–81), Colombi (*sottomaestro*, 1674–92), G.B. Vitali (*sottomaestro*, 1674–92), Antonio Gianettini (1686–1721), Pacchioni (*sottomaestro*, 1699–1720, and *maestro*, 1722–38) and A.M. Bononcini (1721–6).

Francesco II was succeeded by his uncle Rinaldo d'Este in 1694, and musical life at Modena entered a period of decline, particularly with regard to instrumental music, although operatic performances increased. During the French occupation of Modena (1702–7) all musical activities at court were suspended while the duke lived at Bologna. On his return the *cappella musicale* was reduced in size and by 1713 it included only four instrumentalists, seven singers and two *maestri*; a further reduction to a total of nine members was made in 1734.

In 1771 the Accademia Filarmonica Modenese was founded, and by 1777 supported a chorus and orchestra. In 1780 it was renamed the Accademia Ducale dei Filarmonici and from 1817 it was known as the Società Filarmonica Modenese. It was dissolved in 1845.

The Società Artistico-Filarmonica was instituted in 1881 with the aim of promoting all artistic activities, including public and private concerts, particularly during Holy Week. A choral society, the Corale Rossini, was founded in 1887 and remained active until 1937. A music school supported by city funds was instituted in 1864; it was renamed the Scuola Comunale di Musica Orazio Vecchi in 1914, and in 1950 came under state control.

The earliest theatre in Modena, the Sala or Teatro della Spelta, was in the Palazzo Comunale, and dramatic and musical performances were held there from 1539. Vecchi's madrigal comedy *L'Amfiparnaso* was given there in 1594, but no reports of subsequent musical performances remain from before 1654, when Duke Francesco I d'Este rebuilt the old hall into a large theatre with graded seating, columns and galleries (cap. 3000). It was named the Teatro Ducale di Piazza and inaugurated in 1656. The first operas staged there were Rima's *Sancio* (1656) and Ferrari's *L'Erosilda* (1658). After 1710 the theatre mounted comedies, served as a site for 'azioni accademiche' and eventually became a warehouse; it was demolished in 1769.

A smaller theatre, the Teatro di Corte (also known as the Teatro Ducale), was built in 1669 and inaugurated in 1686 with *L'Eritrea, overo Gl'inganni della maschera* (composer unknown) and was used irregularly, mostly for courtly events. Renovated and enlarged in 1749 and 1768, it was renamed Teatro Nazionale in 1800, Teatro Regio in 1804 and again Teatro Ducale in 1815. It was closed in 1848 and demolished in 1862; a new theatre, the Teatro Aliprandi, was built on the site and used mostly for performances of comedies and musical comedies until it burnt down in 1881.

The Teatro Valentini, which staged comedies from 1643, likewise burnt down, in 1681. It was reconstructed and renamed the Teatro Fontanelli (after its new owner) in 1683. During its short autumn season a few operatic

performances were given there such as Carlo Pallavicino's *Vespasiano* in 1685. It was renamed Teatro Rangoni in 1705, Teatro di Via Emilia in 1807, Teatro Comunale in 1816 and Teatro Vecchio in 1841. The city administration built a larger theatre, the Teatro Comunale Nuovo, which was inaugurated in 1841 with Alessandro Gandini's *Adelaide di Borgogna al castello di Canossa*.

A small but elegant and comfortable theatre used at Modena during the 18th century was the Teatro Molza, built next to the Teatro della Spelta in the ducal palace and inaugurated in 1713 with F. Gasparini's *La fede tradita e vendicata*; it was used between 1720 and 1735, when the Rangoni, which was at the disposal of the court from 1724 to 1730, was not staging opera. The Teatro Storchi, which opened in 1889, was the most important opera house in the period 1916–21. After World War II operatic standards rose considerably in Modena, partly owing to the presence of such singers as Freni and Pavarotti, both natives of the city. Since the late 1950s the Teatro Comunale has imported foreign productions and exchanged productions with other theatres within the region.

The court's music library formed the bulk of the musical collection of the Biblioteca Estense (*I-MOe*), which also contains the music libraries of Maximilian, youngest son of Maria Theresa and Maximilian Franz, Elector of Cologne. The collection of the Modenese musicologist L.F. Valdrighi is in the Modena Museum.

ELVIDIO SURIAN/ALESSANDRA CHIARELLI

Modena, Julio da. *See* SEGNI, JULIO.

Modena, Leon (*b* Venice, 1571; *d* Venice, 1648). Italian rabbi, cantor and scholar. He was a cantor in the Scuola italiana (Italian synagogue), Venice, from 1607 until his death. He appears to have introduced some form of polyphony, probably improvised, into the synagogue at Ferrara in 1604. Erudite in Jewish and humanist studies, Modena composed more than 40 writings, on subjects as diverse as Hebrew language and grammar, lexicography, Jewish rites and customs, Kabbalah, alchemy and gambling, as well as various plays, prefaces and rabbinical authorizations, translations, editions, almost 400 poems, and a highly personal autobiography. Music occupied a central place in his life and thought. Among his extended responses to questions put to him in his capacity as a religious authority, he wrote two essays on music, specifically polyphony: the first (1605) legitimizes its use in Jewish prayer services and celebrations, as well as for study; the second (from later years) addresses the issue of whether it is permitted to repeat the name of God (in a single voice or between voices).

Modena played a leading role in shaping the first and, until the 19th century, most important collection of polyphonic works by a Jewish composer, Salamone Rossi's *Hashirim asher lish'lomo* ('The Songs of Solomon', 1622–3), for which he probably wrote most of the extensive prefatory matter, including a reprint of his first *responsum*; he was entrusted by the composer, moreover, with preparing the work for publication and reading the proofs. In 1628 he founded a music academy in Venice, which he directed until about 1639. Many of Modena's poems were written for wedding or other festive events and may be assumed to have been sung, in some cases by the author.

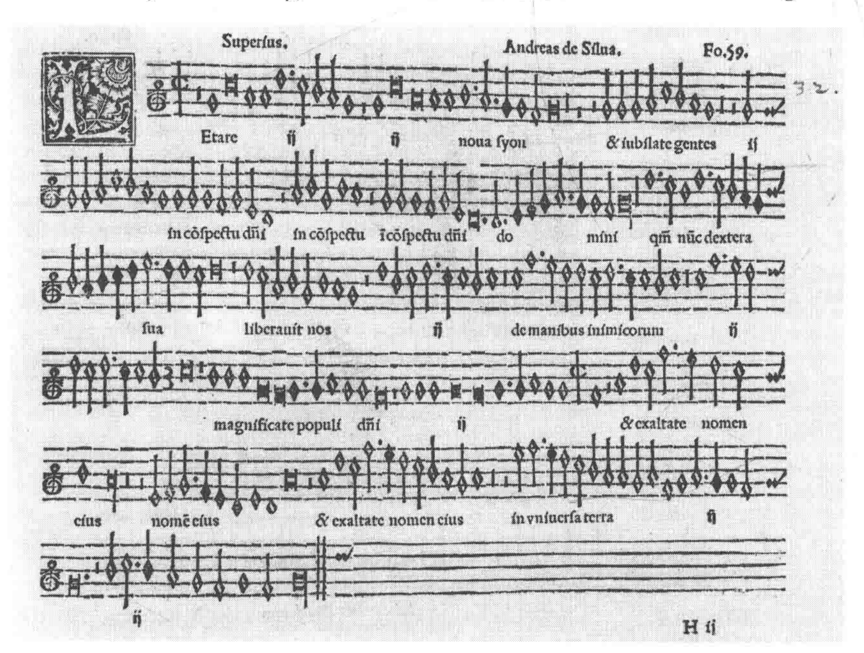
DON HARRÁN

Mode of limited transposition. Term used by Messiaen in his *Technique de mon langage musical* (Paris, 1944; Eng. trans., 1956, chap.16) for a SCALE which can be transposed by a semitone fewer than 11 times before the original set of notes reappears. Examples include the whole-tone scale (mode 1 in Messiaen's system, reproduced after two successive semitone transpositions) and the octatonic scale (mode 2, reproduced after three).

□

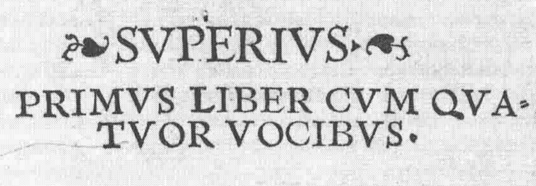
Moderato (It.: 'moderate', 'restrained'). A direction used either alone as a tempo designation or as a qualification to some other direction. It is sometimes abbreviated to *mod.to*. Because verbal directions appeared in 17th-century music only to tell the musician something that sense of tradition would not, *moderato* did not appear until the very end of the century, when certain composers began marking everything they wrote. Thus François Couperin, who marked everything but his sacred pieces, made considerable use of the French adverbial form *modérément*, and his contemporaries in France also used the adjectival form *modéré*, which has remained in common usage ever since. *Moderato* itself was included in Brossard's *Dictionaire* (1703) as meaning 'with moderation, discretion, wisdom, etc., neither too loud, nor too soft, nor too fast, nor too slowly, etc.' – a definition which is in itself a sign of a new generation in tempo and expression marks, one in which for the first time even the ordinary had to be explained. Curiously, Rousseau (1768) gave *modéré* as the equivalent of the Italian *adagio*, the second of his five main degrees of movement in music. Since the early 19th century, *moderato* has most often appeared either alone or in the compounds *allegro moderato* (a little slower than *allegro*) and *andante moderato* (a little faster than *andante*). For a curious usage in J.S. Bach *see* LENTO.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

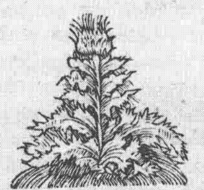


DAVID FALLOWS

Moderator [muffler pedal] (Fr. céleste). A muting device that introduces a strip of cloth, felt or leather between the hammers and strings of a piano. Operated by a hand stop, knee lever or, especially in later examples, a pedal, it was commonly found on German and Austrian pianos of the 18th and early 19th centuries. From about 1810 to the 1830s Viennese grand pianos often had two moderator pedals, the second of which inserted an extra thickness of muting cloth to provide a third level of soft tone-colour in addition to the normal moderator and the *Una corda*. Moderators, which had almost never been included in French and English grand pianos, fell out of favour in Germany and Austria after about 1840. The device was also applied to square and upright pianos, in which it remained in occasional use throughout Europe and America until the early 20th century, since these instruments usually lacked *una corda* pedals.



EDWIN M. RIPIN/JOHN KOSTER



Moderne, Jacques (*b* Pinguente, *c*1495–1500; *d* Lyons, after 1560). French music printer of Italian birth. He was the second printer to publish music on a large scale in France. The first was Pierre Attaingnant of Paris, who began issuing his music books in 1527–8, using a practical and relatively inexpensive single-impression method which he had just developed. Moderne was one of the first (along with Johann Petreius and Christian Egenolff independently in Nuremberg and Frankfurt) to adapt this new method for his own use. He began printing polyphonic music in 1532 (a book of plainsong masses is dated 1530) and continued to be Attaingnant's only serious rival in France for 15 years.

From the identification on his early books as 'Jacobus Modernus de Pinguento' we may presume that Moderne

1. *Superius voice of the first part of Andreas de Silva's motet 'Laetare nova Sion', from 'Motteti del fiore' (Lyons: Moderne, 1532)*

2. Title page of the superius partbook of 'Motetti del fiore', printed by Moderne (Lyons, 1532)

was born in the village of Pinguente (now Buzet, Croatia) on the Istrian peninsula. Whether he spent some apprentice years in Venice cannot be determined. His name appeared as a bookseller on the tax rolls of Lyons for the first time in 1523 and regularly thereafter until the early 1560s. According to a contract dated 28 May 1562 he rented out a room in his house, but in 1568 his widow is listed in the tax records.

He is identified in the archives and frequently on his title-pages as 'grand Jacques', no doubt because of his girth or his height, or both. His social stature must have been substantial as well, since the Lyons records show him to have been a modest landowner and an official in various Lyons activities, as well as a neighbour to some of that city's most prominent citizens.

Moderne's publishing activity was by no means restricted to music. He was an active printer of several types of popular books – on religion, home remedies, emblems and palmistry among others – in Latin and in French. Though some undated volumes were undoubtedly printed before, the earliest dated one appeared in 1526. He continued issuing these books throughout his career.

Music is the major part of his production and the part that brought him the greatest renown. Masses, motets, chansons and instrumental music are well represented in his books. After issuing two books of masses in plainchant in 1530, he produced a series of eight polyphonic motet anthologies from 1532 to 1542, four called *Motteti del fiore* because of the woodcut of a thistle (see figs. 1 and 2). A similar series of 11 (or perhaps more) chanson collections, entitled *Le parangon des chansons*, was issued between 1538 and 1543. The *Parangon des chansons* series was printed uniquely and innovatively in 'table-book' format, with the tenor and altus voices presented on facing pages inverted above the superius and bassus (a presentation adapted 60 years later by Peter Short and Thomas East for the English ayre). Later several books were devoted to the music of single composers. There was also at least one unsigned collection of some anonymous monophonic noëls and two treatises on music theory reprinted from earlier sources. There is no evidence that Moderne was a musician himself. He is never so described in the contemporary records, nor has any music written by him turned up in manuscripts or printed editions.

Moderne may have been persuaded to try his hand at music printing by the composer FRANCESCO DE LAYOLLE, who was the organist at Notre Dame de Confort and who had already published several books of motets with Gueynard and other printers of Florentine origin at Lyons between 1525 and 1528. He acted as editor for Moderne's first polyphonic publication, *Liber decem missarum* of 1532, as Moderne acknowledged in the dedication. He probably continued as Moderne's editor, especially since the greater part of the musical output was prepared for publication before Layolle's death around 1540. After that the originality of the repertory declined.

Moderne printed about 50 music books, which contain over 800 pieces. More than half are unique to Moderne's prints. Many of the rest were frequently reprinted later by others but made their first printed appearance here. These books are a particularly important source for the music of Layolle and of Pierre de Villiers, who seems to have lived in Lyons and perhaps also offered musical assistance to Moderne. Besides Layolle and Villiers, Eustorg de Beaulieu, Charles Cordeilles, Henry Fresneau, Gabriel Coste, P. de La Farge and Guillaume de La Moeulle were of local origin or residence. Moderne devoted two publications of masses, motets and Magnificat settings exclusively to Pierre Colin of Autun, while including several other motets and chansons by Colin in his anthologies. But most of the composers best represented in the collection are international figures like Gombert, Willaert, Arcadelt, Lhéritier and Jacquet of Mantua, or members of the Parisian school like Claudin de Sermisy, Maillard, Sandrin, Certon and the ubiquitous Janequin. In contrast to Attaingnant who confined himself mostly to French and Netherlandish composers, Moderne included works by musicians from Italy, Spain and Germany. He devoted entire books to Italian canzonas by Layolle and Matteo Rampollini, to motets by Morales

and to lute music by Francescho Bianchini and Giovanni Paolo Paladino. The first part of *Musique de joye*, reprinted from a Venetian source, contains ricercares by a number of other Italians as well as dances from Attaingnant and other French sources; Morales, Mateo Flecha and Luys de Narváez represented Spain, and Leonhard Paminger and Mathias Eckel, Germany. Moderne was the first to print the lute music of the Hungarian Balínt Bakfark.

Some explanation for the variety in Moderne's repertory lies in the character of the place where he worked. In the first half of the 16th century Lyons was a cosmopolitan city with large Italian and German colonies, an important centre for the new printing trade and a meeting ground for intellectuals. Its position on the border between France and Savoy and at the confluence of the Saône and Rhône rivers made it a crossroads. Fairs four times a year brought traders from as far away as Lebanon in the east and Portugal to the west. Thus Moderne had access to music of varied origins and a ready market to disseminate his music books throughout Europe.

SAMUEL F. POGUE/FRANK DOBBINS

Modernism. A term used in music to denote a multi-faceted but distinct and continuous tradition within 20th-century composition. It may also refer to 20th-century trends in aesthetic theory, scholarship and performing practice. Modernism is a consequence of the fundamental conviction among successive generations of composers since 1900 that the means of musical expression in the 20th century must be adequate to the unique and radical character of the age. The appropriateness of the term to describe a coherent and discrete movement has been underscored by the currency of the word 'postmodern', which refers to the music, art and ideas that emerged during the last quarter of the century as a reaction to Modernism (*see* POST-MODERNISM). The word 'Modernism' has functioned throughout the century both polemically and analytically; although it is applied loosely to disparate musical styles, what links its many strands is a common debt to the historical context from which it emerged.

1. ORIGINS. Modernism first took shape as a historical phenomenon between 1883 and 1914. Before the death of Wagner, the term 'modern' was used interchangeably with 'new', 'recent' and 'contemporary'. In its Wagnerian usage it also denoted an embrace of a wide palette of music as a means of conveying narrative and extra-musical content, as opposed to 'absolute' music. Its use in the early and middle 19th century echoed the controversies of the 18th-century debate in which the ancients were contrasted with the moderns. Scepticism about the quality and value of the new in art and music pervaded the early and middle 19th century, indicating the lasting influence of 18th-century criticism and the controversies surrounding post-revolutionary Romanticism (whose aesthetic response to a perceived moment of dramatic historical change – as in the criticism of Friedrich Schlegel and the painting of Caspar David Friedrich – was inconsistent, at once anticipating the ambitions of Modernism and reinvigorating a re-examination of antiquity and the Middle Ages). Neo-classicism thrived until 1830 and evolved into an eclectic but dominant 19th-century historicism. Doubt was cast on the cultural and aesthetic potential of the present, particularly in the context of rising rates of literacy and the expansion of the audience well beyond the ranks of the 18th-century aristocracy. Wagner himself used the term 'modern' in 1849 as an epithet directed against Meyerbeer as a way of characterizing grand opera's cheap concession to popular and philistine taste. Art was being debased by those who sought to celebrate and exploit the spiritually corrupt aspects of modern life, including trade, industry and journalistically manipulated public opinion.

From the mid-century, however, following Baudelaire's defence of Wagner in 1861 and use of the word 'modern' in 1863 (*The Painter of Modern Life*), the term came to signify, in a positive sense, a revolutionary avant garde that rejected historical models and confronted directly the overwhelming character of the new in contemporary life by penetrating beyond the surface of modernity. The link between Baudelaire's notion of the modern and Wagner's ideas about the artwork of the future was forged in the frequent application of the term to describe the work not only of Wagner but of composers who were influenced by him in the generation of Mahler and Strauss. By the early 1890s, the word was used equally in assigning praise and blame with respect to post-Wagnerian music that experimented with form, tonality and orchestration in a manner evocative of the radical qualities of contemporary culture and society. In instrumental music the modern was associated with the tone poem and large-scale work evocative of ideas and emotions using massive forces and novel instrumental effects. By 1900, the word had ceased to denote, in a generic sense, the new.

Issues of terminology aside, Modernism, throughout the 20th century, retained its initial intellectual debt to Wagnerian ideas and conceits regarding the link between music and history. The art of music was perceived to need to anticipate and ultimately to reflect the logic of history. In Wagner's view, the imperative of art was a dynamic originality rooted in the past but transcending it. The history of music developed progressively through time, rendering initially novel and forward-looking styles dominant, only to witness that dominance undermined and superseded by the next wave of prescient change as history moved forwards. Success with the established audience of one's time was not a criterion of aesthetic merit or historical significance. Legitimate originality in art was inherently progressive, oppositional and critical. It pierced the surface of reigning tastes, undermined them and revealed hidden truths and profound historical currents. Art true to its own time, whether called modern or the artwork of the future, forged a leading edge in history; it constituted a prophetic force for change often rejected by contemporary critics and connoisseurs. Con-

sonant with such Wagnerian ideals, the first generation of 20th-century Modernist composers readily embraced the historical relativism implicit in the motto inscribed on Joseph Maria Olbrich's 1897 Secession building in Vienna: *Der Zeit ihre Kunst: Der Kunst ihre Freiheit* ('To each age its art: to art, its freedom'). Music shared with the other arts not only the obligation to engage the historical uniqueness of modern life but the need to bring forward the subjective and uniquely insightful experience of the creative artist, whose perceptions and experiences were deemed decisive as the substance of the aesthetic realm. Music was understood as crucial to the notion of an organic and encompassing art experience whose impact extended beyond mere aesthetic appreciation.

2. Musical characteristics. Despite the use of the term 'modern' in connection with Mahler (whose distortions of symphonic form, penchant for fragmentation and unconventional sonorities and use of instruments, including cowbells and hammers, were cited by later Modernists and their defenders such as Webern and Paul Bekker), Debussy (on account of his use of harmony and interest in non-Western music), Skryabin (also for harmonic originality) and Strauss (whose *Salome* and *Elektra* were considered thoroughly avant garde), these four figures were ultimately understood as precursors of 20th-century Modernism. By 1912 Strauss was viewed as having turned away from Modernism; Mahler died in 1911, Skryabin in 1915 and Debussy in 1918. Busoni, Schoenberg, Schreker and Stravinsky were recognized before 1914 as the first proponents of 20th-century Modernism. The selfconscious search in the years immediately before 1914 by composers and performers for a language of music adequate to and reflective of the contemporary moment revealed a conception of modernity dominated by the progress of science, technology and industry, and by positivism, mechanization, urbanization, mass culture and nationalism. A heightened sensitivity to the isolation and alienation of the individual and a concomitant intensity of personal emotions accompanied the sense of newness and discontinuity that pervaded the first years of the century.

The aesthetic reaction to modernity reflected not only enthusiasm but ambivalence and anxiety. Nietzsche's critique of modernity was well known. Nevertheless, the shared assumption surrounding the subsequent debates over Modernism was that the present was far more radical in its contrasts with the immediate past than previous periods had been. Therefore the historical tastes and aesthetic styles characteristic of much mid- and late-19th-century painting, architecture and music were rejected. Overt departures from immediate historical precedents became hallmarks of early Modernism. Furthermore, given a pervasive sense of dread about societal and cultural consequences of modernity, the subjective experience of the artist, at the moment, became increasingly glorified. In this regard, early Modernism was indebted to turn-of-the-century advances in painting, particularly Impressionism and Expressionism. Varèse captured the subjective and political aspects of the Modernist credo accurately when he wrote, in 1917, 'I dream of instruments obedient to my thought and which, with their contribution of a whole new world of unsuspected sounds, will lend themselves to the exigencies of my inner rhythm', and in 1936, 'the very newness of the mechanism of life is forcing our activities and our forms of human association to break with the traditions and methods of the past in the effort to adapt themselves to circumstances'.

The basic assumptions underlying the compositional traditions of the 19th century underwent scrutiny, particularly the concept and practice of tonality, the reliance on recognizable rhythmic regularities, the dependence on traditional instruments and sonic effects and the use of extended compositional forms, as in the case of Bruckner. Normative expectations regarding beauty in sound and timbre and meaning in musical expression were confronted, especially in matters of orchestration, the use of instruments and the voice vis-à-vis the techniques of post-Wagnerian composition. The link between music and narration particularly came under scrutinity. Modernity demanded the shattering of expectations, conventions, categories, boundaries and limits as well as empirical experimentation (following the example of science) and the confident exploration of the new. This would inspire the continuing search during the century for new systems of pitch organization as alternatives to tonality, and for new instruments, often the result of technological advances, from the theremin (1920) and the ondes martenot (1928) to the synthesizer and the computer. As the Italian futurist Luigi Russolo wrote in 1913, 'We must break out of this narrow circle of pure musical sounds, and conquer the infinite variety of noise-sounds'. The employment of *Sprechstimme* by Schoenberg in *Pierrot lunaire* (1912) is one notable early example; text and sound no longer ran together along parallel descriptive logics.

3. Aesthetic aspects. Modernism in music was fuelled by more than aesthetic ambitions and the embrace of the uniquely new in music. A critique of contemporary cultural standards and the social uses of music as exemplified by the turn-of-the-century urban concert audience and public for music in the home was, from the start, a driving force behind early 20th-century compositional innovations. Reigning habits of listening were understood as too dependent on conservative expectations regarding music's surface logic and its alluring, sensual and story-telling properties. Repetition, lush sonorities and a reliance on extra-musical narratives were chief targets in the turn-of-the-century discourse about music that differentiated, as Schoenberg argued, decoration and ornament from structure, and style from idea in the use of sounds alone. Contemporary taste appeared distorted by a dependence on false façades. The extensive and widespread bourgeois audience in Europe of concertgoers and amateurs before World War I was seen as addicted to art as comforting entertainment and affirmation, and as unable and unwilling to confront the unique characteristics, transformative power and ethical character of true musical art. The popularity of third-rate operettas on the eve of World War I was just one symptom of this malaise. Music journalism was viewed as playing a nefarious role by claiming corrupt established compositional conventions as reflective of normative criteria of beauty in music. The social critique implicit in Modernist ideology created an uncomfortable and uneasy affinity between Modernism and conservative cultural criticism which, following Matthew Arnold's *Culture and Anarchy* (1869) and Max Nordau's *Entartung* (1892, Eng. trans. 1895 as *Degeneration*), condemned mass society and the expansion of the audience for music and culture as responsible for the decline in standards, the corruption of taste and the encouragement of artistic mediocrity

masquerading as the modern. Modernists and their defenders would never entirely escape the charge of intolerance, snobbery and élitism and a distaste for the democratization of culture made possible, ironically, by the technological advances of modernity, from printing to electronic reproduction and transmission.

4. Performance. From its inception, Modernism influenced not only the direction of musical compositions but also performing practices. A new rationalism and critical formalism emerged in the early 20th century that focussed on clarity, objectivity and historical and stylistic criticism with respect to a musical text. The improvisatory, seemingly over-inflected and boldly personal and expressive character of the late 19th-century performances of the reigning classical canon, particularly Beethoven, came under attack before 1914, notably from Heinrich Schenker. An austere, explicitly anti-sentimental Modernist approach to performance evolved at mid-century and came to dominate; examples include the conducting of Arturo Toscanini, George Szell, Hermann Scherchen and Fritz Reiner, the interpretative strategy of the Kolisch Quartet (and later the Juilliard and Guarneri Quartets), the pianism of Artur Schnabel, Rudolf Serkin and Glenn Gould and the refined approach to the violin displayed by Joseph Szigeti and Jascha Heifetz. Modernism helped impel and sustain a new obectivity towards the past and its attendant revisionism that profoundly influenced scholarship and principles of textual criticism and editing. Guido Adler's critical construct of the methods and goals of musicology made him sympathetic to the innovations of Mahler, Schoenberg and his protégés, many of whom had been students of Adler in music history. The newness of Modernism, for Adler, writing in 1919, was justified as evidence for the patterns of historical development; therefore, as a 'child of the times', he found the tendency to 'suppress living composers with inappropriate comparisons with works from the past' unreasonable and intolerable. The later 20th-century penchant for historically based performing practices, pre-Classical repertory and period instruments can also be linked to Modernism. At stake in these trends were a reaction against Romanticism and a reassertion of the primacy of an inherent logic of musical materials. Likewise, late Romanitc historicisim in taste and subjective appropriation in performance were superseded by a revival of interest in pre-Classical eras, particularly medieval and Renaissance music. Scholarly objectivity with respect to history became a Modernist conceit.

5. Social and cultural aspects. The extensive commerce associated with musical life that had developed during the last quarter of the 19th century was held in the early 1900s as partially responsible for the prevalence of debased listening habits. Modernism was endorsed from the outset as an aesthetic strategy that fought against the domination and corruption of taste by business interests in the arts, particularly in concert management and music journalism and publishing. After 1918, Modernist composers sought refuge in new organizations, such as Schoenberg and Berg's Verein für Musikalische Privataufführungen, Cowell and Varèse's Pan American Association of Composers and the Copland and Sessions New York concerts. Modernism created a demand for new publishers and journals, leading to the establishment of the Arrow Press, Dreililien Verlag, New Music Series, Universal Edition, Editions Russes, *New Music Quarterly*, *Modern Music* and *Musikblätter des Anbruchs*. The selfconscious sense of an avant garde and the isolation from conventional commercial concert life (despite the notable advocacy of famous performers such as Koussevitzky, Klemperer and Stokowski) helped to widen a rift between popular and concert music that would continue to plague Modernist composers throughout the century (*see* Avant garde). Modernism also alienated a large segment of the century's professional performers. Intense hostility to most instrumentalists, singers and conductors came to characterize modernist composers, notably Schoenberg, Stravinsky, Sessions and Babbitt. In response, a select cadre of performers chose to link their careers explicitly with the Modernist avant garde, including the pianists Edward Steuermann, David Burge and Ursula Oppens, the violinists Louis Krasner, Rudolf Kolisch and Felix Galimir and the flautist Severino Gazzelloni, often working in small ensembles devoted to propagating Modernism.

In contrast to Modernism in painting (e.g. non-objectivism and abstraction) and architecture (functionalism from Adolf Loos to Le Corbusier), Modernism in music failed to alter fundamentally the tastes and practices of 20th-century mass culture. Film music and commercial advertising music did not come to reflect Modernist innovations in the way commercial design and illustration in visual media eventually appropriated new developments in 20th-century painting and culture. Only in the arenas of historical performing practice and music as academic discipline (in terms of theory and scholarship) did Modernism exert a wide influence and define standard practices.

In painting and literature, early 20th-century Modernism attacked realism and naturalism. Their counterparts in music were tonality, its link to narrative, and its formal consequences in, for example, sonata form and symphoinc tone poetry, even in the manner practised with wide success in the 1880s and 90s by Strauss. Schoenberg's *Kammersymphonie* op.9 (1906) explicitly eschewed repetition, large-scale forces, tonal stability and extensive duration. In the early controversies over Modernist innovations, tonality was construed as the functional equivalent of conventional but spurious claims to objective external reality and a natural system of representation. The pre-1914 challenges (by Schoenberg and Ives) to the uses of tonality and its attendant conventions rejected the means by which the extra-musical had been represented, signified and illustrated so effectively and successfully by Wagner and Italian *verismo* composers. Modernist music shared with contemporary radical innovations in the other arts an affinity to new epistemological theories which questioned the conventional subject–object construct. Theories of relativism, psychoanalysis, the limits of language and logical fallibility thrived alongside logical positivism as inspirations to Modernist experiments. Likewise, the work of Hermann Helmholtz and Ernst Mach on the physics of sound, the physiology of hearing and the psychology of sensation supported the arguments against viewing the logic and conventions of Western music, especially tonality, as objective and natural. So too did early 20th-century forays into anthropology that described and highlighted non-Western musical cultures not based on tonality.

Although narrative possibilities of music were not entirely rejected by the first generation of Modernists, the materials and strategies of musical representation underwent drastic change, away from attempts at direct allusion and correlation to an 'inward' relationship and 'higher' parallelism, as Schoenberg put it. In music, early Modernism thrived alongside EXPRESSIONISM in poetry, drama and painting. Modernism also gained impetus from early 20th-century mystical enthusiasms and philosophies, such as theosophy, as well as from orientalist exoticism, primitivism and symbolism in poetry (Maurice Maeterlinck, Richard Dehmel, Stephane Mallarmé), dance (the choreography of Fokine, Massine and Nizhinsky) and the visual arts, including set design (the designs by Alfred Roller for Mahler's operatic productions in Vienna from 1902 to 1907 and the pre-war work of Nicholas Roerich and Leon Bakst). In dramatic works from the early 1900s (e.g. Bartók's *Bluebeard's Castle*, 1911, and Schoenberg's *Die glückliche Hand*, 1913) one can discern an aesthetic which reasserted absolutist non-representational musical aesthetics and revealed a new range in the use of musical materials in the context of operatic form. Schoenberg wrote in 1912: 'There are relatively few people who are capable of understanding, purely in terms of music, what music has to say. The assumption that a piece of music must summon up images of one sort or another, and that if these are absent the piece of music has not been understood or is worthless, is as widespread as only the false and banal can be'. It is not surprising therefore that a formalist bias came to dominate Modernism after 1920.

Modernism was first publicly debated as a distinct historical phenomenon before World War I as a result of several prominent controversies tied to musical events between 1908 and 1913: the Viennese and Berlin premières of works by Schoenberg (particularly his Quartet no.2 and *Pierrot lunaire*), the Paris première of Stravinsky's *Le Sacre du Printemps* (at which Debussy was present) and the so-called 'scandal' concert of 1913 organized by Schoenberg in Vienna of music by himself, Berg, Webern, Zemlinsky and Mahler. These last two events were so contentious that police intervention was required. One leading Viennese critic, Ludwig Karpath, claimed that Schoenberg and his disciples were not only destroying music and violating true standards of beauty and art, they were insulting the audience and explicitly challenging its competence to judge music. Busoni published his *Entwurf einer neuen Ästhetik der Tonkunst*, a defence of progressive developments in the materials of music and methods of composition in 1907. Schoenberg's *Harmonielehre* (1911) espoused the notions of the 'emancipation of the dissonance' and 'extended tonality'. Within a year of the end of World War I, a debate over Modernism was well under way, particularly as a result of Pfitzner's two blistering pamphlets, *Futuristengefahr* (1917) and *Die neue ästhetik der musikalischen Impotenz: ein Verwesungssymptom?* (1920). With Pfitzner, a permanent link between politics and aethetics was forged in the debate over Modernism that was to help define the direction of Modernism for most of the century. Faced with an initial resistance by the public and the critics, opponents decried the arrogance and arbitrary radicalism of the break with the past and tradition, while the innovators defended themselves by an appeal to history as it ought to be understood – the Wagnerian imperative to change and therefore, ironically, an anti-Wagnerian return to the principles of pre-Romantic classical composition – or by references to the unmet spiritual demands of the contemporary moment. The view of Brahms thus underwent revision; he became a model of purely musical innovation.

6. WORLD WAR I AND ITS CONSEQUENCES. World War I was crucial to the development of Modernism. The shock of the devastation and carnage, in addition to the instability and hardship of the postwar years, deepened the impulse among composers, particularly in France and Germany, to use art as a vehicle for protest and criticism. The trajectory of pre-war Modernism seemed vindicated and justified. A radical break and the shedding of the veneer of objective aesthetic norms and conventions through fundamental musical innovation (e.g. the abandonment of tonality) and the explicit distortion of traditional expectations emerged as legitimate responses to the irrationality and cruelty of contemporary life. Bartók's *Miraculous Mandarin* (1919, orchd 1924) and Berg's *Wozzeck* (1922) were crucial and influential examples. The positive embrace of technology, as well as the perceived need to abandon old distinctions between music and noise (audible in the use of string instruments to create percussive and atmospheric sounds) ran parallel with a heightened curiosity about non-Western musical practices and instruments. Not only the entire 19th century but pre-war Expressionism came under fire, which in turn fuelled a neo-classicism that sought inspiration in the search for the new in non-Wagnerian historical precedents, particularly models from the 18th century. As Schoenberg's development of the 12-note system of composition (a strategy experimented with at the same time by J.M. Hauer) after World War I implies, during the interwar years Modernism and neo-classicism were allied through a common rejection of all forms of Romanticism. Schoenberg's reputation as not only radical but conservative was based on his advocacy of the primacy of counterpoint and his reassessment of Brahms – long considered the arch-conservative of the 19th century – as a progressive adherent to the 18th-century principle of developing variation and the autonomy of music.

By 1933 five distinct strands of Modernism had come into being: (i) the Second Viennese School, made up of Schoenberg and his followers, particularly Berg and Webern; (ii) the French-Russian axis, dominated by Stravinsky; (iii) German Expressionism, which included Busoni and the young Paul Hindemith; (iv) indigenous Modernisms, characterized by Ives in America, Bartók in Hungary, Szymanowski in Poland, Janáček and Martinů in postwar Czechoslovakia and Carlos Chavez in Mexico; and (v) experimentalism, characteristic of Hába, Varèse and Cowell, that led to the exploration of microtonality, the embrace of ambient sound and the machine and a fascination with non-Western musics and technology. These strands often came together in the work of particular composers. Many early Modernists, including Stravinsky, Bartók and Szymanowski, asserted the radical and modernist possibilities inherent in rural folk and premodern traditions.

Although these five types continued to define Modernism for the remainder of the century, the Viennese school was of the greatest significance. It inspired a powerful third generation after Berg and Webern, including the work of Nikos Skalkottas, Egon Wellesz, Stefan Wolpe, Ernst Krenek, K.A. Hartmann and Roberto Gerhard. The

French tradition continued with Messiaen, Boulez and Henri Dutilleux. Particularly important has been the intersection between national and local traditions and Modernism, as in the cases of György Ligeti (Hungary), Witold Lutosławski (Poland), Harrison Birtwistle (England), Alberto Ginastera (Argentina) and Morton Feldman (USA). The experimental dimension witnessed particular vitality in the last quarter of the century, especially as a result of advances in technology (sometimes employed in connection with the postwar extension of serialism beyond pitch) and, in recent years, the influence of rock music. Key figures include Conlon Nancarrow (who generated an entire repertory using the player piano) and George Crumb (whose theatrical, exotic sound textures were influential in the 1970s), La Monte Young and Terry Riley in minimalism, Roger Reynolds and Annea Lockwood in conceptual music, Otto Luening and Vladimir Ussachevsky, and later Morton Subotnik, Charles Wuorinen, Mario Davidovsky, Richard Teitelbaum and David Rosenboom in electronic music (including the use of synthesizers and computers), and John Zorn, Frank Zappa and Anthony Braxton in the connection with rock and jazz.

7. BETWEEN THE WARS. The political implications of the debate over Modernism before 1914 became far more significant after the war. In the interwar years, musical Modernism became allied with progressive and radical left-wing politics. By the mid-1930s, conservative, anti-Modernist compositional aesthetics had become part of the official doctrine of fascism and Soviet communism under Stalin. Nazi ideology (*see* NAZISM) and the Soviet construct of SOCIALIST REALISM attacked Modernism as anti-nationalist, unnatural, élitist, degenerate, semitic, foreign and subversive. The leading conservative composers in Germany, Pfitzner and Strauss (who sought to craft a synthesis of Modernism and populism), went along with the Nazi regime, as did most of their talented younger colleagues (e.g. Carl Orff and Werner Egk) who explicitly suppressed any evident residual Modernist tendencies. The Russian Modernism of the 1920s and early 30s – the work of Nikolay Roslavets, Aleksandr Mosolov and the young Shostakovich – was suppressed by 1936. In 1938 Modernism was officially banned and declared 'degenerate' by the Nazis (*see* ENTARTETE MUSIK). In 1948 Stalin, through the notorious Zhdanov decree, reaffirmed the attitude of the 1930s and once again decried Modernism as exemplary of bourgeois individualism and empty formalism. The irony in the attack by Hitler and Stalin was that by the late 1920s the continuing failure of Modernism to gain a wide audience had led to defections (in terms of compositional practice) within the Modernist camp by composers on the political left, notably Hanns Eisler and Kurt Weill. Nonetheless, the close link between fascism and totalitarianism and a reactionary musical aesthetic, as well as the intense ideological campaign against it, lent Modernism a unique prestige and visibility in the 1930s that continued well into the postwar era, in marked contrast to its lack of success with the public.

8. WORLD WAR II AND AFTER. In part as a result of the political significance and ethical overtones of Modernism, its moment of relative dominance among composers occurred in the late 1940s, the 50s and the 60s, the decades most influenced by the shock of the Holocaust and Hiroshima. Enthusiasm for post-Webern serialism and experimentalism thrived. In this context T.W. Adorno (who studied with Berg and Steuermann) emerged as the most influential postwar theoretical advocate of Modernism. Adorno focussed on Schoenberg and his school, which he regarded as the only true and historically valid progressive school of composition. Unlike Schoenberg himself, he dismissed Stravinsky and Bartók (who never entirely abandoned tonality as a framework) as false responses to modernity. If music was to follow its true historical logic and fulfil its political and ethical function, it had to resist the regressive habits of listening and the fetishistic use of music characteristic of advanced capitalism and institutionalized by fascism (e.g. Tin Pan Alley, jazz, Hollywood, Broadway and classical music concerts and radio broadcasts that repeated a select number of masterpieces from the standard repertory). The conflict between the audience and the rejection of inherited conventions of musical expression became virtues and signs of authenticity. Only by resisting an aesthetic that exploited music's power to affirm active collaboration with evil and to encourage passive submission to injustice, exploitation and oppression could 20th-century music realize the inherent liberating power of art. Adorno claimed that Schoenberg's creation of serial technique and Webern's extension of it in the use of silence, duration and discontinuities made Schoenberg, as he himself asserted, the true prophet of the 20th century. Ultimately, through an encounter with Modernist 20th-century music, the contemporary public could once again learn to appreciate the essence of Beethoven and the canonic repertory so highly prized but abused by reactionaries as a foil against innovation. In the 1950s Modernists such as Milton Babbitt argued that a mass public was irrelevant and construed the isolation of Modernism from the general public and its new status as music for an élite as a virtue.

After 1945 the implications of Webern's music – 12-note composition, short forms, transparent textures, delicate sonorities, fragmentation, experiments with time and the use of silence as an element of punctuation – defined not only the legacy of Viennese Modernism but became emblematic of Modernism *per se*. Even Stravinsky and Copland were motivated in the 1950s and 60s to employ serial techniques in their music. The French-Russian trajectory had evolved into the neo-classicism exemplified by the teaching of Nadia Boulanger. Messiaen helped sustain a distinct postwar French Modernist influence. The German Expressionist tradition continued with Henze and Hartmann but was itself influenced by the Schoenberg school. The overwhelming majority of postwar German, Italian and French Modernists, including Dallapiccola, Stockhausen, Boulez, Maderna, Pousseur, Nono and Berio and the participants in the most influential Modernist festivals of the late 1940s, 50s and 60s (the Internationale Ferienkurse für Neue Musik at Darmstadt and Musiktage für zeitgenössische Tonkunst in Donaueschingen), followed the path charted by Schoenberg and the Second Viennese School. In postwar America the European émigrés, including Schoenberg, Hindemith and Krenek, exerted a powerful influence that often intersected with indigenous Modernism. Experimentalism, conceptualism and radical minimalism flourished (e.g. the music of Lou Harrison, Harry Partch and Steve Reich). Cowell and Cage became influential as composers and theoreticians. Modernism encompassed electronic

music, adaptations of non-Western musics (e.g. in the music of Colin McPhee), new forms of notation and chance music. The work of Sessions, Ligeti and Elliott Carter reflects a brilliant synthesis of indigenous impulses and also European Modernist techniques. The postwar music of Stockhausen and Xenakis mirrors the integration of technology and modern scientific theory with earlier Modernist strategies. In America, *Perspectives of New Music* became the leading postwar academic journal of advocacy for Modernism.

9. THE LATE 20TH CENTURY. The populism evident in the political radicalism of the 1960s in Europe and America shattered the inherited mid-century linkage of Modernism and progressive politics. As the political overtones of pre-1945 and 20th-century Modernism receded from memory and rock and commercial folk music took an oppositional, political significance in both west and east Europe, the moral edge of Modernism weakened, leaving composers free to become more eclectic. Modernism's status at the end of the century stood in stark contrast to the expectations generated after both world wars. From the mid-1920s, Modernism was widely accepted as the defining aspect of 20th-century music and the century's dominant musical signature. The legitimacy of its aesthetics and the significance of its genesis provided the foundation for the standard historical paradigm and narrative concerning 20th-century music: for example, the music of Strauss between 1912 and 1949 was, as Adorno argued, a vestigial phenomenon out of step with history. However, this would change, since from the mid-1970s Modernism was in retreat and pluralism came to characterize the evolution of 20th-century concert music. Deep concern for the health and survival of high art concert music in Europe and North America during the last decades of the century only helped diminish the interest in Modernism. The emergence of postmodernism and neo-romanticism in the last quarter of the century forced a revision of the accepted historical account. So-called conservative 20th-century music, dismissed as secondary and irrelevant in the postwar climate of opinion shaped by the views of Schoenberg, Adorno, Leibowitz, Babbitt and Boulez, began to return to the repertory and receive serious critical assessment. Copland, Barber, Britten and Shostakovich increasingly appear central to any musical characterization of the century. Modernism may end up as only one of many competing 20th-century trends and not the century's dominant voice. However, even if Modernism and its repertory end up at the periphery, it has consistently framed the debate about the nature and future of high art musical composition.

Modernism's failure vis-à-vis the other arts to gain wide acceptance (a failure that has frequently been held responsible for the relative decline in the significance of all concert music during the last third of the century) can be linked to the dramatic shifts in musical culture resulting from technological advances. The 20th century witnessed the explosion of novel forms of sound reproduction and distribution and the creation of a mass market for recorded sound. A premium on familiarity and ease of listening took hold as a decline in older forms of music education escalated. The piano was replaced by the radio and gramophone as the central instruments of musical culture. The beneficiary of this was not Modernism, which depended on the capacity to follow sound, pitch changes and complex textures, but anti-Modernist popular music, ranging from the musical to the hit song, film music and, later, rock and popular music as well as the conservative tradition of musical composition. The defections from Modernism by prominent composers were often based on the very political grounds that argued on its behalf. Copland, like Weill and Eisler, cited his progressive political commitments when he turned from Modernism in the 1930s after realizing the gap between Modernism and the mass audience. After the 1960s, George Rochberg, Philip Glass, David del Tredici and Krzysztof Penderecki abandoned Modernism on account of its inability to secure a significant public. Although by the end of the century Modernism was in retreat, it continued in the work of American and European composers, particularly under the aegis of Boulez and IRCAM in Paris. Modernism's range at the end of the century stretched from the conceptual music of Pauline Oliveros to the brilliant and original experimental synthesis of Japanese and Western Modernism in Toru Takemitsu's work. Notable late 20th-century exponents include George Benjamin, Jacob Druckman, Brian Ferneyhough, George Perle, Wolfgang Rihm, Richard Wernick, Richard Wilson and Ralph Shapey.

LEON BOTSTEIN

Modern Jazz Quartet [MJQ], **the.** Jazz ensemble. Three of its original members – Milt Jackson (vibraphone), John Lewis (piano and director) and Kenny Clarke (drums) – with Ray Brown (doublebass) first performed together in 1946 in Dizzy Gillespie's big band. In 1951–2 these four players made recordings under the name of the Milt Jackson Quartet; by 1952, when the first recordings under the name the Modern Jazz Quartet were issued, Percy Heath had replaced Brown as bass player. The group began performing regularly in concert halls and night clubs from 1954. In the following year Clarke was replaced by Connie Kay, thus establishing the group's longstanding membership. After two decades of recordings and international concert tours the MJQ broke up in 1974. For several years its members pursued separate careers, reuniting occasionally for short concert tours, but in 1981 they resumed playing together for several months each year. In 1997 the players disbanded in order to pursue other musical interests.

The MJQ played in a restrained, conservative bop style that is sometimes referred to as cool jazz. In its best moments it had a finely honed ensemble sound, owing in part to the abiding association of the four excellent players and in part to Lewis's compositions, which include some of the most carefully organized works in jazz history. The main soloist was Jackson, whose exuberant and rhythmically complex solos contrasted effectively with Lewis's restrained and deceptively simple manner of playing. By frequently accompanying Jackson with subsidiary countermelodies rather than the usual chordal punctuations of bop, Lewis created a distinctive contrapuntal texture seldom heard in other bop performances.

Throughout its long career the MJQ also performed and recorded much third-stream music, combining techniques of European art music and jazz improvisation. These works, written by Lewis, Gunther Schuller, André Hodeir and others, are uneven in quality, some suffering from disparities between the composed and improvised sections. Among the best are Lewis's *England's Carol* and his fugal pieces *Versailles*, *Three Windows*, *Vendome* and *Concorde*.

THOMAS OWENS

Moderno, stile (It.). A term most frequently used, in antithesis to STILE ANTICO, to refer to church music written after 1600 in an up-to-date style.

Modiana, Orazio [Horatio] (*fl* before 1625). Italian composer. He was a priest who for some time before 1620 (when he was succeeded by Ignazio Donati) was choirmaster of Casalmaggiore Cathedral, near Parma. He left Casalmaggiore to serve the Duke of Modena. In 1625 he was a canon and choirmaster of the collegiate church at Guastalla, south of Mantua, and in the service of Cesare Gonzaga. His two surviving publications are *Primitie di sacri concerti a voce sola, con il basso per sonar l'organo, clavicembalo, chitarone, ò altra sorte di stromenti* (Venice, 1623) and *Filomenici concenti di madrigali concertati a due, tre, quattro e cinque voci: da cantarsi con il clavicembalo, ò altro stromento musicale*, op.3 (Venice, 1625). On the title-pages of both he described himself as a member of the Accademia de' Filomeni at Casalmaggiore, his academic name being 'Il Pellegrino'. In the preface to his 1623 book he directed the singer to vary the tempo of the music according to the nature of the words being sung.

JOHN WHENHAM

Modinha. A Portuguese and Brazilian sentimental art song cultivated in the 18th and 19th centuries. From the early 1700s it competed with the *lundu* to be the first truly Brazilian music form. *Moda* is a generic term applied vaguely to any song or melody. Particularly common in the 18th century were the *modas a duo*, for two sopranos, sung in parallel motion with harpsichord accompaniment and a possible doubling of the bass line by a low string instrument. In practice most printed *modinhas* in Portugal were accompanied by the guitar. During the Second Empire in Brazil the *modinha* acquired the character of the Italian opera aria, while in Portugal the same occurred about 1800. Under such influences the *modinha* began to lose its original simplicity, acquiring elaborate melodic lines with typically superficial ornamentation. Aspects of the opera aria were retained in the popularization of the *modinha* and came to be identified later in the 19th century as 'national' traits. Eventually the Brazilian *modinha* became a strongly lyrical folksong incarnating Brazilian romantic spirit. As a love song it was closely related to another popular genre, the *lundu*, a song and dance born of African origin which, together with the *modinha*, became the most important salon genre in Portugal and Brazil.

GERARD BÉHAGUE

Mödl, Martha (*b* Nuremberg, 22 March 1912). German soprano and mezzo-soprano. She studied at the Nuremberg Conservatory, made her début as Hänsel at Remscheid in 1942 and was then engaged at Düsseldorf (1945–9), singing Dorabella, Octavian, the Composer (*Ariadne auf Naxos*), Clytemnestra, Eboli, Carmen and Berg's Marie. In 1949 she joined the Hamburg Staatsoper and became a dramatic soprano. In 1950–51 she appeared as Lady Macbeth in Berlin and subsequently sang Kundry, Venus, Isolde and Brünnhilde (*Die Walküre*). In 1951 she sang Kundry at the first postwar Bayreuth Festival, a performance which was recorded live. She sang there regularly until 1967, notably as Brünnhilde and Isolde, and later adding the mezzo role of Waltraute to her repertory.

Mödl first appeared in England in the 1949–50 Covent Garden season, as Carmen. She sang at Edinburgh in 1952 with the Hamburg company and in 1958 with the Stuttgart Opera, which she had joined in 1953. In 1955 she sang Leonore at the reopening of the Vienna Staatsoper. She appeared at the Metropolitan (1956–60) and sang the Nurse (*Die Frau ohne Schatten*) at the reopening of the Munich Nationaltheater (1963). She sang in the premières of Reimann's *Melusine* (1971, Schwetzingen), Fortner's *Elisabeth Tudor* (1972, Berlin), Einem's *Kabale und Liebe* (1976, Vienna) and Reimann's *Die Gespenstersonate* (1984, Berlin). Returning to the mezzo repertory, she continued to sing into her 80s roles such as the Housekeeper (*Die schweigsame Frau*), the Countess (*The Queen of Spades*) and the Mother (Fortner's *Die Bluthochzeit*). Mödl was a highly individual singer and a performer of great dramatic intensity. Her recordings include Brünnhilde in Furtwängler's *Ring* (1953) and Isolde (1952, Bayreuth).

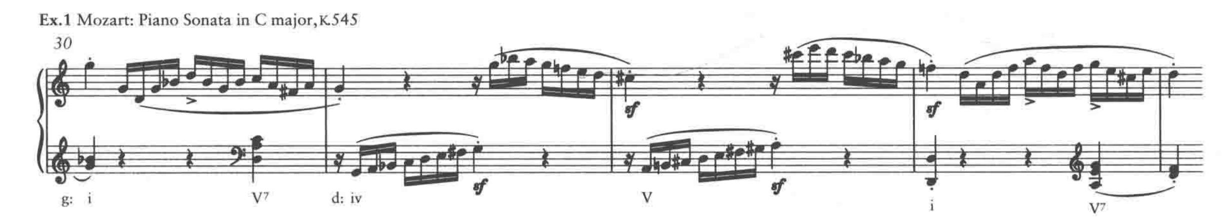
HAROLD ROSENTHAL/ALAN BLYTH

Modulation (i). In tonal music, a firmly established change of key, as opposed to a passing reference to another key, known as a 'tonicization'. The scale or pitch collection and characteristic harmonic progressions of the new key must be present, and there will usually be at least one cadence to the new tonic. Firm establishment also depends on these features having a certain duration; however, the exact amount of time required for a 'firm' modulation cannot be precisely specified, since the sensation of a change of key is a psychological phenomenon experienced differently by different listeners. A certain ambiguity may arise, therefore, as to whether a given passage is properly a modulation or a tonicization – an ambiguity compounded by differences among theoretical approaches.

Techniques of modulation often involve pivot chords, that is, chords common to the original key and the new key which can provide a transition between the two (as can be seen in ex.1, in which the pivot chord is given two labels, indicating its role in the two keys). Some authors have warned against the use of the dominant of either key as a pivot chord: the dominant of the original key, on the one hand, is a strong function and not readily reinterpreted; the dominant of the new key, on the other hand, may be ineffective, since a simple dominant–tonic progression may be too abrupt to establish the new tonal centre with sufficient force.

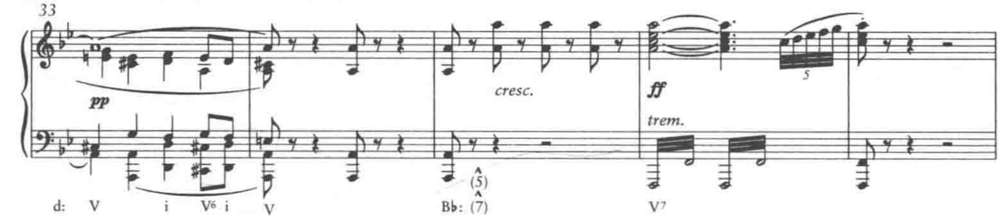
The choice of a pivot chord or chords depends on the range of pitches and chords held in common between the original key and the new key. The possibility of modulation by pivot chord therefore depends on the relationship between the two keys. The closer two keys are on the CIRCLE OF FIFTHS (*see also* KEY (i)), the more pitches they have in common, and the larger the repertoire of available pivot chords.



In the case of modulation to a more distant key, when the two keys have fewer pitches in common, it becomes more difficult to find a pivot chord. Other techniques of modulation are therefore used in these circumstances, including the use of a single pitch as a 'pivot note' (ex.2*a*); 'direct' or 'phrase' modulation, in which there is a change of key between phrases without the use of any pivot (ex.2*b*); 'chromatic' modulation, using chromatic alteration in the middle of a phrase (ex.2*c*); 'sequential' modulation, or straightforward restatement of a phrase in a different key (ex.2*d*); and enharmonic reinterpretation (ex.2*e*), often involving the German augmented 6th chord (which may be respelled as a dominant 7th), or the diminished 7th chord (which has special qualities of symmetry).

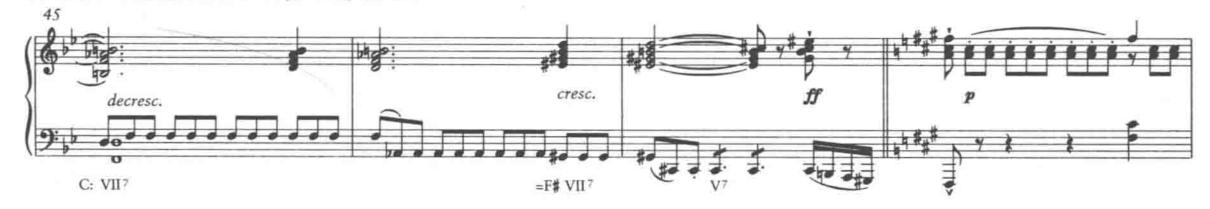
The term 'modulation' was first applied to changes of key in the 18th century. Its Latin forerunner *modulatio* ('measurement', 'organization' or 'regulation') was closely associated with music during the Middle Ages through the definition 'musica est scientia bene modulandi' long associated with St Augustine (*see also* MARCUS TERENTIUS VARRO). This definition, however, had to do with the numerical proportions that music exemplified rather than with pitch organization as such.

In what has been claimed as the first indication of the modern meaning of modulation, Alexander Malcolm stated that 'Under the Term of *Modulation* may be comprehended the regular Progression of the several Parts thro' the Sounds that are in the *Harmony* of any particular *Key* as well as the proceeding naturally and regularly with the *Harmony* from one *Key* to another' (*A Treatise of Music*, Edinburgh, 1721). Here, though, change of key is a subsidiary meaning within a more general concept of modulation.



In his *Versuch einer Anleitung zur Composition* (Leipzig, 1782–93), Koch referred to changes of key as

Ex.1 Mozart: Piano Sonata in C major, K545



Ausweichungen ('digressions'). He distinguished three varieties of *Ausweichung*: 'incidental' or 'arbitrary', involving brief chromaticism (i, 292–9), 'passing', involving longer references to the new key but no cadence, and 'formal', requiring a cadence in the new key (ii, 188–92).

The term *Modulation* was also used in German, however, and the relationship between it and *Ausweichung* was discussed in the mid-19th century by Ernst Friedrich Richter (*Lehrbuch der Harmonie*, Leipzig, 1853, 14/1880, p.89):

> The term modulation [*Modulation*] has different meanings. Earlier one understood by the term the method by which the harmonic progression of a song was regulated. In the newer sense, one understands the word to mean digression [*Ausweichung*] from one key to another. The phrase 'digressive modulation' [*ausweichende Modulation*], which can be found occasionally, is thus, according to the original meaning of the word, no pleonasm.

The distinction made by Richter referred to certain German theorists of the 18th and early 19th centuries who had equated the terms *Ausweichung* and *Modulation*. By the end of the 19th century *Ausweichung* was reserved for a temporary change of key – a tonicization – and *Modulation* for a more permanent change.

Theorists of the late 19th century and the 20th took advantage of the chromatic resources available to them in treatises devoted largely or exclusively to the subject of modulation. Bernhard Ziehn, for example, in his *Harmonie- und Modulationslehre* (Berlin, 1887), detailed modulation to any key through a huge variety of chromatically altered or enharmonically reinterpreted 7th chords. In his *Beiträge zur Modulationslehre* (Leipzig, 1903, 24/1952, Eng. trans. 1948), Max Reger illustrated modulations from C major to 41 different keys including B♯ major and C♭ minor, all achieved through pivot chords.

Both Schenker and Schoenberg subscribed to a theory of 'monotonality' according to which any tonal piece or movement had only one key, that in which it began and ended. As a result, they viewed all other changes of key

as merely apparent, expanding on and expressing the single key of the piece, and argued that modulation in the sense of a true change of tonic was illusory.

JANNA SASLAW

Modulation (ii). A term originating in telecommunications usage describing the superimposition of characteristics of one signal ('programme') upon another ('carrier'); it later entered the terminology of electronic music, where it is frequently used in a broader sense, sometimes as unspecific as 'a process of change'. Many characteristics of signals may be modulated. In frequency modulation (FM) the frequency of the carrier is made to conform to the wave shape of the programme: for example, if the programme is a sine wave of frequency 6 Hz and low amplitude, the audible result of modulation will resemble the carrier in all respects except that a vibrato (small variation of pitch) will be superimposed upon it. Alterations in the wave form, frequency or amplitude of the programme will produce results more complex and less easily described; in particular, as its frequency enters the audio range (approximately 18Hz–22 kHz), distinct new 'sideband' frequencies will be produced. If the ratio between the frequencies if programme and carrier is simple (1:1, 2:1, 3:2 etc.) the sidebands generated will be in harmonic series, and the complex tones produced will resemble the overtone structures of real instruments; this is the fundamental sound-generation technique employed by FM synthesizers. In amplitude modulation (AM) it is the amplitude of the carrier that is made to conform to the wave shape of the programme: here a same sine wave of 6 Hz as programme will have the effect of superimposing a tremolo (small variation of dynamic) upon the carrier. Again, more complex results may be produced by changing the programme.

In contrast to FM and AM modulation, the distinction between programme and carrier is of less significance for ring modulation, the effect of which is symmetrical. The output from a RING MODULATOR consists of the sum and difference of the frequencies of the inputs: for example, the result of ring modulating two sine waves of 400 Hz and 500 Hz will be two sine waves of 100 Hz and 900 Hz. However, if either or both of the input signals is more complex than a sine wave, as is likely to be the case in a musical context, then the output will be even more complicated since each partial of the one input will be added to and subtracted from each partial of the other.

Frequency, amplitude and ring modulation are the oldest and most familiar modulation processes used in electronic music. However, with the development of voltage control systems the number of devices based on the programme–carrier principle has proliferated: all of these perform operations that may legitimately be described as modulations. Pulse modulation, for example, is the modification by control voltage of the length of individual pulses from a pulse generator. Phase modulation is produced by the superimposition of a signal upon itself after an extremely short but continually changing time delay regulated by a control voltage; with a slow rate of change in the time delay, the effect upon a complex signal will be of a band of noise sweeping through the signal.

This extension of applications has encouraged a looser use of the term. For instance, location modulation is a variation in the apparent spatial location of a sound (pitch and timbre may also be affected). The term has even been extended beyond the boundaries of electronic music to describe any continuous change in timbre, rhythm or other parameters.

DAVID ROBERTS

Modulator (i). A device used in ELECTRO-ACOUSTIC MUSIC to modulate sound signals. *See also* MODULATION (ii) and RING MODULATOR.

Modulator (ii). A chart showing the initials of the sol-fa syllables arranged vertically and adapted by John Curwen from Sarah Glover's NORWICH SOL-FA LADDER. (*See also* TONIC SOL-FA.)

Modulus (Lat.). Synonym for AMBITUS in the treatise *Quaestiones in musica*.

Modus (Lat.: 'mood'). In the system of mensural notation of the late Middle Ages, the relationship between long and breve. *See* MODE, §I, 1 and NOTATION, §III.

Modus lascivus (Lat.). A name sometimes used for the IONIAN mode in medieval and early Renaissance music. As a historical term it is probably spurious.

Moe, Benna (*b* Copenhagen, 14 Jan 1897; *d* Copenhagen, 30 May 1983). Danish composer and organist. In 1915 she took a degree in organ playing at the Kongelige Danske Musikkonservatorium in Copenhagen. She gave concerts throughout her life, enjoying particular success in Sweden, where, in the 1940s, she made long stays in Stockholm and in Mora, working partly as town composer and music teacher. She also performed as a singer, and in 1939 gave the première of one of Sibelius's songs, *Simma and frå blåa fjärdar*. From 1948 to 1950 she was cinema organist at the Palladium, Copenhagen, but in later years she concentrated more on church concerts (though she never held a church post). Moe composed a large amount of music, and there is little difference between the compositional technique of her large quantity of light music and the more serious compositions, such as her organ works of the late 1970s and 1980s, the String Quartet (1934) and her ballet *Hybris*, which was performed in Copenhagen in 1930. Moe was a gifted improviser who shaped her music according to her spontaneous ideas; her melodies, which were organic in development, remained within a late Romantic idiom.

WORKS
(*selective list*)

Stage: Hybris, ballet, 1929; Copenhagen, Kongelige Teater, 1930

Chbr and solo inst: Berceuse, vn, pf, 1914; 3 instruktive etuder, pf, op.6 (1918), op.9 (1923); Alpine Suite, op.12, org, 1927; Gondolier's Serenade, op.11, pf (1927); Danse espagnole, vn, pf,

1928; Festival Polonaise, pf 4 hands, 1928; Intermezzo, vn, pf, 1931; Str Qt, f, 1934; Meditation, vn, pf, 1969; Koncert suite, org (1971); Cantilena, org (1972); Une petite suite ancienne, org (1972); Praeludie, org, 1977; Legend, org, 1980

Vocal: more than 200 solo songs, mostly from the period 1925–45, of which 20 are children's songs; occasional cants., incl. Kantate vid Mora, 1945

Many marches, waltzes, tangos and foxtrots, orchd by others

INGE BRULAND

Moeck. German firm of music publishers and instrument makers. Hermann Moeck (i) (*b* Elbing, 9 July 1896; *d* Gran Canaria, Canary Islands, 9 Oct 1982) began an advertising company and directory publishing house at Celle in 1925. After he encountered the recorder through the *Jugendbewegung*, he established the present firm in 1930, and it has devoted itself above all to promoting that instrument and its music. The journal *Der Blockflötenspiegel* (1931–4, in conjunction with Nagels Musikverlag) contributed much to the revival of recorder playing in Germany by discussing technical and historical issues. The subscription series *Zeitschrift für Spielmusik*, issued monthly from 1932, provides folk, early and contemporary music for amateur players of the recorder and other instruments; further articles were published in the complementary *Der Celler Spielmann* (1938–48). The firm has also published several series for school and practical use: Moeck's gelbe Musikhefte (1934–), Moeck's Kammermusik (1938–), Der Bläserchor (1965–), Der Streicherchor (1975–82), Das Blockflöten-Repertoire (1976–), Das Gitarren-Repertoire (1984–95) and Monumenta Musicae ad Usum Practicum (1985–).

In 1947 Hermann Moeck (ii) (*b* Lüneburg, 16 Sept 1922), son of the founder, became a partner in charge of the publishing. In 1958 Moeck became actively involved with the publication of modern music; it has also represented Polskie Wydawnictwo Muzyczne in the West, promoting such important contemporary Polish composers as Lutosławski, Penderecki and Serocki. Moeck was a pioneer in the publication of avant-garde recorder music, initially with the collaboration of MICHAEL VETTER. It has also published books on contemporary music, instrument making and woodwind instruments. The journal *Tibia* (1976–) rapidly established itself as the world's leading woodwind periodical.

Hermann Moeck (i) began the instrument-making side of the business by tuning and improving recorders he bought from makers in Markneukirchen then sold by mail order. In 1949 the firm started making its own recorders. Moeck (i) retired in 1960 and was succeeded by his son, who also took charge of the instrument making and built a factory in 1962. In the 1950s and 60s the firm made viols and the Krefeld *Quintfidel*, a soft, five-string, viol-like instrument intended for ensemble playing with recorders. From 1964 to 1969 OTTO STEINKOPF worked for the firm and designed copies of various Renaissance and Baroque woodwind instruments, which have continued to be produced. Moeck's aim is to combine the craftsman's skill with precision engineering and computerised control to produce a flow of high-quality instruments. In 1966 Moeck cooperated with FRIEDRICH VON HUENE to pioneer the mass production of historical copies of recorders with high, narrow windways, based partly on an instrument by Jean-Hyacinth-Joseph ROTTENBURGH; other Renaissance and Baroque copies have since been added. Up to 350,000 recorders for professionals, amateurs and schools have been made annually, the largest number of wooden instruments by any firm in the world, and efforts are being made to find synthetic alternatives to tropical hard woods. There were 110 employees in 1997.

In recent years Moeck has done much to promote composition and performance by its sponsorship of professional seminars and workshops, the Moeck Verlag Award (1984–) partly in conjunction with the Kazimierz Serocki International Composers Competition, the Internationale Blockflötensymposium Calw and the Moeck-/Society of Recorder Players Solo Recorder Playing Competition in London. For services to industry and culture Hermann Moeck (ii) was awarded the Bundesverdienstkreuz (1. Klasse) in 1988.

CHRISTOPHER MONK/DAVID LASOCKI

Moennig. American family of instrument makers and dealers. William Heinrich Moennig (*b* Markneukirchen, Saxony, 29 June 1883; *d* Philadelphia, PA, May 1962) trained as a violin maker with his brother-in-law Julius Guetter in Philadelphia at the beginning of the 20th century. In 1909 he established his own firm, which has been carried on by his descendants as William Moennig & Son. In 1925 he sponsored the immigration of his nephew, (William) Hans Moennig (*b* Markneukirchen, 14 Dec 1903; *d* Philadelphia, 1 Nov 1988), who had worked for the German firm of Heckel as a bassoon maker and repairer. After a brief period working for the flute maker William S. Haynes in Boston, Hans established his own business in Philadelphia, where he was a highly regarded maker, dealer, and repairer of wind instruments; it was disbanded in 1983.

William Heinrich's son, William Herrman Moennig jr (*b* Philadelphia, 21 July 1905; *d* Nashville, TN, 6 Sept 1986), became a pupil of his father, who then sent him to study in Markneukirchen and Mittenwald, studying under Leo Aschauer and Paul Dörfel; in 1937 he qualified as a master violin maker under the auspices of the German Guild, the first American-born violin maker to do so. After World War II, William Moennig jr built up a business with a fine reputation among musicians and teachers throughout the USA for fair dealing in old instruments. He was one of the leading experts on fine old violins and was the first American member of the International Society of Violin and Bow Makers. His son William Harry Moennig III (*b* Philadelphia, 28 Aug 1930) is an excellent craftsman. He trained with Amédée Dieudonné in Mirecourt, France, and at Mittenwald with Leo Aschauer, as well as in the shops of Pierre Vidoudez and Max Möller, before returning to Philadelphia. In 1975 he took over the running of the business from his

father. Also active in the firm are William Harry's son William Raymond Moennig IV (*b* Philadelphia, 10 April 1957), who received his training from his father and grandfather as well as from Hans Weisshaar in Los Angeles, and his daughter Pamela Moennig Taplinger (*b* Philadelphia, 25 April 1954). Since 1995 two associates, Philip J. Kass (*b* New York, 7 Aug 1954) and Richard J. Donovan (*b* Binghampton, NY, 30 June 1950) have also joined the firm as partners.

CHARLES BEARE/PHILIP J. KASS

Moer, de. *See* MOORS.

Moeran, E(rnest) J(ohn) (*b* Heston, 31 Dec 1894; *d* nr Kenmare, Ireland, 1 Dec 1950). English composer of Anglo-Irish descent. He was the son of a Norfolk clergyman and was educated at Uppingham School, where he learnt the violin and played in a quartet. He entered the RCM in 1913, but after 18 months his studies were interrupted by World War I; he joined up as a despatch rider and was commissioned, but after being severely wounded in the head was declared unfit for further active service. On demobilization in 1919 he returned to his old school as music master, but he soon decided to continue his studies and worked under John Ireland until 1923.

It was after this period with Ireland that Moeran's music began to receive public performances. The First Rhapsody for orchestra was played several times before it was given by the Hallé Orchestra in 1924 under Harty, and a series of his programmes was given at the Wigmore Hall in 1925. At this time his music was dominated by the influences of Ireland and of Delius, whose chromatic harmony was always to colour Moeran's work, while his intimacy with the folksongs of his native East Anglia strongly affected his melodic style. Throughout the 1920s and early 30s Moeran concentrated on the smaller genres which seemed to suit his lyrical and harmonic gifts. Among the earliest and most attractive pieces of the period are the Three Piano Pieces, the Theme and Variations for piano, the String Quartet in A minor, the Piano Trio and the Violin Sonata. Although their gestures are broader, the two orchestral rhapsodies of 1922 and 1924 are loosely episodic, and it is significant that Moeran found himself unable to fulfil a commission from the Hallé Orchestra for a symphony in 1924.

Nevertheless, he had achieved considerable technical fluency, and the bounds of his style were firmly established when he wrote the String Trio (1931), his outstanding chamber work. That style places him definitively among his more eminent contemporaries: Delius, Vaughan Williams, Holst, Bax, Ireland and Warlock. Indeed, his music may be criticized as too reliant on the work of these composers, but Moeran's individuality had continued to develop after the frankly Delian references of the Piano Trio. The influence of Warlock is still present in the Seven Poems of James Joyce (1929), among Moeran's many early songs, written shortly after the period when he and Warlock shared a house in Eynsford. But if this stylistic dependence robs his work of a strong personal identity, such pieces as *Whythorne's Shadow* (1931) and *Lonely Waters* (1932) have a distinctive quality that resides primarily in their characteristic harmony, although Moeran's was but a limited area lying narrowly between Delius's chromaticism as transformed by Warlock, and Vaughan Williams's modality or, more importantly, his bimodality.

At this time Moeran retired to the Cotswolds, and set out to review his achievement and expand his style and technique. Although there was no immediate major change in his music, this period of self-criticism eventually produced a series of large-scale works, and his output of songs, piano pieces and chamber music was greatly reduced. The first fruit was the Symphony in G minor (1924–37), a remarkable accomplishment for a man who, until then, had conceived music lyrically, drawing heavily on his immediate responses to nature. Nature remained an important spur to his invention, and he stated that the symphony was imagined 'among the mountains and seaboard of County Kerry' and 'around the sand-dunes and marshes of East Norfolk' (Westrup) – a reflection of his twin heritage. But the symphony is far more than a record of his impressions of the landscape, and the time he took to complete it may indicate the struggle to change his approach to composition. The lyricism is still there, as in the first movement's second subject, and themes in folksong style supply the basic material. However, Moeran was now capable of sustaining much wider spans, and his style extended to include vigorous fugato writing and a Sibelian thematic growth – the opening theme, for instance, is reconstituted at each appearance. Only in the finale does invention flag, and here the references to Sibelius are most overt. But the work has a strong vitality and nobility; the grandly proportioned first movement and the variegated textures of the Scherzo are possibly Moeran's finest achievements. The Symphony was first performed in January 1938 under Leslie Howard.

This work encouraged Moeran to develop the energetic side of his character where previously he had dwelt upon wistful introverted moods. The outgoing quality was most brilliantly expressed in the Sinfonietta (1944), whose first and last movements are conceived in terms of sparkling virtuosity with vigorous contrapuntal writing and luminous orchestration. But before this piece Moeran completed a work which achieves a paradigmatic balance between poetic dreaming and dashing vitality: the Violin Concerto. Of its three movements, only the central rondo scherzo provides fully-worked, quick music, the outer movements sharing slow, meditative material. In 1945 Moeran composed the Cello Concerto for Peers Coetmore, whom he married in the same year. This concerto is a work of some grandeur, including an opening movement of majestic gloom and a vigorously intricate rondo finale, rich in material. His final orchestral work, the Serenade in G, includes elements of pastiche, which are not completely convincing although they are handled delightfully. This and the sombre Cello Sonata were the last major works Moeran was to complete: in December 1950 he was found dead in the River Kenmare, having fallen after a heart attack. He was then working on a Second Symphony and was probably going through another transitional stage, with bitonal elements becoming increasingly important.

Moeran occupied a minor place in the music of his time, but his meticulously polished and ready technique is unsurpassed among his British contemporaries. This craftsmanship is evident in the clarity of his textures and processes, and in the superb sonority of his orchestral writing.

ANTHONY PAYNE

Moeschinger, Albert (*b* Basle, 10 Jan 1897; *d* Thun, 25 Sept 1985). Swiss composer. He studied in Berne, Leipzig and Munich (with Courvoisier) during the years 1917–23, and taught the piano and theory at the Berne Conservatory from 1937 to 1943. After retiring to Saas Fee in the mountains of Valais to devote himself exclusively to composition, he moved to the canton of Ticino in 1956. During the 1930s his orchestral music was performed under such conductors as Paul Sacher, Alexander Schaichet, Ernest Ansermet, Hans Rosbaud and Hermann Scherchen, and Walther Frey and Franz Josef Hirt were among the interpreters of his virtuoso chamber music. He wrote the cantata *Tag unsres Volks* op.46 for the opening of the Swiss Fair in 1939; his awards include the Basle Arts Prize (1953) and the Swiss Musicians' Union composition prize (1957).

Moeschinger brought about a distinctive and personal synthesis of German and French elements: his extensive oeuvre, numbering more than 200 works, is rooted both in the chromaticism of Reger and in the sound world of Debussy. Although his First String Quartet (1921) shows the influence of Schoenberg, Moeschinger made no closer approach to that composer, not even when, from 1956, he began to employ 12-note procedures. Serial techniques made it possible for him to control and objectify his athematic writing more thoroughly; throughout his career, his music increasingly stretched the boundaries of tonality. A French influence is asserted to varying degrees in Moeschinger's work; other abiding characteristics include rich harmonies and complex rhythms, comparable with those of Stravinsky and Bartók.

HANS OESCH/CHRISTOPH BALLMER

Moevs, Robert (Walter) (*b* La Crosse, WI, 2 Dec 1920). American composer. After studying music at Harvard University (BA 1942), he entered the US Air Force and served as a pilot. He resumed his musical studies at the Paris Conservatoire (1947–51) and then Harvard (MA 1952); his principal teachers were Piston and Boulanger. For the next three years he was at the American Academy in Rome as a Rome Prize Fellow. An inspiring teacher, Moevs served on the faculty at Harvard (1955–63) and at Rutgers, the State University of New Jersey (1964–91). He was composer-in-residence at the American Academy in Rome in 1960–61 and a Guggenheim Fellow in 1963–4. Awards made to him include one from the National Institute of Arts and Sciences (1956) and many from ASCAP; in 1978 he received the Stockhausen International Prize in Composition for his Concerto grosso, which was later recorded on the CRI label.

Moevs's broad compositional structures are logical and balanced, with an extremely impassioned content. He writes masterfully for orchestra and for percussion in particular. While Beethoven and Stravinsky seemed the spiritual sources of his music in the 1950s, affinities with Varèse and Boulez may be detected in subsequent works, which display a characteristic passion and control in developing what Moevs refers to as 'systematic chromaticism'. He views what is primary to be less a succession of pitches heard in isolation than the intervals they generate. Subjected to inversion, retrograde etc., their tension and relaxation give meaning to the sound. *Itaque ut* (1959), an *a cappella* episode from *Attis*, offers a succinct example of the procedure that has remained a hallmark of his style.

BRUCE ARCHIBALD/RICHARD E. WILSON

Moffo, Anna (*b* Wayne, PA, 27 June 1932). American soprano. She studied at the Curtis Institute, Philadelphia, and in Rome with Luigi Ricci and Mercedes Llopart, making her début in 1955 at Spoleto as Norina. In 1956 she sang Zerlina at Aix-en-Provence and appeared throughout Italy, making her American début the following year as Mimì in Chicago. She joined the Metropolitan Opera in 1959, making her début as Violetta; she appeared regularly in New York during the 1960s and early 1970s in such roles as Pamina, Norina, Gilda, Luisa Miller, the four heroines of *Les contes d'Hoffmann*, Juliet, Gounod's Marguerite, Manon, Mélisande and the title role in *La Périchole*. She sang Gilda at Covent Garden (1964), and appeared in Vienna, Salzburg, Berlin and elsewhere. A lyric soprano of warm, full, radiant tone, she also undertook coloratura parts. Her later roles included Thaïs, Adriana Lecouvreur, and Kate in Giannini's *The Taming of the Shrew* (1979, Vienna, Virginia). Among her many recordings are Nannetta (in Karajan's first *Falstaff*), Lucia, Luisa Miller and, on film, Violetta in *La traviata*.

HAROLD ROSENTHAL/ALAN BLYTH

Mogavero, Antonio (*b* Francavilla Fontana, nr Brindisi; *fl* 1590–1600). Italian composer. Although he was born in southern Italy, he seems to have been active, at least in the late 1590s, in the Venetian area; the dedication to Archduke Ferdinand of his third book of madrigals for five voices, suggests a longstanding connection with the house of Austria. The verse is for the most part in the light pastoral vein and the musical style bright and diatonic, the one exception being *Misero un di piangendo*, a somewhat studied exercise in the pathetic mode. The book ends with a madrigal for two four-voice choirs. Mogavero is represented, moreover, in a collection of settings of poems by Angelo Grillo, who was then Prior of S Giuliano in Genoa (RISM 1598[6]); most of the other composers whose works appear in the volume are northerners. A substantial portion of Mogavero's output, including the first two books of madrigals for five voices, is now lost. Although his surviving works are all secular, he also wrote and published sacred music. Some of the lost works were formerly in the library of King João IV of Portugal (destroyed in 1755).

WORKS

Canzonette alla napolitana ... libro primo, 3, 4vv (Venice, 1591)

Il primo libro delle canzonette, 4vv (Venice, 1596), inc.

Il terzo libro de madrigali intitolato Vezzi amorosi, con un dialogo, 5, 8vv (Venice, 1598), inc.

Partitura Lamentationum Jeremiae prophetae in maiori hebdomada, 6vv, bc ... canticum vero Zacchariae & Miserere, 8vv (Venice, 1623)

1 madrigal, 1598[6]

LOST WORKS

1 book madrigals, 5vv; 1 book madrigals, 4vv; 1 book motets, 5–8vv; 2 motets, 6vv; 1 book masses, 8vv; all cited in catalogue of King João IV library, Portugal

STEVEN LEDBETTER/IAIN FENLON

Mohammad Omar, [Ustād] (*b* Kabul, 1905; *d* Kabul, 1980). Afghan *rubāb* player and composer. His father, Mohammad Ibrahīm, was a professional player of the *rubāb* (short-necked lute) and the *tabla*. Mohammad Omar received a basic training in the *rubāb*, but initially set out to be a singer, training in *ghazal* and rāga singing with Aghā Mohammad, the son-in-law of Ustād Qasem. Owing to illness (probably tuberculosis) he decided to give up singing and specialize in playing the *rubāb*, the double-chested plucked lute which is the national instrument. He became the principal *rubāb* player at Radio Afghanistan and the leader of various ensembles, and he also composed many instrumental sections (*naghma*) for popular songs and light instrumental pieces for small radio ensembles. In 1949 he was given the title of Ustād. He was recognized as a gifted teacher, and over the years was involved in a number of music education schemes. In 1974 he spent three months at the University of Washington, Seattle, as artist in residence.

He excelled at the *rubāb* but nevertheless sometimes used to complain from the point of view of a vocalist about its narrow ambitus (effectively one and a half

Ustād Mohammad Omar playing the Afghan rubab, 1970

octaves) and limitations for microtonal inflections and ornamentation. He made certain technical innovations, favouring a very large instrument, and modifying the bridge to raise the shortest sympathetic string so it could be used as a high drone. One of the best known and highly esteemed of Afghan musicians, his *rubāb* was the distinctive voice of Afghanistan as received by the radio audience.

ABDUL-WAHAB MADADI (with JOHN BAILY)

Mohaupt, Richard (*b* Breslau, 14 Sept 1904; *d* Reichenau, Austria, 3 July 1957). German composer. After studying music at Breslau University with Julius Prüwer and Rudolf Bilke he became a vocal coach and conductor at various German opera houses including Aachen, Breslau and Weimar. In 1931–2 he toured Eastern Europe and Asia as a pianist and conductor, and then settled in Berlin where he worked for the UFA film company. Although his first ballet *Die Gaunerstreiche der Coursache* received a successful première in Berlin in 1936, Mohaupt became increasingly disenchanted with the Nazi regime. He was expelled from membership of the Reichstheaterkammer and the Reichsmusikkammer, and his opera *Die Wirtin von Pinsk*, commissioned by Karl Böhm and the Dresden Staatsoper, was banned after a few performances in 1938. One year later Mohaupt emigrated to New York where he taught privately and, as a composer, achieved success in a variety of mediums including opera, film, radio, television and orchestral music. In 1955 he returned to Europe and settled in Austria.

Neither radical nor conservative in style, Mohaupt's music followed a kind of all-purpose modernism, and was notable for its rhythmic vitality, vivid instrumental colouring and good humour. More successful in stage and programmatic works than in abstract compositions, he achieved considerable popularity during the 1940s and 50s with his orchestral work *Stadtpfeifermusik* (1939) and his second opera *Die Bremer Stadtmusikanten* (1944).

WORKS
(*selective list*)

Operas: Die Wirtin von Pinsk (3, K. Naue, after C. Goldoni: *Mirandolina*), 1937, Dresden, 1938; Die Bremer Stadtmusikanten (2, Mohaupt), 1944, Bremen, 1949; Double Trouble (Zwillingskomödie, 1, Mohaupt, after Plautus), 1954, Louisville, KY, 1954; Der grüne Kakadu (1, Mohaupt, after A. Schnitzler), 1956, Hamburg, 1958; Boleslaw der Schamhafte, unperf.

Ballets: Die Gaunerstreiche der Coursache, 1935, Berlin, 1936; Lysistrata (dance-comedy), solo vv, chorus, orch, 1941, rev. as Der Weiberstreik von Athen, orch, 1955, Karlsruhe, 1957; Max und Moritz (dance-burlesque), 1945, Karlsruhe, 1949; The Legend of the Charlatan (mimodrama), 1949

ERIK LEVI

Mohler, Philipp (*b* Kaiserslautern, 26 Nov 1908; *d* Frankfurt, 11 Sept 1982). German composer and teacher. After initial musical training in Kaiserslautern, he studied in Munich with Haas and von Walterhausen among others and, from 1933, taught and conducted in Munich, Nuremberg and Landau. In 1940 he succeeded Distler as instructor in conducting and composition at the Staatliche Hochschule für Musik, Stuttgart, where he was later appointed professor (1943–59). During this period he also directed the Stuttgart Orchester-Verein and the Stuttgart Lehrergesangverein. In 1958 he was appointed director of the Staatliche Hochschule für Musik, Frankfurt, a post he held until his retirement in 1975. Under his directorship, the school expanded and gained an international reputation. He received a number of awards and honours including first-class membership in the Bundesverdienstkreuz (1968), the Order of Merit of the Federal Republic of Germany (1974) and the Goethe Medal of the State of Hessen (1975).

Mohler referred to Hindemith as the principal influence on his music besides Haas. Choral works, including many short, *a cappella* pieces, form a significant portion of his output. The importance of his contribution to this repertory has been recognized in the establishment by the Pfälzischer Sängerbund of the Philipp Mohler Medal for the furtherance of choral music.

WORKS
(*selective list*)

Orch: Pf Conc., op.16 (1937); Fantasiestück, op.17, vc, orch (1960); Sinfonisches Vorspiel, op.18 (1939); Sinfonische Fantasie, op.20 (1941); Heitere Ouvertüre, op.27, str (1951); Concertino, op.28, fl, str (1955); Sinfonisches Capriccio, op.40 (1957)

JOHN MORGAN/R

Mohori. Cambodian instrumental ensemble; the term is also used to describe its repertory (*see* CAMBODIA). The ideal formation comprises *roneat aek* (high-pitched xylophone), *roneat thung* (low-pitched xylophone), *khloy* (duct flute), *tror che* (high-pitched two-string fiddle), *tror so tauch* (medium-high-pitched two-string fiddle), *tror so thom* (medium-low-pitched two-string fiddle), *tror ou* (low-pitched two-string fiddle), *krapeu* (three-string zither), *khim* (hammered dulcimer), *ching* (small cymbals), *thaun-rumanea* (two-piece drum-set) and *chamrieng* (vocals). The precise instrumentation varies, depending upon patronage and ownership: instruments can be doubled, tripled or even quadrupled.

While other Khmer music ensembles such as the *arak*, *kar*, *pey keo* and *korng skor* have religious functions, the *mohori* is used in a secular context. It is light in character and is normally played at banquets or to accompany a *mohori* play or folkdances of recent origin; it may also be performed for entertainment.

SAM-ANG SAM

Mohr, Ernst (Werner) (*b* Basle, 4 March 1902; *d* Basle, 6 Dec 1985). Swiss musicologist. He studied musicology at the universities of Basle under Karl Nef, Berlin under Abert, Sachs and Wolf, and Paris under Pirro, while also studying theory at Basle Conservatory. In 1927 he took the doctorate at Basle University with a dissertation on the allemande. He taught theory, history of music and literature at Basle Conservatory (1928–69) and he was also reader in theory of music at Basle University (1946–70). Between 1933 and 1959 he was president of the Basle section of the Schweizerische Musikforschende Gesellschaft, and from 1949 to 1974 he was president of the society. He began acting as chief examiner for the Schweizerischer Musikpädagogischer Verband in 1943, and from 1952 to 1972 he was general secretary of the IMS, in succession to Merian; in 1972 the IMS made him an honorary member.

When Mohr became general secretary he had the task of reviving international cooperation among musicologists, and he won world-wide recognition for his sustained ability to remove obstacles with diplomatic finesse and patience. He worked equally for musicology in Switzerland: he instigated the Schweizerische Musikdenkmäler, the *Schweizer Beiträge zur Musikwissenschaft* and the 25

volumes of publications of the Schweizerische Musikforschende Gesellschaft, whose *Mitteilungsblatt* he started editing in 1945. He was an influential teacher at both conservatory and university and published a large number of studies of modern Swiss-German musical history, among which the biography of Willy Burkhard is particularly important.

JÜRG STENZL

Mohrhardt, Peter. *See* MORHARD, PETER.

Moilli, Damiano (*b* Parma, *c*1439; *d* Parma, *c*1500). Italian printer. Active at Parma, he was called a book printer and illuminator in documents of 1474 but later listed variously as a paper dealer, bookseller, ceramicist and bookbinder. He worked in the manuscript book trade before and after his publication of four printed books between 1477 and 1482, supplying the local Benedictine convent with liturgical books. His first printed book, an abbreviated *Graduale* of 1477 (issued with his brother Bernardo), was a milestone of early music printing, the third known printed music book after the *c*1473 *Graduale* and Han's 1476 *Missale*. Its giant roman plainchant type, printed in black on pages with four red staves (each 55 mm high), is the largest known, nearly double that used in the *Graduale* printed by Emerich at Venice in 1499, with seven staves a page.

M.K. DUGGAN

Moiseiwitsch [Moyseivich], **Benno** (*b* Odessa, 10/22 Feb 1890; *d* London, 9 April 1963). British pianist of Russian birth. In Odessa he studied at the Imperial Music Academy with Dmitry Klimov, winning the Rubinstein Prize when he was nine. At 14 he went to Vienna (where he adopted the German transliteration of his name) to study with Leschetizky but his family settled in England and he made his official début at Reading in 1908, and his first London appearance at the Bechstein Hall in 1910 (in 1937 he took British nationality). After 1919 he toured Europe and the USA regularly, later the Antipodes, East Asia, Africa and South America. His daughter Tanya became a stage designer.

Moiseiwitsch's playing was marked by a semblance of utter impassivity, possibly modelled on his friend and musical idol Rachmaninoff, although Moiseiwitsch was himself a passionate and expert poker player. His interpretations, notwithstanding, were essentially fiery, effortlessly brilliant and powerful, with singing tone, firmly controlled yet subtle rhythm, and a strong vein of elegant poetic expression. 'Moiseiwitsch double octaves', thumbs louder than fifth fingers, became a household word among pianists. He excelled in Rachmaninoff's music (Rachmaninoff often complained with feigned envy that Moiseiwitsch played his works better than he did), but was as cogent in that of Medtner, whom he constantly championed, and in Schumann and Tchaikovsky. His repertory, formerly extensive, really began with Beethoven, like that of other Leschetizky pupils (earlier works were played in Romantic arrangements), and extended to Poulenc, though he sometimes gave first performances of newer music. In later years he played Beethoven often but drily, without much charm or brilliance; yet those were two principal characteristics of Moiseiwitsch the man (but he also had a dry, leisurely sense of humour), as of his interpretation in Chopin, Schumann and Liszt, and of his instant appeal to audiences everywhere. He was a scrupulous and warmhearted partner in chamber music, for example Brahms's Quintet or Rachmaninoff's Elegiac Trio and Cello Sonata. He was created a CBE for his tireless work in World War II, when he played hundreds of recitals for servicemen and charities.

WILLIAM S. MANN/R

Mojiganga (Sp.: 'masquerade'). A comic public entertainment or burlesque performed in costume; a short theatrical postlude to a larger dramatic production performed by the entire cast in bizarre costumes.

Mojigangas first emerged as farcical pageants in Spain and the Spanish colonies in the early 17th century. They usually took place during Carnival in the form of public parades in the city streets or town square and involved floats, improvised slapstick humour, stunts, strange exotic costumes (especially animal costumes), equestrian displays, music and dance. Esquivel Navarro's dance treatise (*Discursos sobre el arte del dançado*, 1642) indicates that people danced in an intentionally ridiculous manner during these festivities. One of the first *mojigangas* to be described took place at the Palacio Real in Madrid on Carnival Tuesday 1623, and included skits, vaudeville-like diversions, jokes and a comic dance in which the musicians tested the dancers by changing the tune and style every few bars.

By the mid-17th century the *mojiganga* was also adopted as part of state celebrations for occasions such as royal weddings or births, military triumphs or the arrival of a visiting monarch. The raucous humour and extravagant costumes of the earlier, popular form were retained (see Esses for descriptions of specific *mojigangas*). Indeed, the genre had become such an integral part of Spanish public life that it was even incorporated into the normally

austere *auto sacramental* for the feast of Corpus Christi in 1662 and 1664.

Shortly after its appearance as an open-air mock pageant, the *mojiganga* began to enter the Spanish theatre, where it involved the entire cast in exotic costumes (again often animal costumes or feathers) and nearly always included dancing. Luis Quiñones de Benavente wrote several interludes considered to be the forerunners of the theatrical *mojiganga*. One of the first works to bear the title *mojiganga* was Calderón de la Barca's epilogue to *El golfo de las sirenas* (17 January 1657). In subsequent works, such as his *Los sitios de recreación del rey*, he separated the concluding *mojiganga* from the main text of the drama or *comedia* and published it separately. When his *La fiera, el rayo, y la piedra* (1652, Palacio del Buen Retiro, Madrid) was restaged in Valencia in 1690 for the wedding of Charles II and Mariana of Neuberg, the original's concluding *máscara* was replaced by a new *mojiganga*. In José de Cañizares's *mojiganga Los sones* the dancers depict the characters of the *dama*, *españoleta* and *gran duque* (who enters on stilts) and dance a *guineo* and a *torneo*, and his *Los sopones* (for Corpus Christi 1723) includes a *contradanza* and a *fandango*. The anonymous *La gitanada* (for Corpus Christi *c*1670) includes a *villano* and a *chacona* performed by a group of gypsies, a *caballero* sung and danced by two elderly characters, and a *mariona* and a *guineo*. Gypsies are again the main characters in the *chacona* in the anonymous *Las sacas* (1708, Zaragoza, Corpus Christi); and Sebastián Rodríguez de Villaviciosa's *Las figuras y lo que pasa en una noche* (1672, Zaragoza) also contains a *chacona*. In Seville in 1672 Bernardo de la Vega's theatre troupe presented a *mojiganga* that made use of a *chamberga*, a *sonecillo* and a *tonadilla*.

Other notable *mojigangas* are those by Vicente Suárez de Deza y Avila (*Mojiganga de Don Gaiferos*; *La ronda en noche de Carnestolendas*, 1663, Madrid); Agustín Moreto y Cabana (*El Rey Don Rodrigo y la caba*, 1665, Madrid); Diego de Nájera (*Retrato de la Reyna Nuestra Señora Doña Mariana de Neoburg*, 1690); Antonio de Zamora (*Los oficios y matachines*, 1701; *Mojiganga para la zarzuela 'Amor es el quinto elemento'*, 1728); Manuel de León Marchante (*Los alcaldes*, pubd posth., 1722); Bernardo López del Campo (*Zarambeque*); Francisco Antonio de Bances y Candamo (*Mojiganga para el auto 'El primer duelo del mundo'*); and the anonymous works *Mojiganga y fin de fiesta del auto 'El año Santo de Roma'* (1723); *Los volatines y mojigangas*; *Don Gaiferos*; *Mojiganga de la Negra*; and *El organillo, sainete nuebo y moxiganga*.

CRAIG H. RUSSELL

Mojsisovics(-Mojsvár), Roderich Edler von (*b* Graz, 10 May 1877; *d* Graz, 30 March 1953). Austrian composer. He studied theory and composition with Degner in Graz (1896–9) and also took a doctorate in law at the university (1900). He then continued his music studies in Cologne with Wüllner (1901) and in Munich with Thuille (1901–2). Between 1903 and 1905 he was chorus master at the German Academic Singers' Organization in Brno, and in 1910 he edited the *Musikalisches Wochenblatt* in Leipzig. From 1912 to 1931 he was director of the Steiermärkischer Musikverein in Graz (it became the conservatory in 1920), and then taught in Munich (1935–41), where he became musical adviser to the *Münchner Neuesten Nachrichten*, and in Mannheim (1941–4), before returning to Graz to teach operatic dramaturgy (1945–8).

His style is very much rooted in the late Romantic tradition of Reger and Pfitzner. Although he exerted influence as a teacher (Max Schönherr, Hans Holenia and Otto Siegl numbered among his pupils), his work failed to gain wide currency even during the Third Reich when his national-conservative sympathies, as well as his collaboration with the influential critic Fritz Stege on *Norden in Not* (1936), a Nordic *Volksoper*, might well have endeared him to the authorities.

WORKS

(*selective list*)

Dramatic: Die roten Dominos (op, 2, Mojsisovics, after H. Hopfen: *Zehn oder elf*), op.20, Graz, 1907; Ninion (melodrama, 1, E. Mayer and A. Weissman), op.19, Pressburg, 1907; Messer Ricciardo Minutolo (Musikkomödie, 4, Mojsisovics), op.50 (Zürich, 1907); Oedipus auf Kolonos (incid music, Sophocles), melodramatischen Harfenmusik, Eisenach, 1912; Tantchen Rosmarin (komische Oper, 4, K.H. Strobl, after Zschokke), Brno, 1913; König Mensch (marionette play, 2, W. Illing), op.63, Graz, 1922; Der Zauberer (1, Mojsisovics, after M. de Cervantes: *La cueva de Salamanca*), op.60, Gera, 1926; Madam Blaubart (burleske Oper, 3, K. Mayer and E. Meier-Hahn), op.62, inc. radio perf. Breslau, 1934; Die Locke (musikalisches Lustspiel, 1, Mojsisovics), op.72, Knittelfeld, 1927; Die Lerche, Krefeld, 1928; Anno Domini (altdeutsche Oper, 2 scenes, Mojsisovics), op.75, unperf.; Phantastischer Tanzspiel, ballet, op.76, Graz, 1929; Norden in Not (nordische Volksoper, 3, F. ERIK LEVI

Mokranjac, Stevan (Stojanović) (*b* Negotin, 9 Jan 1856; *d* Skopje, 28 Sept 1914). Serbian composer, musicologist and conductor. From 1879 he studied at the Munich Conservatory with Sachs (harmony) and Rheinberger (composition); he also studied with Parisotti in Rome (1884–5) and with Reinecke, Jadassohn and Brodsky in Leipzig (1885–7). In 1887 he returned to Serbia to become conductor and lifelong director of the Belgrade Choral Society, for which he wrote many works. Two years later he founded a string quartet, in which he played second violin. He made numerous tours of Slav territories, notating folksongs as he heard them. In 1893 he visited Dubrovnik and Cetinje, in 1894 Skopje and Budapest; in 1896 he toured Macedonia extensively and in 1910–11 visited Bosnia, Hercegovina, Montenegro, Dalmatia and Croatia. He incorporated many of the folksongs he collected into his own compositions. In 1899, with K. Manojlović and S. Binički, he founded the Serbian School of Music in Belgrade (now the Mokranjac School of Music), remaining its director until his death.

Had Mokranjac accomplished nothing more than the establishment of the Belgrade String Quartet and the Serbian School of Music, he would nevertheless have been assured a place in history. But by his training and development of the Serbian Choral Society into a group of international standard, which toured Russia, Germany, Austria and Hungary, he set a standard of choral singing that is still emulated. Even more important was his work in collecting folksongs from Serbia, Macedonia, Montenegro, Bosnia and other Slav territories. He notated many of them in their original form (published in 1966), also making a scientific analysis of their musical content. Among his most noteworthy collections are 160 folk melodies from Kosovo (1896) and about 300 Serbian melodies.

Folksong naturally inspired Mokranjac's own compositions. Wishing to liberate Serbian music from its primitive inheritance, he believed that by studying with the best teachers in Europe and by basing his own music on national melodies he could achieve this aim. Apart from a few instrumental works, his music is all vocal (predominantly choral), divided nearly equally between secular and sacred. The most famous of his secular pieces are the 15 *Rukoveti* ('Bouquets') or choral rhapsodies that incorporate some 90 folksongs, arranged and harmonized in a vivid, imaginative and varied manner. He was a deeply religious man and contributed abundantly to church music, notably with two settings of the Serbian Orthodox Requiem, various services, including the large-scale *Liturgija* (*Božestvenaja služba*) of 1894–5, and a manual of Orthodox church singing (*Opšte pojanje* ('General singing)', Belgrade, 1935). Mokranjac made important studies of the *Osmosglasnik* (the *Oktoechos* of the Serbian Orthodox church), published in 1908.

WORKS

Edition: *S. Mokranjac: Sabrana djela* (Belgrade 1992–)

SACRED CHORAL

all for mixed voices unless otherwise stated

Tebe boga hvalim [Lord, we give thee thanks], 1882; Opelo [Requiem], no.1, g, 1883, no.2, f♯, 1888; Svjati Bože i Aliluja [Sacred Service and Alleluia], 1883; Akatisti Bogorodici [Prayers to the Virgin], 1892; Tebe odjejuščagosja [Songs for Good Friday], 1892; Veličanije Sv. Savi [The Glorification of St Sava], male vv, 1893, rev. for mixed vv, 1906; Liturgija [Liturgy] Božestvenaja služba, 1894–5

Crkveno pojanje [12 sacred songs], 3 children's vv, 1901–2; Ps cxxxvi 'Na rjekah Vavilonski' [On the waters of Babylon], male vv, 1908; 24 other works (incl. 1 for male vv)

SECULAR VOCAL

[15] Rukoveti [Bouquets], on folksongs from various regions, all with chorus: 1 with T, B, 1884; 2 with T, 1884; 3 with T, B, 1888; 4 Mirjano, B, pf, 1890; 5 with S, T, 1892; 6 Hajduk Veljko, T, 1892; 7 Iz Stare Srbije i Makedonije [From Old Serbia and Macedonia], T, 1894; 8 Sa Kosova [From Kosovo], 1896; 9 Iz Crne Gore [From Montenegro], 1896; 10 Sa Ohrida [From Ohrid], 1901; 11 Iz Stare Srbije, 1905; 12 Sa Kosova, 1906; 13 Iz moje domovine [From my Homeland], 1907; 14 Iz Bosne [From Bosnia], 1908; 15 Iz Makedonije, 1909

Ivkova slava (S. Sremac and D. Brzak), 8 dramatic scenes, S, A, T, chorus, orch, 1901

Other: 36 songs, mixed vv, incl. Jadna draga [Unfortunate Sweetheart], S, 1887, Primorski napjevi [Coastal Songs], 1893, Kozar [The Goatherd], 1904; 5 songs, male vv; 21 folksongs and ballads, 1v, pf; 1 song, 1v, orch; 10 songs, children's vv

INSTRUMENTAL

Sanjarije [Reveries], on a Serbian folksong, str qt, 1877; 5 fugues, str

NIALL O'LOUGHLIN

Mokranjac, Vasilije (*b* Belgrade, 11 Sept 1923; *d* Belgrade, 27 May 1984). Serbian composer. He graduated from the piano class of Emil Hajek (1948) and the composition class of Rajičić (1951) at the Belgrade Academy of Music, where he later became full professor of composition and orchestration. He was a recipient of the October Prize (1967) and the Seventh of July Prize (1976) of the City of Belgrade, and in 1976 he became a full member of the Serbian Academy of Arts and Sciences.

His music's Romantic and expressionistic qualities combine in a musical language that is marked by dramatic strength and lyric expression. His orchestral works and piano pieces are among the finest examples in the Serbian repertory. In the symphonies, powerful and delicate emotions are contrasted and often reach peaks of great drama or even tragedy. After 1960 adventurous harmony – stemming from an extended tonality and often bitonal – becomes an important dramatic resource. Drawn particularly to sonata form, his music displays a predilection for working with thematic cells. The *Lyric Poem* represents the synthesis of his work, while the piano pieces, which bear a national stamp, are highly idiomatic.

ROKSANDA PEJOVIĆ

Mokrousov, Boris (*b* Nizhny Novgorod, 14/27 Nov 1909; *d* 27 March 1968). Russian composer. He studied privately with Viktor Beliy, Litinsky and Anatoly Aleksandrov, and then at the Moscow Conservatory with Myaskovsky, graduating in 1936. Although he turned to large-scale forms a number of times, it was with his songs (the principal sphere of his work), that Mokrousov gained true popularity. The subjects and genres of the songs are very varied: song-ballads, soldiers' and maidens' songs, humorous and variety stage songs. The music relies on Russian national folklore (peasant and urban), and also on the romance; his melodies have well defined contours, are expressive and evocative, and are easily remembered. The finest of them are characterized by their restraint and sincerity; the songs from the film *Svad'ba s pridanïm* 'A Marriage with a Dowry' also gained huge popularity. A special feature of Mokrousov's method of writing songs was to compose the music first, and then fit the lyrics on a prescribed theme to it. He is an Honoured Representative of the Arts of the Chuvash ASSR (1962), and a laureate of the USSR State Prize (1948).

MARINA NEST'YEVA

Mokrý, Ladislav (*b* Topolčany, 2 June 1932). Slovak musicologist. He studied musicology and history at Bratislava University (graduated 1955) and was librarian (from 1953) and assistant lecturer (1954–9) at its musicology institute. In 1963 he became a research fellow at the Institute of Musicology of the Slovak Academy of Sciences, part-time lecturer in musicology at the Bratislava Academy of Music and secretary of the musicology section of the Slovak Composers' Union; between 1957 and 1971 he also served on the editorial board of *Slovenská hudba*. His particular interests are early music (notably palaeography and Slavonic chant) and musical sociology, whose position he has defended within the Marxist concept of musicology; his article on the subject (1962) shows considerable historical awareness and made it a viable study in Czechoslovakia. He was the co-author of a history of Slovak music (1957) and helped to edit the first Slovak music encyclopedia; he also made Slovak translations of Siegmund-Schultze's *Georg Friedrich Händel* (Bratislava, 1959) and Stokowski's *Music for all of us* (*Hudba pre všetých*, Bratislava, 1963).

□

Molaines, Pierre de. *See* PIERRE DE MOLINS.

Molchanov, Ivan Evstrat'evich (*b* Yaroslav region, Russia, 1809; *d* St Petersburg, 1881). Russian baritone folksinger and choir leader. He was born to a peasant family. While he was young he became known as *Russkiy pevets* ('The Russian singer') and wrote the lyrics of a soldiers' song, *Bïlo delo pod Poltavoy* ('The Battle under Poltava') which remained popular for many years; its melody was rooted in the 18th-century Russian *kant* style. From the 1850s to the 1870s he was the leader of a small folk choir of former smallholders which performed in many Russian cities including Moscow, St Petersburg, Vladimir, Kursk and Nizhniy Novgorod. This choir preceded the famous Russian 'peasant' choir organized in 1910 by Mitrofan Pyatnitsky (1864–1927). Molchanov knew several hundred folksongs and taught his choir orally; he also taught soldiers to sing Russian songs and established a private school in which he taught children to sing in a 'folk' manner, i.e. polyphonically. Some of his songs were noted down by Mikhail Glinka (1804–57). During the 1860s Molchanov studied Émil Chevé's method of musical notation with the Russian musician and scholar Vladimir Odoyevsky (1804–69), who wrote down 20 folksongs performed by Molchanov; this collection was not published until 1998. Molchanov also published a few books of popular songs (*pesenniki*).

BIBLIOGRAPHY

I.E. Molchanov: *Noveyshiy russkiy i tsïganskiy pesennik s orkestrovannïmi Molchanovïm pesnyami* [The newest Russian and Gypsy songbook with songs 'orchestrated' by Molchanov] (St Petersburg, 1880)
B.B. Granovsky: *Pesni pevtsov-samorodkov Ivana Fomina i Ivana Molchanova v sobranii V.F. Odoevskogo* [Songs of the singers Ivan Fomin and Ivan Molchanov in the collection of Vladimir Odoyevsky] (Moscow, 1998)

IZALY ZEMTSOVSKY

Molchanov, Kirill Vladimirovich (*b* Moscow, 7 Sept 1922; *d* 14 March 1982). Russian composer. He graduated in 1949 from the Moscow Conservatory where he studied with Anatoly Aleksandrov. He became secretary to the board of the Composers' Union (1951–6) and director of the Bol'shoy Theatre (1973–5) as well as being nominated Honoured Representatove of the Arts of Russia (1963). Music theatre was the primary sphere of his work and the majority of his operas are based on contemporary themes, such as the events of World War II in which the composer was directly involved. His stage works are attractive for their unusual dramatic turns and their use of potently expressive theatrical techniques. The vivid melodies which populate his music have their roots in the Russian tradition; they combine recitative with elements of song and romance in an organic manner. His works were particularly popular in Russia during the Soviet era. He was involved in writing film music for more than 30 years of his career; his scores are cherished by Russian filmgoers. He wrote regularly for both the non-specialist and specialist press.

WORKS
(*selective list*)

DRAMATIC

Kamennïy tsvetok [The Stone Flower] (op, 4, S. Severtsev, after P. Bazhov), 1950, Moscow, Stanislavsky-Nemirovich-Danchenko Music Theatre, 1951
Zarya [Dawn] (op, 4, Severtsev, after B. Lavrenyov: *Razlom* [The Break Up]), 1956, Moscow, Stanislavsky-Nemirovich-Danchenko Music Theatre, 1956

ALLA VLADIMIROVNA GRIGOR'YEVA

Moldenhauer, Hans (*b* Mainz, 13 Dec 1906; *d* Spokane, WA, 19 Oct 1987). American musicologist of German birth. He graduated from the Musikhochschule in Mainz, where he was a pupil of Hans Rosbaud. He emigrated to America in 1938 and took the BA at Whitworth College, Spokane, in 1945 and the DFA in musicology at Chicago Musical College of Roosevelt University in 1951. In 1942 he founded the Spokane Conservatory, of which he was president from 1946. He also taught at the University of Washington from 1961 to 1964, and lectured at colleges and universities throughout Europe and America.

Moldenhauer was the founder and director of the Moldenhauer Archive of autograph musical manuscripts, letters and documents; formerly located in Spokane, with parts housed at Northwestern University, the archive is now mostly dispersed (*see* COLLECTIONS, PRIVATE). An important section of this collection is the Webern Archive; Moldenhauer's long-standing interest in the composer is reflected in this compilation of manuscripts and memorabilia and in his many articles about Webern. Moldenhauer published a number of Webern Archive music manuscripts, including the sketches, in facsimile or practical editions.

PAULA MORGAN

Moldobasanov, Kaly (*b* Terek, Narïn district, 28 Sept 1929). Kyrgyz composer. Born into the family of a famous *akïn* (Kyrgyz bard and singer of epics), he played several traditional instruments from early childhood before studying conducting and violin at Kyrgyz State College of Music and Choreography and, in 1954, graduating from Lev Ginzburg's conducting class at the Moscow Conservatory. He became the principal conductor of the Kyrgyz State Theatre of Opera and Ballet (1966–73), and served as the head of the Kyrgyz Composers' Union (1979–97) and of the Kyrgyz Institute of Art (from 1984). His most famous work is *Materinskoye pole* ('Mother's Field') of 1976, which is significant as a successful attempt to develop a new branch of Kyrgyz art. The work has been staged in many countries. He was awarded the State Premium of the USSR in 1976 and the title of People's Artist of the USSR (1979).

WORKS
(*selective list*)

Mgnoveniya [Instants], 7 miniatures, pf, 1974; Materinskoye pole [Mother's Field] (ballet, orat, after Ch. Aytmatov), 1975; Fantasy-Improvisation, pf, 1976; Ob Conc., 1976; V stane Manasa [In the Camp of Manas], sym. suite, 1978; Janïl-Mïrza (ballet), collab. M. Burshtin; Legenda o Mankurte [Legend of Mankurt] (ballet, after Aytmatov), 1986; Mï schastlivïye deti [We are Happy Children], vocal cycle, S, orch, 1986; film scores, choral works, songs and romances

RAZIA SULTANOVA

Moldova [Moldova, Bessarabia; formerly Moldavian Soviet Socialist Republic] (Rom. Republica Moldova). Country in south-eastern Europe bordered by the Ukraine to the north, east and south and by Romania to the west. The capital city is Chişinău, and the population numbers *c*4.5 million, 75% of whom speak Romanian. In 1990 the country gained its independence and became known as Moldova.

I. Art music. II. Traditional music.

I. Art music

Studies suggest that Moldovan folk customs derive from those of Thracian peoples (the Getae and Daci), strongly influenced by Roman and Slavonic arrivals. In the 12th, 13th and 14th centuries a national identity was formed, to be embodied in the Moldavian state with its capital at Iaşi (1387), and the resulting congruence of latinized (Wallachian) and Slav cultures had its effect on folklore, and thereby on secular and, in part, sacred music.

The first professional musicians in Moldavia were the *lăutari* and their ensembles, the *tarafi*, whose music was oral. The Orthodox Church, whose liturgies were originally in Greek or Church Slavonic, introduced the Romanian language in the 16th century, and the first manuscripts of chant in Romanian date from the first third of the 18th century. A further early musical tradition was that of the court and military orchestras, which flourished from the 15th century onwards. In the 17th and 18th centuries military bands took on a Turkish colouring and became known as 'tubulkhanya' or 'meterkhanya'. Dimitrie Cantemir (1673–1723) made an important contribution to the study of both Turkish and Moldavian music, and his *Chant des derviches* (Paris, 1714) found its way into Mozart's *Entführung*.

Compositions with Moldavian folk elements began to appear at the end of the 18th century in the operas of the Russian-based composers Józef Kozłowski, Aleksey Verstrovsky and K. Eizrikh. At the beginning of the 19th century the German cellist Bernhard Heinrich Romberg, enchanted by Moldavian folk melodies, wrote the fantasy *Mititica* on them. During this same period Italian music gained favour: during festivities organized by Prince Grigory Potyomkin in Chişinău in 1788–9 Sarti's *Te Deum* was performed, and early in the next century G. Magi wrote incidental music for the theatre in Iaşi.

Between 1812 and 1918 the greater part of Moldavia was included in the Russian province of Bessarabia, with its centre at Chişinău. But though the influence of Russian culture grew, links with the West were not broken; indeed, visits by both Western and Russian opera companies, choirs and soloists became more frequent. Among the

musicians who established themselves in Chişinău were A. Khlebovsky (a pupil of Liszt), P. Kakhovsky and V. Gutor (graduates of the St Petersburg Conservatory) and M. Schildkret, who had studied at the Vienna Conservatory. At the same time there were Bessarabian musicians who enjoyed international careers: the singers V. Cuza, A. Antonovsky, L. Lipkovskaya and J. Athanasiu, the pianist and conductor Alexander Ziloti, the pianist Aleksandr Goldenweiser and the choral composer-conductor Gavriil Musicescu.

When Pushkin was in Chişinău (1820–23), there was music at the houses of the *boyarin* Varfolomey and the collegiate assessor Z. Ralli. Later the town had a musical society (1835) and the Garmoniya Association (1880), of which the latter became in 1899 the local branch of the Russian Musical Society, signalling a change from amateur to professional status in its members. The branch ran a music school, headed by Vladimir Rebikov, and there were two other music schools in the town, founded around the same time by Gutor and K. Khrshanovskaya. Among composers, J. Perja, Khlebovsky and V. Gofman wrote chamber and instrumental music, M.S. Berezovsky and M. Bârcă produced church music and folksong arrangements, and Rebikov and Khrshanovskaya pioneered opera.

Bessarabia was assigned to Romania in 1918, but the region on the left bank of the Dniestr remained in Russian possession and in 1924 became the Moldavian Autonomous Soviet Socialist Republic (MASSR). The professionalization of music was helped by the founding in Chişinău of the Unirea Conservatory in 1919, the Natsional'naya Konservatoriya (National Conservatory) in 1925, on the basis of the IRMS music school and the Munitsipal'naya Konservatoriya (City Conservatory) in 1936. Also in Chişinău there were attempts to found a permanent opera, philharmonic society and chamber music associations. Choirs flourished: Maria Cebotari, later a leading opera singer in Germany and Austria, began her career in Berezovsky's. Composers working in Chişinău between the wars included E. Coca, A. Il'yashenko and V. Bulïchev, a pupil of Sergey Taneyev, as well as V. Popovici and S. Neaga, both of whom had studied in Paris. Neaga's works, among them a symphony in C minor, a string quartet and a piano sonata, were of fundamental importance in the development of Moldavian music. There were also Ukrainian composers who played a decisive role, including V. Polyakov and N. Vilinsky. In 1928 a small orchestra was set up by M. Caftanati in Balta, then the capital of the MASSR; it was succeeded in 1930 by a symphony orchestra in the new capital of Tiraspol. Also in 1930 K. Pigrov founded the Doina choir, and in 1937 the Moldavian branch of the Union of Ukrainian Composers was set up.

In 1940 the region was reconstituted as the Moldavian SSR with its capital in Chişinău. Doina and the symphony orchestra became part of the Moldavskaya Gosudarstvennaya Filarmoniya (Moldavian State Philharmonia); the union became the Soyuz Kompozitorov Moldavii (Union of Composers of Moldavia, now the Union of Composers and Musicologists of Moldova); the City Conservatory became the Kishinyovskaya Gosudarstvennaya Konservatoriya (Chişinău State Conservatory, now the Musicescu Academy of Music); and the Moldavskiy Muzikal'nïy-Dramaticheskiy Teatr (Moldavian Music and Drama Theatre) was founded. All these organizations were disrupted during World War II, but important compositions were produced, including Coca's *Vesennyaya simfoniya* ('Spring Symphony') for violin and strings, and Neaga's *Moldavskaya fantaziya* for violin, piano and strings, Violin Concerto and symphonic *Poèma o Dnestre* (1943), which embodied the conflict of the war years and heralded a new style of dramatic symphonism in Moldavian music.

The decade after the war was overshadowed by Soviet cultural policy, but then development was renewed, thanks to the relaxing of constraints and to events within Moldavia. The opening of the Pushkin Moldavian (Opera, Ballet and Drama) Theatre in Chişinău (now the National Opera) in 1955 stimulated local composers, among them D.G. Gershfel'd (the heroic-historical operas *Grozovan*, *Aurelius* and *Sergey Lazo*), V. Zagorsky (the ballets *Rassvet*, 'Dawn', and *Perekryostok*, 'The Crossroads'), A.G. Stârcea, Gheorghe Mustea (the opera *Alexandu Lăpuşneanu*), E.T. Lazarev (the ballets *Antony i Kleopatra* and *Idol*, as well as comic operas), Zlata Tcaci (the ballet *Andrieş*), E. Doga (the ballet *Luceafărul*) and L. Ştirbu (the rock opera *Mioriţsa*). A new opera house opened in 1980. Between the mid-1960s and the mid-1980s two tendencies in Moldavian composition may be distinguished, one fulfilling official demands during the era of stagnation with 'festive' choral works, 'jubilee' overtures and so on, the other preferring abstract genres, assisted by new performing organizations and by the inauguration of the Organnogo Zala (Organ Hall) in Chişinău in 1978. Examples of the latter stream include the seven symphonies of V. Polyakov and the works of Solomon Lobel', Zagorsky, Gheorghe Neaga, Tcaci and Pavel Rivilis. Stravinsky's modal and rhythmic language had an effect on Rivilis, and there are serial elements in Zagorsky's Rhapsody for violin, two pianos and percussion and Neaga's Second Symphony.

During the period before and after the founding of independent Moldova in 1990, there were diverse attempts to liberate national culture from foreign influence. These expressed themselves musically in quotations, imitations or recreations of folklore (as in the works of Tudor Chiriac, Yu. Tsibul'skaya and E. Mamot) and in revivals of the previously repressed tradition of church music (as in V. Ciolac's Liturgy and works by Teodor Zgureanu). Other composers sought to combine national with contemporary international elements: the instrumental and vocal works of Ghenadie Ciobanu, V. Belyayev and A. Fyodorova are based on individual interpretations of spectral music, and the later symphonies of Dmitry Kitsenko employ minimalist techniques. On the organizational front, the integration of Moldova's music into the wider world has been helped by the UNESCO National Commission and by the festivals Mertsishor and Days of New Music, which are held annually in Chişinău.

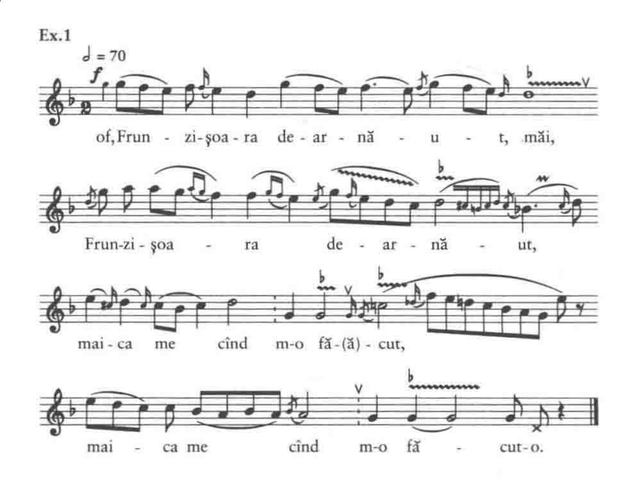
II. Traditional music



1. General. 2. Pastoral music. 3. Ritual songs. 4. Dramatized games and folk dramas. 5. Dances. 6. The Lăutari. 7. Children's songs. 8. The doina.

1. General. The sources of traditional music in Moldova can be traced back to the ethno-cultures of the Getae and the Daci in the 4th century BCE, the descendants of the Thracians of the 9th century BCE, whose economy combined agriculture and cattle breeding. The musical culture of this specifically pastoral way of life was destined, in all probability, to play the most significant and decisive role in the creation of traditional music in Moldavia. The most notable result of this influence is the fact that Moldavian folklore has a well-developed monodic tradition for solo voice. Characteristics of this are the extensive embellishment of melodies and richness of singing between syllables; the widespread frequency of melodies beginning with an octave leap, probably the result of loud singing in open spaces and the acoustics of a hilly steppe-like terrain; the parallel functioning of melodies of vocal and instrumental types and their interaction with one another, which may be why the verbs 'to sing' and 'to play' in Moldavian, 'a *cânta*', are the same; the complexity and variety of rhythms and the capriciousness of the *rubato* system; and the meditative character of many lyrical songs (ex.1).

2. Pastoral music. Moldova's pastoral milieu has been preserved to the present day. The genre system of traditional pastoral music can be divided into three types:

(i) Calls and invocations. Such forms of communication are threefold: (a) invocations directed at the phenomena of the cosmos, *la răsăritul soarei*, an invocation to the sun, *zorzile*, to the dawn; (b) invocations directed towards people, including a favourite girl (*când veneam de la fete*, children (*chemarea copiilor la masă*), members of sit-around gatherings (*chemarea la şezătoare*) etc; (c) invocations directed at animals, including 'sending the sheep on their way' (*porneala oilor*); when the shepherd gathers

Ex.1

his sheep into the pen (*când strîngă oile la stână*); when the cows are sent into the hills (*chemarea vitelor la munte*) etc.

(ii) Dances. Dance is a fundamental part of traditional pastoral music. Many dances have developed as a result of choreographic interpretation of working processes and some of these dances have penetrated into the common environment of the village. *Hora* (round-dances) are the principal type performed by shepherds. They are characterized by dynamic movement and complex steps and are generally performed in groups of five to seven with the shepherds' arms around their fellow dancers. They include the *Ciobăneasca* (*cioban*, 'shepherd'), *Mocăneasca* (*mocan*, 'shepherd'), *Cârligul* (*carlig*, 'shepherd's crook'), *Strunga* (*strunga*, 'sheep-pen'), *Cârlăneasca* (*carlan*, 'lamb'), *Bârzoiu*, *Corăgheasca*, *Bătuta*, *Arcanul* (*arcan* 'lasso') and *Mărioara* (a diminutive form of Maria). *În jurul bătului* ('round the stick') is a dance performed by a single shepherd.

(iii) Heroic epic poetry and ballads. The works of heroic epic poetry which in the past were in the repertory of shepherds and *lăutari* have been preserved to the present day, although apparently only by shepherds and only in the form of individual fragments. From these it is possible to determine that the performance of heroic epic poetry had nothing in common with the performance of ordinary songs: works of epic poetry were performed dynamically and loudly with great fervour, their melodies, characterized by a declamatory style of delivery, not restricted to recitative, rather using expressive turns of intonation. Melodies, the manner of performance and numerous invocatory exclamations gave the performance of epic poetry an active character of appeal.

Among the most ancient ballads in which conflict of personality and social environment found expression is *Când ciobanul a pierdut oile* which tells of a shepherd who lost a flock of sheep belonging to the community, and having thus 'betrayed' the trust of the community was harshly punished. Such ballads reveal how actions shaking the collective basis of a community were judged without compromise, and how the relations of people within communities were built on trust, with any action that violated such trust harshly censured. It also reveals how social conflicts engendered by differentiation in a large patriarchal family find reflection. This ballad is more widespread in an instrumental form of delivery of the poetic subject, usually performed on the *fluier* (flute).

Another ballad, known as *Mioriţa*, reveals how two powerful categories of early human thinking, mythological and syncretic, come together. The attitude and outlook typical of those living in a pastoral environment found their expression in the links between people and nature, the cosmos, life and death, the material and the spiritual, people and destiny. Due to a rare richness of content, this particular ballad has stimulated numerous scholarly interpretations, creating specific difficulties in studying the way in which it first emerged.

(iv) Musical instruments. Musical instruments can be divided into two groups, according to their function within shepherds' lives: those for making signals and those for playing various types of melodies. In the first group is the *bucium*, a wooden cylindrical-conic pipe 3m long and braided with birch bark, which is used to produce sounds based on a natural scale; the *corn*, a shepherds' horn, which is used as a summons to milking sheep; and the *fluier lung*, a 50–90 cm long flute with a semi-aslant aperture, which allows the player to produce both a melody and guttural vocal sound. The second group includes the *fluier*, which is both the most widespread musical instrument and that with the greatest technical possibilities, including legato, staccato, arpeggio, trills and passages. The *fluier* is 27cm long, has six holes for playing and is commonly made of elder, lime, beech or plum. There are several types of *fluier*: the *fără dop* (without a whistle), *cu dop* (with a whistle) and a variation of the *fluier* that contains a reed. Also used primarily for melody are the *caval*, a wooden pipe 50–89 cm long and made of plane with six holes for playing; the *cimpoi* (bagpipes); and the *tilinca*, a primitive musical instrument from the *fluier* family, which has a pipe up to 80 cm long without holes for playing. All musical instruments were made either by shepherds themselves or by a local joiner.

3. Ritual songs. Against the background of an agrarian culture unison singing also developed. Unison and heterophonic singing is characterized by a tendency to unify rhythmic relationships, with moderate use of embellishments in melodies and a comparatively narrow pitch range (basically a 5th or a 6th). Unison is the timbre in Moldovan folklore associated with the idea of ritualistic cults and is used exclusively in ritual works. It is charac teristic of both the *colinde* and the *cântece de stea* (songs of the star) sung on Christmas Eve or Christmas Day, which have fallen on 6 and 7 January, since Moldova adopted the old style calendar for the church festival year (ex.2).

Ex.2

On New Year's Eve (13 January) *cântece despre Malanca*, ritual songs about Malanca, are sung. In the north of the republic they can be heard as a group of closely related variants completely unknown in the rest of Moldova (ex.3). In the south of the republic New Year songs of another genre, *the Sorcova*, are found.

Ex.3

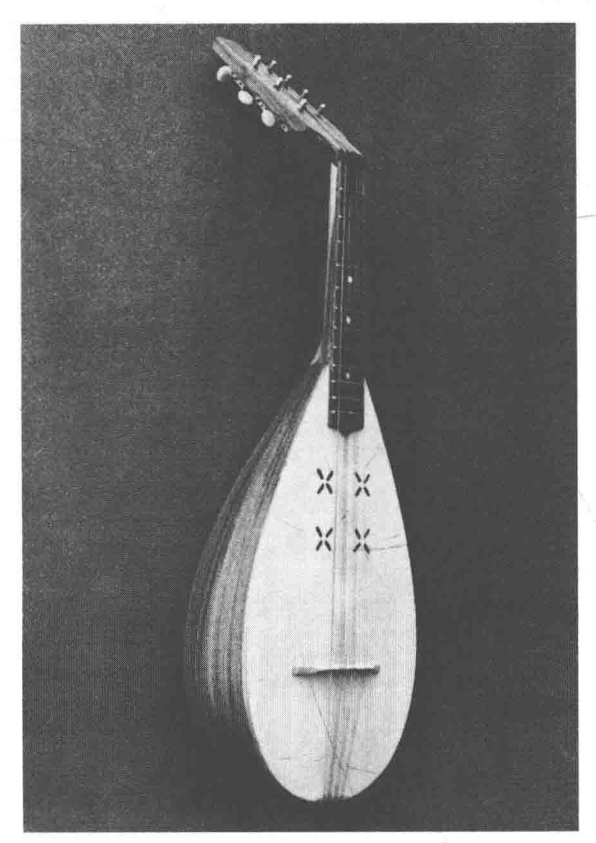
On New Year's Eve the calendar ritual *Pluguşor* is practised everywhere, performed in its fullest form by *flăcăii*, unmarried lads, who go around all the houses where *fete mari*, marriageable girls, live. At the end of the ritual, the latter, as a sign of thanks, present the boys with a large, beautifully baked loaf. The ritual includes the delivery of a poetical text, based on an agrarian theme, called a *hătură*, which is accompanied by an artistic and sonorous depiction of ploughing with oxen. While one of the participants loudly and rapidly declaims the text of the *hăitură*, the other lads at specific moments in the text exclaim '*Hăi, hăi!*', as if urging on the oxen. Another of the participants holds and constantly rings the little bell which normally dangles from the oxen's neck; the regular cracking of a whip is heard, while on the musical instrument, the *buhai* (a type of membranophone – *buhai* also means 'ox' in Romanian), glissando sounds in a low register and of indeterminate length are produced to represent the bellowing of the oxen. Performance of the *hătură* creates a rather complex polyrhythm and from the declamation produces the impression of a kind of rhythmic ensemble. Strong links run between the *Pluguşor* ceremony and the *Joc*, a village dance festival. The same lads who go on the *Pluguşor* organize the *Joc*, and the girls to whom the *Pluguşor* was directed become its participants. The girl whose loaf the lads consider to be the finest is given the honour of dancing with each participant of the *Pluguşor*. Money raised during the *Pluguşor* is used to pay for musicians. The link between calendar and family rituals can be factually ascertained, something which is a regular feature of traditional culture: it is possible that these types of links took shape during the syncretic period of development. In a number of villages calendar rituals were not performed throughout the village, but strictly within particular parts of it. It therefore may be deduced that in the past going round the houses for calendar rituals was restricted to patrimonic relatives rather than all the inhabitants of a village.

4. Dramatized games and folk dramas. Perhaps nowhere in Europe has such a variety of theatrical forms been preserved until the late 20th century as in Moldova, and mostly in the north. They included calendar and ritualistic works performed only on New Year's Eve (the only participants were boys and young men who took all the roles, including female ones); others were performed at sit-around gatherings, weddings and during evenings of dancing. All forms of art of these folk theatres can be subdivided into elementary dramatized games, more sophisticated performances and folk dramas proper.

Dramatized games form the initial phase in the history of the art of folk theatre. Among dramatized games are some of ancient origin including the *Ciocârlie* (the Lark),

the *Băsmăluţă* (the Little Kerchief), *Scursul vinului* (wine pressing) etc. In Moldavian mythology the lark is thought to be an enigmatic bird, cursed and racked by torments. The myth tells how a fairy asked for the freedom of the skies, the ability to fly and how, in reply, the thunderclouds grew angry, but a prophetess (soothsayer) turned her into a bird of the fields, of the dawn, and of thunderstorms, constantly following in the tracks of the tiller of the land. In the dramatized game the part of the Lark is acted by a lad who, wearing a mask, represents the body of the bird, while two girls on either side of him represent the wings, all three imitating the flight of the bird. Following this, the lad chooses one of the girls to dance with. Dance movements are learnt from the people most senior in age, although not everyone is capable of performing the dance for it requires a virtuoso. In another dramatized game, the wine pressing, the lads imitate the pressing of bunches of grapes within a circle of girls who sing a rhythmically precise song, accompanied by clapping. Folk plays are characterized by more elaborate subjects and by the inclusion of poetical texts. Dependent on their principal subject, this kind of theatrical art can be subdivided in three ways: (a) about animals: the bear (*ursu*), the goat (*capbra*), the deer (*cerbul*), the ox (*buhaiul*), the ram (*berbec*); (b) about historical personages: the Turks (Turci), the Gaiduks (Haiduci); (c) about fantastical personages, essentially the Paparuda, evil spirits (Strigoii) (ex.4). Folk dramas with elaborate subjects made more

Ex.4

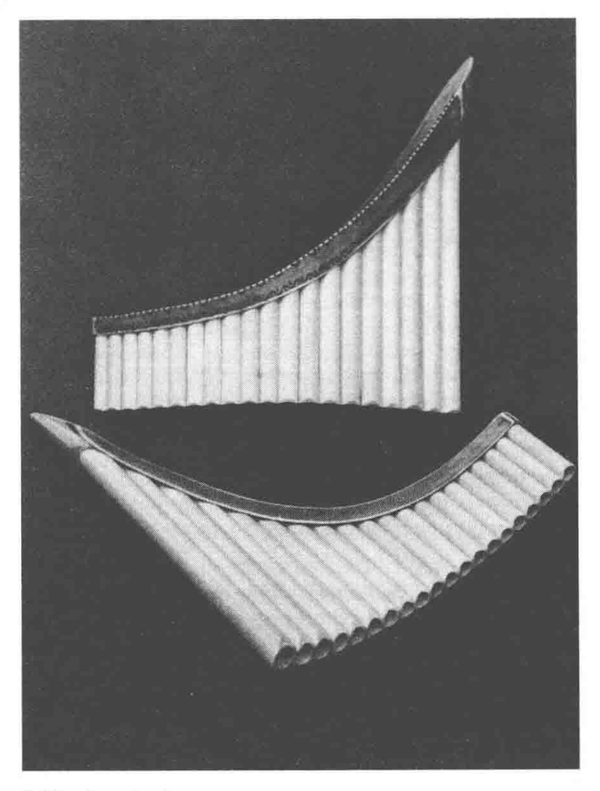


complex by the inclusion of various kinds of events as well as a structure of culmination and dénouement, used unaccompanied dialogues, dialogues performed with a chorus, dances, marches and various sound effects, with the courtyard, and exterior or interior of a house serving as the stage set. There were several kinds of folk dramas: including the *Făt-Frumos*, or fantastic drama and the historical drama. This latter form can in turn be divided into two types: the *drama voinicească* or heroic drama including *Novăciea*, *Brîncovenii*, *Şoldan Viteazul* (Şoldan the Brave); and the *drama haiducească* or Gaiduk dramas, including Haiduci (the Gaiduks), *Ceata de haiduci* (the band of Gaiduks) and *Codrenii*. A list of the dramatis personae of the heroic drama *Novăciea* included Novăciea (a Moldavian peasant woman), Lenkutsa (her daughter), Pasha, Sultan, Bey, Arap (soldiers from the corps of the Sultan's Guards), involving a Turkish fairy, various kinds of mummers and a musician.

5. DANCES. Dance is a valuable part of Moldova's musical culture and is characterized by a rich variety of poetic images and themes. Its forms and functions identify it with dances of the Carpathian-Balkan area. Moldova's ancient choreographic culture is represented in circle, semicircle and line-form dances, whereas dances from the 18th century onwards are in pair-form. Moldavian dances have a great variety of genres, with over 300 named forms, including many ritual dances. Some ritual dances are related to the calendar (there are numerous examples of New Year dramas) and to fertility rituals. The *Drăgaica* ritual included dances in which the most beautiful girl in the village (the *Drăgaica*) was adorned with garlands of wheat, and danced through the fields with her companions. The dance was intended to promote good harvests and fertility, and was performed until the middle of the 20th century. The *Paparuda* is an invocation for rain that is still performed. Village girls between the ages of seven and 15 go from house to house dancing and singing a specific poetic song. Many dances are related to marriage ceremonies including the *dansul miresei* ('dance of the bride'), l*a scoaterea* ('dance of the bride's dowry') and the *hora mare* ('wedding party dance'). Several times a year, at Christmas, Easter or chosen Sundays, villages organize a *Joc* (or *hora*). These have strict traditions governing the behaviour of all participants and the order in which dances are performed. Dances are divided into four groups according to the choreographic and rhythmic patterns of both the music and dance: the *sarba*, *batuta-hora*, *Ostropat* and *Geamparale*, and *hora mare*. Other dances are based on non-instrumental forms. Brief poetic strophes that are screamed out by dancers are known as *strigatura* (*a striga* 'to scream or to shout') and are used to increase the emotional level of the dance, as well as to direct the movements of the dancers. *Cantec de joc* ('dance with song') is a form of dance without instrumental accompaniment.

6. THE 'LĂUTARI'. *The 'lăutari'*, professional folk musicians, can be considered as a separate social world. Drawn from both village and urban backgrounds, for the most part the *lăutari* have never been formally musically trained, their repertory in essence compiled through the oral tradition: despite the fact that for the most part the *lăutari* do not read musical notation, they achieve a serious level of perfection of virtuoso playing technique. The word *lăutar* is derived from *lăută*, a plucked musical instrument which had long been obsolete. The names of certain musicians have been passed down from the 15th century onwards, thanks to historical documents and travellers' chronicles, informing, for example, about the existence of the *lăutar* Stoica during the rule of Ştefan the Great (Ştefan cel Mare; 1457–1504). At first the art of the *lăutari* was widespread only in the villages, where they played an important part in one of the most ancient folk games, the *Căluşari*, in which the participants, in keeping with pagan notions, chased away evil spirits. *Lăutari* took part in the springtime gatherings of young people with their swing (*scrânciob*), traditionally a cartwheel on top of a pole with seats hanging from the outer rim.

The *lăutari* perform in various kinds of ensembles particularly the *tarafs*, usually grouped around a well-known *lăutar* consisting of between 12–18 people. The group usually includes most Moldovan folk instruments, that is: two violins, viola, double bass, the *kobza*, a plucked lute-like instrument whose strings used to be plucked with a goose feather (fig.1), *fluiers* of various kinds, clarinets, a *nay* (panpipes) (fig.2), *cimpoi*, two trumpets, trombone, percussion and later the cimbalom (fig.3). The violin and *fluier* take the leading role in the *taraf*. During the 16th century the proliferation of *lăutar* ensembles led to their acceptance by the ranks of the aristocracy, becoming an indispensable attribute of the houses of landowners, the courts of *voyevodas* and rulers, as a manifestation of *bon ton*. *Tarafs* were invited in for victory celebrations, weddings or any other kind of

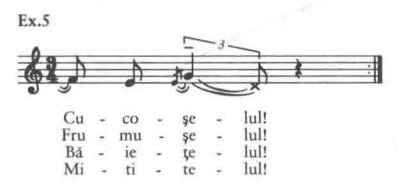


1. *Kobza (lute)*

important event. The best Moldavian ensembles gained recognition not only in their own land but far beyond it. Thus, in 1740 a *taraf* of nine people was invited to St Petersburg to a celebration at the court of the Russian Empress, Anna Nikolayevna. The *lăutari* gradually settled in Moldavia's expanding and developing towns, affirming national music traditions in an urban environment, with groups of musicians appearing in the streets and squares of towns as direct participants in national festivals, *joci* and weddings etc.

As the number of professional folk musicians increased, the need arose to regulate the relations between certain musicians and between them and their owner-patrons. In addition to their direct duties, many serf musicians were forced by their owners to play whenever required, such seasonal work being widespread in Moldavia as in other countries. This harsh exploitation of labour was the source of considerable revenue for the owners of serf musicians while for the *lăutari* it was a way of earning a living. As a result both owners and *lăutari* were interested in developing this type of work, which therefore became widespread. It led to the formation of corporate associations of *lăutari* which played a major role in their lives. Musicians' guilds gradually appeared, although it is difficult to say when exactly this happened in Moldavia. The peculiarity of the process meant that written or printed charters were set down on paper long after the guilds themselves came into being: thus the first stages in the establishment of the guilds with their colourful practices found no written reflection, but were secured on the basis of traditions passed down from generation to generation. The first charters establishing corporate rules and regulations already speak of these guilds as ancient and long-established traditions.

The large number of violinists among the Gypsies who were widely represented in *lăutar* ensembles resulted in such words as 'fiddler' and 'gypsy' being used synonymously. It is therefore difficult to ascertain when the words 'fiddler' and 'gypsy' are used in old Moldavian written documents, whether people are referring to nationality or profession. The first mention of Gypsies can be found in Moldavian documents of 1428 during the reign of Alexandru cel Bun, Alexander the Good. The active participation of Gypsy musicians in the *tarafs* resulted in the formation within the art of the *lăutari* of a certain independent stylistic domain where the intonations of traditional Moldavian and Gypsy music are closely intermingled. This area, which covers both instrumental and vocal music, allows a certain parallel with similar processes in Spanish music, which led to the development of flamenco, and of *verbunkosh* in 18th-century Hungarian music, to be drawn. The love and the general esteem within society in which the Moldavian *lăutari* were held for many years resulted in the preservation of music, traditions and names, including Yanku Perja, Kostaki Marin, Georgy Kherar, Kostaki Parno, Georgy Murga, Karp Kornitse, Alexander Cheban and Barbu Lăutar who captivated Franz Liszt by his art of improvisation and rare musicality.



7. CHILDREN'S SONGS. In traditional musical culture much attention was paid to the musical development of the child beginning from the earliest age. Consequently, musical works intended for this age group are numerous and varied, both in terms of function and form. These

2. *Nay (panpipes)*

3. Members of the Fluyerash orchestra playing the chimpoi (bagpipe), ţambal (cimbalom) and accordions

works form two groups. The first consists primarily of short songs, less commonly musical dialogues for mother and child designed to develop co-ordination of movements, good humour and a feeling of rhythm and musicality. One single Romanian word, *dezmierdare*, meaning 'caress', 'spoil', 'feel pleasure' expresses this. During these songs, the mother prompts the child to move in time with the rhythm (ex.5). The second group consists

of lullabies, which are also aimed at improving a child's perception and developing musicality, but their general purpose to relax the child, is different. Lullabies, a variety of lyrical song, are fairly old in origin and have evolved little with time. As a rule the melody moves in a narrow range; small intervals of a 2nd and 3rd predominate, with a tendency towards repeating rhythmic and motivic patterns.

8. THE DOINA. The *doina* is a type of musical movement that is characterized by short note values without regular metre and by heavy use of rubato. Its melodies are informed by a combination of variation and improvisation. Its subjects are mostly love or themes of nature.

During the last 30 to 40 years of the 20th century the traditions of the *lăutari* were actively developed in the Republic of Moldova, most notably in the formation of numerous folk music ensembles of professional as well as amateur calibre including Flueash, Folklor, Lăutari, Mertsishor, Mugurel and many others (see fig.3). They perform folksongs, various instrumental melodies, *doina* melodies and dances with appropriate arrangements. Dance companies are accompanied by various types of orchestra. The selection of works to be arranged, peculiarities of arrangements, make-up of the orchestra, choreography of the dances, manner of performance, even the costumes of the dancers and the orchestral players have a strong tendency towards stylization. Success in resolving artistic problems depends wholly on the way folk material is treated. The most authoritative directors of folk music orchestras include Sergey Lunkevich, Dumitriu Blazhin, Nikolae Botgros (who comes from a *lăutari* family), Sergey Chukhry, Aleksandr Vakarchuk and others. Among celebrated performers of folksongs are Nikolae Sulak, Valentina Kozhokaru, Nikolae Glib, Zinaida Zhulya, Tamara Cheban and Lidiya Bezhenaru. Parallel to this trend in traditional music there is another which strives towards traditions of pastoral music and music of agrarian life. Among the folk music ensembles of this type which have achieved particular popularity are Tălăncuţă established by Andrey Tamazlĭkaru and Tălăncuţă directed by Gleb Chaykovsky-Mereshanu. The role of the older generation in handing down traditional songs to the younger generation has decreased, with a greater preference for imitating folksongs heard on radio and television programmes. A recent widespread trend is characterized by a synthesis of the achievements of national Moldovan music with folk music of the *lăutar* traditions.

VLADIMIR AXIONOV (I), YAROSLAV MIRONENKO (II)

Moldovan, Mihai (*b* Dej, 5 Nov 1937; *d* Medgidia, 16 Aug 1981). Romanian composer. After attending the Music Lyceum in Cluj (1952–5), he studied composition at the Cluj Academy with Toduţă (1956–9) then at the Bucharest Academy with Jora (1959–62). Moldovan was musical secretary of the Army Ensemble in Bucharest (1962–5), musical director of the Army Film Studio (1966–7), director of the Electrecord record company (1968–71) and creative editor of Romanian Radio. From an early preoccupation with integrated serialism he moved towards a technique encompassing folk references, modalism and proportion, achieved in part through mathematical operations. The contrast between the emphatic folk references of *Şase stări de nuanţă* (1966) and the orthodox serialism of the Violin Sonata (1968) demonstates Moldovan's stylistic vacillation. In his most characteristic works he applies principles of geometry and mathematics to a texturally varied modal style; in *Recitindu-l pe Blaga* and *Recitindu-l pe Eminescu* (1980) his techniques of repetition achieve a music of particular poise and grace.

OCTAVIAN COSMA

Mole, Miff [Irving Milfred] (*b* Roosevelt, NY, 11 March 1898; *d* New York, 29 April 1961). American jazz trombonist. He played the violin, alto horn and piano before learning the trombone. Based in New York, he made hundreds of recordings with many groups, the most influential being those with the Original Memphis Five and with Red Nichols's innovatory groups in the 1920s (for example, *Shim-me-sha-wabble*, 1928, OK). In these years he fashioned the first distinctive and influential solo jazz trombone style, free from the glissandos and rudimentary bass-line paraphrases of tailgate playing and characterized by precise execution, wide leaps and short rhythmic values. This style was already formed by the time he recorded his own composition *Slippin' Around* with Nichols (1927, Vic.). In 1929 he joined the NBC radio orchestra, where he remained for most of the 1930s. After working with the big bands of Paul Whiteman (1938–40) and Benny Goodman (1943) he returned to small-group jazz, sometimes with Muggsy Spanier. Illness prevented him from playing regularly in the mid-1950s, but he continued to work sporadically until his death.

JAMES DAPOGNY/R

Moleiro, Moisés (*b* Zaraza, 28 March 1904; *d* Caracas, 18 June 1979). Venezuelan composer and pianist. He studied

piano in Zaraza with Manuel Martín Sansón and, from 1917, with Heriberto Tinoco at the Escuela de Música y Declamación, Caracas. He then worked for the Venezuelan ministry of the interior (1922–48). In 1924 he took piano lessons with Salvador Narciso Llamozas, one of the outstanding teachers in the capital. At the same time he studied harmony with Vicente Emilio Sojo. With Sojo, José Antonio Calcaño and Juan Bautista Plaza, Moleiro was a co-founder of the Orfeón Lamas, the first and most important mixed choir of the country in the first half of the century. In 1933 he became a solfège teacher at the Escuela de Música y Declamación, and from 1936 to 1971 he taught the piano there. In 1974 he won the National Prize of Music.

Moleiro's music is full of folk and ethnic elements, reflecting the nationalistic style of his generation. He is well known as a piano composer, but he also left songs for voice and piano and for mixed choir.

JUAN FRANCISCO SANS

Molière [Poquelin, Jean-Baptiste] (*b* Paris, bap. 15 Jan 1622; *d* Paris, 17 Feb 1673). French playwright and actor. He was related to the Mazuel dynasty of Parisian musicians. He frequently included songs, instrumental music and dances in his productions. His first company, the Illustre Théâtre (formed in 1643), employed a professional dancer and four instrumentalists to perform 'tant en comédie que ballets'. After a 13-year tour of the provinces (where in the 1650s they performed Pierre Corneille's musical machine play *Andromède* and the *Ballet des incompatibles*) they returned to Paris; there Molière's first big success was the sparkling, urbane comedy *Les précieuses ridicules* (1659), in which string players have a part in the dramatic action. His later contribution to musical theatre consisted of the so-called *comédies-ballets*, which date from the height of his career (in fact, only *Le bourgeois gentilhomme*, 1670, was originally labelled a COMÉDIE-BALLET).

Molière featured ballet, at the time Louis XIV's favourite form of theatre, in plays commissioned for court festivities. There he and his collaborators attempted a new synthesis of music, dance and drama. He proclaimed his first *comédie-ballet*, *Les fâcheux* (1661; music mostly by C.-L. Beauchamps), to be 'a *mélange* that is new for our stages … which can serve as a plan for other works conceived at more leisure'. During the 1660s, he and Lully collaborated on a series of *comédies-ballets* for the royal carnival celebrations (*Le mariage forcé*, 1664; *La pastorale comique*, 1667; *Le sicilien*, 1667; *Les amants magnifiques*, 1670; *La comtesse d'Escarbagnas*, Dec 1671), for the Versailles *fêtes* of 1664 and 1668 (*La princesse d'Elide* and *George Dandin*) and for parties given at royal châteaux during the autumn hunting season (*L'amour médecin*, 1665; *Monsieur de Pourceaugnac*, 1669; *Le bourgeois gentilhomme*, 1670). The king danced in many of these court productions, giving his last public performance in *Les amants magnifiques* (1670). Molière also wrote *Psyché*, a *tragicomédie et ballet* with music by Lully, for the king's 1671 carnival celebrations; he was assisted by Pierre Corneille, who helped with the versification, and Philippe Quinault, who wrote the sung lyrics. After this collaboration Molière and Lully quarelled, and in spring 1672, Molière engaged Marc-Antoine Charpentier to provide new music for earlier *comédies-ballets* (*La comtesse d'Escarbagnas*, *Le mariage forcé* and perhaps *Les fâcheux*) and to compose a score for *Le malade imaginaire* (1673; ed. H. Wiley Hitchcock, Geneva, 1973), the only *comédie-ballet* not to receive a court première.

Other playwrights of the time attempted to write *comédies-ballets* (e.g. Guillaume Marcoureau de Brécourt, Antoine Montfleury, Denis Clesselier de Nanteuil, François Girardin and Raymond Poisson) but were not as successful as Molière, who found clever ways to link the musical *intermèdes* to his dramatic subject and thereby 'make one single thing of the ballet and the play'. Song and dance served to develop the play's themes through music, metaphor and figured expression. *Le bourgeois gentilhomme* and *Le malade imaginaire*, for example, conclude with musical initiation rituals, through which the protagonists become apotheosized in carnivalesque ballet-masquerades.

As heroic mythological opera was better suited to Louis XIV's political agenda, *comédie-ballet* fell out of fashion soon after Molière's death. On 14 June 1673 Donneau de Visé wrote that Molière 'first invented the manner of intermingling musical scenes and ballets in comedies, and he found by that a new secret of pleasing [which was] unknown until then, which gave rise in France to these famous operas' (*Mercure galant*).

JOHN S. POWELL

Molière [Molier], **Louis de.** *See* MOLLIER, LOUIS DE.

Molina, Antonio (Jesus) (*b* Manila, 26 Dec 1894; *d* Manila, 29 Jan 1980). Filipino composer and conductor. He studied at the S Juan de Letran College (BA) and the University of the Philippines Conservatory (teacher's cello diploma 1933); his composition teacher was Nicanor Abelardo. Later he joined the staff of the University of the Philippines, where he was secretary of the conservatory until 1941. He taught and lectured outside the university as well, also conducting choral groups, church choirs, opera and orchestral concerts. In 1956 he was made director of the Cosmopolitan Academy of Music, and also directed the Centro Escolar University Conservatory (1948–71). He received an honorary doctorate from the university in 1953 and was made dean emeritus of the conservatory on his retirement. In 1973 he was made National Artist, the highest state recognition accorded a Filipino musician. His compositions show a daring departure from the traditional Romantic style of his colleagues: he employed the whole-tone scale, augmented 4ths, unresolved dissonances, parallel 5ths and Debussian progressions, all with a meticulous care for detail.

LUCRECIA R. KASILAG

Molina, Bartolomé de (*fl* early 16th century). Spanish theorist. He was a member of the Franciscan order and a Bachelor of Theology. He published a brief treatise on plainchant entitled *Arte de canto llano Lux videntis dicha* (Valladolid, 1504/*R*), dedicating it to the Bishop of Lugo and explaining his choice of title by saying that 'those who would like to see and read by it will, in a very short time, be taught, illuminated and removed from error'. It is similar to Durán's *Lux bella* (1492) and expounds without originality the essentials of the subject, with a study of the manner of writing chants in different modes when using a single line instead of a staff.

F.J. LEÓN TELLO

Molinari, Bernardino (*b* Rome, 11 April 1880; *d* Rome, 25 Dec 1952). Italian conductor. He studied at the Liceo Musicale di S Cecilia in Rome, and first attracted attention when he prepared the Augusteo Orchestra in Rome for a concert of Richard Strauss works conducted by the composer in 1909. Molinari was appointed artistic director of the Augusteo in 1912, and he devoted his energies primarily to this organization until his retirement in 1943. He conducted its orchestra on tour in Italy and abroad and, with the support of Mussolini as head of state and the Governor of Rome, obtained a permanent basis for the orchestra in 1937. At the Accademia di S Cecilia in 1936 he established an advanced course for conductors, a position that developed into a professorship in 1939; his students included Gavazzeni, Molinari Pradelli, Pedrotti, Petrassi and Rossellini. In a period of renewed Italian interest in symphonic music, Molinari wielded much influence through his performances of new works by such composers as Alfano, Casella, Malipiero, Perosi, Pizzetti and Respighi, and contemporary music by other composers, in particular Debussy, Strauss and Stravinsky, with whom he was on friendly terms. In 1937 he toured Germany, but otherwise made only rare guest appearances abroad, and occasional appearances conducting opera in Rome, Florence, Buenos Aires, Vienna and Prague. With Debussy's approval he transcribed *L'isle joyeuse* for orchestra, but his arrangements of 17th- and 18th-century Italian music (including concertos by Vivaldi and Monteverdi's *L'incoronazione di Poppea*) are stylistically free.

CLAUDIO CASINI

Molinari, Pietro (*b* Murano, Venice, *c*1626; *d* Murano, 8 Oct 1679). Italian composer. He was parish priest at S Stefano, Murano, from 1671. With Aurelio Aureli he was a charter member of the Accademia degli Angustiati and in 1664 supplied music for the prologue and other parts of Domenico Gisberti's *La barbarie del caso*, the inaugural (and only) drama presented by the academy. For Carnival 1660 he composed all or part of *Hipsicratea* (text by G.M. Milcetti), the first opera performed at Murano. Molinari's only surviving work is a cantata (in *D-Kl*).

LORENZO BIANCONI

Molinari Pradelli, Francesco (*b* Bologna, 4 July 1911; *d* Bologna, 7 Aug 1996). Italian conductor and pianist. He studied the piano with Ivaldi and composition with Nordio at Bologna, then conducting with Bernardino Molinari at the Accademia di S Cecilia in Rome, graduating in 1938. He made his operatic début in Bologna in 1937 and his début as a concert conductor the following year; he concentrated almost exclusively on opera after 1939, when he conducted *L'elisir d'amore* at Bologna, Bergamo and Brescia. After his first appearance at La Scala in 1946 he conducted regularly at leading Italian opera houses as well as making frequent tours in other countries. He first appeared at Covent Garden in 1955, conducting *Tosca* (with Tebaldi), and returned to conduct the new production of *Macbeth* (with Gobbi and Shuard) in 1960. From 1957 he was a regular conductor at San Francisco, and from 1959 at the Vienna Staatsoper; he made his début at the Metropolitan Opera in 1966, and returned there often until 1973. He retired in 1983. His recordings include notable versions of *La forza del destino*, *La traviata* and *Manon Lescaut* (all with Tebaldi), *Turandot* (with Nilsson) and the first complete *La rondine*. As a pianist he was particularly admired as an accompanist to singers.

BERNARD JACOBSON

Molinaro, Simone (*b* Genoa, *c*1570; *d* after 1633). Italian composer, teacher and lutenist. His father's name was Bartolomeo. Simone was the nephew and pupil of G.B. Dalla Gostena (murdered in 1593) whose second book of *Canzonette* (RISM 1589[13]) includes his first published work. Several of Molinaro's publications similarly included works by Dalla Gostena. In 1598 Molinaro was a canon of the Cathedral of S Lorenzo in Genoa. He became *maestro di cappella* there on 31 October 1601, a post from which he was abruptly dismissed in October 1617, possibly due to a serious illness, to which he referred in two letters of 1619. During his tenure at the cathedral he was entrusted with the musical education of a number of boys, for terms of as long as 12 years, and in 1618 some 'alumni Simonis Molinarij ea scientia clarissimi' were heard in Rome. From 1608 Molinaro was engaged, first as an extra musician and then, from 1609, on a permanent basis, by the prestigious Cappella di Palazzo; he became *maestro* in 1625. A visit to Naples from November 1609 to April 1610 may have led to his decision to publish in score form Carlo Gesualdo's six books of five-voice madrigals (Genoa, 1603). Publication of his music ceased after 1616 (with the exception of a German contrafactum, almost certainly of an earlier work, published in RISM 1624[16]), and there is almost no biographical information after 1625 apart from a legal document in Genoa in 1627, which could however refer to another man of the same name. He was still *maestro* of the Cappella di Palazzo in 1633, and he was alive in 1634 according to a census of clergy in Genoa; in a list of 1636 his name is replaced in the Cappella di Palazzo by that of the new *maestro*, G.P. Costa.

Molinaro's lute book, published in 1599, is one of the most important of his age. His lute compositions, which reveal melodic and rhythmic gifts, include eight saltarellos, 11 passamezzos, each with its own galliard, 15 fantasias, a *Ballo detto Il Conde Orlando* (arranged for orchestra by Respighi in his first set of *Antiche arie e danze*, 1917) and intabulations of pieces by Crecquillon, Clemens non Papa and Gioseffo Guami. In the passamezzos and galliards his control of variation technique is demonstrated in the use of sequences, echo effects and ornamental elaborations. The fantasias are more virtuoso and daring than the dance pieces, and in his celebrated 12th fantasia his fluent sense of modulation leads to remote areas unusual for the time. His use of chromaticism is only occasional, and contrary to expectation shares none of the audacity or harmonic sureness of Gesualdo, whose music he admired. As a madrigalist, too, he was skilful but unadventurous; *Baci amorosi e cari* and *Cantiam Muse cantiamo*, the two pieces which appeared in the *Giardino nuovo bellissimo* (RISM 1605[7]), are among his best. His basically conservative and smoothly lyrical style is perhaps most suited to the requirements of sacred music, yet even in his sacred works his potential as a harmonic colourist is sometimes realized, as in *Domine convertere* from the *Motectorum* of 1597. His reputation as a connoisseur of contemporary music is demonstrated in *Fattiche spirituali*, his collections of sacred contrafacta of madrigals by Andrea Gabrieli, Alessandro Striggio (ii), Macque, Marenzio, Monte and Orazio Vecchi, as well as in his edition of Gesualdo's madrigals.

Molinaro was also active in publishing, which he carried out in Loano, in collaboration with F. Castello. Their publications include the last two books entirely devoted to Molinaro's works. The Genoese musician Giovanni Battista Aicardi, Molinaro's pupil and heir is referred to variously as his adopted 'step-son' (under the name G.B. Molinaro) and 'nephew'; the precise relationship between the two is unclear.

GLENN WATKINS/DINKO FABRIS

Moline, Pierre Louis (*b* Montpellier, *c*1740; *d* Paris, 19 Feb 1821). French writer. He studied arts at Avignon and law in Paris, but adopted literature as a profession. With deplorable fecundity, he contributed to every fashionable stage genre, including tragedy, comedy of manners, bourgeois drama and Revolutionary *sansculottide*. He was advocate to the *parlement*, then secretary to the Convention (1792–4). Among his few, generally poor, librettos, two were outstandingly successful at the Opéra: the adaptation of Calzabigi for Gluck's *Orphée* (1774), and the most important stage work of J.-F. Edelmann, *Ariane dans l'isle de Naxos* (1782). He also wrote the texts for Edelmann's *Diane et l'amour* (1802) and Candeille's pastoral *Laure et Pétrarque* (1778); he adapted Vadé's text for a revision of Gluck's *L'arbre enchanté* (Versailles, 1775), and translated Paisiello's *Il re Teodoro in Venezia* for Fontainebleau (1786, as *Le roi Théodore à Venise*). He contributed to the Gluckist controversy in *Dialogue entre Lully, Rameau, et Orphée dans les Champs Elysées* (Amsterdam, 1774).

JULIAN RUSHTON

Molinet [Moulinet], **Jehan** [Jean] (*b* Desvres, 1435; *d* Valenciennes, 23 Aug 1507). French poet, composer and historiographer. Almost nothing certain is known of his early years. He obtained his *maîtrise* in Paris, where he may also have worked as a secretary at the Collège du Cardinal Lemoine. From 1464 to 1475 he appears to have been unofficially associated with the court of Burgundy, writing *La complainte de Grece* (1464) and several other political pieces espousing the Burgundian point of view. In 1475 he succeeded his mentor, Georges Chastellain, as official chronicler of the house of Burgundy, a position he held until 1506. He is documented in 1494 as holding canonicates at the church of the Salle-le-Comte in Valenciennes, in Condé, and at the church of St Géry in Cambrai.

He associated with many important musicians of his day, exchanging poetic correspondence with Antoine Busnoys, Loyset Compère and Verjus (i). He evidently knew Ockeghem as well, since he wrote two epitaphs on the composer's death, one of which, *Nymphes des bois*, was set to music by Josquin des Prez.

Throughout his career Molinet wrote a substantial body of poetry; his verse was highly regarded for its artful allegory and verbal gymnastics, style traits that were typical of the *grands rhétoriqueurs*. Several examples of his expertise at versification are displayed in his treatise *L'art de rhétorique* (ed. E. Langlois: *Recueil d'arts de seconde rhérique*, Paris, 1902/*R*), a guide for would-be poets. (Sources for this treatise offer conflicting attributions: although printed editions imply that the nobleman Henry de Croy was the author, the two surviving manuscripts contain strong evidence that Molinet was responsible for its compilation.)

He was also a knowledgeable musician, employing musical terms and concepts correctly within his poetry, and earning the honour of inclusion among other fine composers in Compère's motet *Omnium bonorum plena*. The rondeau *Tart ara mon cueur sa plaisance*, Molinet's only securely attributed composition, distinguishes itself by being an early example of a four-voice chanson and by its evident popularity, which made it one of the most widely copied songs of its decade. A five-voice cantus firmus *Salve regina* ascribed to 'Johannes Molunet' (in *D-Mbs* Mus.Ms.34), however, is most likely by a later composer working for Charles V.

KATHLEEN SEWRIGHT

Molinié, Etienne. *See* MOULINIÉ, ÉTIENNE.

Molino, Antonio [Burchiella; Blessi, Manoli] (*b c*1495–7; *d* ?Venice, in or after 1571). Italian actor, poet and musician. In a sonnet that he set in his 1568 volume he stated that he was then over 70. He lived in Venice. According to the dedicatory letter by Lodovico Dolce in *I fatti, e le prodezze di Manoli Blessi strathioto di M. Antonio Molino detto Burchiella* (Venice, 1561) he was educated in all the attributes of a gentleman, including dancing, singing and the playing of instruments. He travelled in the Levant and on his return to Venice founded an academy of music with Brother Armonio, who was the organist of S Marco. Molino was one of the first to recite comedies in a variety of dialects, including those of Venice and Bergamo, in a mixture of Greek and Italian, and in the jargon of soldiers ('stil strathiotesco'). In the introduction to the 'third night' of *Le notti piacevoli* by Straparola there is a reference to his abilities on the viol.

Molino is regarded, along with Andrea Calmo and Angelo Beolco as one of the leading figures in the early history of the *commedia dell'arte*. He was closely associated with some of the best-known composers of his day, and Andrea Gabrieli and Monte dedicated madrigal books to him. The print *Di Manoli Blessi il primo libro delle greghesche* (RISM 1564[16], ed. S. Cisilino, Padua, 1974), for four to eight voices, consists of settings of his poetry by Andrea Gabrieli, Merulo, Padovano, Porta,

Rore, Wert, Willaert and others, among them a setting by Gabrieli of a lament on the death of Willaert (*see* GREGHESCA). Gabrieli's *Greghesche et iustiniane* for three voices (1571) includes 15 settings of texts by him. Molino also published two books of madrigals, *I dilettevoli madrigali a quattro voci* (Venice, 1568, inc.), for four voices, and *Il secondo libro de madrigali a quattro voci con uno dialogo* (Venice, 1569, inc.).

CHARLES WARREN

Molins, P(ierre) des (*fl* mid-14th century). French composer. He is probably identifiable with the 'Perotus de Molyno' who was in England in 1357–9 among the musicians of the chapel of King Jean II of France, at that time a captive of Edward III. (See C. Wright: *Music at the Court of Burgundy, 1364–1419*, Henryville, PA, 1979; for previous suggestions regarding the composer's identity, see U. Günther, *MD*, xvii, 1963, pp.79–95, esp. 84–5.)

His two extant compositions were extremely popular. *De ce que fol pensé* (ed. in CMM, liii/1, 1970; PMFC, xix, 1982), a three-voice ballade, is in many MSS, occasionally with a fourth voice (a triplum), and also has a decorated two-part keyboard version. The opening of the cantus even appears in a tapestry, in which a lady plays a harp while a servant holds the roll of music. *Amis, tout dous vis* (ed. in CMM, liii/1, 1970; PMFC, xxii, 1989), a three-voice rondeau, is known with two different contratenors and two different but related ornamental versions of the top voice.

GILBERT REANEY/R

Molins, Pierre de. *See* PIERRE DE MOLINS.

Molique, (Wilhelm) Bernhard (*b* Nuremberg, 7 Oct 1802; *d* Cannstatt, nr Stuttgart, 10 May 1869). German violinist and composer. His father, a musician in the municipal band, was his first teacher, and he performed in public at the age of six. In November 1815 Spohr passed through Nuremberg and agreed to give him a few lessons because 'the lad performed excellently for his age'. He completed his studies in Munich under Pietro Rovelli (1816–17) and travelled with his master to Vienna, where he made a successful début on 28 December 1817 and joined the orchestra of the Theater an der Wien, while studying with Mayseder. In January 1820 he was recalled to Munich to succeed Rovelli; from 1826 to 1849 he served as royal music director and orchestra leader in Stuttgart. The excellence of the Stuttgart orchestra (attested by Berlioz) was largely due to Molique's teaching skill. At the same time he undertook extensive concert tours throughout Europe, including Russia. He was particularly well received in London, where he first appeared at the Philharmonic on 14 May 1840 playing his own Concerto no.5 in A minor. Further successful visits to England in 1842 and 1848 led to his decision to settle in London in 1849, where he was highly acclaimed as a performer (particularly in chamber music), teacher and composer. His oratorio *Abraham* was given at the Norwich Festival of 1860. In 1861 he was appointed professor of composition at the RCM. After a farewell concert at St James's Hall, London, on 3 May 1866, he retired to Cannstatt. His eldest daughter Caroline became known as an accomplished pianist.

Molique was an impressive violinist of sound musicianship and masterly technique but lacked the flair of a true virtuoso. Berlioz described his playing as 'vigorous, broad and severe, though lacking in nuance'. Mendelssohn and Schumann admired his extraordinary technical dexterity but found his playing cold. Joachim, a friend and admirer, praised his infallible intonation while criticizing his angular bowing. Molique's violin style was influenced by German and French models, particularly Spohr and Lafont. As a composer, he was closer to Mendelssohn and disliked the modernism of the New German School. His conservative leanings are also evident in his somewhat old-fashioned *Studies in Harmony* (London, 1862). Of his six violin concertos the fifth enjoyed great popularity and was considered by Joachim to be a mainstay of the violin repertory. Equally popular was his Cello Concerto, which Riemann compared with that of Schumann. The Piano Trio op.27 was a favourite work of Hans von Bülow, and the Concertina Concerto was written specially for the virtuoso Giulio Regondi. Molique's numerous compositions, which also include much chamber music and many songs, are now almost forgotten.

BORIS SCHWARZ

Molitor, Alexius [Müller, Johann Adam] (*b* Simmershausen, nr Rhön, 19 Nov 1730; *d* Mainz, 16 June 1773). German composer. A pupil at the Augustinian Gymnasium in Münnerstadt, Lower Franconia, 1743–9, he received his musical education from G.J. Hahn (1712–72) and appeared as a soloist in the school dramas for which Hahn provided music. In 1749 he became a novice in the monastery of Oberndorf am Neckar, and he made his profession later in the same year, taking Alexius as his monastic name and subsequently linking it with the Latinized version of his surname. In this period he was described as *componista* for the first time. Transferred to the Augustinian monastery in Mainz in 1752, he began his theological and canonical studies at Mainz University and in 1753 was ordained priest; after 1761 he was also *director chori musici*. The specification of the organ of

the Augustinian church in Mainz, still extant, was probably mainly Molitor's work.

Molitor was among the most highly regarded south German monastic composers of his period, and his works remained in performance for a long time, some of them beyond the turn of the century. His masses, in the late Baroque tradition, combine homophonic and polyphonic structures, flowing melodies and a firm contrapuntal technique, which is shown most clearly in the closing sections of the Kyrie and Gloria; in some masses the final 'Dona nobis' is marked to lead back to the beginning. The solo sections contain some extended coloratura passages and make great demands on the singers. Molitor's only surviving oratorio, *Daniel*, shows his talent for music drama in the Neapolitan operatic style.

GÜNTER WAGNER

Molitor [Müller], **Fidel** (*b* Wil, canton of St Gallen, 13 June 1627; *d* Magdenau, canton of St Gallen, 3 Oct 1685). Swiss composer. His original name was Müller. He was first of all Kantor, then Kapellmeister, of the Cistercian monastery at Wettingen. He was later prior and father confessor at the nunneries at Feldbach and Magdenau in eastern Switzerland. Like J.M. Gletle, Berthold Hipp, Martin Martini and Valentin Molitor, he was one of the most important Swiss church composers of the second half of the 17th century. Two of his three volumes contain solo motets with instruments. In the 17 pieces in the third volume soloists are pitted against a chorus in the manner of the double concerto; the homophonic tuttis are somewhat primitive, but in the solo parts Molitor often showed himself capable of stronger melodic expression.

HANS PETER SCHANZLIN

Molitor [Müller], **Valentin** (*b* Rapperswil, canton of St Gallen, 15 April 1637; *d* Weingarten, Württemberg, 4 Oct 1713). Swiss composer and organist. His original name was Müller. In 1656 he took his vows at the monastery at St Gallen and in 1662 was ordained priest. After working in various monasteries as organist and organ teacher he became Kantor at the monastery at St Gallen in 1683 and in 1685 Kapellmeister. He spent his last years at the monastery at Weingarten. His works display characteristic features of the concerted style of church music, but in his melodious *Odae* simple songlike forms predominate. The mass and motets have rich textures, sometimes reinforced by clarinos, but they lack impetus since their form is so disjointed. He was commissioned by the Swiss Benedictine congregation to edit the second edition of the *Directorium*.

WORKS

Edition: Directorium seu cantus et responsoria in processionibus ordinariis per annum (St Gallen, 2/1692)
Odae genethliacae ad Christi cunas, 1–3, 5vv, 2 vn (Kempten, 1668)
Missa una cum tribus motettis in solemni translatione SS et martyrum (St Gallen, 1681)
Epinicion marianum (St Gallen, 1683)

HANS PETER SCHANZLIN

Moll (Ger., from Lat. *mollis*: 'soft'). *See* MINOR (i), as in *A moll* (A minor), *Mollklang* (minor triad), etc. For the origins of the term, *see* DUR.

Moll, Kurt (*b* Buir, nr Cologne, 11 April 1938). German bass. He studied at the Hochschule für Musik, Cologne, then privately with Emmy Mueller. He made his début as Lodovico (*Otello*) at Aachen, where he was engaged from 1961 to 1963, and then sang at Mainz and Wuppertal before joining the Hamburg Staatsoper in 1970. From 1972 he has been a regular guest at Munich, Vienna and Paris, and has also appeared at Salzburg and Bayreuth. His roles include most of the leading bass parts in Wagner's operas, his King Mark and Pogner being particularly vivid portrayals, and he uses his true, strong and flexible bass equally well in less serious roles such as Osmin, which he recorded with considerable success under Böhm. He is a noble Sarastro, with the low notes resonant and firm. He is also an appreciable interpreter of such Verdi roles as Fiesco and Padre Guardiano. He first appeared in the USA as Gurnemanz (1974, San Francisco). In 1975 he created the King in Bialas's *Der gestiefelte Kater* at the Schwetzingen Festival in the Hamburg Staatsoper production and added the title role in Massenet's *Don Quichotte* (given with the same company) to his repertory. He made his Covent Garden début as Caspar in *Der Freischütz* in 1977, returning as Osmin in 1987 and Daland in 2000; his Metropolitan début was in 1978 as the Landgrave, and he has subsequently appeared there in several Wagner operas. Moll is also a distinguished concert and oratorio singer, and made his American début as a recitalist in Carnegie Hall in 1984. His extensive discography includes all his Wagnerian roles, lieder and oratorio.

ALAN BLYTH

Molldreiklang (Ger.). Minor TRIAD.

Molle, Henry (*b* Leicester, *c*1597; *d* Cambridge, 10 May 1658). English composer. He was the son of John Molle, a prisoner of the Inquisition in Rome from 1608 to 1638. He went to Eton College (*c*1608–12) and then to King's College, Cambridge, in 1612, taking the BA in 1617 and

the MA in 1620. He was elected a Fellow of King's in 1615, and public orator to the university in about 1635. He was dismissed from his fellowship in 1650, but this was restored to him by Cromwell in 1653. A Henry Molle was headmaster of the King's School, Worcester, and the dedicatee of a piece in Thomas Tomkins's *Songs* of 1622.

Although most of Molle's music is preserved in the part-books of Peterhouse, Cambridge, there is no evidence that he was ever organist there, but he may have taken part in the semi-professional choir alongside college members and other musical amateurs.

Molleda, José Muñoz. *See* MUÑOZ MOLLEDA, JOSÉ.

Mollenhauer. German family of woodwind instrument makers. Johannes Andreas Mollenhauer (*b* Fulda, 31 Aug 1798; *d* Fulda, 30 Aug 1871), who probably learnt instrument making in Munich, Linz and Pressburg, established a workshop in Fulda in 1822. He was later joined by his two sons, Gustav (*b* Fulda, 7 Feb 1837; *d* Kassel, 18 Dec 1914) and Thomas (i) (*b* Fulda, 22 Feb 1840; *d* Fulda, 1 July 1914), and the firm became known as J. Mollenhauer & Söhne. In 1864 Gustav founded his own firm at Kassel, which passed in turn to his two sons, Thomas (ii) (*b* Kassel, 21 Feb 1867; *d* Kassel, 10 July 1938) and Johannes (*b* Kassel, 20 April 1875; *d* Kassel, 22 Feb 1950). At the end of the 20th century this firm was still operating under the name Gustav Mollenhauer & Söhne, specializing in double-reed instruments, especially contrabassoons.

Thomas Mollenhauer (i), who continued to work in Fulda, is also recorded as having worked for Boehm (1863–4) and Ottensteiner of Munich. He subsequently developed significant Boehm-system piccolo and clarinet models. His elder son Josef Nikolaus (*b* Fulda, 20 July 1875; *d* Friesenhausen, 12 Oct 1964) worked with Heckel and later became head of J. Mollenhauer & Söhne. In the late 1920s he mounted an energetic campaign in favour of the adoption of standardized pitch ($a' = 435$). The firm ceased making instruments in about 1975 and is now exclusively a music dealer.

Conrad Mollenhauer (*b* Fulda, 10 Sept 1876; *d* Friesenhausen, 12 Oct 1943), younger son of Thomas (i), worked with Rittershausen of Berlin and then Adler of Markneukirchen and established his own business in Fulda in 1912. His son was Thomas (iii) (*b* Fulda, 17 July 1908; *d* Fulda, 8 Feb 1953), after whose death the firm continued as Conrad Mollenhauer, Fulda, under the direction of his widow. Another family member, Bernard Mollenhauer (*b* 1944), assumed directorship of the firm in the 1970s; since 1995 it has been managed by Joachim Kunath. The firm is noted for its revival of the recorder and in 1954 introduced the Jugendoboe or Choroboe, a simplified oboe conceived by Arnold Klaes for group playing, particularly in schools. Conrad Mollenhauer has continued to manufacture a wide range of recorders in different woods and plastic for school, ensemble and solo playing, and also makes flutes to professional standard. In 1995 the firm was awarded the 'I.F.' label (Industrie Forum, Design, Hannover) for the quality of their work.

Moller. *See* MALER.

Moller, Joachim. *See* BURCK, JOACHIM A.

Möller, Johann (*b* Alsfeld, Hesse, *c*1570; *d* Darmstadt, 6 Jan 1617). German composer and organist. After receiving a master's degree he became a teacher at the Darmstadt court school in 1593; his pupils included Ludwig, the heir-apparent, and Philipp, the future Landgrave of Hessen-Butzbach. In 1597 he was appointed organist of the court church and soon afterwards carried out the duties of Kapellmeister too. When Ludwig became landgrave in 1596 Möller's opportunities for composition increased: as well as writing sacred music he supplied music for ballets and carousels performed to mark baptisms, weddings and visits from other rulers. Of his secular output only two books of pavans and galliards survive. Following earlier practice, each galliard is a rhythmic variation of the preceding pavan, a procedure by which Möller, together with composers such as Christoph Demantius and Johann Groh, laid the foundations of the later orchestral suite.

ELISABETH NOACK

Möller [Müller], **Johann Patroklus** (*b* Soest, Westphalia, 1697/8; *d* Lippstadt, 24 July 1772). German organ builder. His father, Martin, was a cabinet maker in Soest. Johann Patroklus may have been taught by P.H. Varenholt; he settled in Lippstadt in 1720 and became one of the leading organ builders of the region, supplying instruments in the southern part of the Münster district, the northern part of the Sauerland, and in the Detmold district. He was concurrently organist of the Grosse Marienkirche in Lippstadt. His organs included that of St Thomae, Soest (1720); the rebuilding (1734) of the organ at the Grosse Marienkirche, Lippstadt; and organs for Marienmünster Abbey (1736–8, still extant); Böddeken Abbey (1744; now in St Nikolaus, Büren); Münster Cathedral (1752–5); and Paderborn Cathedral (1754–6). The organ built about 1735 for Dalheim Abbey (now in St Johannes Baptist, Borgentreich) is also attributed to

Möller. He developed the characteristics of the typical 17th-century Westphalian organ, with its rich tone-colour, in an apt and logical manner. In all his organs each manual was provided with a complete Principal chorus (including $5\frac{1}{3}'$, 3 1/5′, Sesquialtera, Mixtur and Zimbel in the Hauptwerk; and in the Positiv $2\frac{2}{3}'$ as well as Sesquialtera and Mixtur or $1\frac{1}{3}'$ and Mixtur) and a respectable group of foundation stops (including Quintaden, Gemshorn, Salicional, Transverse flute and Viola da gamba), in addition to reeds (Trumpet 8′ and 4′, Fagott and Rankett 16′ and Krummhorn and Vox humana 8′) and flute upperwork ($2\frac{2}{3}'$, 2′, $1\frac{1}{3}'$, 1′ and Kornett III). His pedal-boards usually had 16′ and 8′ foundation stops, a 2′ or 1′ flute, and reeds (Posaune 16′, Trumpet 8′, Schalmei 4′ and Kornett 2′). The synthesis of the styles of NIEHOFF and BECK, already vigorously pioneered by the Bader family, was perfected by Möller in accordance with the needs of his age. Like his predecessors in Westphalia he remained partial to the spring-chest, continuing to incorporate it in his new organs. Möller may be regarded as one of the leading masters of the classical German organ.

HANS KLOTZ

Moller, John Christopher [Möller, Johann Christoph] (*b* Germany, 1755; *d* New York, 21 Sept 1803). British-American composer, organist, concert manager and music publisher of German birth. After about a decade in London, where his principal works were published (*c*1775–85), he moved to the USA. He was prominent in the musical life of Philadelphia (October 1790–November 1795) as organist of Zion Lutheran Church and co-manager (with Reinagle) of the City Concerts (1790–93), performing as a pianist, harpsichordist and violist. In New York he was organist of Trinity Episcopal Church and concert manager at fashionable summer pleasure gardens. Moller's and Capron's press (established in March 1793) was among the earliest in the USA for the exclusive printing of music, and Moller alone issued over 40 publications.

RONALD D. STETZEL

Möller. American firm of organ builders. It was founded as M.P. Möller at Warren, Pennsylvania, in 1875 by Mathias Peter Möller (*b* Bornholm, Denmark, 1854; *d* Hagerstown, MD, 1937). After training as a mechanic Möller emigrated to the USA in 1872 and worked for the organ builders Derrick & Felgemaker, of Erie, Pennsylvania. While there he developed an improved wind-chest. In 1880 he moved his business to Hagerstown, where it remained, becoming the largest manufacturer of pipe organs in the USA. During the 1930s Richard Whitelegg, a noted voicer, was Möller's tonal director. On Möller's death, his son, M.P. Möller jr (1902–61), became president of the firm. Control stayed with the founder's family: his son-in-law W. Riley Daniels became president in 1961, his grandson Kevin Mackenzie Möller in 1978, and another grandson, Peter Möller Daniels, in 1984. Two former employees of the Aeolian-Skinner Organ Co. became tonal directors for Möller: Donald Gillett in 1972 and Daniel Angerstein in 1987. In 1992 financial problems caused the firm to go into liquidation, and much of its equipment was sold to groups of former employees operating as the Hagerstown Organ Co. and Eastern Organ Pipes, Inc.

The first Möller organs had mechanical action, but Möller soon developed a reliable pneumatic action which was used until electro-pneumatic action was adopted about 1918. Although Möller was responsible for some of the largest organ installations in the USA, the firm is also known for its pioneering work in the development of small self-contained organs, sold originally under the name of 'Möller Artiste' but later known as 'Series 70' after revision along more classic lines. Important installations include those in St George's Church, New York (1958), the Cathedral of Mary Our Queen, Baltimore (1959), the National Shrine of the Immaculate Conception, Washington, DC (1965), Heinz Chapel at the University of Pittsburgh (1970), Orchestra Hall, Chicago (1981), National City Christian Church, Washington, DC (1981), and West End United Methodist Church, Nashville, Tennessee (1983).

Mollica, Giovanni Leonardo. *See* DELL'ARPA, GIOVANNI LEONARDO.

Mollier [Molière, de Molière, Mollière, Molier], **Louis de** (*b* *c*1615; *d* Paris, 18 April 1688). French dancer, composer, poet, lutenist and lute teacher. He was director of entertainments for the Countess of Soissons from at least 1636 until her death in 1644; it was her patronage that enabled him to enter the court. He became a royal lutenist in 1646 and was still playing the lute at court in 1673. He was named a royal dancer in 1644, and it is in this capacity that he achieved his greatest renown. He danced in nearly every *ballet de cour* from then until 1665 (e.g. *Ballet du dérèglement des passions*, 1648; *Ballet de Cassandre*, 1651; *Ballet de la galanterie du temps*, 1656), often alongside the young Louis XIV and his favourite, Lully. He composed music for ballets, and sometimes also the words (e.g. *Ballet des plaisirs troublés*, 1657). According to the *Mercure galant* (July 1677), 'il a toujours pris soin de mêler ce que la musique française a de plus doux, avec le profond de la science des Italiens'. His greatest success came on 6 September 1656, when he directed the dancing and danced in a ballet presented before Queen Christina of Sweden of which he had written both text and music. The following February the musicians at court tried to prevent any further increase in Lully's power at court by excluding him from a ballet that they presented with music by Mollier, but the plan miscarried owing to the inferior music, and Lully became more solidly entrenched. Lully bore no grudge against Mollier, who continued to dance, compose *airs* and accompany singers on the lute and theorbo. From 1650 until his death he was lute teacher to the children of the court; his most important pupil was the dauphin. From 1665 to 1673 he composed songs for Marais' theatre, and he wrote music for two operas when opera replaced the *ballet de cour* as the most important form of court entertainment in the 1670s. According to the *Nouveau mercure galant* (December 1678), every Thursday evening at his home Mollier gave a concert performance (with Jacquet de la Guerre on the harpsichord) of a small, successful opera that had been performed at the Louvre.

It is uncertain if Mollier was related to his colleague and good friend, the playwright MOLIÈRE, but it is likely that the latter assumed this alias from Mollier. Since both men wrote poetry at the court at the same time, there is some difficulty in distinguishing between them.

Mollier's daughter Marie-Blanche (1644–1733) was a famous singer and dancer at court. Loret (in a letter of 22 February 1659) called her 'La très mignonne Molière' and spoke of her 'grâce singulière'.

JOHN H. BARON/GEORGIE DUROSOIR

Mollo, Eduard. Proprietor of Austrian music publishing company, 1837–42. *See* CAPPI.

Mollo, Tranquillo (*b* Bellinzona, 10 Aug 1767; *d* Bellinzona, after 1837). Italian music publisher active in Austria. He was first employed by the firm of ARTARIA in Vienna and in 1793 was made a partner. After leaving Artaria, he and Domenico Artaria (iii) founded the firm of T. Mollo & Co. in July 1798. In October 1802 Mollo purchased Carlo Artaria's firm which Domenico Artaria then directed while Mollo remained at the parent firm. In 1804 Domenico Artaria broke with Mollo and reactivated the family firm in the Kohlmarkt; Mollo continued to run his business under his own name as a map, art and music publishing firm. The firm's basic stock consisted of the material taken over from Artaria in the years 1798 and 1804; thus the works published up until that time bear the imprint of Artaria or Mollo, but often with the plate numbers altered. Production begun after 1804 brought a confusing amount of altered plate and edition numbers which have still not been clarified; current works from the old stock were also reprinted when necessary.

Music publishing, which was somewhat neglected during the troubled years of war in favour of map production, began to flourish again after 1815. Under Mollo's direction his sons Eduard (1799–1842) and Florian (*b* 1802) worked in the firm. On 1 January 1832 Tranquillo announced his official retirement in a printed advertisement, and on 17 February that year the publishing house was renamed Kunsthandlung der Tranquillo Mollo's Söhne. A division soon followed: Eduard retained his father's shop, while Florian founded his own firm on 4 July 1834, which existed until June 1839. Eduard joined G. Cappi's firm in 1837 and worked there until his death. The final fortunes of the firm are reported in a contract between Mollo's sons and Tobias Haslinger, by which 630 publications on 11,348 plates were transferred to the latter. Haslinger wrote the document on 24 May 1832; it lists each work with the sum of the plates and plate numbers, providing valuable material for research into both Mollo's and Haslinger's publishing firms. Written five months after Mollo's retirement, the contract gives a detailed account of his sons' plans as well as information on Haslinger.

The output of the publishing house T. Mollo & Co. and later T. Mollo alone (after 1804) shows a wide variety of composers (most of them represented by a few works only) including Cherubini, Clementi, Gyrowetz, Rodolphe Kreutzer, J.B. Cramer, Eberl, G.G. Ferrari, Krommer, G.J. Vogler and Vanhal. Works by Haydn and Mozart are chiefly from the Artaria period while Beethoven's (including 19 original pieces) come from both periods.

After 1804 music by new and less important composers was published, including Bevilacqua, Leonhard von Call (*c*100 works), Ferdinando Carulli, Diabelli, J.L. Dussek, Gelinek, Mauro Giuliani, Eduard von Lannoy, Adolf Müller, Paer, Hieronymus Payer, Pleyel, Rossini, Steibelt and Johann Rudolph Zumsteeg. On 30 December 1828 the first edition of Franz Schubert's choral work *Glaube, Hoffnung und Liebe* (D954) was published.

ALEXANDER WEINMANN

Molnár, Albert Szenci. *See* SZENCI MOLNÁR, ALBERT.

Molnár, Antal (*b* Budapest, 7 Jan 1890; *d* Budapest, 7 Dec 1983). Hungarian musicologist, composer and viola player. After studying composition with Herzfeld at the Budapest Academy of Music (1907–10), he made expeditions collecting folk music in Transylvania and northern Hungary (1910–12), played the viola in the Waldbauer String Quartet (1910–13) and the Dohnányi-Hubay Piano Quartet (1915–17) and taught music history and solfège at the Municipal Music School (1912–18). In 1919 he was appointed professor at the Budapest Academy of Music, where he remained until his retirement in 1959, teaching music history, theory, solfège (a subject he introduced at the academy) and chamber music; he also served in the 1930s as vice-president of the Hungarian Association of Music Teachers. He published the series Népszerű Zenefüzetek ('Popular musical pamphlets'), which included studies by Bartók and Szabolcsi, and his own *Kodály Zoltán* (the first monograph on the composer). Later he was editor of the series Kis Zenei Könyvtár ('Little library of music'), composer monographs which appeared from 1957. He was awarded the Haynald Prize for his *Missa brevis* (1910), the Franz Joseph Prize for composition (1914), the Baumgarten Prize for his literary activity (1938, which enabled him to publish his *Zeneesztétika*, 'Musical aesthetics', i) and the Kossuth Prize (1957); on his 80th birthday (1970) he received the title of Eminent Artist.

Molnár was one of the founders of modern Hungarian musicology. His comprehensive knowledge of all periods of music and his thorough insight into musical aesthetics, which drew on psychology and sociology (his chief works on musical aesthetics in 1938 and 1971 illuminate the matter from philosophical and analytical points of view), enabled him to write authoritatively on a wide range of subjects. As early as 1912 he was able to assign Bartók and Kodály to their proper place in music history, being one of the first to recognize their achievement. Several of his books were directed to amateurs and contributed greatly to music education in Hungary.

Molnár's compositions include chamber music (notably three string quartets and a flute quartet), orchestral works (e.g. the Variations on a Hungarian Theme, the Hungarian Comedy Overture and the Budapest Overture), works for piano and organ, sacred and secular vocal music, and many pieces for teaching purposes.

PÉTER P. VÁRNAI/R

Molnar, Josef (*b* Gänsendorf, 7 Sept 1929). Austrian harpist. A member of the Vienna Boys Choir, he later trained as a harpist at the Vienna Academy of Music. Settling in Japan, he was responsible for the creation of a school of Japanese harp playing, introducing the European repertory to that country, encouraging Japanese composers to write for the harp, and publishing the first harp method to have been written in Japanese.

ANN GRIFFITHS

Molt, Theodore Frederic [Johann Friedrich] (*b* Gschwend, Baden-Württemberg, 13 Feb 1795; *d* Burlington, VT, 16 Nov 1856). Canadian music teacher of German birth. The son of a schoolteacher and Lutheran organist, he learnt the rudiments of music from his father and an older brother, becoming a schoolteacher himself in 1812. In 1815 he served in the Napoleonic army as accountant and assistant paymaster, witnessing the decisive battle at Waterloo. He then spent two and a half years in the Württemberg militia and in 1819 became a teacher at his father's school. Although he was praised for his teaching of calligraphy and singing, local citizens complained about his enforcement of strict discipline and by 1820 he lost his position. Possibly Molt first went to the Philadelphia region; in 1822 he began to teach music in Quebec, and in 1824 he founded a Juvenile Harmonic Society there. He returned to Europe for a year in the spring of 1825. In the autumn he visited Beethoven who gave him as a souvenir the canon *Freu dich des Lebens* (WoO195; *CDN-On**). He also met Czerny and Moscheles, both of whom may have taught him, and, according to Converse, Schubert. After his return to North America he taught music in Quebec (1826–33, 1841–9), Montreal (briefly, 1837) and Burlington, Vermont (1833–41 and from 1849; from 1835 at the Burlington Female Seminary). Molt was organist at the Roman Catholic Cathedral in Quebec from 1840 or 1841 until 1849, and founded a Société Philharmonique. His setting of I. Bédard's *Sol canadien, terre chérie* was one of the first patriotic songs composed in Canada. Of his compilation *La lyre sainte* (Quebec, 1844–5) only two instalments appeared. His songs and piano pieces were published in Quebec, London and the USA. Three have been reproduced in *The Canadian Musical Heritage* (i, iii, vii). A hard-working and respected teacher, Molt published a number of instruction books for piano and for voice (Quebec, 1828 and 1844–5; Burlington, 1835, 1836 and 1854; Boston, 1855).

HELMUT KALLMANN

Molteni, Benedetta Emilia. *See* AGRICOLA, BENEDETTA EMILIA.

Molter, Johann Melchior (*b* Tiefenort, nr Eisenach, 10 Feb 1696; *d* Karlsruhe, 12 Jan 1765). German composer. Like many German musicians of the first half of the 18th century, he came from the Thuringian-Saxon area. His father, Valentin Molter, was a teacher and Kantor in the village of Tiefenort, and Johann Melchior probably received his earliest musical education from him. Later he attended the Gymnasium in Eisenach, where J.S. Bach had earlier been a pupil; he also belonged to the Chorus Symphoniacus under the directorship of Kantor J.C. Geisthirt, which brought him into contact with the music cultivated in Thuringia, especially that of the Eisenach court orchestra founded in 1708 by Telemann. He apparently left Eisenach in 1715; in autumn 1717, as a violinist, he entered the service of the Margrave Carl Wilhelm of Baden-Durlach who had moved that year from Durlach to the newly-founded and rapidly growing city of Karlsruhe. There, in 1718, Molter married Maria Salome Rollwagen; they had eight children.

The young *Hofmusicus* rapidly won the margrave's favour and he was sent to Italy with full salary to study the Italian style. Molter spent 1719–21 in Venice and Rome, and may have come into contact with such artists as Vivaldi, Albinoni, the Marcello brothers, Tartini and Alessandro Scarlatti. In 1722, after his return to the Baden residence, the margrave appointed him court Kapellmeister in succession to Johann Philipp Käfer. His varied duties included the direction of church music in the court chapel and the provision of music at table, for balls and various other occasions; he also directed performances in the margrave's theatre, where German opera was cultivated. Numerous compositions date from that period, including oratorios, cantatas, orchestral works, chamber music and perhaps even operas. This activity came to an abrupt end in 1733 when, at the outbreak of the War of the Polish Succession, the margrave dissolved his Kapelle and fled to Basle in exile. Molter was dismissed but retained his title.

The next year, however, he obtained the post of Kapellmeister at the court of Duke Wilhelm Heinrich of Saxe-Eisenach, which had fallen vacant on the death of Johann Adam Birckenstock. His duties in Eisenach were the same as those in Karlsruhe except that there were no opera productions. The many works of these years include sacred and secular vocal compositions.

Molter's wife died in 1737, and a second visit to Italy later that year may be connected with this; artistically, the reason for the journey lay in Molter's wish to acquaint himself with the new developments in Italian music, associated with such composers as Pergolesi, Leo and Sammartini. He visited Venice, Ancona, Foligno, Rome and Bologna, and probably also stayed in Naples and Milan. While in Italy, in 1738, Molter received news of the Margrave Carl Wilhelm's death, and hurried to Karlsruhe where he honoured his former patron with a performance of funeral music. He returned to Eisenach, and at some time before 1742 he married Maria Christina Wagner. In 1741 Duke Wilhelm Heinrich died without issue (Molter supplied the funeral music) and Saxe-Eisenach passed to the Duke of Saxe-Weimar, who dissolved the Eisenach Kapelle. Molter went to Karlsruhe in 1742 and obtained employment there the next year, with the additional obligation to teach music at the

Gymnasium. Financial conditions, however, were less good than before 1733, and the small orchestra was appropriate only for modest undertakings. Molter overcame this situation by composing many chamber works.

No change occurred until Carl Wilhelm's grandson and successor, Margrave Carl Friedrich (1728–1811), reached his majority and assumed government. He ruled his small country with justice and moderation, and was an educated man with an interest in the arts and sciences which subsequently allowed him contact with Gluck, Klopstock and Goethe, among others. In 1747 he commissioned Molter to develop a plan for the reorganization of the court's musical establishment, with which he subsequently agreed in most respects. Molter was given a suitable salary (500 florins, plus 89 in kind), and had at his disposal about 25 instrumentalists as well as singers, the number being increased as necessary by various servants and retired musicians. Besides strings and harpsichord (or organ), the orchestra included two oboes (doubling flutes), two bassoons, two horns, two or three trumpets and timpani. Molter could now perform any kind of music, especially as several musicians were not only virtuosos on their own instruments but also played a second (among them the clarinet and viola da gamba). In the following years Molter wrote a vast quantity of cantatas, symphonies, concertos and chamber music. Works of other composers, German, Italian and French, were also performed. Court music at Karlsruhe flourished, though opera production was not resumed.

Molter occupied this post until his death, and it may have been as a tribute to Molter that the margrave left his post vacant for a whole year despite the existence of a suitable candidate; his second wife survived him by only two years.

Molter's surviving body of work is comprehensive and includes all contemporary genres; it reflects the many influences to which he was exposed. A steady development may be traced from the late Baroque style to the *galant*, as in the work of his contemporaries Hasse, Quantz and the Graun brothers. During his first period at Karlsruhe (1722–33) his style was affected by his studies in Italy and his encounter with the music of the Venetian masters, but French elements are also recognizable. In the Eisenach years (1734–41) he drew nearer to Telemann's manner of writing, through contact with the work of his central German colleagues, including J.C. Hertel, J.B. Bach and G.H. Stölzel; but after his second Italian journey (1737–8) he completed the transition to the *galant* style under the influence of the Neapolitans and Sammartini, and this was carried further during his second Karlsruhe period (1742–65) through familiarity with the flourishing Mannheim school. Throughout these stylistic changes, Molter remained bound to the central German tradition of Kantor and organist; and this must be viewed as the basis of his style.

Although the occasional dullness of invention, the generally small dimensions and the routine, schematic use of familiar models show the hand of a minor master, that is not the entire story. His interest in sonorities, and thus in instruments and their acoustic and technical possibilities, is particularly notable; he followed attempted advances in this direction, for example (like Graupner and Endler) using five timpani instead of the usual two. He also experimented on his own account. He not only used familiar instruments in new ways (among them the trumpet and the horn) but also gave preference to new or unusual instruments like the clarinet, the chalumeau, the flauto d'amore, the flauto cornetto and the harp. He combined the most diverse instruments and put them to singular uses with great taste, particularly showing a feeling for wind instruments. Timbre gradually became a structural element in his music. The combination of this understanding of instrumentation with a marked melodic gift produced some charming chamber works – he called them 'concertinos' – whose small dimensions give them the character of miniatures. His clarinet concertos also owe their existence to his interest in instrumental problems, and have more than once been assigned a special historical importance: but they were written less because of Molter's desire to experiment than to provide a repertory for the Karlsruhe musician Johann Jacob Hengel.

Some of Molter's concertos and symphonies have music of unusual animation; in the overtures, on the other hand, there is French pomp mixed with French grace, elegance and delicacy. His 'Sonate grosse' represent a bold experiment: these are an entirely new kind of orchestral composition in their cyclic construction and type of movement. No other composer, however, followed up that development. These works include some polyphonic writing, which usually remains in the background in Molter's music, even in the vocal works. Most of his vocal music is lost; there is reason to believe that some of it was particularly important. Despite his limitations, Molter was an artistic personality well above the average level of the 18th-century German minor master.

Molter's surviving manuscripts were donated to the Badische Landesbibliothek Karlsruhe, by his son Friedrich Valentin Molter, a former director of the library.

WORKS

surviving MSS are in D-KA unless otherwise stated; for a complete catalogue see Häfner (1966)

VOCAL

Orat for Good Friday, *D-SHs*, same as Passion cited in *EitnerQ*
11 curch cants. (incl. 1 inc.), *D-Rp* (wrongly attrib. C. Stolzenberg)
Dramma per musica, for birthday of Margrave Carl Friedrich
7 It. cants.: 5 for S, orch; 1 for S, bc; 1 for B, orch (frag.)
2 It. arias, S, orch
Fragments of oratorios, funeral music, cantatas, arias, etc.

INSTRUMENTAL

Esercizio studioso, continente 6 sonate, vn, bc, op. 1 (Amsterdam, 1723)
170 sinfonias (incl. 15 inc.), 2 in *D-SWl*; 14 ovs, 1 inc.; Musica turchesca [suite]; 21 sonatas, 2 inc.; 20 concs., 12 formerly *KA*, destroyed; minuets: all for orch
47 concs. for solo inst, orch: 6 for vn, 1 lost, 1 inc.; 1 for vc; 10 for fl; 1 for fl d'amore; 5 for ob; 3 for bn, 1 inc.; 5 for 2 tpt; 3 for tpt; 1 for hn in D; 6 for cl; 1 for kbd; 5 frags., 1 for vn, 2 for bn, 1 for ? 2 ob, 1 for ?cl
Chamber music for winds: 1 sinfonia, 2 cl, 2 hn; 3 sinfonias, tpt, 2 hn, 2 ob, bn; 3 concertinos, tpt, 2 ob, bn; 6 concertinos, 2 fl, 2 hn, bc; 2 concertinos, 2 hn, 2 chalumeaux, bn, 1 inc.; 2 concertinos, 4 fl, bc
*c*100 other chamber works incl. sonatas and concertinos à 4 and à 3; sonatas, vn/fl, bc; minuet with variations, va da gamba, bc; duets, 2 fl; marches and single pieces for wind insts
Chorale preludes, org; other pieces and exercises, kbd (mostly frags.)

Molto (It.: 'much', 'very'). A word used to qualify tempo and expression marks in music: *molto piano*, *molto grazioso*, *molto andante* (*see* ANDANTE), etc. It is also found in such contexts as *allegro di molto* (given by Koch, 1802, as the equivalent of *allegro assai*).

For bibliography *see* TEMPO AND EXPRESSION MARKS.

Möltzel, Jiří. *See* MELCELIUS, JIŘÍ.

Molu, Pierre. *See* MOULU, PIERRE.

Molza, Tarquinia (*b* Modena, 1 Nov 1542; *d* Rome, 8 Aug 1617). Italian *virtuosa* singer and poet. She was the niece of the poet Francesco Maria Molza. She married the Modenese gentleman Paolo Porrino in 1560 and was widowed in 1579. Many tributes to her singing appear in both literary and musical prints from the very early 1570s onward. A passage in Francesco Patrizi's manuscript treatise *L'amorosa filosofia*, written in 1577, contains a description of Molza singing and accompanying herself on the viola bastarda that is one of the most detailed accounts we have of anyone's singing in the last third of the century. This account also makes clear the unusual depth of her musicianship. Her official presence at the court of Ferrara as a lady-in-waiting to the Duchess, Margherita Gonzaga-Este, is attested from May 1583 onward. She was apparently not technically a member of the court's famous *concerto delle donne*, but was rather an instructor and adviser to them during and after the formation of the group in the early 1580s. She remained at Ferrara until the impropriety of her relationship with the composer and Mantuan *maestro di cappella* Wert caused her dismissal in late 1589. She was one of the most extraordinary female courtier/intellectuals of the late 16th century.

ANTHONY NEWCOMB

Mombelli, Domenico (*b* Villanova Monferrato, nr Alessandria, 17 Feb 1751; *d* Bologna, 15 March 1835). Italian tenor and composer. He began his career as organist at Crescentino, where in 1776 he staged his own three-act opera *Didone*, to a libretto by Metastasio. He came to prominence as a singer in 1780, when he first appeared in Venice in Anfossi's *Nitteti*; he returned there frequently until 1800. Although he sang in Rome, Turin, Reggio nell'Emilia, Padua and Bologna during this period, his main centre of activity other than Venice was Naples, especially the Teatro S Carlo, where he first appeared in 1783 in Sarti's *Medonte* and Cimarosa's *Oreste*, and returned periodically until 1803.

Mombelli's first wife was Luisa Laschi, Mozart's first Countess Almaviva, with whom he sang in Vienna in 1786; she died in 1789. In 1791 he married the dancer Vincenza Viganò, a niece of Boccherini and sister of the choreographer Salvatore Viganò. They had 12 children of whom two, Ester (*b* Bologna, 1794) and Anna (*b* Milan, 1795), became singers; with them and a bass, Mombelli formed a travelling company which appeared in Lisbon, Padua and Milan (1806–11).

In 1805 Mombelli became friendly with the 13-year-old Rossini, who composed for him the principal role in *Demetrio e Polibio* to a text by Vincenza Mombelli. The work was performed in 1812 at the Teatro Valle, Rome, with Domenico as Demetrius, Ester as Lisinga and Anna as Siveno. For some years Mombelli held the copyright of *Demetrio e Polibio* and performed in it at the Teatro Carcano, Milan (1813) and in other cities. Castil-Blaze reports that he sang in Florence at over 70 years of age. He was one of the best 'serious' tenors of the Classical period in Italy, perhaps second only to Giacomo Davide: in 1816 he was described by Duke Cesarini Sforza as incomparable 'nelle parti forti e vibrate'. By then his voice was in decline and he turned increasingly to teaching, first in Florence and then in Bologna. His published works include two sets of ariettas for voice and keyboard, six duets for two sopranos and the rondò *Tu mi sprezzi*.

ELIZABETH FORBES, COLIN TIMMS

Mombelli, Ester (*b* Bologna, 1794; *d* 1827 or later). Italian mezzo-soprano and soprano. A daughter of the tenor Domenico Mombelli, she sang with the family opera company, creating Lisinga in Rossini's *Demetrio e Polibio* at the Teatro Valle, Rome (1812). For her, Rossini wrote the cantata *La morte di Didone*, which she sang at the Teatro S Benedetto, Venice, in 1818. She also created the title role of Donizetti's *Zoraide di Granata* at the Teatro Argentina, Rome (1822), and Gilda in the same composer's *L'ajo nell'imbarazzo* at the Teatro Valle (1824). In 1825 at the Théâtre Italien, Paris, she sang Madama Cortese in the first performance of Rossini's *Il viaggio a Reims* and took part in the Paris première of Meyerbeer's *Il crociato in Egitto*. A noted exponent of the role of Cenerentola, she retired in 1827. It was said of her that 'she ravishes with the sweetness of her singing and the pathetic expression of her emotions'.

ELIZABETH FORBES

Mombelli, Luisa. *See* LASCHI, LUISA.

Moment form. A concept, introduced by Stockhausen, in which individual passages of a work are regarded as experiential units. *See* STOCKHAUSEN, KARLHEINZ, §§3 and 4.

Moment musical. A term invented in summer 1828 by Marcus Leidesdorf, a publisher in Vienna, to describe each of six piano pieces by Schubert when they were published as his op.94 (D780), under the title *Momens musicals*. The faulty French (*recte* 'moments musicaux') has frequently been attributed to Schubert. The origin of the name seems to lie in the fact that just before their publication Leidesdorf had composed a set of pieces that he published under the name *Momens mélancoliques*. Schubert wrote his *Moments musicaux* at various times: no.3 in 1823, no.6 in 1824 and the rest in 1827. All are delightful examples of his lyric genius. Outside Schubert there are very few examples, but Paderewski wrote one (1892) and Rachmaninoff wrote six (op.16, 1896).

MAURICE J.E. BROWN/R

Momigny, Jérôme-Joseph de (*b* Philippeville, Namur, 20 Jan 1762; *d* Charenton, 25 Aug 1842). Belgian theorist and composer. By the age of 12 he had progressed sufficiently to hold one of the appointments of organist in the town of Saint Omer. He later settled in Lyons as a music teacher and as organist at St Pierre. He played a political role in Lyons during the Revolution, and several years later settled in Paris where he founded a music publishing house in 1800. It was his goal to reformulate the principles of music theory entirely, and to replace textbooks used at the time with his own. In 1828 he was driven into bankruptcy and forced to sell his publishing house but through the good offices of Cherubini he obtained an annual pension of 400 francs. Momigny's last years were marked by a progressive mental decline; he spent several periods in the asylum at Charenton, where he died.

It is primarily for his writings that Momigny is of interest to scholars today; the theories he developed were very advanced for his time, and in a certain sense ingeniously anticipate modern music theory. Except for certain preliminary comments of a distressingly childish nature – Momigny always presented his ideas as if they were the only ones which were valid – the modernity of some of his ideas on rhythm and harmony is striking. Fundamentally convinced of the relationship between musical phenomena and human physiological functions, he established a link between a man's walking pace, his rate of heartbeat and the musical measure. His basic principle, that music proceeds from the upbeat to the downbeat, adumbrated the idea of the *mesure à cheval*, formulated by Mathis-Lussy in 1883. 'The real rhythmic unit', Momigny wrote, 'is therefore not imprisoned: it should not be considered as enclosed within two bar-lines, as it does not start with the downbeat and end with the upbeat. Rather, it straddles the bar-line, with its first beat to the left and its second to the right.' This theory led him to distinguish the *mesure auriculaire*, the measure as it is heard, from the *mesure oculaire*, the measure as it is written down.

In the field of harmonic theory, Momigny worked to expand the concept of tonality. Like Rameau, he accepted resonance as the starting-point of his theory; but he did not limit himself to a fundamental concord based on three pitches. Instead, he constructed a seven-note chord built in 3rds, which is what modern French 12-note theorists refer to as *le total diatonique*. Momigny, however, went even further: to the seven diatonic notes he added the five chromatic and the five enharmonic notes, so that 17 notes, not seven, belonged to the same tonality. The enharmonic notes were as much a part of the tonality as the others; it was only from their context that one could determine whether or not they would lead to a modulation. It is plain how daring this new theory must have seemed in the early 19th century; the elaborations it underwent a century later, when Ravel and Stravinsky introduced the concept of polytonality, are equally striking. (*See also* ANALYSIS, §II, 2, and fig.6.)

Momigny's compositions, which never enjoyed much of a reputation outside the fashionable salons, include a few pieces of chamber music, numerous songs, various arrangements and transcriptions, and three operas: *Le Baron de Felsheim* (Lyons, before 1800), *La nouvelle laitière* (before 1811) and *Arlequin Cendrillon* (Paris, 1800).

JEAN MONGRÉDIEN

Mompellio, Federico (*b* Genoa, 9 Sept 1908; *d* Domodossola, 7 Aug 1989). Italian musicologist. He studied the piano at Genoa and composition with Mario Barbieri and took diplomas in both subjects at Parma Conservatory (1926, 1928); he also completed an arts degree at Genoa University (1932). He began his career teaching music history at Palermo Conservatory (1933) and then taught both music history and composition at Parma Conservatory (1934). From 1938 to 1949 he was librarian of Milan Conservatory and was responsible for saving much of the

collection during the war. In 1949 he became professor of music history and later also vice-director of the conservatory, where he remained until 1968. After working with Torrefranca at the universities of Milan and Florence, he taught music history at the universities of Pavia, Milan and Parma from 1950 and in 1954 joined the staff of the Scuola di Paleografia e Filologia Musicale of the University of Parma (later Pavia), becoming professor there in 1968. He was vice-president of the Società Italiana di Musicologia (1964–8) and was a member of the Accademia di S Cecilia. He received the Prix A. Feltrinelli from the Accademia de Lincei in 1983. Mompellio's research dealt mainly with Italian music from the 15th-century onwards; he was known particularly for his editions and biography of Sigismondo d'India.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Mompou, Frederic [Federico] (*b* Barcelona, 16 April 1893; *d* Barcelona, 30 June 1987). Catalan composer. Essentially a piano miniaturist and songwriter, he created a small but highly personal body of work. He began to study the piano at the Barcelona Conservatory and gave his first public recital at the age of 15. In 1911 he travelled to Paris where he studied privately with Ferdinand Motte-Lacroix (piano) and Marcel Samuel-Rousseau (harmony). He remained in Paris until 1941, when he returned to Barcelona. A shy, somewhat timid person, he nevertheless moved in well-connected circles throughout his life and made notable friendships, including Poulenc and the painter Mirò, with the second of whom he had something in common as a creative artist, in terms of the surface simplicity of their work and their reliance on distinctive symbols or gestures drawn from their Catalan environment and folklore. For many years, until disabled by a stroke, he lectured on his own music at Música en Compostela, an annual gathering of international students at Santiago de Compostela.

Mompou's op.1 is the set of nine *Impresiones intimas* (1911–14). According to the composer's own account, these miniatures – which exhibit a mixture of adult musicality and naive, childlike emotional directness – were written in response to hearing Fauré. However, if they do display influences, it is more those of Debussy, Ravel and Mompou's nationalist forebears, while his own distinctive voice, which remained little changed over the course of his life, is already evident. There followed a series of works bearing descriptive titles – *Scènes d'enfants*, *Pessebres*, *Suburbis* (the titles used are in the language of the country where the work was first published) – in which the example of Satie becomes more evident. Like Satie, Mompou turned his own technical limitations into a personal aesthetic, which he termed *primitivista*. This is immediately obvious on the page in an extreme economy of notation. But this apparent simplicity belies the composer's struggle for perfection. Even the shortest of miniatures were worked on or revised over a period of years. Satie is also discernible in the use of such performance directions as 'Chantez avec la fraîcheur de l'herbe humide' in *Scènes d'enfants*. But there is no sense of Satiesque irony in Mompou, whose naive approach remains rooted in Romanticism. He had little in common with Les Six.

Aside from the French influence, Mompou owed much to his Spanish and Catalan nationalist forebears. As with Falla, the structural and modal idiosyncracies of folk music pervade his work. Indeed the far greater virtuosity of Falla's music belies a great deal that the two composers have in common. Modes and figurations typical of Andalusian and other regional idioms are to be found in Mompou, but more often his melodic writing is rhythmically and structurally suggestive of Catalan folksong. Occasionally authentic or quasi-authentic Catalan melodies are used, such as 'La filla del Marxant' in the last of the *Scènes d'enfants*. The long series of *14 Cançons i danses* are all, with the exception of numbers 5, 6, 10 (which uses two of the *Cantígas de Santa Maria* of Alfonso el Sabio) and 13 (the only one for guitar) and the *danses* of 3, 9 and 14, based on traditional Catalan tunes, which are enfolded in rich, sophisticated harmony. This combination of diatonic melody with rich, often chromatic harmony, is the basis of all Mompou's music.

Many of his miniatures set out to evoke the essence of a particular mood, either a response to a scene in life or something more abstract: he believed in the 'magical' power of harmony to be quite precise in this respect. His *Cants màgics* and *Charmes* may be seen as an attempt to imagine how a medieval practitioner of the occult might have used this power. In the four volumes of *Música callada* (1959–67) – 'quiet' or 'silent' music – whose texts are taken from St John of the Cross (a writer set by Mompou on a number of occasions), he creates a mystical, spiritual series of moods. Here, as with late Falla, there is an increased austerity compared with earlier works, but the structural simplicity remains unchanged. A final substantial group of pieces comprises a body of often very

beautiful songs, many of them settings of Catalan texts. Of these, *Combat del Somni* may perhaps be singled out as an example of Mompou at his most expansive and haunting, while the two sets of *Comptines*, which set traditional counting-game rhymes, exemplify his interest in the world of childhood. Late in his life, Mompou produced some more ambitious choral and stage works, including the oratorio *Improperios*, while many arrangements and orchestrations of his music have been made by other hands.

WORKS
(*selective list*)

STAGE

Perimplinada (ballet, after F.G. Lorca), 1956, collab. Montsalvatge

PIANO

Impresiones intimas, 1911–14, rev. 1959; Pessebres, 1914–17; Scènes d'enfants, 1915–18; Suburbis, 1916–17; Cants mágics, 1917–19; Fêtes lointaines, 1920; Charmes, 1920–21; 3 variations, 1921; Dialogues I–II, 1923; Cançons i danses nos.1–4, 1921–8, nos.5–12, 1942–62; Préludes nos.1–6, 1927–30; Souvenirs de l'exposition, 1937; Variaciones sobre un tema di Chopin, 1938–57; Dialogues III–IV, 1941–4; Paisajes, 1942–60; Cançons i danses V–XII, 1942–62; Préludes nos.1–10, 1943–51; La cançion que más amaba, 1944; Canción de cuna, 1951; Música callada, 1959–67 [4 vols]

Songs: L'hora grisa (M. Blancafort), 1915; Cançoneta incerta (J. Carner), 1926; 4 mélodies, 1926; Le nuage (M. Pomés), 1928; Comptines I–III, 1931; Combat del Somni (J. Janés), 1942–8; Comptines IV–VI, 1943; Llueve sobre el río, Pastoral (J.R. Jiménez), 1945; Cantar del alma (St John of the Cross), 1945; Cançó de la fira (T. Garcés), 1945; Aureana do sil (R. Cabanillas), 1951; Sant Marti (P. Ribot), 1962; Primeros pasos (C. Janés), 1964; 5 Melodías sobre textos de Paul Valéry, 1965–73; Becquerianas (G.A. Bécquer), 1971

Choral: Cantar del alma (St John of the Cross), chorus, org, 1951; Improperios (liturgical texts), Bar/B, chorus, orch, 1963; L'Ocell Daurat, chorus, 1970; Propis del temps d'avent, chorus, org, 1973; Ball rodo, SATB, 1976; La vaca cega (J. Maragall), chorus, org, 1978

Other inst: Suite compostelana, gui, 1962; Pastoral, org, 1972–3; El pont, vc, pf, 1976

Principal publishers: Eschig, Salabert, Union Musical Ediciones S.L.

RICHARD PETER PAINE

Monachus, Guilielmus. *See* GUILIELMUS MONACHUS.

Monaco. Country in Europe. It is an independent European principality in an enclave on the French Mediterranean coast. At the end of the 12th century it came under Genoese control, and from the 13th century the Grimaldis (Guelphs) fought for its independence; but they were successively dominated or protected by the counts of Provence, the dukes of Milan, the Genoese, the Spanish, the dukes of Savoy and the French. There were consequently many influences on Monaco's cultural life. Some surviving folksong texts indicate Provençal influence in the 18th century; sea songs show Italian, Spanish and French features.

As early as 1406 the Avignon Pope Benedict XIII and his court stayed in Monaco and had music performed there. During the Renaissance, when Italian influence was predominant, the Genoese lords commissioned music, had manuscripts copied and protected printers. Music also flourished in the mid-17th century, when as a result of the Treaty of Péronne (1641), Prince Honoré II of Monaco passed from Spanish to French protection, and during visits to Paris (1642–3, 1646–7, 1651) acquired a taste for court songs and ballet and made the acquaintance of some composers. Freed from the cares of war, Monaco mounted entertainments in imitation of Versailles, with French dancing-masters, music masters and performers. For the Carnival in 1654 the court presented the first work known to have been written in Monaco, *Les entretiens de Diane et d'Apollon*, a sumptuous *ballet de cour* initiated by the Duchesse de Valentinois, Honoré's daughter-in-law, on a text by Sir Charles Ferriol. In 1655 there followed *Le vittorie de Minerva*, on a libretto by F.F. Frigoni and with music by F. Gropallo, Honoré's *maître de chapelle*. Liturgical music was performed in the church of St Nicolas, where a new organ was installed in 1638.

Music was even more prominent at the court of Honoré II's grandson, Antoine I (reigned 1701–31). He was a favourite pupil of Lully, who had given him his conducting stick, and was active as composer, conductor and producer. He corresponded with Couperin and Destouches, was a patron of the local composer, a 'sieur David', sent his musicians to study in Paris or Turin and encouraged them to perform outside Monaco. At that time the repertory of dramatic, symphonic and chamber music performed in Monaco consisted of works by the leading French and Italian composers. Subsequent princes were less enthusiastic about music, although Honoré III sponsored the Monaco-born Honoré Langlé, who later became a theorist and music teacher in Paris. With the French Revolution and the Empire, Monaco's sovereignty was suspended and significant artistic activity ceased.

Prince Florestan, who reigned in the mid-19th century, was fond of the theatre, and music reappeared in vaudeville and opéra comique, notably in the works of Dalayrac, a pupil of Langlé. By the mid-19th century the new town of Monte Carlo, across the bay from Monaco, had become a fashionable resort and François Blanc, director of the Société de Bains de Mer, began organizing concerts in the casino with the Monte Carlo Orchestra (founded 1856). A new casino was built in 1862–3, and in 1878 Blanc's widow commissioned Charles Garnier, the architect of the Paris Opéra, to build a 600-seat opera house within the casino complex. That theatre, the present Salle Garnier, was opened in 1879. From its inauguration under Jules Cohen and Camille Blanc, the Monte Carlo Opera engaged the most famous singers of the day, including Patti, Melba, Nordica, Scalchi, Caron, Faure, Maurel, Plançon, Pandolfini, Devriès and Renaud. The company's celebrity was coupled with that of its most famous director, Raoul Gunsbourg, under whose tenure (1893–1951) Caruso, Ruffo, Chaliapin (who sang at Monte Carlo for over 30 years), Farrar and Thill were engaged at the earliest stages of their careers and remained faithful performers, together with more established artists such as Tamagno, Litvinne, Journet, Schipa, Gigli, Lauri-Volpi, Lubin, Muzio, Bori, Pons and De Luca. Gunsbourg's casts rivalled those of La Scala, the Metropolitan, Covent Garden and the Colón, and his company gave guest performances in many capitals. He played an

important role in Diaghilev's enterprises, and also presented or commissioned new works for Monte Carlo: *Le jongleur de Notre-Dame*, *Cherubin*, *Thérèse*, *Don Quichotte*, *Roma*, *Cléopâtre*, and *Amadis* by Massenet, *Amica* by Mascagni, *Pénélope* by Fauré, *La rondine* by Puccini, *L'aiglon* by Ibert and Honegger, and *L'enfant et les sortilèges* by Ravel, in addition to operas by Saint-Saëns, De Lara and Franck. Many French premières of the works of young Italian composers and of Richard Strauss were also given. Gunsbourg revived operas by Lully, Rameau, Bizet and Gounod, although he never hesitated to modify works by cuts, additions and substitutions. He was the first to stage Berlioz's *La damnation de Faust* (1893).

Maurice Besnard (1952–65) continued the casting traditions by employing Corelli, Di Stefano, Labò, Bergonzi, Mödl, Crespin, Tebaldi, Schwartzkopf and Gencer; since Gunsbourg's days, however, financial means have slowly diminished. Succeeding directors have been Louis Ducreux (1966–71); the composer Renzo Rossellini (1972–6), who performed his own works together with those of Menotti, Raffaello de Banfield and Damase; Guy Grinda (1977–84); and, from 1984, John Mordler. The season now runs from January to April and usually consists of three performances each of four productions with guest singers accompanied by the orchestra, which since 1980 has been known as the Monte Carlo PO.

The orchestra also has its own extensive concert season in the Auditorium Rainier III in the Centre de Congrès, with summer concerts being given in the Cour d'Honneur of the Palais Princier at Monaco. Musical directors have included Paul Paray, Louis Frémaux, Edouard van Remoortel, Igor Markevitch, Lovro von Matačić, L.T. Foster, Gianluigi Gelmetti and James DePreist; in addition, many famous conductors have appeared as guest conductors. The orchestra has commissioned numerous works from contemporary composers, made many recordings and has toured extensively in Europe and the USA. In 2000, under its newly appointed musical director Marek Janowski, the orchestra was enlarged from 85 to over 100 players. The same year the Forum Grimaldi was opened. This contains three auditoriums, the largest of which, seating 1900, has at last enabled Monte Carlo to mount large-scale productions of opera and ballet. The festival Le Printemps des Arts de Monte Carlo is held annually in April and May; the principality also hosts an annual singing competition.

Monahan, Gordon (*b* Kingston, ON, 1 June 1956). Canadian composer. After performing as a rock musician he studied science at the University of Ottawa (1974–6) and then completed the BA in music (1980) at Mount Allison University where his composition teacher was Michael R. Miller. Inspired by the work of Cage, James Tenney and Udo Kasemets, he began composing for acoustic, amplified and prepared piano. *Piano Mechanics* (1981) won first prize in the 1984 CBC National Radio Competition for Young Composers. Monahan went on to create works using elements of natural forces and the environment. This led to the construction of long string installations activated by wind (*Long Aeolian Piano*, 1984–8), water vortices (*Aquaeolian Whirlpool*, 1990) and indoor air draughts (*Spontaneously Harmonious in Certain Kinds of Weather*, 1996).

From 1989 Monahan concentrated on designing and constructing Sound Installations with automated performance capabilities. His *Music From Nowhere* series (1989–) transforms loudspeakers into acoustic sound-producing devices. *Sounds And The Machines That Make Them* (1994), commissioned by the Deutscher akademischer Austauschdienst, is a concert for computer-controlled kinetic machines. *Multiple Machine Matrix* (1996), built from electronic surplus and trash, is a multi-functional performance and installation environment of automated machine sculptures. In these works Monahan combines 'technological processing control with . . . natural, musical, "prehistoric" sounds, in order to question our assumptions of what music is and where it comes from' (Monahan, 1995, p.9).

ELAINE KEILLOR

Monari, Bartolomeo ['Monarino'] (*b* Bologna, *c*1663; *d* Bologna, 7 Jan 1697). Italian composer and organist. From the use of the diminutive 'Monarino' it has been supposed that he was the younger brother of Clemente Monari, though their respective periods of activity suggest otherwise. He seems to have spent his whole career in Bologna, where he studied with Filipucci. He was admitted to the Accademia Filarmonica in 1679 and in 1689 was elected *principe*. In 1685 he became organist of S Giovanni in Monte, and soon afterwards *maestro di cappella* there, replacing Filipucci who had died six years earlier. He left a year later, but returned as *maestro* in 1691 and remained there until his death. In 1687 he was involved in a quarrel between his protector Filippo Bentivogli and Pietro Malvezzi over whether he or Perti should compose music for the feast of the convent of S Lorenzo (see *RicciTB*). On 15 December 1693 he succeeded G.F. Tosi as second organist of S Petronio with a monthly salary of 20 lire. He was last paid for his services there on 29 December 1696. His 17 organ pieces are well-crafted, one-movement works of medium length, mostly fugal in nature, in which counterpoint is often reduced to melodic sequences on a (sometimes figured) chordal accompaniment, as in violin and harpsichord compositions of the period. His sacred works, written for the annual feast of the Accademia Filarmonica in S Giovanni in Monte, are in the mainstream Bolognese style of his contemporaries, though the counterpoint is less complex.

WORKS

THOMAS WALKER/MARC VANSCHEEUWIJCK

Monari, Clemente (*b* Bologna, ?*c*1660; *d* ?Forlì, after 1728). Italian composer and violinist, probably the younger brother of Bartolomeo Monari. He began his career as 'musico di violone' to Marquis Guido Rangoni of Modena, as indicated in his op.1 (1686), containing 'the first works of a young man'. By 1692 he was in the service of Duke Anton Ulrich at Brunswick, where he probably remained until 1703 or shortly before and where he had three operas performed in 1692. From 1703 to at least 1706 he was *maestro di cappella* of Reggio nell'Emilia Cathedral, and he held a similar position at Forlì Cathedral from 1713 to 1729.

His only surviving opera, *Il Pirro*, generally thought to have been staged in Venice, may instead have been given in Bologna in 1719, along with music by other composers. Of some interest among his oratorios is *Il fasto depresso* (1692), which alludes to the political and dynastic ties of the Este family. His sacred compositions are characterized by the use of dialogues between the voices and solo instruments (trumpet and strings), a feature of the Bolognese tradition.

WORKS

OPERAS

lost unless otherwise stated

dm – *dramma per musica*

Gli amori innocenti (pastorale), Brunswick, 1692
La Libussa (dm), Brunswick, 1692
Il Muzio Scevola (dm, N. Minato), Brunswick, 1692
L'Aretusa (op pastorale, P. d'Averara), Milan, 1703
L'amazzone corsara (dm, G.C. Corradi), Milan, 1704
Il Teuzzone [Acts 2, 3] (dm, A. Zeno), Milan, 1706 [Act 1 by P. Magni]
L'Atalanta (dramma pastorale, Zeno), Modena, carn. 1710
I rivali generosi [Act 1] (dm, 3, Zeno), Reggio nell'Emilia, Pubblico, April 1710 [Act 2 by F.A. Pistocchi, Act 3 by G.M. Capelli]
Il Pirro [Act 1] (dm, Zeno), Venice or Bologna, 1719, *D-SHs* [Act 2 by A.S. Fiorè, Act 3 by A. Caldara]
Arias, some probably from Il Teuzzone, *E-Mn*

ELVIDIO SURIAN

Monarino. *See* MONARI, BARTOLOMEO.

Monasterio, Jesús (*b* Potes, Santander, 21 March 1836; *d* Potes, 28 Sept 1903). Spanish violinist and composer. A child prodigy, he studied the violin first with his father

and then in Valladolid. In 1843 he played in Madrid before Queen Isabel II, who became his patron, and then performed in many Spanish towns. In 1851 he was awarded a grant to go to Brussels, where he completed his studies with Bériot at the conservatory, and where he won the *prix extraordinaire*. After several highly successful concert tours of Europe, he returned to Madrid and was named honorary violinist of the royal chapel in 1854. He became professor of violin in the Madrid Conservatory in 1857 and director in 1894. He made several concert tours in Europe, always with acclaim. On Bériot's death in 1870, Monasterio was offered the post of professor of violin at the Brussels Conservatory, but did not accept it, preferring to remain in Spain. In Madrid he contributed greatly to the diffusion of chamber and orchestral music, founding in 1863 the Quartet Society, which put on regular concerts of chamber music for a number of years. In 1864 he began conducting, becoming in 1869 conductor of the Concert Society, in which he promoted orchestral works of the great Romantic and neo-classical composers, until then almost unknown in Spain. His compositions are mostly for violin or orchestra, but also include a few religious works for voices. The best known is *Adiós a la Alhambra* (for violin and piano), which Meyerbeer appreciated on hearing it in 1862 in Berlin. In general, however, Monasterio was less important as a composer than as a soloist and, above all, as an organizer and promoter of instrumental music in Madrid, which at that time was overshadowed by Italian opera.

JOSÉ LÓPEZ-CALO

Moncayo (García), José Pablo (*b* Guadalajara, 29 June 1912; *d* Mexico City, 15 June 1958). Mexican composer. He studied harmony with Huízar, the piano with Hernández Moncada and composition with Chávez at the Mexico City Conservatory; later he took lessons from Copland (1942). He embarked upon his musical career in 1931 as a percussionist in the Mexican SO (now the National SO), which he conducted from 1949 to 1954. In 1934, along with Galindo, Contreras and Ayalas, he formed the Group of Four whose aim was to rekindle the nationalist spirit in Mexican music. Some of Moncayo's works – in particular his famous *Huapango* – incorporate popular melodies, in this case the folkdances *el siquisirií*, *el balajú* and *el gavilán*. Regrettably, the popularity of this piece has obscured the rest of Moncayo's small, original output: for example *Amatzinac* and *Bosques*, which display Impressionist traits and a predominantly modal harmonic idiom, and the *Muros verdes* for piano, whose sequence of motifs describe a spiral form. His opera *La mulata de Córdoba* – based on the work of the same name by Xavier Villarrutía – tells the story of an enchantress condemned to death during the Inquisition who disappears, on the point of being executed, in a boat cloud of fire. Moncayo's modernist style admirably combines with the poetry of the text to create one of the finest 20th-century Mexican operas. Such was his significance that his death in 1958 is considered to mark the end of the nationalist school in Mexico.

Moncini, Pierre-Alexandre. *See* MONSIGNY, PIERRE-ALEXANDRE.

Monckton, (John) Lionel (Alexander) (*b* London, 18 Dec 1861; *d* London, 15 Feb 1924). English composer. He studied at Oxford, where he did much acting and wrote music for university productions. He took up law as a career and was called to the Bar in 1885. After writing drama and music criticism for the *Pall Mall Gazette* he joined the *Daily Telegraph* as assistant to Clement Scott and Joseph Bennett. A song submitted to the impresario George Edwardes was used in the burlesque *Cinder-Ellen up too Late* (1891), and he continued to contribute numbers to Edwardes's productions, notably for Ivan Caryll's scores for the Gaiety Theatre; it was to Monckton's interpolations of such numbers as 'Jack's the boy' (*The Geisha*), 'A Simple Little String' (*The Circus Girl*) and 'Soldiers in the Park' (*A Runaway Girl*) that these scores owed much of their success. The first work predominantly his own was *A Country Girl* (1902), and he went on to write music for the most successful Edwardian musical shows, including *Our Miss Gibbs* (with Caryll, 1909), *The Arcadians* (with Talbot, 1909) and *The Quaker Girl* (1910). Though he sought with some success to emulate Sullivan, it was for his gay and striking melodies that he stood out among the British musical theatre composers of the time.

Monckton was married to the soubrette Gertie Millar, for whom he wrote some of his best numbers, including 'Keep off the Grass' (*The Toreador*, 1901), 'Moonstruck' (*Our Miss Gibbs*) and 'Chalk Farm to Camberwell Green' (*Bric-à-brac*, 1915).

WORKS

all stage works; all produced in London and published there in vocal score at time of original production; musical plays unless otherwise stated

The Shop Girl (musical farce, 2, H.J.W. Dam), Gaiety, 24 Nov 1894, collab. I. Caryll; The Circus Girl (2, J.T. Tanner, W. Palings [W. Pallant], H. Greenbank and A. Ross), Gaiety, 5 Dec 1896, collab. Caryll; A Runaway Girl (2, S. Hicks, H. Nicholls, A. Hopwood and H. Greenbank), Gaiety, 21 May 1898, collab. Caryll; The Messenger Boy (2, Tanner, A. Murray, Ross and P. Greenbank), Gaiety, 3 Feb 1900, collab. Caryll; The Toreador (2, Tanner, Nicholls, Ross and P. Greenbank), Gaiety, 17 June 1901, collab. Caryll; A Country Girl (2, Tanner, Ross and P. Greenbank), Daly's, 18 Jan 1902, collab. P.A. Rubens

The Orchid (2, Tanner, Ross and P. Greenbank), Gaiety, 28 Oct 1903, collab. Caryll; The Cingalee (2, Tanner, Ross and P. Greenbank), Daly's, 5 March 1904, collab. Rubens; The Spring Chicken (2, G. ANDREW LAMB

Moncrieff, Gladys (Lillian) (*b* Bundaberg, Queensland, 13 April 1892; *d* Gold Coast, Queensland, 9 Feb 1976). Australian soprano. After showing promise as a child performer in Queensland she successfully auditioned with the J.C. Williamson management for professional training and from 1914, sang principal roles in Gilbert and Sullivan and musical comedy. After a South African tour she achieved lasting success as Teresa in Harold Fraser-Simson's *The Maid of the Mountains* (1921, Melbourne), eventually playing the role some 2800 times. Contemporary critics wrote of the purity, richness, power and wide range of her voice, her conviction of style and her clear enunciation. She had a considerable success in London in Lehár's *Die blaue Mazur* (1927). Her subsequent Australian appearances included the leading roles in two Australian musicals by Varney Monk, *Collit's Inn* (1933) and *The Cedar Tree* (1934), many revivals of operettas and musical comedies, and concert tours up to her retirement in 1959. Moncrieff became one of the most consistently admired and affectionately regarded performers (often referred to as 'Our Glad') in Australia. Her autobiography, *My Life of Song*, written with Lillian Palmer (and including a discography), was published in Adelaide in 1971.

ROGER COVELL

Monday, William. *See* MUNDY, WILLIAM.

Mondéjar [Mondexar], **Alonso de** (*fl* 1502–16). Spanish composer. He was appointed a singer in the Castilian royal chapel on 17 August 1502 and served Queen Isabella until her death in November 1504; he was one of the singers to accompany her funeral cortège to Granada. He then became a member of the Aragonese chapel until Ferdinand's demise in January 1516. Apart from these 14 years of royal service little is known of his life and career; all his works are found in sources that include repertory from the royal chapels.

Eleven songs are attributed to him in the Cancionero Musical de Palacio, while a *romance*, *Camino de Santiago*, and a further textless villancico are ascribed to him in *E-Bbc* 454. His songs display a remarkable degree of homogeneity, perhaps reflecting the fact that they all appear to have been added at about the same time to the Cancionero. Almost all of his villancicos are for three voices (with the exception of *Oyan todos mis tormentos*), have a three-line *estribillo* (*No desmayes, coraçón* alone has a two-line refrain), and set poems on the theme of courtly love. Two stylistic tendencies are apparent, both of which are characteristic of the court song composers of the early part of the 16th century: a more elaborate and imitative texture, and an essentially homophonic idiom, with independent movement between the voices limited to preparation for cadence points.

The *alternatim* Magnificat attributed to Mondéjar in the Barcelona manuscript sets the even verses, and consistently uses imitation between the three voices. On the other hand, the four-voice Passiontide motet *Ave rex noster* (*E-SE* s.s.) contrasts imitative and homophonic sections to underline the importance of certain words, including those of Christ on the Cross. The Eucharist motet *Ave sanctissimum et gloriosum corpus* is similar in form and style but is also attributed to 'Diaz' (probably a contemporary of Mondéjar in the royal chapels) in another source; it is not clear which of them was the composer of this striking piece.

TESS KNIGHTON

Mondondone, Girolamo da. *See* FERRARI, GIROLAMO.

Mondonville, Jean-Joseph Cassanéa de (*b* Narbonne, bap. 25 Dec 1711; *d* Belleville, 8 Oct 1772). French composer, violinist and conductor. With Jean-Philippe Rameau, he was one of the outstanding figures of French music in the 18th century. He probably received his musical education from his father, who was organist of Narbonne Cathedral. In 1731 he settled in Paris and made his début as a violinist at the Concert Spirituel on Palm Sunday 1734, on which occasion the *Mercure de France* praised him for his virtuosity. At about this time he also published his first collections of instrumental music, a set of violin sonatas op.1 (1733) and the *Sonates en trio* op.2 (1734). He was first violin in the Concert de Lille when, in 1738, he published *Les sons harmoniques* op.4, a set of violin sonatas with an introduction setting out, for the first time, the technique of playing harmonics on the violin by lightly touching an open string. On 1 April 1739, he was appointed violinist of the royal chamber and chapel.

Mondonville's first *grands motets*, performed at Versailles in 1738, met with great success at the Concert Spirituel the following year. The *Mercure de France* (April 1739) stated that the fame of the 'young master' was now established not only as a violinist but also as a composer. He was extremely busy at this time; in 1739 he received fees for about 100 concerts in Versailles, Compiègne, Fontainebleau and Marly. In July 1740 Mondonville acquired the reversion of André Campra's post as *sous-maître* of the royal chapel and acceded to the position itself on 4 March 1744 on the death of Charles-Hubert Gervais; but, since he was not permitted to publish the motets he composed for the chapel, he resigned the post in 1758. He was also pursuing his career as a violinist, performing both as a soloist and with the flautist Michel Blavet, the violinist Jean-Pierre Guignon and the singer Marie Fel, for whom he wrote a violin concerto with a vocal part (now lost) given at the Concert Spirituel in 1747. In 1748 Mondonville married the harpsichordist Anne Jeanne Boucon (*b* Paris, 1708; *d* Paris, 4 Feb 1780), a pupil of Rameau to whom Jean Barrière, Jacques Duphly and Rameau himself all dedicated harpsichord pieces; their son, Maximilien Joseph (1749–1804), became an amateur violinist and oboist.

In June 1748 Mondonville became associated with Pancrace Royer in the organization of the Concert Spirituel. On Royer's death in 1755 he became director of the Concert, with Capperan, until July 1762, when Antoine Dauvergne obtained the privilege for a nine-year period. As conductor of the orchestra Mondonville introduced various innovations from 1755 onwards, including organ concertos by Claude Balbastre, who also entertained the audience by playing organ adaptations of Mondonville's overtures to *Daphnis et Alcimadure* and *Titon et l'Aurore*. Mondonville also included in the programmes symphonies by Gossec and by foreign composers such as Holzbauer and Wagenseil. His own works were very popular. Up to 1791 Mondonville was the composer most frequently played at the Concert Spirituel; with 39 pieces on the programmes, and a total of 510 performances, he comes ahead of Lalande (31 pieces and 421 performances) in the repertory of the Concert from the time of its creation. His motets – in which the influence of Lalande is perceptible – were extremely successful, both the *grands motets* with chorus (*Dominus regnavit*, *Magnus Dominus*, *Jubilate Deo*, *Coeli enarrant*) and the *petits motets* for solo voice (*Regina coeli*, *Simulacra gentium*) forming part of the basic repertory of the Concert Spirituel.

Jean-Joseph Cassanéa de Mondonville: portrait by Maurice-Quentin de La Tour, pastels on paper (Musée Antoine Lécuyer, Saint-Quentin)

Mondonville's *grands motets* reinvigorated the genre, and with the operas of Rameau are among the most accomplished French works of the 18th century. They were copied, distributed and adapted all over France: as a result there are four versions, each with variants, of the *Dominus regnavit* (from Paris, Carpentras, Lyons and Lille). This *grand motet*, performed two to four times a year at the Concert Spirituel between 1735 and 1758, is typical of Mondonville's compositional artistry. To illustrate the words 'Elevaverunt flumina vocem suam', for instance, he unleashes a vocal and instrumental hurricane: rapid vocalises express the movement of the waters, while the orchestra, with its broken chords in the bass and its strings of repeated notes, evokes the idea of a storm and comes close to the operatic style. As with Rameau, art was here trying to imitate nature.

Mondonville's operas were also highly regarded; while *Isbé* was only a qualified success in 1742, *Bacchus et Erigone* was very successful in 1747 when it was produced at the Théâtre des Petits-Cabinets at Versailles with Madame de Pompadour in the leading role. *Le carnaval du Parnasse*, a *ballet-héroïque*, was given 35 performances in 1749 and was revived in 1750, 1759, 1767 and 1774. *Vénus et Adonis* (1752), an *opéra-ballet*, was well received, as also was *Titon et l'Aurore*; along with the second version of Rameau's *Castor et Pollux*, *Titon*, with its subtle orchestration, became a rallying-point for the supporters of the French during the Querelle des Bouffons. The Languedoc setting of the pastoral *Daphnis et Alcimadure* encouraged Mondonville, who wrote his own libretto, to make an innovation: the prologue is in standard French, but the following three acts are in Provençal dialect. This work was well received both at its première at Fontainebleau on 4 November 1754 and

when it was subsequently given at the Académie Royale (5 January 1755). However, *Thésée*, to a libretto by Quinault, was only partly successful at its première on 7 November 1765 at Fontainebleau; memories of Lully's *tragédie lyrique* were still present in the public mind.

When Mondonville gave the première of the oratorio (or 'motet français') *Les Israëlites à la Montagne d'Horeb* at the Concert Spirituel in 1758, he claimed in the libretto to have 'enriched our music with a new genre previously absent from it'. In fact, although the oratorios of Charpentier had obviously been forgotten for half a century, Mondonville did at least deserve credit for bringing the genre into line with the tastes of the day. He composed two more French oratorios, *Les fureurs de Saül* (1759) and *Les Titans* (1760, described as a mythological cantata, with a libretto by the Abbé de Voisenon), thus opening up the way for many composers, including Gossec, Giroust and Le Sueur.

Mondonville made some interesting innovations in his instrumental music. He gradually abandoned the trio sonata genre, and in 1734 published his *Pièces de clavecin en sonates avec accompagnement de violon* op.3. The title indicates that the harpsichord is the principal instrument, but in practice Mondonville achieved a perfect balance between harpsichord and violin, exploiting the possibilities of both instruments. Rameau took his inspiration from Mondonville in his *Pièces de clavecin en concerts* (1741), as also did Louis-Gabriel Guillemain in 1745 (*Pièces de clavecin en sonates avec accompagnement de violon*) and Armand-Louis Couperin in 1765 (*Sonates en pièces de clavecin avec accompagnement de violon*). Mondonville's *Pièces de clavecin avec voix ou violon* op.5, contrary to what the title suggests, are in fact *petits motets* on texts from *Psalms*, sometimes in a very figurative style; both voice and violin are required for all the pieces except one. In the matter of violin technique Mondonville was the first to use harmonics in *Les sons harmoniques* op.4.

Mondonville's brother, Jean Cassanéa de Mondonville (*b* Narbonne, 15 April 1716; *d* after 1769), known as Mondonville *le jeune*, was also a violinist and composer. He was a musician in the royal chapel and published *Six sonates à violon seul et basse continue* (1767), formerly attributed to Mondonville's son Maximilien Joseph.

WORKS

DRAMATIC

first performed at the Paris Opéra (Académie Royale de Musique) unless otherwise stated;

music lost unless otherwise stated

Isbé (pastorale-héroïque, prol., 5, H.-F. de la Rivière), 10 April 1742; pubd as op.6 (Paris, *c*1742)

Bacchus et Erigone (acte de ballet, 1, C.-A. Le Clerc de la Bruère), Versailles, 1747; pubd as part of *Les fêtes de Paphos* (Paris, 1758), of which it then formed part

Le carnaval du Parnasse (ballet-héroïque, prol, 3, L. Fuzelier), 23 Sept 1749; pubd as op.7 (Paris, *c*1749)

Vénus et Adonis (ballet-héroïque, 1, J.B. Collet de Messine), Bellevue, 27 April 1752; pubd as part of *Les fêtes de Paphos*(Paris, 1758), of which it then formed part; lib (Paris, *c*1752)

Titon et l'Aurore (pastorale-héroïque, prol., 3, Abbé de La Marre with addns by C.-H. de F. de Voisenon; prol. by A.H. de Lamotte), 9 Jan 1753; pubd as op.8 (Paris, *c*1753/*R*)

Daphnis et Alcimadure (pastorale languedocienne, prol. 'Les jeux floraux', Voisenon; 3, Mondonville), Fontainebleau, 29 Oct 1754; pubd as op.9 (Paris, 1754/*R*); ed. R. Blanchard (Paris, 1974)

Les fêtes de Paphos (opéra-ballet, 3 entrées: 'Venus et Adonis', Collet de Messine; 'Bacchus et Erigone', La Bruère; 'L'Amour et Psyché', Voisenon), 9 May 1758; pubd as op.10 (Paris, 1758)

Thésée (tragédie, 5, P. Quinault), Fontainebleau, 7 Nov 1765; lib (Paris, 1765)

Les projets de l'Amour (opéra-ballet, 3 entrées: 'L'Hymen et l'Amour', 'Jupiter et Calisto', 'Mirzele', Voisenon), Versailles, 29 May 1771

SACRED VOCAL

Oratorios, music lost: Les Israëlites à la Montagne d'Horeb, 1758; Les fureurs de Saül, 1759; Les Titans (C.-H. de F. de Voisenon), 1760

Grands motets, principal sources *F-A*, *Pc*, *Pn*: Bonum est; Cantate Domino; Coeli enarrant gloriam Dei, ed. C. Davy-Rigaux (Paris, 1998); De profundis, ed. S. Bouissou (Paris, 1993); Dominus regnavit; Exultate justi; In exitu; Jubilate Deo omnis terra, ed. J.-P. Montagnier (Paris, 1997); Lauda Jerusalem; Laudate Dominum quoniam bonus; Laudate Dominus omnes gentes; Magnus Dominus; Nisi Dominus; Omnes gentes; Quam dilecta; Qui confidunt; Venite exultemus, ed. S. Bouissou (Paris, 1998)

Petits motets: Regina coeli; Simulacra gentium; others in Pièces de clavecin op.5 (see 'Instrumental')

INSTRUMENTAL

Sonates, vn, bc, op.1 (Paris, 1733)

Sonates en trio, 2 vn/fl, bc, op.2 (Paris, 1734); ed. R. Blanchard (Paris, 1967)

Pièces de clavecin en sonates, hpd, vn, op.3 (Paris and Lille, 1734), ed. M. Pincherle (Paris, 1935); arr. as 6 sonate a 4, 2 vn, 2 ob, bn, bc [perf. Concert Spirituel, 1749, according to La Laurencie, i, 385], *F-Pn*, ed. Centre de Musique Baroque de Versailles (Versailles, 1997)

Les sons harmoniques, sonates, vn, bc, op.4 (Paris and Lille, 1738)

Pièces de clavecin, hpd, vn/1v, op.5 (Paris, 1748); ed. in Borroff (1958)

Lost works cited in *Mercure de France*: Concert à 3 choeurs, 1738; vn concs., 1739 and later; Concert de violon avec chant, 1747; Concert de violon avec voix, orchestre et choeurs, 1752; ovs. arr. org

MARC SIGNORILE

Mondy, John. *See* MUNDY, JOHN.

Mone, Franz Joseph (*b* Mingolfsheim, nr Bruchsal, Baden, 12 May 1796; *d* Karlsruhe, 12 March 1871). German historian. He studied at Heidelberg where he later taught and served as librarian; he taught at Leuven, 1827–31, and was director of the archives at Karlsruhe, 1835–68. He worked on north European paganism, and published documents on Latin and Greek religious services; musicologically he is notable for his three-volume text edition *Lateinische Hymnen des Mittelalters* (Freiburg, 1853–5/*R*); from his references here to Greek hymns he seems to have been aware of the verse structure of Greek medieval liturgical poetry, the discovery of which is usually credited to JEAN BAPTISTE PITRA. In this matter see W. Meyer: 'Pitra, Mone und die byzantinische Strophik', *Gesammelte Abhandlungen zur mittellateinischen Rhythmik*, ii (Berlin, 1905), pp.287–302.

MILOŠ VELIMIROVIĆ

Monet, Jean. *See* MONNET, JEAN.

Moneta, Giuseppe (*b* Florence, 1754; *d* Florence, 17 Sept 1806). Italian composer. After composing a *farsa* for four voices (its title is unknown), he had, for a young amateur, a remarkable outburst of activity in 1779: his oratorio *Il*

figliuol prodigo was given at S Giovannino degli Scolopi on 20 February, his comic opera *I pastori delle Alpi* was produced at the Teatro di borgo Ognissanti on 1 June; and he directed, from the first harpsichord, Paisiello's *Il tamburo notturno* at the same theatre on 9 September. For the next 20 years he composed a succession of operas, intermezzos and melodramas, as well as sacred and instrumental music. Judging by local reviews, his music was well liked by the Florentines. He won various titles, most importantly *maestro di cappella onorario e compositore* of the courts of Tuscany (1791) and (later) Parma.

Comic genres made up the majority of Moneta's dramatic compositions. He was favoured by the Tuscan court as a composer of ceremonial operas and cantatas, such as *L'Urano*, a cantata (celebrating Herschel's discovery of the planet Uranus) for the wedding of Archduke Francesco in 1788. But his most original contribution was to the development in Italy of *melologo* ('melodrama' or 'tragedia lirica'), a new dramatic form which had been cultivated in France and Germany in the 1770s. Moneta set three such dramas in the 1780s: first *Il Meleagro* (1785), with text by Camillo Federici, who acknowledged his desire to emulate Rousseau's *Pygmalion* of 1770; and followed by two more: *La vendetta di Medea* (1787) and *La morte di Sansone* (1789).

A collection of five sinfonias has survived which displays suggestions of programmatic intent and what the descriptive style in his lost *melologos* may have been. His favoured position in Tuscany as composer of orchestral music is indicated by a performance in Florence in 1792 of a 'piena sinfonia' before the Palazzo Pitti to welcome Grand Duke Ferdinando III. He also composed six trios for flute, bassoon and continuo and two sonatas for piano and violin.

Like the musical culture of Tuscany in general in his time, Moneta's works remained largely unknown beyond the region's borders and the related principalities of northern Italy. The most successful of his comic operas was *Il capitano Tenaglia*, performed in Livorno and Brescia in Carnival 1784, and Geneva in 1786. His composing apparently ceased in 1799, probably because of the French occupation and rule (1799–1814) during which his patron, Ferdinand III, retreated to Vienna. Moneta was among the composers, educators and musicians who formed in 1801 the Collegio di Professori, devoted to raising music in Florence to its 'greatest perfection', promoting the study of music and increasing the number of scholars and 'dilettantes'. In 1806 he was listed among the 'interessati', or financial backers, of the Teatro degl'Intrepidi. Moneta's obituary in the *Gazzetta toscana* (1806, no.40) speaks of the 'universal appreciation and praise' accorded his music.

WORKS

performed in Florence unless otherwise stated

OPERAS

I pastori delle Alpi (dg, 2, A. Pasquali Valli), Borgo Ognissanti, 1 June 1779

Angelica e Medoro (serenata, 2 pts, P. Metastasio), Porta Rossa, 19 March 1780

La giardiniera accorta (dg, 2), Cocomero, 20 Sept 1781

Il marchese a forza (dg), S Maria, carn. 1783

Il capitano Tenaglia ossia La muta per amore (dg, 2, C. Orcomeno), Livorno, Armeni, carn. 1784

Il Meleagro (melodramma, 3, C. Federici), Cocomero, 22 June 1785

Il tutore e la pupilla, ovvero Amor vuol gioventù (int, 2 pts, M. Coltellini), Cocomero, 26 Dec 1785

L'equivoco del nastro (int, 2), Cocomero, carn. 1786

La vendetta di Medea (tragedia lirica, 5, C. Giotti), Intrepidi, 31 Dec 1787

Orfeo negli Elisi (azione teatrale, 1), Intrepidi, 17 May 1788

Il sacrifizio d'Ifigenia (dramma per musica, 1, Giotti), Cocomero, 3 Feb 1789, 1 aria *I-Fm*

La morte di Sansone (tragedia lirica, Giotti), Cocomero, 3 Feb 1789

Le nozze all'inferno (farsa, 2, D. Somigli), Piazza Vecchia, carn. 1791

Il conte Policronio, overo Le bugie hanno le gambe corte (dg, 2, G. Squilloni), Poggio a Caiano, 18 Sept 1791, *Fc*

Le due orfane e i due tutori innamorati (dg, 2), S Maria, 9 July 1792, *US-R* (excerpts)

Oreste (dramma serio in musica, 3, F. Gonella), Pisa, Accademia dei Costanti, spr. 1798, *I-Fc* (2 copies)

Le varie poi fauste vicende di Flora (azione teatrale, 1, G. de Gamerra), Cocomero, Advent 1799, *Fc*

La poetessa capricciosa amante de' due gemelli (dg, 1), Cocomero, 26 Dec 1799

Revisions of: L. Caruso: La locanda in scompiglio, 1780; G. Sarti: I contratempi, 1781; P. Guglielmi: I due fratelli sciocchi, 1782

OTHER WORKS

Orat: Il figliuol prodigo, S Giovannino degli Scolopi, Feb 1779; Il sacrificio di Jefte, Fucecchio, S Giovanni, 22 Aug 1795; Il trionfo di Gedeone (dramma sacro, 2), Pergola, 6 March 1798, *Fc*

Other vocal: L'Urano (cant., 2, M.A. Giannetti), 3vv, Porta Rossa, 23 March 1788; La morte di Beatrice Cenci Romana (cant.), S, hp/pf, vn, *I-Nc*; 6 ariette, v, hp/kbd (n.p., n.d.); arias in *CZ-BER*, *US-BEm* (doubtful)

Inst: 5 syms., op.2, *CH-N*; 6 trios, 2 fl, bn *NL-DHgm*; 2 sonatas, pf, vn (Florence, n.d.), *I-MTventuri*, *PAc*, *US-LOu*

ROBERT LAMAR WEAVER

Monetarius [Müntzer], **Stephan** (*b* Kremnica; *fl* 1494–1515). Slovak theorist. He studied at Kraków in 1494 and taught in Vienna before 1515. His treatise *Epitoma utriusque musices practice* (Kraków, 1515; facs. in MMP, ser.D, i, 1975) is dedicated to his patron Georgius Thurson, a member of a Hungarian magnate family that had served the cause of humanism. It is written in the two-part form typical of the early 16th century (*musica plana, musica mensuralis*) and has affinities with Johannes Cochlaeus, Gaffurius, Giorgio Anselmi and Jacobus Faber Stapulensis. In his treatise Monetarius quotes a poem by the German humanist Walter Eck, who was in Kraków about 1515.

Money-Coutts, Francis Burdett (Thomas Nevill) [5th Baron Latymer] (*b* London, 18 Sept 1852; *d* London, 8 June 1923). English poet and librettist. Born into a family of English bankers, he read law at Cambridge but regarded writing as his career and adopted the pen name 'Mountjoy'. In the early 1890s he became firm friends with

Albéniz, then living in London, and offered Albéniz a considerable income in exchange for setting his librettos to music. Their first work was the opera *Henry Clifford*, followed by their most important work, the opera *Pepita Jiménez*, based on the novel by Juan Valera. Money-Coutts's fondest ambition, however, was to create an operatic trilogy based on the *Morte d'Arthur* of Sir Thomas Malory; the libretto for *King Arthur* was published separately (London, 1897), but Albéniz completed only the first opera, *Merlin*; *Lancelot* and *Guenevere* were left incomplete at the composer's death in 1909. Money-Coutts also supplied Albéniz with numerous song texts, which appear in the collections *To Nellie: Six Songs* and *Quatre mélodies*, as well as the individual works *Art thou gone for ever, Elaine?*, *The Gifts of the Gods* and *The Caterpillar*. Money-Coutts's greatest contribution to music history, however, was his unselfish patronage of Albéniz, which permitted the ailing composer to devote his final years to writing his celebrated work for piano, *Iberia*.

WALTER AARON CLARK

Monferrato, Natale [Nadal] (*b* Venice, *c*1615; *d* Venice, before 12 April 1685). Italian composer and organist. He was a priest and was possibly a pupil of Giovanni Rovetta or of his own brother, Innocente. He took part in the competition for the second organist's post at S Marco, Venice, on 23 January 1639 (not 1640, as Caffi and others stated), when Cavalli was appointed, but the following month he became a singer there at the modest annual salary of 60 ducats. In 1642 (before 21 September) he was appointed *maestro di musica* of the Conservatorio dei Mendicanti, Venice; his tenure is also noted in the dedication to his op.4. On 20 January 1647 he was made *vicemaestro di cappella* of S Marco at a salary of 120 ducats, which was raised in 1650 to 160 ducats and three years later to 200. On the death of Rovetta he was again passed over, in favour of Cavalli, for the post of *maestro di cappella* of S Marco on 20 November 1668, but he finally obtained it on 30 April 1676 following Cavalli's death (accordingly, he resigned from the Medicanti) and held it until his death. He was an energetic director: he attempted to raise the standards of the choir by re-auditioning the older singers and by reducing its numbers, thus allowing higher salaries to be paid, though he met with bureaucratic difficulties in carrying out this policy. He was much appreciated by the procurators, who twice (in 1670 and 1682) awarded him a special gratuity for dedicating compositions to them. In his later years he was a partner with Giuseppe Sala in the ownership of the leading music publishing house in Venice. His will shows that he was a reasonably wealthy man; he left musical instruments to G.B. Volpe and Pietro Veralli, while the residue went to the Scuola del Sacramento in S Bartolomeo di Rialto, where a marble bust of him was erected in the sacristy.

Monferrato's works for S Marco seem mainly to have been in the *stile antico*, of which documentary evidence also suggests he was much in favour. His masses are very austere examples of this manner, displaying few of the expressive devices of chromaticism and dissonance that other composers used to modify its traditional basis. His motets and psalms, by contrast, show the influence of his teaching at the Mendicanti, especially the solo motets of op.4, which he wrote for its pupils. These are attractive works, displaying elements of both the melodious arias and expressive recitative found in the Venetian operas of the mid-17th century. They are not quite so clearly diatonic as those of the Bologna school, but with their harmonic sequences and regular rhythms they approach the idiom of the Italian sacred cantata, especially as individual sections within them are often expansive and highly developed.

DENIS ARNOLD/R

Monferrina. A country dance, Piedmontese in origin, popular in England in the early 19th century (sometimes called 'monfrina', 'monfreda' or 'manfredina'). Typical examples, in 6/8 metre, appear in *Wheatstone's Country Dances for 1810* and *Companion to the Ballroom* (*c*1816). Clementi composed two sets, of 12 (op.49, 1821) and six (WO15–20).

□

Mongini, Pietro (*b* Rome, 1830; *d* Milan, 27 April 1874). Italian tenor. He started his career as a bass, but by 1853 was singing tenor roles at Genoa. In 1855 he made his Paris début at the Théâtre Italien as Edgardo in *Lucia di Lammermoor*, and in 1857 sang at Reggio nell'Emilia in the first performance of Achille Peri's *Vittor Pisani* and in Donizetti's *Anna Bolena*. He first appeared at La Scala in 1858 as Arnold in *Guillaume Tell*, and made his London début in 1859 as Elvino in *La sonnambula* at Drury Lane, where he also sang Arrigo in the first London performance

of Verdi's *Les vêpres siciliennes* (in Italian). In 1860 he sang Manrico (*Il trovatore*) at La Scala and Huon in Weber's *Oberon* at Her Majesty's Theatre. He returned to London every year from 1862 to 1873, appearing either at Her Majesty's, where his many roles included Don Alvaro in the first London performance of *La forza del destino* (1867), or at Covent Garden, where he made his début as Gennaro in *Lucrezia Borgia* (1868). On 24 December 1871 he created the role of Radamès in the first performance of *Aida*, at the Cairo Opera House. According to contemporary reports, his genuinely heroic tenor voice was not used with much subtlety or intelligence, but in such roles as Arnold, Manrico and Alvaro the sheer brilliance of sound and the excitement of his performances compensated for any lack of artistry.

ELIZABETH FORBES

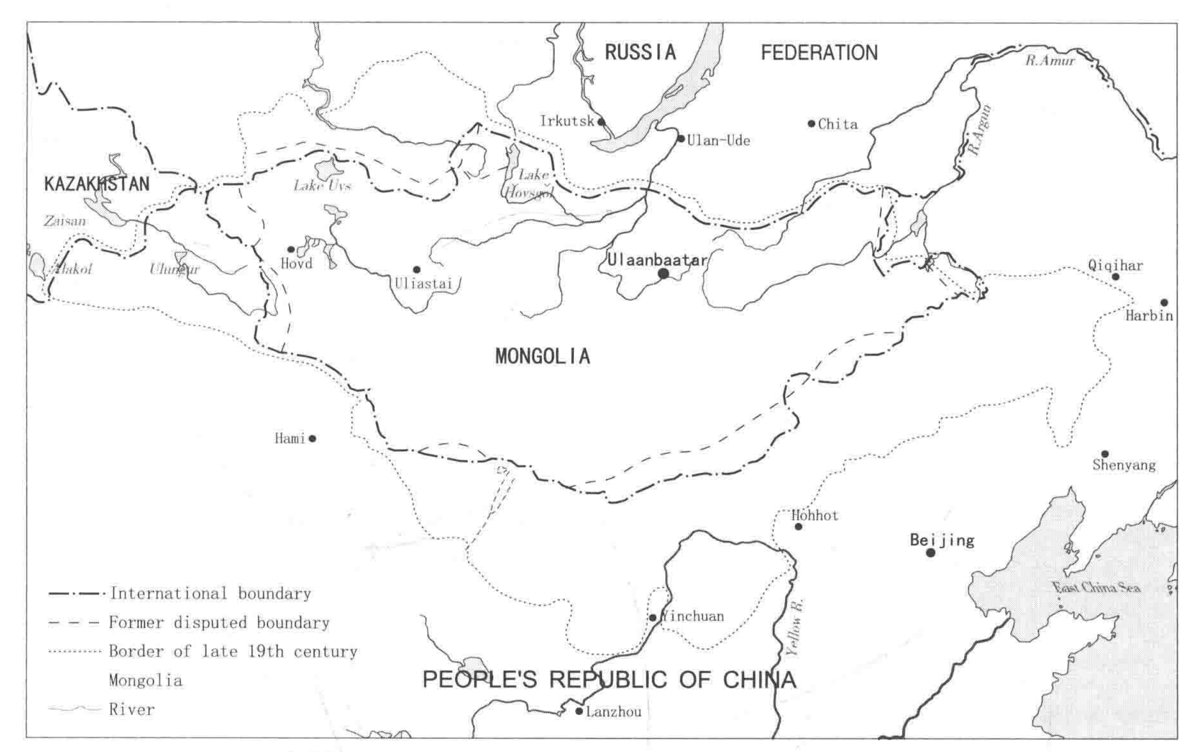
Mongolia. Independent country in INNER ASIA and landlocked between the Russian Federation to the north and China to the east, west and south. It covers an area of 1,565,088 km² (606,250 miles²) and has a population of 2·74 million (2000 estimate) of which an estimated 78·8% are classified as Khalkha [Halh] Mongols. Other Mongol groups include Altai Urianghais, Bargas, Baits, Buryats, Chahars, Darhats, Darigangas, Dörbets, Hamnigans, Harchins, Horchins, Hoshuts, Hotogoids, Mingats, Ölöts, Sünits, Torguts, Üzemchins and Zakchins. Turkic minorities within Mongolia include Kazakhs (5·9% of the population) and small numbers of Tuvans, Üzbeks (Chantous), Uighur and Soyot Urianghais, Tsaatans and Hotons.

Mongols emerged as a distinct group during the 11th and 12th centuries. The first Mongol Uls (Mongol nation) – a name reassigned during the 1990s to contemporary Mongolia – was established in 1206 by Temüjin (Chinggis Khan), who united the Mongolian tribes to create a nomadic empire, which, at its height, reached from Korea to the Black Sea (1206–1368). The division between Eastern Mongols (including Khalkhas) and Western (Oirat) Mongols dates back to that time; since then these two confederations have periodically opposed each other in war. The Eastern Mongols were united under Batmönh Dayan Khan, who became ruler in 1479, but during that century were twice defeated by the Oirats. In 1552, Altan Khan of the Tümed united the Khalkhas and defeated the Oirats, initially a confederation of four tribes: the Jungars, Torguts, Hoshuts and Dörbets. From the 15th century to the 17th, the Confederation of Four Oirats (Dörvön Oird) consolidated and eventually formed a Western Mongol Jungar State (1630–late 1750s). In order to get military aid to hold off the Jungar leader Galdan Boshigt Khan (1651–96), the Khalka princes swore an oath of allegiance to the Emperor K'ang Hsi at the Doloon Nuur convention of 1691, leading to a formal annexation of Mongolia by the Manchus (called by them 'Outer Mongolia') that lasted until 1911. The Oirat Mongols resisted Manchu domination for another 70 years.

For information on the musics of different Mongol confederations and groups, musical genres, instruments and musicians *see* BAATARYN AVIRMED, HETS, HUUR, HUUCHIR, IKIL, LIMBE, MONGOL MUSIC, NARANTSOGT, NAMJILIIN NOROVBANZAD, OVERTONE-SINGING, SHUDRAGA, TOPSHUUR, TSUUR and YATGA.

CAROLE PEGG

Mongol music. The musics of the traditionally nomadic Mongol peoples of INNER ASIA, who now live predominantly in Mongolia (Mongol Uls) and Inner Mongolia (an autonomous region in northern China) as well as elsewhere in China, in Russia and in diasporic communities in Europe and the USA.



I. Introduction. II. Traditional music and dance. III. Religious musics. IV. 20th-century political influences.

I. Introduction

The majority of Mongols live in Mongolia and Inner Mongolia; they are also found in Buryatia and along the Volga river in Russia, and in other areas of China, particularly in the autonomous region of Xinjiang and in Qinghai province (fig.1). The dissemination of Mongols occurred partly because political borders changed and administrative divisions were created that divided and relocated Mongol peoples at various times – under the Mongolian Empire (1206–1368), the Jungar State (1630 to late 1750s), and the Chinese Qing dynasty (1644–1911), as an autonomous state under the Bogd Khan (1912–19) and during the communist Mongolian People's Republic (1921–92) – and partly because of their own migrations. When Stalin successfully negotiated sovereignty for Mongolia at the Yalta conference in 1945, the political division between Mongol groups in Inner Mongolia (part of China) and Mongolia (then the Mongolian People's Republic) was consolidated. However, Mongols still use the metaphor of a human body to symbolize the 'natural' unity of their politically-divided peoples referring to Mongolia as 'Back' or 'North' Mongolia (*Ar Mongol*) and to Inner Mongolia as 'Breast' or 'South' Mongolia (*Övör Mongol*). While they view themselves as united in being 'Mongol', Mongols do express different kinds of identity through musical forms, styles and practices.

Within Mongolia, the estimated total population in 2000 is 2.74 million. The majority group, the Khalkhas (1,610,200), live predominantly in central and east Mongolia. Other groups are concentrated in the border areas. Along the Altai mountain range of west Mongolia live Dörbets (55,200), Baits (38,800), Zakchins (22,500), Altai Urianghais (20,400), Torguts and Hoshuts (10,200), Ölöts (8100), Mingats (4000), Western Khalkhas, and non-Mongol groups including Hotons (4000), Tuvan Urianghais and Chantous (Üzbeks). Among the rolling green steppes of east Mongolia are located Buryats (34,700), Darigangas (28,600), Bargas (2000), Üzemchins (2000) and Hamnigans, and amid the snow-capped mountains, forests and lakes of north Mongolia live Darhats (14,300), Hotogoids, Chahars and Buryats. Within the Russian Federation, there are an estimated 453,000 Buryat Mongols and 2,000,000 Kalmyk Mongols. Census statistics (1990) suggest that over 5.5 million Mongols are living in China, of which almost 3.5 million are in Inner Mongolia. Torguts and Hoshuts living in Qinghai, Inner Mongolia and Tibet number 114,000; Daurs and Torguts living in Xinjiang number 135,000.

Repertories, styles, forms and genres of Mongol music are influenced by the ethnicities, life styles and histories of the performers. Traditionally, music is primarily vocal; instrumental music takes a secondary role. As transhumant pastoralists in an often hostile environment, the everyday lives of Mongols are suffused with music linked to ritual, folk-religious, shamanic and Buddhist practices, whether herding, hunting or holding domestic

1. *Main geographical areas occupied by Mongols*

celebrations (*nair*) and public festivals (e.g. *Eriin Gurvan Naadam*, Festival of the Three Manly Sports; see §II, 1(vi) below). In all three religious complexes, Mongols use musical practices to communicate with and attempt to influence spirits believed to live in and comprise natural phenomena. Similarly, animals are controlled, herded and hunted using a range of vocal and instrumental sounds.

Traditionally, there were gender-specific practices in vocal and instrumental performance. The most highly valued vocal forms were performed in formal ritual contexts by men. Women were generally prohibited from performing *tuul*'s (epics) and *höömii* (*see* OVERTONE-SINGING), as well as the most valued *urtyn duu*s (long-songs). In the context of celebrations, the eldest male always performed a technically difficult *urtyn duu* before the most respected female, who performed a less difficult song. Women were prohibited from playing the HUUR (fiddle), *limbe* (side-blown flute), *tsuur* (end-blown pipe), *topshuur* (two-string plucked lute) and *yatga* (zither). Only the *aman huur* (jew's harp) appears to have been played in both secular and shamanic contexts by both men and women of all groups.

During the communist period, a 'new hearth' (first the 'club' and 'red corner' and then the theatre) was created for music. Music was secularized, taken out of the round felt tent or monastery and moulded into a 'national' form, with socialist content that claimed ideological equality in gender, status and ethnicity. European art forms, including classical music, opera and ballet were introduced, and traditional Mongolian song and dance melodies were adapted to equal-tempered scales, derived from the harmonic series of European art music. In contemporary Mongolia, traditions of various provenances are in the process of intermingling: traditional songs, instruments and dances are being reinjected with ethnicity; religious musics are being practised in ritual contexts; Soviet traditions and Soviet transformations of pre-Soviet traditions continue to be developed; and new rock and 'world music' influences are being taken on board.

II. Traditional music and dance

1. Vocal musics: (i) Long-songs (ii) Short-songs (iii) Heroic epics (iv) Tales, legends, praise-songs and 'words' (v) Magical formulae (vi) Festival forms. 2. Instruments. 3. Dance.

1. VOCAL MUSICS. In terms of musical structure, traditional Mongolian songs fall along a continuum. At one end is the 'extended' long-song (*aizam urtyn duu*), which is richly decorated, drawn out and without fixed rhythm; at the other is the strophic, syllabic, rhythmical short-song (*bogino duu*), which is mostly in simple, duple or quadruple time and occasionally in triple time, and performed without ornamentation. Contexts of performance also differ for these songs. In addition, there are a range of vocal forms not classified by Mongols as 'song', but which by virtue of their structure or rhythmic performance may be considered to be musical.

(i) Long-songs. Most Mongolian ethnic groups perform a style of *urtyn duu* (long-song), the themes of which range from the religious, philosophical, ceremonial and didactic to expressions of love for family, nature, birthplace and animals. *Urtyn duu* is a Khalkha term that came into general use after standardization of music under the communists. Traditionally, each Mongolian group has its own terms often indicating use in a particular context: Khalkha Mongols also use the terms *nairyn duu* (celebration song), since long-songs are the only form of song permitted in Khalkha celebrations, and *aizam duu* (extended song). Each group also has its own repertory, forms, styles and methods of ornamentation.

The long-song uses five equally-spaced pitches, from which further pitches are derived. It occurs in three main musical forms: extended (*aizam*), general (*tügeemel*, *jir*) and abbreviated (*besreg*). *Aizam urtyn duu* is performed mainly by Eastern Mongol groups, including Khalkhas. It is characterized by rich ornamentation and use of falsetto, extreme elongation of both musical phrases and syllables, a melody that continually unfolds rather than repeats, and lack of a regular beat. Its melodic complexity and melismatic skill takes precedence over textual clarity for both performer and audience. Classical Mongolian script pronunciation is often used, and syllables are interpolated to preserve the flow of the melodic line. While initial-line alliteration, typical of Mongolian poetry, is employed, the line is often truncated, so that metrical elements of the written text are not preserved in the song. Performance manner is restrained, with little facial or bodily movement.

In traditional Khalkha celebrations, each long-song should have 64 *türleg* ('choruses'), although 4, 8, 16 and 32 are acceptable. The Khalkha phrase '16 or 32 *aizam duu*', refers to a long-song with 16 or 32 *türleg*. Central Khalkha style is characterized by its wide range, which when it incorporates falsetto may reach almost three octaves, and by a full-throated, declamatory vocal tone from the chest. Intervallic movements are wide – 3rds and 4ths are used in succession – and there is a general absence of conjunct movement. Borjigin Khalkha style has a range as wide as Central Khalkha, and falsetto is used, but intervallic movements are small, and more complex decoration of the melodic line is used. Western Khalkhas, who live in districts bordering west Mongolia, perform *aizam urtyn duu* but use a more restricted melodic range than Central Khalkhas.

Tügeemel urtyn duu ('general' long-song) lies between 'extended' and 'abbreviated' forms and is used on non-official occasions, such as during herding on the steppes. *Besreg urtyn duu* ('abbreviated' long-song), a shortened or hybrid form with short verses and sometimes choruses, is performed by Western Mongols, including west Mongolian groups and Mongols in Xinjiang. This form also exploys devices such as empty syllables and interjections, but because there is little ornamentation, a less complex musical structure and less elongation of words, the text is more clearly audible. Melodies have a more angular structure. Long-song styles from pre-socialist Mongolia, which have become rare, include Eastern Khalkha, Hardel and Bayan Baraat.

Performance practices and styles are transmitted orally. For Khalkhas, the song performed by child-riders before a horse race, *giingoo* (see §(vi) below), is used to display their potential as long-song performers. Basic differences occur between Eastern Mongols, Western Mongols and Inner Mongolian groups. Among Western Mongols such as Baits, Dörbets, Torguts and Mingats, long-songs are without instrumental accompaniment, but verses and choruses are sung by all present in heterophonic layers of melodic improvisations. Among Khalkha groups, a solo vocalist sings verses to the accompaniment of a horse-head fiddle (*morin huur*; fig.2) and sometimes also a six finger-hole, side-blown flute (*limbe*), which follow the melody and decorations of the vocal line. Each verse is composed of two, four or more musical phrases or sections (*tuhailbar*), and after every three verses the assembled celebrants contribute a kind of refrain (*türleg*), while the singer pauses for breath or clears the throat. Among Üzemchins in Xilingol banner, Inner Mongolia, there is no instrumental accompaniment, but during verses the audience supplies a vocal drone which they call *chor* (in eastern Mongolia, 'mouth *tsuur*') beneath the solo vocalist's melody, and then all contribute to the melody of the chorus.

The selection of the initial and final long-song is chosen according to group tradition. Borjigin and Central Khalkhas always begin a domestic celebration (*nair*) or festival (*naadam*) with *Tümen Eh* ('First of Ten Thousand'), and the first three long-songs have to be *aizam* in form and chosen from a specific corpus of songs. Bait Mongols begin with *Bayan Tsagaan Nutag* ('Rich White Homeland'), Hotons with *Nariin Baahan Sharga* ('Thin Rather Light-Bay [Horse]'), Dörbets with *Nariin Goviin Zeerd* ('Chestnut-Brown of the Narrow Gobi'), and Darhats with *Talbain Sharga* ('Four-Square Bay').

(ii) Short-songs. Although referred to generally by a Khalkha term, *bogino duu*, this category includes satirical,

2. *Dad'süren (long-song singer) and Arildii (horse-head fiddle player) of the Borjigin Khalkhas in their ger (home) in Middle Gobi, Mongolia, 1989*

dialogue and situational songs, which are improvised in alliterative stanzas. *Shog duu* (satirical songs) are used to lampoon, criticize or comment on anti-social behaviour, problematical relationships and everyday events on a public level; for instance, the Bait Mongol song *Donkoo* (or *Elkendeg*) criticizes drunkenness, arrogance and rootlessness.

Magtaar (situational songs) operate on a more private level. They are used to express opinions about specific places and people and may be addressed to lovers or personal friends. Occasionally, *magtaar* are used in Dörbet celebrations, accompanied by dance (*büjigtei magtaar*). Satirical songs are distinguished melodically from situational songs: the former have lighter, less lyrical tunes. Traditionally, west Mongolian satirical songs are performed unaccompanied, or accompanied by a simple rhythmical device; occasionally they are accompanied by the two-string spike fiddle, *ikil*.

As with long-songs, different ethnic groups have their own short-song melodies and styles. The musical range is generally within one-and-a-half octaves, and no ornamentation is used. Musical simplicity allows the singer to concentrate on rhyming the improvised text and clearly transmitting the meaning. A form of 'lengthened' short-song (*urtavtar bogino duu*) uses a drawn-out melody with some ornamentation in verses in conjunction with a more rhythmical melody in the chorus. In both forms, textual meaning is enhanced during performance by dramatic, sometimes even theatrical, facial and bodily movements.

Hariltsaa duu (dialogue-song) is a performance style that, when used in short-song form, also makes expressive use of the eyes and upper body. Although no costume, masks or make-up are used, these highly dramatised songs are considered to be an early form of Mongolian drama. *Hariltsaa duu* may be performed by several people or solo.

(iii) Heroic epics. *Baatarlag tuul*'s (heroic epics) are lengthy oral works about brave knights who fight and eventually defeat the forces of evil.

Epic traditions among the Oirats of north-west Mongolia, Buryat Mongols and Volga Kalmyks were noted by Vladimirtsov (1923). The Buryat Mongol academician Rintchen, citing *Janggar*, *Khan Harangui* and *Högshin Luu Khan*, proposed that Khalkha melodic tales (*üliger*) from central Mongolia should be included within the category 'epic'; this remains a subject of debate. The *Geser* epic (*see* TIBETAN MUSIC, §III, 4) was widespread in both oral and written forms among Khalkha Mongols, Buryats, Oirats, Inner Mongols, Kalmyks and Monguors. Similarly, *Janggar*, the main epic cycle of Kalmyk Mongols, is also found among Baits, Dörbets, Torguts and Altai Urianghais of west Mongolia; Khalkhas of central Mongolia; Torguts, Ölöts, Hoshuts and Chahars of Xinjiang, China, and Höh Nuur Mongols in Qinghai province, China. Manuscript versions of *Khan Harangui* have been collected and published from Khalkhas in central Mongolia, from Kizil in Tuva, from Okin in Buryatia and in Western Mongol *tod* script. As with the *Geser* and *Janggar* epic cycles, *Khan Harangui* passed to and from written and oral traditions.

Altai Urianghais, Torguts, Baits and Dörbets all have their own corpus of epics with distinctive form and content. The oral epic tradition is believed by west Mongolian bards (*tuul'chs*) to have been maintained unbroken over many centuries. Performance skills have

3. Rincin plays the dörvön chihtei huur to accompany the qugur-un üliger 'Rabsul Mamu' outside his home in Ordos, Inner Mongolia, 1987

been transmitted primarily by males within families (*see* BAATARYN AVIRMED).

All west Mongolian epics follow the same underlying structure: after many trials of strength and courage, the hero eliminates evil and takes home a devout wife. Descriptive and conceptual motifs provide the opportunity to root the epic among a particular group in a particular place.

Among Altai Urianghais and Baits, a low-pitched, declamatory style of voice-production, *häälah* (*hailah*), is used for epic performance. (Zakchins use a singing voice, *duulah*.) The sound is related to *höömii* (*see* OVERTONE-SINGING) in that harmonics are produced, but these are not used to create a melody.

West Mongolian heroic epics are accompanied by the two-string plucked lute *topshuur* and occasionally, as among Zakchins, by the two-string spike fiddle *ikil*. Buryat Mongols and Mongols from Inner Mongolia use the spike fiddle *huur*, although Buryat Janggar bards once used the *yatga* (zither). The much shorter, story-like Khalkha *ülger* is recited without musical accompaniment.

(iv) Tales, legends, praise-songs and 'words'. In southern regions of Mongolia and in Inner Mongolia, the *dörvön chihtei huur* ('four-eared fiddle') is used to accompany musical tales or legends (*üliger*; fig.3). These tales are highly dramatised, with a single performer expressing different characters by means of changes in vocal and instrumental timbre and using pace to express the tale's action.

A form of musical narrative in alliterative verse, the *ülger* (*üliger*) has some of the characteristics of epic. Indeed, among Buryats, Khalkhas and Mongols of Inner Mongolia, the term *ülger* is used to mean 'epic', which causes some confusion. Poppe (1979) saw the relationship between epic and *ülger* in a derogatory way. The *üliger* was, he said, 'a semi-poetic, semi-narrative work . . . the result of a certain degeneration of the Khalkha Mongolian heroic epic'. The *qugur-un üliger* ('tale accompanied by fiddle', literally 'tale of the fiddle') includes motifs and performance-techniques common to epic performance and may have been a way of prolonging the life of the epic–*ülger* in a communist environment. One of the best known Inner Mongolian performers, Muu-ökin, was said to be able to perform *ülger* that lasted for months, to improvise in length and details, and to vary melody and pace according to the narrative. Another performer, Pajai, was also skilled in improvisation, in performance often replacing several verses with new ones.

Bengsen-ü üliger ('tales of literary origin') are performed in south-east provinces of Mongolia among Jaruud, Üzemchin and Ar Horchin Mongols and by groups in Inner Mongolia. Accompanied by the *dörvön chihtei huur*, texts inspired by classical Chinese novels are transformed into a Mongolian art form by the use of improvised 'connected verse' (*holboo shüleg*). These sections of improvised lines in alliterative parallelism (*tolgoi holboh*) have various functions: to ornament the tale (*chimeg holboo*) by describing the hero and his actions, to summarize its contents (*ülgeriin tovchoo*) or to add a different theme (*chölööt sedevt holboo*), such as a wrestling match or spirit-distilling session.

Musical performances of myths or legends (*domog*) take a variety of forms: the myth of the origin of the horse-head fiddle, *Cuckoo Namjil*, is sung to accompaniment by the *morin huur*; Western Mongols perform melodies related to their own histories on the *ikil*; instrumental melodies are frequently related to animal legends (*see* P. NARANTSOGT); and Bait, Dörbet, Torgut and Ölöt Mongols use the *biy*-dance (see §3 below) to express the adventures of their legendary heroes.

Magtaal (praise-songs), formerly connected with Shamanism, hunting practices and a substantial element in epic performance, are improvised in contemporary Mongol music as a 'snapshot' of the immediate context. The 'word' (*üg*) is also a traditional improvisation on a theme. The subject, who may be a person, beast or object, comments rhythmically upon the fate that has overtaken it.

(v) Magical formulae. Incantations (*shivshleg üg*), well-wishing words (*beleg demberliin ügs*), wish-prayers (*yeröól*) and curses (*haraal*) are part of the vocal repertories of Mongolian Folk Religion, Shamanism and Buddhism, but performed rhythmically and in verse, they may also be considered a genre of musical poetry (*högjimt yaruu nairag*).

Shivshleg üg, which address natural phenomena as if human, are believed to be an ancient form of folk benediction.

Beleg demberliin ügs and *yeröól* are widespread among Khalkha, Dörbet, Bait, Ölöt and Üzemchin Mongols. Performance of both must be melodic (*uyangalag*), using improvised words in equal rhythm (*jigd hemeer*) and in verse. *Beleg demberliin ügs* are performed by lay people and consist of only a few lines. They express wishes relating to rituals and labour and must be performed when encountering people engaged in those activities. *Yeröóls* are performed by specialists at annual and life-cycle celebrations, such as births, felt-making, construction of a new *ger*, weddings, departure for hunting or travelling, and selection of foals. They are associated with anointing the newborn (both human and animal), as well as clothes, tools, tents and weapons, and they vary in length from two to 30 or 40 lines. Rooted in ritual occasions for specific ethnic groups and families, the contents of a *yeröól* are improvised and include descriptions of the process and actions preceding the ritual, the ritual itself, justifications for the rituals and teachings. Among Khalkhas, the beginning and end of wish-prayers share features with *aizam* long-songs: both begin by uttering the sound 'Zee' and end with a *türleg* 'chorus' to which all contribute, thus ensuring that it becomes a communal, rather than individual wish. Curses are associated with Shamanism and occur in epics.

(vi) Festival forms. In pre-communist Mongolia, festivals comprising three sports – horse-racing, wrestling and archery – were linked to the celebration of male prowess and to religious beliefs. *Güngoo*, *tsol* and *uuhai* are musical sounds traditionally intended to communicate with these spirits. Although secularized during the communist period, they are being reinterpreted in contemporary practice.

Güngoo is a ritual song performed by child jockeys as they parade in a circle 'in the path of the sun' prior to a race. The melodies are reminiscent of long-song melodies, and the words are unintelligible to both performers and audience.

Prior to wrestling, the contestant's trainer delivers a *tsol* (praise-recitation) in a high-pitched rhythmical manner, in alliterative verse, each section of which ends in a melodically descending phrase. This identifies the wrestler in terms of residence and skill and issues a challenge to a specific opponent. Long-songs are performed by male elders during the wrestling, and wrestlers perform the Garuda dance (see §3 below).

Rhythmical ritual vocal sounds, called *uuhai* by Khalkhas and *bara* by Buryats, are essential to archery competitions. In Mongolia, the words are not comprehensible but sound like melodic calls. Buryat archery songs evoke the lightening speed of the arrow and urge it to reach its mark. An invocation prior to shooting, called by Khalkhas 'summoning *uuhai*', is performed by umpires who beckon and invite both the arrow and good luck. The invocation is accompanied by circular beckoning gestures made with arms reaching towards the sky. This is followed by an *uuhai* of joy when the arrow finds its mark, traditionally intended to awaken the local deity, who will then provide rain and fertility. The final 'roll call' or 'scoring *uuhai*' occurs at the end of the match.

2. INSTRUMENTS. In pre-revolutionary Mongolia, Mongol herders played composite chordophones or aerophones, as did other Inner and Central Asian nomads. Membranophones and idiophones were played in shamanist, Buddhist, court and military contexts.

The composition and repertories of instrumentaria, as well as organology, sounds and functions of instruments vary according to ethnic group traditions. Characteristic of Western Mongols are the two-string spike box fiddle (IKIL), three-string lute (SHUDRAGA, *shanz*), two-string lute (TOPSHUUR) and end-blown pipe with three finger-holes (TSUUR). Central and Western Khalkhas employ the

two-string spike box fiddle with horse-head ornamentation (*morin huur*; *see* HUUR). Other Eastern Mongol groups play the horse-head fiddle (*morin huur*), two- and four-string spike tube fiddles (HUUCHIR, *dörvön chihtei huur*) and side-blown flute with six finger-holes (LIMBE). *Topshuur* and *ikil* are used to accompany heroic epics; *morin huur* and *limbe* to accompany long-songs; *shudraga* and *ikil* to accompany the *biy*-dance.

In pre-communist Mongolia, particular instruments were played in urban contexts. In the capital city, Urga (now Ulaanbaatar), were found the dulcimer (*yoochin*), three-string lute (*shudraga*), side-blown flute (*limbe*) and horse-head fiddle (*morin huur*); in the west Mongolian towns Uliastai and Hovd, *yoochin* and *limbe*. The half-tube zither or *yatga* continued to be played in Mongolian orchestras, imperial palaces and monasteries in 'Outer' and 'Inner' Mongolia until the end of the Qing dynasty in 1911. In contemporary Mongolia (formerly 'Outer' Mongolia), these instruments are typically played in small theatrical folk groups and ensemble orchestras.

Membranophones and aerophones played in a percussive manner and other percussive devices have been used to communicate with spirits since ancient times. The 13th-century epic-chronicle 'The Secret History of the Mongols' (Cleaves, 1982) refers to Chinggis Khan's use of the kettledrum prior to battle, and the 17th-century chronicle *Altan Tobci* ('Golden Summary') mentions the sounding of trumpets in the same context. Mongol shamans and shamanesses use a range of vocal and instrumental percussive sounds to communicate with spirits (see §III, 2 below).

3. DANCE. The *biy*-dance, called by Khalkhas *biyelgee*, uses predominantly the upper-half of the body and is performed by Western Mongols. Traditionally, it was performed solo by males and females in domestic celebrations, during celebrations of the local nobility or lamas, and in free time outside the tent. It is accompanied by the *ikil*, *topshuur* or *shudraga* or by song (*duut biy*). Accompanying *tatlaga* (fiddle tunes) bear the same names as the dances.

Dancers express their identities by the order and styles of performance, as well as by the contents of the dance. Baits always begin with *Elkendeg*, a respectful dance that ritualizes gestures of invitation; Hovog Torguts by a cheerful, swaying *biy* named after their former homeland *Hovog* ('Hovog Sair'). When Baits dance, they use deep, dropping movements of shoulders and chest with legs braced to support the body. Cups of fermented mare's milk are sometimes balanced on the knees to ensure against movement. Dörbets dance with small shimmering movements of the shoulders and arms, sometimes balancing cups on their heads to encourage composure. Although a style may vary within a Mongol group, these variants constitute decorations (*chimeglel*) within a style, occurring because of subgroup affiliation, family tradition and individual improvisations, rather than different styles.

Undesnii biy ('national *biy*') express group features and histories. Oirat groups, who crossed the Altai from present-day Xinjiang after the fall of the Jungar State during the 18th century, perform *Dörvön Oird* (The Four Oirat) and a dance symbolizing their migratory crossing of the River Eev. *Biy*-dances also celebrate mythical ancestors or heroes peculiar to a group. Zakchins, for instance, perform *Janggar*, the hero of an epic cycle, as a *biy*-dance.

Mörgüül biy incorporate ritual movements, including gestures of respect, beckoning good fortune into the home and making offerings to the goddess of the fire. *Tsatsal biy* ('Milk-aspersion' *biy*), which is mimetic of offerings made to elders, ancestors and the eight directions, is one of the most respected *biy*-dances performed by all Mongol groups.

The Secret History refers to a round, stamping dance performed around a 'Branching Tree' during feasting. The Buryat Mongol *yoohor*, which is performed circling in the 'path of the sun' (i.e. clockwise), is the only known contemporary Mongolian circle dance. It is accompanied by sung couplets, improvised by individuals and repeated in chorus by all dancers. The dance is widespread in western Buryatia, but in eastern Buryatia was prohibited by Buddhism and is only performed there during weddings. It is also performed by Buryat Mongols in north-west Mongolia.

The Garuda dance, performed by all Mongol groups before and after each round of wrestling, is said to be imitating two birds – the legendary Khan Garuda of the Buddhist pantheon and the hawk as it swoops to take its prey. The dance also incorporates lion-like poses. While preparing to wrestle, the wrestler dances bird-like from one side of his trainer to the other, pausing only to thrust out his chest and rump. Although styles vary, all dances contain the same three basic elements: slapping the thighs and ground, running, and flapping the arms. When Mongols touch the earth, they believe they may share some of its protective power. Wrestling costumes (jacket, pants, curly-toed boots and traditional hat) denote a dancer's ethnicity by their styles and the relationship between the wrestler and nature by their colours.

A hunter lures marmots by performing *tarvaga höörü-üleh*, a dance that imitates the trotting movements of a wolf or dog. Wearing a mask, a hat with ears or a fox's head, the dancer makes circular movements with a white yak's brush to beckon the marmots.

III. Religious musics

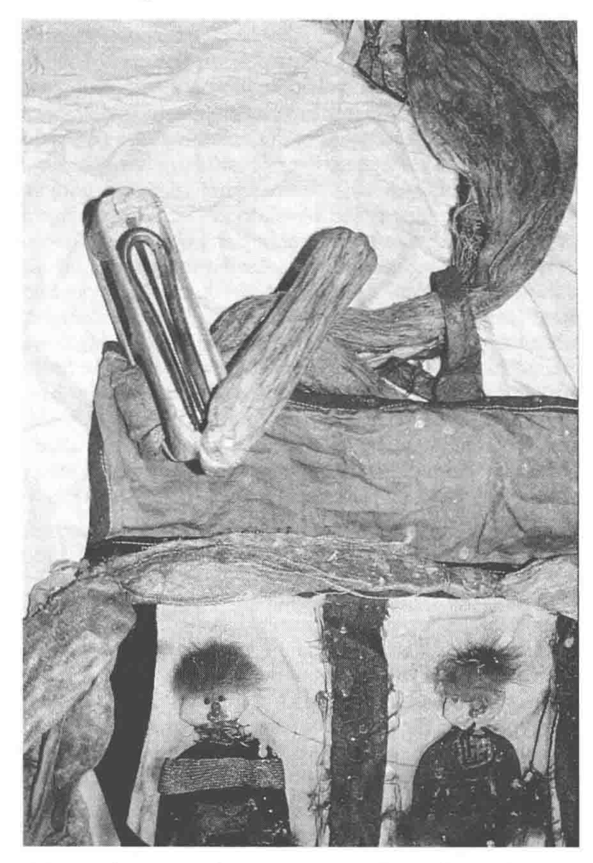
1. Folk-religion. 2. Shamanism. 3. Buddhism: (i) Song texts and notation (ii) Instruments (iii) Masked dance-drama (iv) Secular genres in Buddhist contexts.

1. FOLK-RELIGION. Mongols believe that the truculent spirits of nature and gods of the universe must not only be placated with libations and offerings but also charmed with music, dance and song. The classification of long-song is linked to ritual landscapes that comprise 13 of each natural phenomenon, for instance, 13 snow-capped Altai mountains with 13 valleys and 13 rivers. The 13 horses who live there have 13 divisions and subdivisions of colour; these horse colours form the basis of long-song classification.

Mongolian myths describe how different forms of song, music and instruments originate from the spirits of nature or from gods located in the upper or lower worlds. The construction of instruments from parts of nature (plants, trees and animals) is traditionally surrounded by ritual. Music is used to imitate the sounds and rhythms of wind, water, animals and birds, and Mongols map the contours of their landscapes in melody and dance movements. Certain sounds are believed to influence the weather and the body: whistling is thought to call up the god of the wind; listening to *höömii* is believed to have beneficial

effects; and epic performance is thought to influence health and fertility in both animals and humans.

The most usual context for epic performance in pre-socialist west Mongolia was in the homes of herders, and its prime function was ritual and magical. More rarely, bards performed for princes and were sometimes retained. The bard was believed to be supernaturally inspired, his instrument was thought capable of exorcizing evil spirits, and the content of the epic able to ward off bad spirits and cure animals and humans of infertility and illness. Non-structural narrative differences relate to the ritual properties of the epic; for instance, the discovery by the epic hero 'Black Wrestler Dovon' of a grain of corn fallen from heaven that transforms into a son ensures its use as a cure for infertility. The unusual vocal tone-colour, *häälah*, which differs radically from the normal speaking and singing voice, serves to create an imaginary arena set apart from everyday experience, in which the actions of the epic hero may take place and cures may be accomplished.



Epic heroes, like other armed heroes on horseback, became the focus of religious cults. Geser Khan was viewed by Mongols as a protective deity and worshipped in temples of Geser still in evidence in Ulaanbaatar today (*see* INNER ASIA, §3(ii)).

In Ordos, Inner Mongolia, Mongol elders sound a *tsagaan büree* (white conch-shell trumpet) daily at an altar standing outside their homes surmounted by wind-horse flags and the stallion-tailed standard of Chinggis Khan. The player faces the direction of the mausoleum of Chinggis Khan at Ezen Horoo, where his body, saddle and other ritual objects are believed to reside.

2. SHAMANISM. Traditionally, male and female Mongolian shamans had equal powers. Each uses his or her own melodies for spirit invocation (*duudlaga*) and for renditions of the spirits' words (*tamlaga*), which advise on concerns including illness, hunting tactics and divination. A shaman may enter a semi-dissociated state known as *yavgan böölöh* (walking shamanizing), during which the practitioner embodies the spirits who speak through the song; or *unaatai böölöh* (mounted shamanizing), a deeper dissociation during which the journey to the spirit world and encounters with spirits are enacted.

The female shaman, a number of whom survived the communist regime in Mongolia (1924–92), may call the *ongod* (spirits) with the rhythms and percussive sounds of the *aman huur* (jew's harp), *tayag* (staff), *hets* (skin-covered frame drum) and *holbogo* (small percussive iron pins attached to the drum, drumstick and costume) or with unaccompanied song and other vocal sounds (e.g. blowing, snorting, grunting, yawning, rolling and clicking the tongue). Her choices are influenced by the traditions of her group. Among Buryats, the jew's harp is used to call 'white' spirits to cure the sick (fig.4); a staff bedecked with metal cones is thrust back and forth while singing to call 'black' spirits. When the spirit approaches, the shaman makes the sound of the wind by blowing, and then beats the drum while spinning and perhaps jumping.

Among Darhats, the female shaman plays the *aman huur* during the vocationary period of illness and only when clearly 'chosen' is presented with a horse-headed staff (*morin tolgoitoi tayag*) or a staff with two or three fork-like branches. During the communist period, some Darhat shamans used this instrument instead of their drums, which had been confiscated by the authorities.

4. Buryat shaman jew's harp in case attached to cloth embodying ancestral spirits (ongon), property of J. Tsoloo, Ulaanbaatar Academy of Sciences, 1993

The Darhat shaman uses three styles: a rhythmic 'direct stroke' (*shuud tsohilt*), which expresses the journey along the road; a 'tongue stroke' (*helnii tsohilt*), which creates different pitches by moving the tongue back and forth and is used to imitate the cries of animals and to communicate with animal spirits; and a 'spirit stroke' (*ongodyn tsohilt*), which imitates the trotting of an animal and is used when the spirit is believed to have left the shaman's body and to be returning to its home in mountains or rivers. Tsaatan shamans use the jew's harp while shamanizing away from home, since it is easier to carry than a frame drum.

See also INNER ASIA, §3(i).

3. BUDDHISM. The form of Buddhism that expanded from Tibet into Mongolia during the 13th and 16th centuries was a blend of Mahayana Buddhism and Tantrism. Performance traditions and repertories in Mongolian monasteries drew on different Tibetan traditions and adapted them to their own needs. These traditions varied according to the four religious orders – Nyingmapa (Tibetan *rnying ma pa*), Kargyudpa (Tibetan *bka' brgyud pa*), Saskyapa (Tibetan *sa skya pa*) and Gelugpa (Tibetan *dge lugs pa*) – and their subdivisions, as well as between monasteries within the same tradition. During the 13th century Saskyapa and Kargyudpa monks were active in the Mongol court. The lineages and traditions of the Gelugpa school (called by Mongols *Shar Malgaitai* or 'Yellow Hat') gained supremacy when

Zanabazar (1635–1723) became the first incarnate Bogd Gegeen of Urga, Öndör Gegeen. However, according to monks who have been recently rehabilitated after the communist period, other schools, collectively referred to as *Ulaan Malgaitai* or 'Red Hat', managed to retain some influence until the communist period.

See also INNER ASIA, §3(iii).

(i) Song texts and notation. Each monastery had its own manuscripts of song texts and notations (*yan-yig*), which were closely guarded. There have been few European published sources on the forms that notation took or on any Mongolian Buddhist performance traditions (see Pozdneev, 1887; van Oost, 1915; Pegg, 2001). Four manuscripts entitled *Gür Duuny Bichig*, containing song texts used in Nomun Khan monasteries in the early 18th century and the 19th, have recently been collected in Mongolia. The second and fourth manuscripts also contain notations (*see* NOTATION, §II, 7, fig.11), developed and composed by successive incarnations of the Nomun Khan, that link the performance of songs in these monasteries with the tuning of the ten-string, half-tube zither, *yatga*. Some of the songs share titles with contemporary long-songs, for instance, *Tümen Eh* ('First of 10,000') and *Huuryn Magnai* ('Foremost of Fiddles').

(ii) Instruments. Pozdneev (1887) identified 24 liturgical instruments used in monasteries, including aerophones, idiophones, chordophones and membranophones. The only instrument indispensable to liturgical performance is said by Mongols to be the *honh*, a small embossed bronze bell held in the left hand, together with the *dorje* ('diamond', 'lightening' or 'thunderbolt'), held in the right. A range of cymbals (large-bossed, small-bossed, miniature) and drums are used, including the double-headed, portable frame drum *hengereg* and the double-headed hourglass drum with suspended pellet-strikers, *damar*. The thigh-bone trumpet, *gangdan büree*, normally played in pairs, is used for invocation of fierce deities and to signal entry of masked lama-dancers in the ritual dance-drama, *tsam*. The *bishgüür* (double-reed aerophone) is said by Ordos Mongols to have been created by gods to yield the sound of an Indian bird. In all schools, long metal bass trumpets, *büree*, are used primarily in Tantric ceremonies of the higher class. A pair that was on display in the Tantric temple museum of Choijin Lam in Ulaanbaatar during the communist period was played at the reinstatement of Danzan Ravjaa's monastery at Hamryn Hiid, East Gobi, in 1993. The white, end-blown, conch-shell trumpet *dun* or *tsagaan büree* is played in pairs in Buddhist contexts.

(iii) Masked dance-drama. When the Buddhist masked dance-drama, *tsam* (Tibetan *'chams*), reached Mongolia, possibly in the early 18th century, it assimilated elements from the indigenous shamanic and folk-religious complexes as well as developing distinctive Mongolian characteristics. Until the communist period it was held annually, in the first month of summer. A manual for performances at Mergen Monastery, Inner Mongolia, was written in 1750 by Mergen Diyanci lama, but the first evidence of performance is at Erdene Juu in 1787. In 1811 it was introduced to Ih or Da Hüree (Large Monastery), a former name of the capital, Ulaanbaatar. The masks, clothes and style of this *tsam* were initially based on the dance-book (*'chams yig*) of the fifth Dalai Lama Agvanluvsanjamts (Tibetan *ngag dbang blo bzang rgya mtsho*). Intricate dances were performed by lamas, masked and dressed to depict a variety of Tantric and local deities, evil spirits, monsters and animals.

The most powerful *tsam*, *Erlig-yin cim*, invoked the Mongolian 'Lord of the Underworld', the shamanic Erlig Khan. The central figure of the Gelugpa *tsam*, Yama, Lord of Death, portrayed by an ox's head with a fierce countenance, became the Mongolian Choijil, also identified with Erlig Khan. Black-faced, six-armed Mahakala, worshipped in Mongolia since the days of Khubilai Khan, was popular as a manifestation of the two-armed Gurgon, Lord of the Tent, favoured by the Saskya order. The war god Jamsaran appeared rarely in Tibetan ritual dances, but because of his status as protector of the Bogd Gegeens and therefore the nation, he was an important figure in Mongolian *tsam*. In the annual Khalkha *tsam* held in Ih Hüree, Erlig Khan was accompanied by the 'Lords of the Four Mountains', situated in the direction of the four cardinal points from the city. The Tsagaan Övgön (White Old Man) character appeared in most Mongolian *tsam*. One of the folk pantheon of gods, he was transformed into a joker figure when incorporated into Buddhism. Similarly, Kashin Khan appeared in most Mongolian *tsam*, but his representation and actions varied.

Each monastery had its own versions of *tsam*, with narratives, characterizations, dance movements and instrumentaria influenced by the beliefs, traditions and ethnicity of the resident order. Many local gods and spirits of the earth and sky were represented. The *tsam* at Hamryn Hiid monastery, for instance, featured a demoness called Mam, with black face and pendulous breasts.

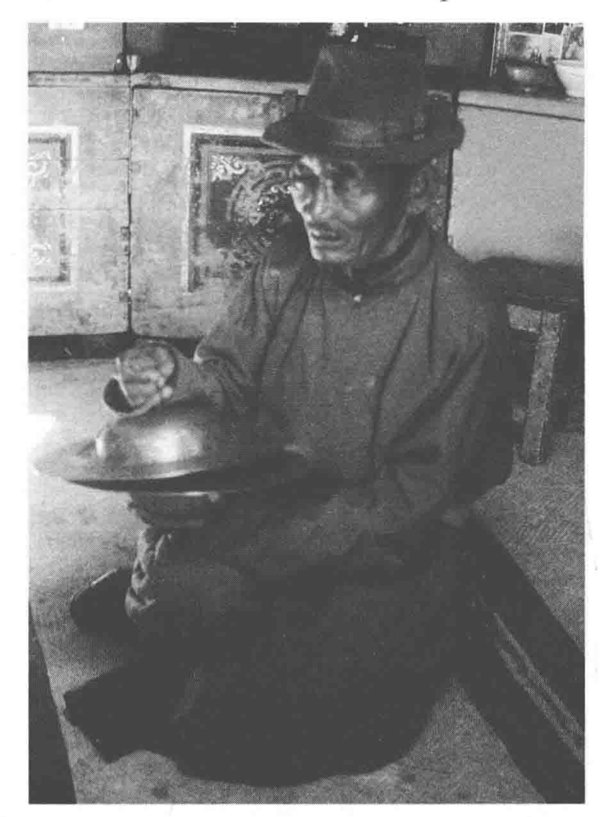
Monks participated in the *tsam* according to age, grade and level of mystical knowledge, for characterization involved embodiment of a god and his attributes. Dance steps and musical accompaniments were complex, carefully choreographed and required lengthy and careful rehearsals.

(iv) Secular genres in Buddhist contexts. Non-Buddhist musical genres were used in monastery contexts and by lamas outside of monasteries in order to attract ordinary herders to Buddhism. This was particularly the case with the 'Red Hats', whose path to Enlightenment allowed more work with the community than that of the 'Yellow Hats'. The 'Red Hat', Danzan Ravjaa (1803–56), the fifth reincarnation of the Noyon Khutuktu of the Gobi, staged musical dramas accompanied by an orchestra in a theatre in his monastery. In *Saran Höhöönii Namtar* ('Biography of the Moon Cuckoo'), put on during the 1830s, he used dialogue-songs with melodies from long-songs, for example *Övgön Shuvuu Hoyor* ('Old Man and Bird') and *Galuu Hün Hoyor* ('The Goose and the Man'). Performances were also given in the prince's palace, where the actors were predominantly lamas, and monasteries paid for transport, assistants and so on.

In west Mongolia, lamas invited epic bards to perform in monasteries, and the monks themselves even performed and taught novices. The Dörbet bard Namilan (*b* 1910) learnt the epics *Geser* and *Khan Harangui* from his lama teacher in Tögsbuyant Monastery, and the bard Parchin learnt the epic *Bum Erdene* from a performance by Sesren in the Bait monastery in present-day Uvs province. Epic heroes took on Buddhist characteristics, in particular Geser, who in Tibet eventually became equated with the Buddhist protective deity Vaiśravana but in Mongolia continued to be worshipped as Geser.

IV. 20th-century political influences

1. The communist periods: (i) Neutralization and folklorization (ii) Opera, ballet, orchestral and chamber music (iii) Pop and rock music. 2. Recent trends.



1. THE COMMUNIST PERIODS. After the victory of the Soviet-inspired communist revolution in Mongolia in 1924, music was increasingly used by the new regime as an ideological tool with which to fashion a 'socialist national identity'. Implementation of the formula 'national in form, socialist in content' involved the elimination of diversity and the neutralization (*saarmagjih*) of distinctive musical traditions. In Inner Mongolia, Mongol music was changed during the Chinese Cultural Revolution (1966–76).

(i) Neutralization and folklorization. In the Mongolian People's Republic of the 1920s and 30s, soldiers trained to play 'national' instruments disseminated 'cultural enlightenment' to scattered nomadic groups. Anything representing past traditions or difference, or symbolizing ethnic or group identities, was forbidden and destroyed. Although the forms of many traditional genres were retained, such as long-songs or praise-songs, contents were stripped of religious or ethnic references and replaced by approved lyrics such as praise of secularized nature, the motherland, industrial workers, patriotic heroes and the Party.

Epics survived in bowdlerised form by being mobilized as examples of creative 'national' genius (*see* BAATARYN AVIRMED). They were classified as 'ancient literature' because they are rich in poetical devices such as vowel harmony, formal parallelism and line-initial alliteration. The latter is the oldest technical device in Mongolian literature, used, for example, in the 13th-century *Secret History of the Mongols*. Epic studies concentrated on textual analysis rather than context. The identification of a common 'oral literary language' in heroic epics from different groups of Western Mongols was convenient for a regime intent on eradicating difference.

As in other communist countries, traditional music was 'folklorized' and Western art forms introduced. The Russian musicologist Boris Feodorovich Smirnov organized the first folk ensemble orchestras in which European and Mongolian national instruments played together, travelling to newly-built regional theatres to train musicians. Under Smirnov's influence, tuning systems were standardized; for instance, of the 12 traditional tuning systems for the *huur*, only *tungalog hög* ('bright' or 'clear' tuning) was allowed (*see* HUUR, §1(i), Table 1). European notation had to be learnt, instruments were 'modernized' and holding positions changed.

Because the half-tube zither or YATGA was associated with the aristocracy and with Buddhist practices, it was initially disapproved of by the new revolutionary regime; it fell into disuse until reintroduced during the 1950s as a 'national' instrument to be played in folk ensemble orchestras. In both the Mongolian People's Republic and in Inner Mongolia, instruments were modified to be able to play alongside European instruments. Under Chinese communism in Inner Mongolia, contexts of performance also had to change. Jamusu, a court musician in the orchestra of Prince De, for example, won prizes in competitions after the 1949 revolution and from 1960 to 1964 taught at the Inner Mongolia Art School.

5. Tsogoo of the Western Khalkhas plays Buddhist cymbals hidden during the communist era, 1998

Most Buddhist instruments and *tsam* masks were destroyed; some were hidden by herders until the 1990s when, with the introduction of democracy, they felt able to acknowledge their existence (fig.5).

(ii) Opera, ballet, orchestral and chamber music. Magsarjavyn Dugarjav (1893–1946) used the new European scale system in his revolutionary song compositions, for example *Ulaan Tug* ('The Red Flag', 1921) and *Mongol Internatsional* ('Mongol International', 1923), and became known as the 'father' of the new music. In 1942 Belegiin Damdinsüren (1919–92), together with B.F. Smirnov, composed the first Mongolian opera, *Uchirtai Gurvan Tolgoi* ('Among Three Mountains of Sorrow'); in 1947 Damdinsüren initiated chamber music as a genre with his composition for solo violin *Hentiin öndör uuland* ('In the Tall Mountains of Hentii'). Damdinsüren twice received the state prize of the Mongolian People's Republic (*Bugd Nairamdah Mongol Ard Uls (BNMAU)-yn Töriin Shagnal*): in 1949 for his musical drama *Iim Negen Haan Baijee* ('Such a Khan there was') and in 1951, together with Luvsnjambyn Mördörj, for joint composition of the national anthem of the Mongolian People's Republic (*BNMAU-yn Töriin Duulal*). Mördörj also received the award in 1946 for having used the new European tonal system in his musical setting in 1944 of Sengee's poem *Eh Oron* ('Motherland').

Sembiin Gonchigsumla (1915–91), composer of opera, ballet, symphonic and film music, was awarded the state prize in 1961 for the ballet *Ganhuyag* ('Steel Armour'). Jamiyangiin Chuluun (1928–96), whose ballet *Uran Has* ('Artisan Has', 1973) founded the Mongolian School of

Ballet, received the state prize in 1966, the People's Artist of the Mongolian People's Republic award (*BNMAU-yn Ardyn Jüjigchin Tsol*) in 1971 and the Order of Sükhbaatar (*Sühbaataryn Odon*) in 1988 for his contribution to the development of classical music and ballet. Davyn Luvsansharav (*b* 1926) was honoured with the state prize in 1963 for his composition of the song *Herlen* ('Herlen').

Recent recipients of state prizes include Byambasürengiin Sharav (*b* 1952), who received it in 1992 for his choral work *Zambuu Tiviin Naran* ('Sun of Zambuu Tiv', 1981), Symphony no.2 (1987) and orchestral prelude *Sersen Tal* ('Awoken Steppe', 1984); Tsogzolyn Natsagdorj (*b* 1951) in 1993 for his opera *Üülen Zaya* ('Cloudy Fate', 1988) and Symphony no.4 *Hödöögiin Saihan* ('Beauties of the Countryside', 1990); and Natsagiin Jantsannorov (*b* 1949), who combines traditional arts such as the long-song, overtone-singing and the horse-head fiddle with European instruments in his orchestral compositions, for example *Mongol Ayalguu* ('Mongolian Melody', 1993).

(iii) Pop and rock music. Although the communist regime tried to guard against influences from the world outside the communist block, pop and rock music influences began to creep in during the late 1960s. Two state bands were formed: Soyol Erdene (Precious Culture) in 1967 and Bayan Mongol (Rich Mongolia) in the late 1970s. Both played a genre known as *estrad* (from the Fr. *estrade*, meaning 'stage'), found in all countries of the former Soviet Union. Translated into English as 'variety', it consisted of a mixture of popular and traditional songs. Song lyrics that glorified the homeland and praised parents were arranged in regular rhythm for brass, electric organ, bass and drums to produce middle-of-the-road sounds. The bands were affiliated with the state-sponsored Philharmonia, which acted as manager, booking agent and censor and played in the auditoria of 'houses of culture'. Uhnaa, founder of Soyol Erdene, spent six years training in the conservatory in Bulgaria. He is a *gavyat* (state-merited artist), 'Conductor of Variety' and director of the Mongolian PO. Soyol Erdene became influenced by different kinds of music as it changed personnel. Initially drawing on the Beatles and Queen, the band became more rock-influenced in the late 1970s under the leadership of Zundar', then jazz orientated under G. Jargalsaihan in the early 80s; it metamorphosed into a pop-rock group during the early 1990s.

2. RECENT TRENDS. In post-communist Mongolia, musics of various provenances are being performed. On the one hand, diverse traditional vocal styles are being promoted (by a long-song association inaugurated in 1991), the validity of reducing Mongolian tonality to the European scale system is being questioned, and instruments confiscated during the hardline revolutionary years are being played and taught again. On the other hand, the Soviet-constructed traditional music continues to develop, as professional 'traditional' musicians make recordings for global consumption and are invited to perform in the West, and as traditional instruments are used in orchestral compositions. *Gavyat* Tsendiin Batchuluun (*b* 1952), for instance, created in 1989 the Morin Huuryn Chuulga (Horse-Head Fiddle Ensemble), which plays classical music and 'national' compositions.

The revival of religious practices such as the Buddhist *tsam* and shaman music has been complicated by their performance by professional actors and dancers in secular contexts. Rock groups are no longer sponsored by the state and in name connect with their historical heroes and belief systems (e.g. Chinggis Khan). Female pop singers are beginning to contest traditional gender roles and relations. For instance, in 1996 Oyunaa promoted her own concert in Ulaanbaatar to raise money for the vicitms of spring fires and floods; Saara had a hit record with the feminist song *Chi Heregüi* ('I Don't Need You'); and Soyol Erdene's vocalist Ariunaa declared, 'I am the Mongolian Madonna'.

Finally, there are disjunctures, tensions, flows and accommodations taking place between local and global soundscapes as Mongols participate musically on the world stage. Overtone-singing, for instance, has become a sonic icon of the exotic and spiritual 'other' for Westerners: while some Mongols continue to use it in traditional ways, others are shifting their ideoscapes to accommodate Western expectations.

CAROLE PEGG

Mongrédien, Jean (*b* Paris, 19 June 1932). French musicologist. He studied Classical literature at the Sorbonne, achieving the agrégation in grammar (1958). He was a reader at Cologne University (1964–9) and then taught at the Institut Français in London (1969–73). In 1973 he received an appointment at the Sorbonne, where, under the supervision of Chailley, he gained the doctorat ès lettres in 1976 with a dissertation on Jean-François Le Sueur. From 1976 until his retirement in 1996 he was professor at the Sorbonne, where he was also head of the music department (1977–83) and the founder in 1979 of the Centre d'Etudes de la Musique Française aux XVIIIe et XIXe Siècles; he was also director of this centre until his retirement.

Mongrédien has focussed his research, which has brought him international renown, on French music of the 18th and 19th centuries, particularly opera and sacred music. His most important work is undoubtedly *La musique en France des Lumières au Romantisme (1789–1830)* (Paris, 1986). He holds a central place in French musicology that derives from his teaching and the part he has played in training young researchers.

JEAN GRIBENSKI

Monica [monicha, monaca] (It.). A tune popular in Italy, Germany, France, the Low Countries and England from the 16th century to the 18th. The title stems from the text that was associated with the melody in Italy, *Madre non mi far monaca*. It tells the story of a young girl forced to become a nun, a recurring theme in much Italian folk literature from the Middle Ages to the Renaissance. Ex.1 shows the musical scheme as it appears in an early 17th-century keyboard manuscript. Both tune and text are found in a manuscript collection of *Canzonette e madrigaletti spirituali* (1610) compiled by Michele Pario (*I-BRq* L.IV.99). A variant of this text appeared earlier in a villanella by Antonio Scandello (*Il secondo libro dele canzone napolitane*, 1577), but the music is unrelated to the monica tune.

The origin of the tune is unknown. However, the terminology adopted in several tablatures of the 16th and early 17th centuries and the occurrence of the monica in dance-like pairs suggest a possible link with the dance-song tradition (Hudson, 1986). In German sources the tune occurs as a *Deutscher Tanz*, and in Italian, French, Flemish and English sources it is often labelled *Alemana*, *Almande*, or *Almagne*. It also appears as *Balo todesco* in Gorzanis's *Opera nova de lauto* (*c*1575–8, 2/1579), as *Ballo tedesco et francese* in G.A. Terzi's *Intavolatura di liutto* (1593), as *Balletto Alta Morona* in Caroso's *Il ballarino* (1581) and as *Balletto Celeste Giglio* in the revised edition of Caroso's dance manual (*Nobiltà di dame*, 1600). In a group of manuscript guitar tablatures that all seem to descend from the same copyist (*I-Fr* 2793, 2804, 2849; *Fn* Lindau Finaly 175, *Tn* Foà 9) and in *I-VEc* 1434, however, it is called *Aria venetiana* or *Aria Venetia che cantava Scappino*.

The chordal accompaniment for the music appears in numerous 17th-century Italian tablatures for the five-course guitar, beginning with Montesardo's *Nuova Inventione* (1606); often two standard *riprese* or ritornellos are included at the end (*see* RIPRESA, ex.1a).

Variations and simple versions of the song for keyboard, for discant and bass and for lute have survived in various manuscripts (Mischiati, 1975; Silbiger, 1980). Frescobaldi composed a set of keyboard variations called *Partite sopra la Monicha* (*Toccate e partite, libro primo*, 1615–16). Some scholars have attributed a *Missa sopra l'Aria della monaca* (*I-Rsg* mazzo IX n.8) to him, though this has been disputed (Annibaldi, 1986). Other keyboard variations appear in Bernardo Storace's *Selva di varie compositioni* (1664). Biagio Marini wrote a *Sonata sopra la monica* (1626) for instrumental ensemble.

Ex.1 *Madre mia non mi far monaca, US-LAum* 18 (*formerly* 51/1)

In France the monica melody circulated with different texts, of which the most popular was *Une jeune fillette* (the earliest occurrence is the *voix de ville* in Chardavoine's *Le recueil des plus excellentes chansons*, 1576). It later achieved popularity as a noël with the text *Une jeune* (or *vierge*) *pucelle*, a common subject for organ variations in the late 17th century and the 18th. Numerous lute collections published in the Low Countries from the second half of the 16th century introduce the monica tune as *Almande nonette*. The earliest known piece bearing this title is contained in Phalèse's *Luculentum theatrum musicum* (1568), but a *Chanson nouvelle de la prinse de Thionville, sur le chant de la Nonette* was included in the *Recueil des plus belles chansons de ce temps* as early as 1559. In Germany the monica was associated with the text *Ich ging einmal spazieren* and with the chorale *Von Gott will ich nicht lassen* (Magdeburg, *Christliche und tröstliche Tischgesänge*, 1572). Settings and elaborations of this hymn may be found in works of Schein, Scheidt, Schütz, Buxtehude and Bach. The same melody also appears in Lutheran hymn books with the text *Helft mir Gott es Güte preisen*. Various English instrumental versions of the monica carry the title *The Queen's Almaine* or *Oulde Almaine*, including a variation set by William Byrd (*Fitzwilliam Virginal Book*).

RICHARD HUDSON/GIUSEPPE GERBINO, ALEXANDER SILBIGER

Moniglia, Giovanni Andrea (*b* Florence, 22 March 1624; *d* Florence, 21 Sept 1700). Italian librettist and personal physician to Cardinal Gian Carlo de' Medici. Moniglia, despite lack of appreciation on the part of the academic reformers of the early 18th century, must be reckoned among the most original librettists of the 17th century. His comic librettos, of which the most famous is *Il potestà di Colognole*, better, though incorrectly, known as *La Tancia* (1657, music by Jacopo Melani), established a genre that continued unbroken into the next century. His *Hipermestra* (1658, music by Cavalli) and *Ercole in Tebe* (1661, music by Melani) set a standard for the *festa teatrale*. *Il ritorno d'Ulisse* (1669, music by Melani) and *Enea in Italia* (1670, music by Melani) anticipate in many

respects Quinault's librettos for Lully, and the signs of reform are clearly visible in *Il tiranno di Colco* (1688, music by Pagliardi).

His librettos were published under the title *Poesie dramatiche* (3 vols., Florence, 1689–90, 2/1698). The great majority were written for Florence with music by Jacopo Melani and Lorenzo Cattani, but they were also much in demand in Venice and Vienna. Other composers who set them include Cesti, Legrenzi, Pasquini and Pietro Andrea Ziani.

ROBERT LAMAR WEAVER

Moniot d'Arras (*fl* 1213–39). French trouvère. ('Moniot' is an Old French diminutive for 'monk'.) According to *Amours, s'onques en ma vie* his given name was Perron, but the authorship of this work has been questioned. The Moine d'Arras who appears as respondent to Guillaume Le Vinier in the jeu-parti *Moines, ne vous anuit pas* is assumed to be the same; Moniot was probably at one time associated with the abbey of St Vaast in Arras. Poems by him are apparently addressed to Robert III, Count of Dreux and to his brother, Jehan de Braine, to Gérard III, Seigneur of Picquigny and Vidame of Amiens, and to Alphonse of Portugal, Count of Boulogne. Two quotations from Moniot's poems appear in the *Roman de la violette*, written by Gerbert de Montreuil in about 1230. The charming pastourelle *Ce fut en mai* (whose attribution has also been questioned) was used by Hindemith in his *Nobilissima visione*.

Moniot wrote in a variety of genres and forms. In addition to the pastourelle and jeu-parti and the customary *chansons courtoises* he wrote two religious poems, both based on earlier models and their melodies, both apparently youthful works. The two initial and two concluding lines of the first strophes of *Bone amour* and *Li dous termines* form the opening and close of two *motets entés* (Motets 593 and 668 in Ludwig and other standard catalogues). The authorship of Motet 528*c* is credited to Moniot in the Vatican chansonnier (*I-Rvat* Reg.lat.1490), where it appears in monophonic form. While six chansons employ bar form, *Dame, ains que je voise* and *Quant voi les prés* use the repeat of the initial phrase that is characteristic of many rotrouenges. *Bone amour* is non-repetitive. *A ma dame*, *Chançonete a un chant* and *Nus n'a joie* begin in this fashion, but they each repeat one or more early phrases towards the end of the melody. *Amours n'est pas* and *Amours, s'onques en ma vie*, which share the same poetic form and melody, display the unusual structure *ABA*^{1}*A*^{2}*ACDEFG*. The same melody appears also as one of three settings of *Qui bien aime*, a poem of different form requiring the merging of the third and fourth phrases into one.

A comparatively large amount of information regarding rhythmic structure is available for Moniot's melodies. The motet quotations of *Li dous termines* and *Bone amour* indicate the 1st and 2nd modes respectively, while the 1st mode is indicated for large portions of *Ne me dones pas talent* in the Chansonnier Cangé (*F-Pn* fr.846). Passages exhibiting regular disposition of ligatures occur in *A l'entrant de la saison*, *Amours n'est pas*, *Chançonete a un chant*, *Dame, ains que je voise* and *Quant voi les prés*, while the modal transcription proposed by Gennrich for *Ce fut en mai* seems quite apt. *Bone amour* apparently enjoyed extraordinary popularity, since it served as the model for four later works. *Chançonete a un chant* and *Li dous termines* were each imitated in one later poem and *Ne me dones pas talent* in two.

THEODORE KARP

Moniot de Paris (*fl* mid-13th century). French trouvère. He may be identifiable with the Monniot who was the author of a *Dit de Fortune* written in 1278, but is not to be confused with Moniot d'Arras (*fl* 1213–39). Nine songs without conflicting attributions are ascribed to Moniot de Paris in a group of manuscripts that represents the main tradition of trouvère song. In these sources he is usually grouped with trouvères who were active in the mid- and late 13th century; this fact tends to reinforce

Dyggve's estimate that he was active at about the middle of the century.

Moniot's works are of interest largely because of the prevalence of relatively simple forms with refrain. Particularly prominent is the rotrouenge, as defined by Spanke (p.294) and Gennrich; the four examples are invariably of the utmost simplicity in musical construction, and their melodies show none of the sophistication of the *chanson courtoise*. An extreme illustration of this tendency is *Lonc tens ai mon tens usé* with its 'vadu, vadu, vadu, va' refrain; its melody, made up of four phrases, is restricted almost entirely to repeated notes beginning on C, progressing to B, A, and finally cadencing on G. Other songs, not of the rotrouenge type, are also characterized by simple melodies. *Au nouvel tens*, for instance, has three basic melodic phrases which together do not exceed the range of a major 6th. The pastoral character of this song is also found in several others; their musical simplicity and rustic themes are probably not coincidental. Evidence for the popularity of these melodies is provided by the fact that we have contrafacta for no fewer than four (*Au nouvel tens*, *Je chevauchoie l'autrier*, *Li tens qui reverdoie* and *Qui veut amours*). *Je chevauchoie* was used twice by Moniot himself.

ROBERT FALCK

Moniuszko, Stanisław (*b* Ubiel, nr Minsk, 5 May 1819; *d* Warsaw, 4 June 1872). Polish composer. He was the leading Polish opera composer of the 19th century.

1. LIFE. Born into the Polish middle gentry in Ubiel, a small village in the province of Minsk, Moniuszko was brought into close contact with music and the other arts early in life. His father Czesław, at one time an officer in Napoleon's army, was a noted poet and painter, and his mother Elżbieta a talented amateur pianist who gave the composer his earliest piano lessons at the age of four. In 1827 the Moniuszkos moved to Warsaw, where Stanisław had lessons with the German-born August Freyer (1803–83), at that time a pupil of Józef Elsner at the Warsaw Conservatory, where Chopin was a fellow student. In summer 1830 the family returned to Minsk (owing to financial pressures), and Moniuszko continued his musical studies with Dominik Stefanowicz, conductor of the local theatre orchestra. He left the gymnasium in Minsk in 1834, ostensibly for health reasons, but probably because his father disliked the growing Russian influence on formal education. That was no doubt why he was sent to Berlin (rather than Moscow or St Petersburg) for further musical studies. Moniuszko enrolled at the Berlin Singakademie in 1837, studying there with C.F. Rungenhagen. His knowledge of opera, which he had already encountered in Vilnius, was naturally widened in Berlin, where Spontini was director of the court opera (Königliche Schauspiele) and where works by Weber, Marschner and Lortzing were recent additions to the repertory. On completing his studies in 1839, he returned to Vilnius, married Aleksandra Müller and made a meagre living as a piano teacher, organist and occasional conductor of the theatre orchestra.

Moniuszko's earliest music of any significance dates from the Berlin years and includes a group of songs (published by Bote & Bock), two string quartets and the operetta *Nocleg w Apeninach* ('A Night in the Apennines'), given its first performance in Vilnius in 1839. His return to Poland inaugurated a period of intensive composition, including songs – several volumes of his *Śpiewnik domowy* ('Home Songbook') – and 'operettas' composed for the amateur operatic society of Vilnius. The best of these, *Loteria* ('The Lottery'), was composed in 1843, had its first performance in Minsk in that year and was given a Warsaw performance three years later. For Moniuszko the visit to Warsaw in 1846 was an important event. He met there some of the principal figures in Polish artistic circles, including the ethnologist Oskar Kolberg and the poet Włodzimierz Wolski, future librettist of *Halka* and *Hrabina* ('The Countess'). It was the stimulus of this visit which inspired Moniuszko to tackle a 'grand opera', and he began work on *Halka* almost immediately. Its two-act version was given a concert performance in Vilnius in 1848 and a staged production six years later. When it was eventually (and after many difficulties) accepted for production in Warsaw, Moniuszko revised the work and enlarged it to four acts, and this second version was performed to immediate acclaim in January 1858. It remains to this day the most popular of all Polish operas.

The success of *Halka* in Warsaw belatedly launched Moniuszko's career. There had already been a measure of wider recognition during three visits to St Petersburg, but *Halka* made him a national celebrity and he immediately embarked on a European tour, meeting Smetana in Prague and Liszt in Weimar, before spending some time in Paris, where he composed most of his one-act opera *Flis* ('The Raftsman'). On his return to Poland he accepted the post of director of Polish productions at the Wielki Theatre, completed *The Raftsman* and began work on *The Countess*. Both works were performed with great success

1. *Stanisław Moniuszko conducting at the Warsaw Musical Society: lithograph from 'Biesiada literacka', no.36 (1892)*

in Warsaw (1858 and 1860), and Moniuszko began work on another one-act opera, *Verbum nobile*, his first collaboration with Jan Chęciński. *Verbum nobile* was given in 1861, and in the same year Moniuszko and Chęciński began work on *Straszny dwór* ('The Haunted Manor').

While working on *The Haunted Manor*, Moniuszko was inevitably caught up in the growing political ferment which led to the insurrection of 1863. The Wielki Theatre was converted into a barracks, Moniuszko's post was lost and his only source of income was a position (from December 1863) as professor of choral conducting at Apolinary Kątski's newly founded Music Institute (later to become a reconstituted Warsaw Conservatory). In the aftermath of the insurrection, censorship in Warsaw was severe and *The Haunted Manor*, regarded as excessively patriotic in tone, was withdrawn after three performances in 1865. From this point there was a decline in Moniuszko's creative powers, and his last major works, the 'Indian' opera *Paria* and the one-act operetta *Beata*, both to librettos by Chęciński, were failures with the Warsaw public on their performances in 1869 and 1872 respectively. Moniuszko died in Warsaw of a heart attack on 4 June 1872.

2. WORKS. Like Glinka in Russia, Erkel in Hungary and Smetana in the Czech lands, Moniuszko has become associated above all with the concept of a national style in opera, and to some extent he himself fostered this idea. He was very much a product of his time and place. Musical life in Poland following the 1830 insurrection was uneducated and conservative, with little in the way of sustained institutional development in any of the major cities. The music which responded most directly to the needs of the country during these years was not Chopin's, which so obviously transcended those needs, but Moniuszko's, in the 12 volumes of his *Home Songbook* and in his operas. In the provincial setting of Vilnius and later in Warsaw he fathered a national operatic style of conservative bent, colouring the European styles of an earlier generation with the rhythms of Polish national dances in a manner which was to dictate the musical formulation of 'Polishness' to later composers.

Of his mature operas, only one, *Paria*, does not have a Polish setting. *The Countess*, *Verbum nobile* and *The Haunted Manor* depict the world of the Polish gentry, *The Raftsman* deals with ordinary Polish people, and *Halka* concerns the relation between the two (fig.2). In all there is a celebration of the social life and customs of Poland, past and present. Moniuszko had great difficulties with the Russian censor in Warsaw, but even with their more overtly patriotic elements removed his operas were bound to be a focus for the nationalist sentiment of a people deprived of political status. The nationalist element would often be heightened in production, moreover, by idealizing the world of an earlier 'grand Poland' as a foil to contemporary discontents. In this context the national

dances – polonaise, mazurka and krakowiak – which underpin so much of Moniuszko's music carried powerfully symbolic values.

It had been common for early 19th-century vaudevilles or Singspiele by Polish composers to use Polish dances as the basis for arias and ensembles. In Moniuszko's mature works this practice carried a new ideological burden as the chief means of establishing a national operatic idiom. *Halka* set the tone, with choral polonaises and polonaise arias depicting the nobility while mazurka and krakowiak arias represent the lower orders. In keeping with its setting, *The Raftsman* employs only mazurka and krakowiak elements. *The Countess*, *Verbum nobile* and *The Haunted Manor* again juxtapose movements based on the polonaise and mazurka, with an additional krakowiak aria in Act 1 of *The Haunted Manor* and a sprinkling of polkas (a Czech 'Polish dance') in *The Countess*. Other national elements include the Highlander Dances in Act 3 of *Halka* and the use of folksong for the huntsmen's choruses in *The Countess* and *The Haunted Manor*. Most curious of all are the polonaise and mazurka elements which find their way into the thoroughly Indian setting of *Paria*.

National elements apart, the operas are indebted above all to early 19th-century French models in their overall design. *Halka* and *The Countess* are similar in general layout to French *grand opéra* (Auber's *La muette de Portici* was a particular influence), especially in their extended scenic tableaux, of which Act 3 of *Halka* and Act 2 of *The Countess* are representative. The one-act operas *The Raftsman* and *Verbum nobile* resemble rather some of the one-act operas prepared by Scribe for the Opéra-Comique. *The Haunted Manor* stands somewhat apart, not only in its blend of Opéra-Comique and Italian elements, but also in the role assigned to the chorus, always prominent in Moniuszko, but here of central importance.

Solo vocal writing ranges from simple strophic songs, such as Chorąży's song in Act 1 of *The Countess*, to big, multi-sectional arias such as Halka's aria in Act 2 of *Halka*, Kazimierz's aria in Act 3 of *The Countess* and Stefan's aria in Act 3 of *The Haunted Manor*. It is here above all that Moniuszko comes closest stylistically to Italian vocal lyricism, that of Rossini in particular. In general, however, solo arias are not extensive in the operas, and tend to be outweighed by duets, ensembles and choruses. A major influence on the choral writing and also on the orchestral style of *Halka* and parts of *The Haunted Manor* was Weber. Moniuszko knew *Der Freischütz* well and regarded it as an important model for his own conception of national opera. Moniuszko's particular blend of established European traditions and Polish national dances has ensured his operas a special place in the Polish repertory, though there are as yet few signs that they can be exported with success.

Next to the operas, Moniuszko's songs were his major contribution to 19th-century Polish music history, though as much for their social and political significance as for their musical quality. Indeed, before *Halka* he regarded himself primarily as a composer of songs. The Mickiewicz settings published in Berlin in 1838 launched him as a composer. They were well received in both the Polish and the German presses, with Fink (in the Berlin *Allgemeine musikalische Zeitung*) describing them as 'national in both word and tone'. On his return to Vilnius from Berlin Moniuszko began the practice of issuing his songs in volumes significantly entitled *Śpiewnik domowy* ('Home Songbook'), of which the first was issued in 1843. They were the first Polish songs of any real worth and quickly won enormous popularity among the middle classes, to a large extent replacing the foreign repertory then fashionable in Poland. Such songs as *Stary kapral* ('The Old Corporal'), *Prasniczka* ('Spinning-Wheel'), and *Trzech budrysów* ('The Three Rascals') have retained their place in Polish affections to this day. Yet their popularity relied on their choice of texts at least as much as on their musical qualities. In this respect Moniuszko's aims were clearly spelt out in an issue of *Tygodnik Petersburski* (12 September 1842):

> I tried to select verses from our best poets ... being of the conviction that these poetic works show the greatest national character and colour ... and that which is national or local, that which is an echo of our childhood memories, will never cease to please the inhabitants of the land on which they were born and raised.

His other compositions are of rather less interest. They include seven masses; several cantatas, including two based on Mickiewicz, *Widma* ('The Phantoms') and *Sonety krymskie*, a setting of eight poems from Mickiewicz's *Crimean Sonnets*; some orchestral works (the overture *Bajka* retains much of its charm and freshness even today); two string quartets completed during his last year in Berlin, and a substantial body of salon piano music. But it was above all as a composer of operas and songs that Moniuszko found favour with his compatriots. Piano music penetrated only to certain fairly select social circles: the landed gentry, the middle classes, the intelligentsia. Opera, too, reached only the few. However, the folk-based arias of *Halka* and, to a lesser extent, *The Haunted Manor* extended well beyond the opera house, acquiring in the process something close to the status of folksongs. They joined forces with the best of the songs from the *Home Songbooks* to create a 'music of the people', where heroic themes drawn from Polish history and folklore might resonate with the rhythms of the mazurka, the krakowiak and the polonaise. This model established the threshold of taste for late 19th-century Polish audiences, and it proved a difficult threshold to cross.

WORKS

(*selective list*)

Edition: *Stanisław Moniuszko: Dziela* [Works], ed. W. Rudziński (Kraków, 1965–) [R]

all MSS in PL-Wtm; printed works published in Warsaw unless otherwise stated

OPERAS AND OPERETTAS

Biuraliści [The Bureaucrats] (operetta, 1, I.F. Skarbeck), 1834, unperf.

Nocleg w Apeninach [A Night in the Apennines] (operetta, 1, A. Fredro), Vilnius, 1839

Cudowna woda [The Water of Life] (operetta, 2), comp. *c*1840, lost except ov.

Ideał, czyli Nowa Preciosa [Perfection, or The New Preciosa] (operetta, 2, O. Milewski), Vilnius, 1840

Karmaniol, czyli Francuzi lubią żartować [Carmagnole, or The French Like Joking] (operetta, Milewski, after Théaulon de Forges and E. Jaime), 1841, unperf.

Nowy Don Kiszot, czyli Sto szaleństw [The New Don Quixote, or 100 Follies] (operetta, 3, Fredro, after M. de Cervantes), 1841, Lwów, 1849, vs (1927)

Żółta szlafmyca [The Yellow Nightcap] (operetta, F. Zabłocki), comp. 1841, 1 song (1863)

Pobór rekrutów [Conscription] (operetta, W. Marcinkiewicz), comp. 1842, 1 song in Śpiewnik domowy, viii (1908)

Loteria [The Lottery] (operetta, 1, Milewski), Minsk, 1843 (1908)
Halka, 1846–7 (op, 2, W. Wolski, after K. Wójcicki: *Stary gawędy i obrazy* [Legends and pictures]), concert perf., Vilnius, 1848, vs (Vilnius, 1850); staged Vilnius, 18 Feb 1854; rev. (4, Wolski), 1857, Warsaw, Wielki, 1 Jan 1858, vs (1858), fs (1861)
Sielanka [Idyll] (op, 2, Marcinkiewicz), comp. ?1848, lost
Cyganie [The Gypsies] (operetta, F.D. Kniaźnin), 1850, Vilnius, 20 May 1852; rev. as Jawnuta, Warsaw, 5 June 1860
Bettly (comic op, 2, E. Scribe and Mélesville [A.-H.-J. Duveyrier]), Vilnius, 20 May 1852
Flis [The Raftsman] (op, 1, W. Bogusławski), Warsaw, Wielki, 24 Sept 1858, excerpts, vs (1858), ov., fs (1898), vs (1902)
Rokiczana (op, 3, J. Korzeniowski), 1858–9, inc., concert perf. (excerpts), 16 Dec 1860, 1 ballad (1913)
Hrabina [The Countess] (op, 4, Wolski, after J. Dierzowski), 1859, Warsaw, Wielki, 7 Feb 1860, excerpts, vs (1860), ov. and ballet music, fs (1899), vs (1901)
Paria (op, prol, 3, J. Chęciński, after C. Delavigne), 1859–69, Warsaw, Wielki, 11 Dec 1869, ov. (1901), vs (1913)
Verbum nobile (op, 1, Chęciński), 1860, Warsaw, Wielki, 1 Jan 1861, vs (1861), fs (1953)
Straszny dwór [The Haunted Manor] (op, 4, Chęciński, after Wójcicki: *Stary gawędy i obrazy*), 1861–4, Warsaw, Wielki, 28 Sept 1865, excerpts, vs (1892), vs (1898), fs (1937)
Beata (operetta, 1, Chęciński), 1870–71, Warsaw, Wielki, 2 Feb 1872, 4 songs (1872)
Trea (op, 2, J. Jasiński, after Flem. legend), comp. 1872, inc.

Dates unknown: Walka muzyków [The Musician's Struggle] (operetta, Marcinkiewicz); Nowy dziedzic [The New Landlord] (operetta, M. Radziszewski); Sen wieszcza [The Seer's Dream] (W. Syrokomla, after J.B. Rosier and A. de Leuven: *Le songe d'une nuit d'été*), 1 song in Śpiewnik domowy, vii (1877)

OTHER STAGE

Incid music: Kupiec wenecki [The Merchant of Venice] (W. Shakespeare), perf. 1870–71; Zbójcy [The Robbers] (F. von Schiller), 1870–71; Hamlet (Shakespeare), Warsaw, 24 March 1871; music to 11 other plays
Ballets: Monte Christo (after A. Dumas (i)), Warsaw, 27 Aug 1866; Na kwaterze [In the Quarters], Warsaw, 6 Sept 1868; Figle szatana [The Devil's Jokes], Warsaw, 1 Dec 1870, collab. A. Münchheimer

SACRED VOCAL

[4] Litanie Ostrobramskie [Ostra Brama Litanies to the BVM], solo vv, chorus, orch, 1843, 1849, before 1854, 1855; R D/vi/30
7 masses: Requiem, d, 1850 (1862); e, 1855 (1860); E♭, 1865 (1874); a (1870); B♭, Warsaw, 19 May 1872 (1873); Requiem, g (1873); D♭ (1874)
Requiem aeternam, solo vv, chorus, orch (1890)
Other works: mass frags., smaller choral and solo works

SECULAR VOCAL

Milda (cant., after J.I. Kraszewski: *Witoloraud*a), solo vv, chorus, orch, Vilnius, 18 Dec 1848 (1909)
Nijoła (cant., after Kraszewski: *Witoloraud*a), Vilnius, 8 March 1852
Madonna (Petrarch: *Sonnets*), B solo, chorus, orch, St Petersburg, 20 March 1856 (Kraków, 1961)
Ballada o Florianie Szarym [Ballad of Florian the Grey] (J. Korzeniowski), Bar, chorus, orch, 1858–9 (1913) [from op Rokiczana]
Widma [Phantoms] (cant., after A. Mickiewicz: *Dziady*), solo vv, chorus, orch, before 1859, Warsaw, 1865 (1900)
Sonety krymskie [Crimean Sonnets] (cant., Mickiewicz), solo vv, chorus, orch, 1867, Warsaw, 16 Feb 1868 (1901)
Pani Twardowska (ballad, Mickiewicz), solo vv, chorus, orch, Warsaw, 8 Dec 1869
Krumine (cant.), Vilnius, date unknown
4 other cants.
360 songs, R A/i–vi, 267 orig. pubd in Śpiewnik domowy, i–vi (Vilnius, 1843–59), vii–xii (Warsaw, 1877–1910) [full list in Nowaczyk]

INSTRUMENTAL

Orch: Bajka [The Fairy Tale], ov., Vilnius, 1 May 1848 (Kraków, 1949); Kain, ov., St Petersburg, March 1856; Polonaise de concert, arr. pf (1866); Uwertura wojenna [Military Ov.], Vilnius, 19 March 1857
Chbr: 2 str qts, no.1, d, 1839, no.2, f, before 1840: R E/ii/33; works for solo pf and pf 4 hands, R E/iii/34, incl. 4 Mazurkas; Song without Words; Fraszki [Epigrams]; 6 Polonaises (transcrs. of Ogiński); Polkas ('Daniel' and 'Gabriela'); Aniol Pański w wiejskim kościółku [Prayers in a Village Church]; 7 Waltzes; Introduction, 5 Waltzes and Finale; Co mówia obłocki o ksiezycu w pogodna noc wiosenna? [What do the Clouds Tell the Moon and the Earth on Spring Nights?]; numerous transcrs. from Kurpiński and Moniuszko

PEDAGOGICAL WORKS

Pamiętnik do nauki harmonii [Textbook on harmony] (1871)
Szkola na fortepian [Piano method], unpubd

JIM SAMSON

Monk, Christopher (William) (*b* Delhi, 28 Dec 1921; *d* Farnham, 17 July 1991). English cornett and serpent maker. He studied history at Lincoln College, Oxford from 1940 to 1944; from 1942 to 1945 he studied the trumpet with George Eskdale. He then became a full-time maker and player of historical instruments. His first cornett was completed in March 1955, and his first cornettino in 1956; he first broadcast as cornett player on 25 April 1958. In 1968, with Len Ward, he devised an inexpensive system of manufacturing resin cornetts, later also applied to serpents; thousands of them have since gone to all parts of the world, doing much to stimulate the modern revival of these instruments. With Andrew

van der Beek and Alan Lumsden he formed the London Serpent Trio, which first appeared in 1976. Production of natural trumpets, sackbuts (with Ted Kirby) and flat trumpets (with Andrew Pinnock, made by Frank Tomes) followed in the 1980s. He contributed a chapter, 'The Older Brass Intruments: Cornett, Trombone, and Trumpet', to the book edited by Anthony C. Baines, *Musical Instruments through the Ages* (Harmondsworth, 1961, 2/1966/*R*). Since 1991 Christopher Monk Instruments has been directed by Jeremy West. For further information see C. Bevan: 'Christopher Monk, 1921–1991: the Purest Serpentist', *HBSJ*, iii (1991), 1–3.

EDWARD H. TARR

Monk, Edwin George (*b* Frome, 13 Dec 1819; *d* Radley, nr Oxford, 3 Jan 1900). English organist and composer. After studying in London with Hullah, Henry Phillips and Macfarren, he became organist and music master at St Columba's College, Stackallan, in 1844. In 1847 he settled in Oxford, where he helped to found the University Motet and Madrigal Society and became its first conductor. He graduated BMus in 1848 and proceeded DMus in 1856. In 1847 he was one of the four founder members of staff at Radley College where he developed a fine tradition of choral worship. He was appointed organist of York Minster in 1859, retiring in 1883. One of the original members of the Musical Association (1874), he was also an amateur astronomer (elected FRAS, 1871) and a Bible scholar, and compiled the librettos for Macfarren's oratorios *St John the Baptist*, *The Resurrection* and *Joseph*. Monk's most enduring influence, as editor and composer, was in Anglican psalmody. Several of his chants are still in regular use. His other compositions include several concert works for chorus, a Unison Service in A, some 40 hymn tunes and five anthems.

STEPHEN BANFIELD

Monk, Meredith (Jane) (*b* New York, 20 Nov 1942). American composer, singer, dancer and choreographer. She attended Sarah Lawrence College (BA 1964), where she studied a combination of theatre, dance and music. On her return to New York, she became involved in the James Tenney-Philip Corner-Malcolm Goldstein-Morton Feldman experimental music scene, and in the happenings and performance art of the Judson Theater. In her first important piece, *16-Millimeter Earrings* (1966), she filmed herself dancing and made her own experimental soundtrack by running three tape loops simultaneously. Her first large theatre work, *Juice* (1969), an attempt to overturn concert conventions, was performed on three non-consecutive nights over a six-week period in three different and increasingly smaller spaces.

During the early 1970s Monk concentrated primarily on solo work and singing. The majority of her early works are for solo voice, or voice and piano. Despite her activity in other media (she is as often written about by dance, theatre and performance art critics as by music critics), her lithe vocal effects are her most characteristic trademark. Her repertory of vocal techniques includes glottal stops, Amerindian-style vibrato, nasal singing, nonsense syllables and child-like vocal tones, sounds featured in Balkan singing, Tibetan chanting and other non-Western traditions. *Lullaby no.4*, from the recording *Songs from the Hill* (1976), uses the feline sound 'me-ow' as its entire material. Other pieces, based on repetitive piano accompaniments, contain only a word or two of text; these include *Scared Song* ('Oh, I'm Scared') and *Double Fiesta* ('Vacation'). In *Our Lady of Late* (1973) Monk accompanied herself by playing a wine glass, taking a sip of wine between songs to alter the pitch of the drone.

With *Quarry: an Opera* (1976), Monk returned to larger productions. Many of these evoke themes of totalitarianism and holocaust. *Quarry* includes film footage of singers dressed in white standing in a rock quarry, and later of bodies floating in black water. *The Games* (1983), a collaboration with performance artist Ping Chong, chronicles the rise of a Nazi-style dictator in a post-holocaust world. After forming her own ensemble in 1978, Monk wrote *Dolmen Music* (1979), a haunting work using primitive chanting techniques. Her first relatively conventional opera, *Atlas* (1991), is inspired by the life of Alexandra David-Neel, a scientist who was the first Western woman to travel in Tibet.

Monk has rejected the term 'minimalism' to describe her music, arguing that she seeks an emotionality she feels is absent in the geometric patterns of early works by Steve Reich and Philip Glass. Repetition and ostinato, however, are central to her compositions. *Atlas*, for example, contains many scenes based on changing ostinatos, often in complex metres. The ostinato of the 'Travel Dream' scene alternates irregularly between patterns of 5/4 + 2/4 and 9/8 + 2/4 (ex.1). In 'Other Worlds Revealed' from Act 3, the striking canonic effect of a slowly blurring and echoing melody is created; to produce this effect each singer in a circle begins to sing as soon as the person standing beside them has started. In 'Explorers' Junctures', a single melody passes from singer to singer, note by note.

Monk's basic style has remained remarkably unchanged over three decades. She writes with her ensemble in mind, tailoring many of her works to the specific performers involved. *The Politics of Quiet* (1996) was written

Meredith Monk: *Atlas*; ostinato from 'Travel Dream Song'

specifically to allow each ensemble member to express his or her own vocal personality. In the 'Agricultural Community' scene of *Atlas*, which takes place over a rousing 5/4 ostinato, vocal parts were not notated but worked out in rehearsal, an unconventional approach common to Monk's compositional method. Her honours include the MacArthur Foundation Genius Award (1995).

KYLE GANN

Monk, Thelonious (Sphere) [Thelious Junior] (*b* Rocky Mount, NC, 10 Oct 1917; *d* Englewood, NJ, 17 Feb 1982). American jazz pianist and composer. Although he remained long misunderstood and little known, both his playing and his compositions had a formative influence on modern jazz.

1. Life. 2. Compositions. 3. Piano style.

1. LIFE. When Monk was four his family moved to New York. In the early 1940s he became house pianist at Minton's Playhouse in Harlem, where he helped to formulate the emerging bop style. In 1944 he recorded with the Coleman Hawkins Quartet, and in the same year his collaboration with Cootie Williams and lyricist Bernie Hanighen, the well-known tune *'Round Midnight* (also known as *Round about Midnight*), was recorded by Williams (Hit). By this time Monk was playing at the Spotlite on 52nd Street with Dizzy Gillespie's orchestra. Between 1947 and 1952 he made recordings for Blue Note: *Evidence*, *Criss Cross* and a bizarre arrangement of *Carolina Moon* (1952, BN) are regarded as the first characteristic works of his output, along with the recordings he made as a sideman for Charlie Parker in 1950, which included *Bloomdido* and *My Melancholy Baby* (both 1950, Mer./Clef). In 1952 Monk acquired a contract from Prestige Records, with which he remained associated for three years. Although this was perhaps the leanest period in his career in terms of live performances, in October 1954 he recorded an album with Sonny Rollins and, in a memorable session with the Miles Davis All Stars on Christmas Eve, he gave perhaps his finest solo performance on *Bags' Groove* (1954, Prst.).

In 1955 Prestige sold his contract to Riverside Records, where Monk remained until 1961. An album with Art Blakey for Atlantic (1957) and three of his albums for Riverside (*Brilliant Corners*, 1956; *Thelonious Himself*, 1957; *Monk's Music*, 1957) were masterpieces, and almost overnight Monk became one of the most acclaimed and controversial jazz improvisers of the late 1950s. In 1957 he began appearing regularly with Coltrane, Wilbur Ware and Shadow Wilson at the Five Spot in New York. During the next few years his group included such noteworthy musicians as Johnny Griffin, Roy Haynes and Charlie Rouse, his lifelong associate. He began to tour the USA regularly and also to appear in Europe.

In 1962 Monk's popularity was such that he was put under contract by Columbia. He was also made the subject of a cover story by *Time* (1964), an honour bestowed on only three other jazz musicians. He made several overseas tours, including visits to Mexico and Japan. Around 1970 he disbanded his group and in 1971–2 worked in the Giants of Jazz together with Dizzy Gillespie, Kai Winding, Sonny Stitt, Al McKibbon and Art Blakey. In November 1971 he made solo and trio recordings for Black Lion Records in London, which some critics felt heralded a new era in his development, but shortly afterwards he suddenly retired from public view. He made three final performances with an orchestra at Carnegie Hall, and appeared with a quartet at the Newport Jazz Festival New York in 1975 and 1976, but otherwise spent his final years in seclusion in Weehawken, New Jersey, at the home of the Baroness Pannonica de Koenigswarter, his lifelong friend and patron. His life was celebrated in the films *Music in Monk Time* (*c*1985), *Thelonious Monk: Straight, No Chaser* (*c*1989) and *A Great Day in Harlem* (1995).

2. COMPOSITIONS. Monk's compositions fall into three periods: those recorded for Blue Note in the 1940s, his works in the 1950s, mainly for Riverside, and a few tunes

written after 1960 for Columbia. Most critics consider those of his first two periods the most significant. Of the first-period works, *Round about Midnight* is his most popular, both with the public and with musicians. *Evidence*, *Misterioso* and particularly *Criss Cross* are considered his masterpieces in purely instrumental terms; quite different from each other, they are united by vigorous, angular melodies of a strongly pianistic character. The first eight bars of *Criss Cross*, for example, consist of two contrasting motifs and demonstrate Monk's highly personal use of rhythmic displacement (ex.1). Each

Ex.1 *Criss Cross* (1951, BN)

piece of this period reveals fresh facets of his thinking: *Eronel* demonstrates his affection for bop, and *Hornin' In* his fascination with the whole-tone scale, which allowed him to suspend the work's tonality for bars at a time (ex.2).

Another aspect of Monk's first-period pieces is his reworking of standard tunes, such as 'Smoke gets in your eyes' (from *Thelonious Monk Quintet*, 1954, Prst.) and *Carolina Moon*, in which he dramatically alters and develops familiar material in an unorthodox and entirely characteristic fashion. In his second period Monk produced many carefree popular pieces such as *Jackie-ing*, but also substantial works, including *Pannonica*, the highly dissonant *Crepuscule with Nellie* and *Gallop's Gallop*, a tour de force of 'wrong' notes which unexpectedly interrupt the conventional harmonies. His most important composition of the 1950s, and perhaps the most unorthodox work of his career, was *Brilliant Corners* whose melody skirts the whole-tone, chromatic and Lydian scales and is furthest removed from his African American roots.

3. Piano style. It is as a performer that Monk was most misunderstood. He did not always exhibit the customary right-hand dexterity of most jazz pianists and, more

Ex.2 *Hornin' In* (1952, BN)

importantly, his fellow jazz musicians quite often disagreed with his choice of notes. But his style, based on the Harlem stride tradition, had many strengths: a highly distinctive timbre, an ability to provide uncanny rhythmic surprises, and a wide variety of articulation. Some of his performances, such as *I Should Care* (from *Thelonious Himself*, 1957, Riv.), show a fresh use of rubato quite different from that of other jazz or lounge pianists. Monk also favoured 'crushed' notes and clusters which 'evaporated' to leave a few key pitches. But his most important contribution as a pianist was his remarkable ability to improvise a coherent musical argument with a logic and structure comparable with the best of his notated compositions. Monk invented and developed ideas rather than merely embroidering chord changes. Brilliant examples can be found in his solos and accompaniments on the recordings of *Misterioso* (1948) and especially *Bags' Groove*, both with Milt Jackson. The album *Thelonious Monk* (1954, Swing) offers great insight into the audacity of Monk's music, his solo version of *Eronel* in particular being outstanding for its considerable pianistic demands. Although many young musicians have borrowed and reinterpreted Monk's melodies for their own improvisations, most jazz pianists seem incapable or unwilling to pursue the introverted, quirky, yet meticulous thought processes that inspired Monk's greatest solos.

SELECTED COMPOSITIONS

Thelonious (1947, BN); Humph (1947, BN); Epistrophy (1948, BN); I Mean You (1948, BN); Misterioso (1948, BN); Criss Cross (1951, BN); Four in One (1951, BN); Bye-Ya (1952, Prst.); Trinkle Trinkle (1952, BN); Blue Monk (1954, Prst); Hornin' In (1952, BN); Eronel (from Thelonious Monk; 1954, Swing); Friday the 13th (1954, Riv.); Bemsha Swing (from Miles Davis All Stars; 1954, Prst.); Little Rootie Tootie (1954, Prst.); Nutty (1954, Prst.); Work (1954, Prst.); Gallop's Gallop (from Gigi Gryce Quartet; 1955, Signal); Brilliant Corners, Pannonica (from Brilliant Corners; 1956, Riv.); Crepescule with Nellie, Ruby, my dear (from Monk's Music; 1957, Riv.); Evidence, In Walked Bud, Rhythm-a-ning (from Art Blakey's Jazz Messengers with Thelonious Monk; 1957, Atl.); Off Minor (1957, Riv.); Round Midnight (B. Hanighen), collab. Williams (from Thelonious Himself; 1957, Riv.); Well, You Needn't (1957, Riv.); Jackie-ing (from 5 by Monk by 5; 1959, Riv.); Shuffle Boil (1964, Col.); Boo Boo's Birthday (1967, Col.); Straight, No Chaser (1967, Col.); Ugly Beauty (1967, Col.); Something in Blue (from Something in Blue; 1971, BL)

RAN BLAKE/R

Monk, William Henry (*b* London, 16 March 1823; *d* London, 18 March 1889). English church musician and composer. He was a pupil of Thomas Adams, J.A. Hamilton and G.A. Griesbach, and began his career in

1841 as organist of St Peter's, Eaton Square. After holding similar posts at St George's, Albemarle Street (1843), and St Paul's, Portman Square (1845), he was appointed choirmaster (1847) and organist (1849) at King's College, London. While at King's he came under the influence of William Dyce, professor of fine arts, whose recent scholarly investigation of the principles of plainchant had prepared the way for its use in the Anglican service. Monk assisted in that development by contributing the first articles on the subject to the journal of the Tractarian Society for Promoting Church Music, the *Parish Choir* (1846–51), of which he later became musical editor.

As organist and choirmaster of the new church of St Matthias, Stoke Newington from 1852, Monk established daily choral services that presented a unique model of the Tractarian ideal – the choir leading the people, the music chosen to suit the calendar, the psalms chanted to plainsong. He was later professor of vocal music at King's College, London (1874), at the National Training School for Music (1876) and at Bedford College, London (1878).

In 1857 Monk was made musical editor of *Hymns Ancient and Modern* (1861) for which he wrote 'Eventide', his famous tune for *Abide with me*. He wrote many other popular hymn tunes as well as anthems and service music, and edited several collections of hymns and metrical psalms. He was awarded an honorary MusD at Durham in 1882. (B. Rainbow: *The Choral Revival in the Anglican Church, 1839–1872*, London, 1970)

BERNARR RAINBOW

Monke, Josef (*b* Elberfeld, 18 March 1882; *d* Cologne, 17 Nov 1965). German brass instrument maker. From 1896 to 1900 he studied instrument making with Mitsching, and trumpet playing with Liebe, in Elberfeld. He then worked briefly with Kurnoth (Knoth) in Danzig (1900), Moritz in Berlin (1901–2), Enders in Mainz (1902), where he worked on the Alschausky trombone (in B♭, with F valve), and in Markneukirchen (1903). In 1904 he became first assistant to L.A. Schmidt (*d* 1921) in Cologne (successor to his father, F.A. Schmidt (1827–93), who had succeeded Schröder in 1848). In 1922 Monke opened his own shop, later employing up to 16 workers. His trumpets in particular represent the culmination of the development of the so-called 'Cologne' models, with a wider bore and larger bell than those of HECKEL, his chief rivals.

Starting while he was working for Schmidt, Monke introduced refinements in the mouthpipe, the valve slide bore, the third valve slide (a trigger mechanism was added in 1950), and the Cologne rotary valve mechanism. It was he – not Vincent Bach – who in 1908 invented the screw-rim mouthpiece. After Monke's death, the firm was directed by his daughter Liselotte (*b* Cologne, 9 June 1923). Hermann Josef Helmich (*b* Cologne, 5 Feb 1927) served as foreman between 1941 and 1997. Lisolette sold the firm on 1 November 1997 to Stephen Krahforst (*b* Cologne, 17 June 1936), the present owner.

A second firm, run by Monke's son Wilhelm Monke (*b* Cologne, 27 Nov 1913; *d* Cologne, 8 Aug 1986) and later by Wilhelm's son Friedrich Wilhelm (Friedhelm) Monke (*b* Cologne, 19 Feb 1943), existed from 1945 to 1994. A third firm, associated with the second, has been run by Friedrich Wilhelm's wife Brigitte (née Rose, *b* Flammersfeld, 20 Sept 1943).

EDWARD H. TARR

Monkees, the. American pop group. Its members were Davey Jones (singer), Mike Nesmith (guitarist and singer), Peter Tork (bass guitarist and singer), and Mickey Dolenz (drummer and singer). The group was formed in 1966 as American television's calculated answer to the Beatles. Nesmith and Tork were aspiring musicians, but Jones and Dolenz openly stated that they were hired primarily as actors to take part in a television series about a pop group. Nevertheless, they had pleasant voices and their first album (*The Monkees*, 1966) received a gold record and yielded two number one singles, *Last Train to Clarksville* and *I'm a believer*. Although it was revealed that session musicians had been employed to make this recording, the Monkees proved in worldwide tours and further recordings (such as *A Little Bit Me, A Little Bit You*, 1967, and *Daydream Believer*, 1967) that they were competent musicians. Tork left the group in 1968, and they continued as a trio until Nesmith left two years later to pursue what proved to be a successful solo career as a country singer and songwriter. After a period of inactivity, Dolenz and Jones revived the group in 1975 with Tommy Boyce and Bobby Hart, the songwriters responsible for many of the Monkees' most successful songs. In 1997 a further revival of the group with the original four members met with only modest success.

BARRY KERNFELD

Monk of Bristol. *See* TUNSTEDE, SIMON.

Monk of Salzburg (*fl* late 14th century). German poet and composer. 49 sacred and 57 secular songs, all with music, appear in manuscripts of the 15th and 16th centuries and of the Meistergesang era. Although his works are to be found in more than 90 manuscripts, his identity, like that of most medieval German poets, has never been documented. The introduction to the manuscript A (*D-Mbs* Cgm 715) mentions the name Herman, but manuscripts C (*Mbs* Cgm 528) and E (*A-Wn* 4696) call him Johanns or Hanns (Spechtler, 9ff); manuscript A makes him a Benedictine and C a Dominican, while E and the other manuscripts give no such description; all, however, agree that he was a learned monk who wrote sacred and secular songs, many of which are attributed to him as 'Mönch', not only in the introductions to manuscripts but even singly (e.g. in D,*Wn* 2856, the Mondsee-Wiener Liederhandschrift).

The manuscripts also unanimously name as his patron the Archbishop of Salzburg, Pilgrim II von Puchheim (1365–96), at whose magnificent court the Monk wrote his songs, some of them at his lord's express command (A, f.1*r*, E, f.107*r*). The acrostic in song no.2 in Spechtler's 1972 edition (S) 'Pylgreim Erczpischof Legat' (contrafactum of *Lauda Sion Salvatorem*) is a tribute to his powerful and influential patron. The secular songs nos.18 and 30

in Mayer and Rietsch (MR), dating from 1392 and 1387, mention Pilgrim's travels and the court he paid to King Wenceslaus IV in Prague. The foundation of more than 100 endowments for the cathedral (1393) gives an idea of the archbishop's standing. Other names mentioned in manuscripts and in the songs themselves reveal a circle around the author. Manuscript A alludes to a priest named Martin who 'supported' the Monk in some unspecified manner; the acrostic in S 3 refers to Pilgrim's court chaplain, Richerus von Radstadt, the foreword to S 5 names the scholar Jakob von Mühldorf as author of its Latin source and that to S 9 (a Latin song) states that the original German song was written by Peter von Sachsen, who had sent it to the Monk.

The 49 sacred songs can be subdivided into 20 songs to the Virgin (S 1–20), 24 songs to the Trinity (S 21–44) with invocations, and 5 songs to the saints (S 45–9). The songs to the Virgin praise her in rich imagery, calling on her especially as intermediary; except for S 1–9 they are designated for specific feasts – Christmas, New Year, the Annunciation, the Assumption and the Birth of the Virgin. S 1–9 stand out in being based on acrostics or otherwise independent of the liturgical year. The second group includes a Christmas carol still sung today – *Josef, lieber neve mein* (S 22), to the tune of *Resonet in laudibus*; it also includes hymns for Passiontide, Easter, Whitsun and Corpus Christi and even a mealtime grace (S 42). The first hymn to the saints is a calendar song (*Cisiojanus*, S 45), followed by one each for Epiphany, the feast of St John, the sending out of the Apostles and St Elizabeth. The Monk wrote his own words and music and also translated or adapted many Latin hymns and sequences.

His secular songs comprise all the genres of late medieval lyric poetry. The ALBA scheme is varied, as the song titles imply: if *Taghorn* (MR 12) describes the characteristic call to wake in the morning, *Nachthorn* (MR 11) represents the man bidding goodnight to his beloved, whereas *Trumpet* (MR 15) is a night-time dialogue in which the watchman sings the second voice; MR 14 represents a return welcome (*Ain enpfahen*) and *Das Kühhorn* (MR 13) parodies the *alba* in that the lovers are a servant and maid waking from their midday rest. The Monk also wrote New Year songs, love letters, songs attacking the 'Klaffer' (court enemies of the lovers), love songs on every theme (a hawking song, farewell, longing etc.) and even a *Leich* (MR 44). Autumn songs and canons to St Martin (drinking-songs) are also represented, as are courtly forms like those found in 15th-century songbooks, for example in *Rosenlied* (MR 49).

The melodic style of the sacred songs is essentially close to that of Latin hymns and sequences (S 22, *Josef, lieber neve mein*, is an exception, with its 3rds and 5ths). The texts and melodies of the secular songs do follow medieval tradition, but also herald a new departure, both in introducing major modality (MR 49 and 13) and because they include the first recorded examples of polyphonic, and therefore rhythmically notated, tunes in the history of German song. For *Pumhart* (MR 11; D, f.186*r*), a primitive bass (unisons and 5ths) in precise rhythm has been written in. The superscription to MR 12 indicates a similar case, and in MR 15 (also an *alba*) the upper part is sung in alternating dialogue by a man and a woman while the watchman sings the lower part. The Monk's *Martincanon* (E, f.170*v*) is the earliest surviving canon *a 3* in German (E: 'Radel von drein stimmen').

FRANZ VIKTOR SPECHTLER

Monleone, Domenico [W. di Stolzing] (*b* Genoa, 4 Jan 1875; *d* Genoa, 15 Jan 1942). Italian composer. Son of the composer Leonardo Monleone, he studied in Milan, taught at the Paganini Conservatory in Genoa, and worked as a conductor in various European cities including Genoa, where he assisted in the artistic direction of the Teatro Carlo Felice. His opera *Cavalleria rusticana* was successfully performed in Amsterdam (1907) and elsewhere but was withdrawn as the result of legal action by Mascagni. Monleone used some of its music for *La giostra dei falchi* (1914), which is set among smugglers in the Swiss mountains. *Arabesca* won the Concorso del Municipio di Roma prize in 1913. Monleone also treated patriotic themes, as in *Alba eroica* (on the political martyrdom of the Bandiera brothers) and *Suona la ritirata*, and composed a comic opera in Genoese dialect (*Scheuggio Campanna*); generally, however, he remained faithful to *verismo* opera (*Il mistero*, *Notte di nozze*), his traditionalist style giving pre-eminence to the melodic element. His operetta *Una novella del Boccaccio* (1909) was presented under the pseudonym W. di Stolzing. Most of his librettos were by his brother Giovanni, a writer and journalist.

WORKS
(*selective list*)

librettos by Giovanni Monleone unless otherwise stated

Cavalleria rusticana (dramma lirico, prol., 1, after G. Verga), Amsterdam, Paleis voor Volksvlijt, 5 Feb 1907, vs (Milan, 1907)
Una novella del Boccaccio (operetta), Genoa, Politeama Genovese, 1909
Alba eroica (op, 3), Genoa, Carlo Felice, 1910, vs (Milan, 1910)
Arabesca (scene liriche, 1, with B. Montelioi), Rome, Costanzi, 1913, vs (Milan, 1913)
La giostra dei falchi (melodramma, 1), Florence, Verdi, 1914, vs (Milan, 1914)
Suona la ritirata (dramma per musica, 3, after F.A. Beyerlein: *La retraite*), Milan, Lirico, 1916
Il mistero (scene siciliane, 2, after Verga), Venice, Fenice, 1921
Fauvette (op, 3), Genoa, Carlo Felice, 1926, vs (Milan, 1925)
Scheuggio Campanna (comic op, 3, B. Canesi and A. Martinelli), Genoa, Carlo Felice, 1928, vs (Genoa, 1928)
La ronda di notte del Rembrandt (scene fiamminghe, 1), Genoa, Carlo Felice, 1933
Notte di nozze (op, 3, Bonetti), Bergamo, Donizetti, 1940
Sotto il knut, unperf.

Vocal-chbr music, unpubd

LUCA ZOPPELLI

Monn, Johann. *See* MONN, MATTHIAS GEORG.

Monn [Mann], **Johann Christoph** (*b* 1726; *d* Vienna, 24 June 1782). Austrian composer, brother of MATTHIAS

GEORG MONN. He was a music teacher in the employ of Count Kinsky in Prague in autumn 1750. J.A. Hiller reported him to be flourishing in Vienna in 1766 as a freelance keyboard player, teaching students 'with much success and acclaim'. His only work known to have been published in his lifetime, a keyboard sonata, appeared in a 1765 collection in which he was recognized as a 'virtuoso di musica in Vienna'. He died in impoverished circumstances.

An evaluation of Monn's music has been hindered by the confusion of his works with those of his brother, whose style his resembles. Less prolific than Matthias, he composed some orchestral and chamber music, but was best known for his keyboard works, of which 15 sonatas, 20 minuets and trios, and a 'ballo' survive. The sonatas surpass those of his brother in variety and virtuosity. They are in three to six movements, and eight sonatas have four movements, including a minuet and quick finale. Some bear characteristic titles, such as 'Balletto', 'Aria scocese' or 'Andante siciliano'. Attractive themes and short phrases contribute to the *galant* character of Monn's music, but his predominantly motivic treatment of material (producing related figures instead of contrasting themes) lends a conservative air to his style that is surprising for his time.

WORKS

Edition: *Wiener Instrumentalmusik vor und um 1750*, ii, ed. W. Fischer, DTÖ, xxxix, Jg.xix/2 (1912/*R*) [F]; incl. partial thematic catalogue of instrumental works]

JUDITH LEAH SCHWARTZ

Monn [Mann], **Matthias Georg** [Johann; Georg Matthias] (*b* Vienna, 9 April 1717; *d* Vienna, 3 Oct 1750). Austrian composer. The elder son of a coachman, Jakob Mann, and Catherina Päsching Mann, he was baptized Johann Georg but used the names Matthias Georg instead, possibly to avoid confusion with his younger brother JOHANN CHRISTOPH MONN. His preferred spelling, 'Monn', may be understood as a Lower Austrian dialect version of the family name Mann. He apparently sang in the choir at Klosterneuburg monastery in 1731–2 and at an early age (but not before 1738) became organist at the new Karlskirche in Vienna. There is little to support Gerber's assertion that Monn was 'Hoforganist' at Melk Abbey or that he gave J.G. Albrechtsberger his first lessons in thoroughbass there. Albrechtsberger's alleged reverence for Monn as a teacher (described by Sonnleithner) has not been proved, but a surviving set of thoroughbass exercises by Monn (*A-Wn* 19101) suggests that he devoted part of his career to teaching.

As a composer, Monn ranked with Wagenseil as the leading Viennese counterpart to Johann Stamitz in Mannheim. Although he never attained wide European recognition his local reputation was substantial, as shown by performances of his music at the imperial court of Joseph II and in monasteries in Austria and present-day Slovakia. A biographical sketch by Sonnleithner, who claimed Albrechtsberger as his source, described Monn as a temperate and economical person, who apparently never married. Although he produced a remarkable number of well-crafted compositions in a variety of genres and styles, none was published during his short lifetime. His output has often been confused with his brother's, and any listing or evaluation must therefore be subject to error.

Monn is noted for having composed the first known four-movement symphony with a third-movement minuet (F1/RD-1, 1740); however, he did not adopt this pattern in his other symphonies, all of which are in three movements. More significant was his handling of form in fast movements: his clear development sections and full tonic recapitulations heralded the emergence of sonata form in the symphony. Possessing the most subtle musical technique of the early Viennese symphonists, Monn showed his originality in effective harmonic detail, striking thematic development and a keen sense of melodic line. In other respects, however, his style remained conservative, owing to the motivic nature of his themes, frequent use of sequences and a lack of strong thematic contrast. Moreover, small proportions, trio sonata textures (without viola) and occasional church sonata designs suggest the influence of chamber music.

Monn's keyboard concertos were the first by a Viennese composer to show *galant* elements in their thematic structure. Several (F41–4, 123–4) are infused throughout with cheerful *galanterie*, characterized by treble-dominated textures and major-mode diatonicism. Ritornello form persists, yet binary tonal plans underlie most movements, and some second and third movements have double bars and repeat signs. Others employ fugal, canonic or toccata-like textures in all movements (F35–6, 39, 125, most in minor keys). An extraordinary harmonic restlessness in the interior solo sections of some movements enhances the developmental character of the sometimes difficult, yet idiomatic, solo part (such as the Keyboard Concerto in E♭, F44, with the modulations e♭–c♯–f♯–b–e♭). Tutti interjections and dialogue passages between solo and orchestra enliven the solo sections, creating textures normally associated with chamber music. Monn's control of texture enables his music to flow seamlessly between contrapuntal and *galant* textures. The Violin Concerto (1747), probably the earliest of the few violin concertos before Haydn's, offers a similar combination of idioms; walking basses alternate with passages of repeated bass notes more typical of north

German concertos. Siciliana rhythms pervade the slow movement. The Cello Concerto exploits the technical possibilities of the instrument to a surprising extent, making especially good use of the low register. Schoenberg in 1911–12 made continuo realizations for it (ed. for vc and pf, Vienna, 1913/*R*), as well as for the D major keyboard concerto F41, which he later adapted as a cello concerto for Pablo Casals (New York, 1935/*R*).

Monn's chamber music for strings includes several partitas in the *sonata da camera* tradition, resembling his symphonies but with one or more minuets and trios, and 17 contrapuntal works with various titles (sinfonia, quartet, partita) in the form and style of the *sonata da chiesa*. The six string quartets (two of them transcriptions of opening movements from Monn's four-part string symphonies) each contain a slow movement and a fugue, but yet even the non-fugal works show wry combinations of learned and *galant* gestures.

Monn's keyboard sonatas each have up to six binary movements, frequently combining dances (allemande, courante, gigue, minuet, or siciliana) with movements identified only by Italian tempo markings or fanciful titles ('La personne galant', 'Aria païsane', 'Capriccio'). Elements of Baroque and *galant* styles co-exist in these works, sometimes within a movement.

The mass settings, mostly of the multi-movement *missa longa* type, are in late Baroque style, maintaining one affection per movement. Perhaps the most accomplished fugue writer of his generation of Viennese composers, Monn used fugue at all the conventional places in the mass and occasionally elsewhere. Despite their conservative suface, however, his masses exude energy and imagination, with vocal solos often integrated into the choral movements and touches of drama and virtuosity in the orchestral and solo vocal writing.
